353,719. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BOURJOIS, INC., New York, N. Y., assignor to Barbara Gould, Inc., New York, N. Y., a corporation of New York. Filed Oct. 7, 1937. Serial No. 398,235.

BARBARA GOULD

For Toilet Preparations—Namely, Toilet Creams as Follows, Cleansing Creams, Liquefying Cleansing Cream, Cold Cream, Circulation Cream, Hand Cream, Tissue Cream, Finishing Cream, Plastic Cream, Irradiated Skin Cream, Eye Cream and Skin Cream; Sun Oil, Pine Bath Oil, Muscle Oil; Liquid Astringent, Astringent Bleach, Complexion Dressing; Lotions as Follows: Skin Lotion and Tonic Known as Skin Freshener, Cream Lotion, Sun Lotion, Summer Tan Lotion and Hand Lotion; Toilet Powders as Follows: Face Powder and Dusting Powder; Rouges in Dry Form and in Cream Form, Lip Sticks, Mascara, Eye Shadow, Eyebrow Pencil; Skin Sachet; Bath Crystals; Deodorant in Liquid Form and in Cream Form; Nail Polish in Cream Form and in Liquid Form; Nail Polish Remover; Cuticle Remover, Nail and Cuticle Oil; Filled Compacts Containing Face Powder, Rouge, Face Powder and Rouge, Face Powder, Rouge and Lip Stick; Ensemble Sets Containing Cleansing Cream, Finishing Cream, Skin Freshener, Tissue Cream and Face Powder in the Combination Mentioned and in Other Combinations; Perfumes, Shampoos and Brilliantine.
Claims use since Apr. 19, 1928.

353,720. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COMMERCIAL SOLVENTS CORPORATION, New York, N. Y. Filed Oct. 18, 1937. Serial No. 398,614.

NORWAY

For Alcoholic Solvents, Methanol, and Radiator Anti-Freeze Solutions.
Claims use since Oct. 9, 1936.

353,721. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS.) SUPERIOR PARTS COMPANY, Chicago, Ill. Filed Oct. 21, 1937. Serial No 398,795.

SAF-T-RAY

For Automobile Safety Reflecting and Signal Lenses.
Claims use since April, 1936.

353,722. (CLASS 39. CLOTHING.) WHELLKIN COAT CO. INC., New York, N. Y. Filed Oct. 21, 1937. Serial No. 398,797.

Himalaya Fleece

For Women's, Misses', and Juniors' Coats and Suits.
Claims use since Feb. 19, 1936.

353,723. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDGAR P. LEWIS & SONS, INC., doing business as Betty Lewis Home Made Candy Company, Malden, Mass. Filed Oct. 23, 1937. Serial No. 398,854.

Betty Lewis

For Chocolates, and Molasses Candy.
Claims use since Apr. 17, 1934.

353,724. (CLASS 39. CLOTHING.) ADELAAR BROS., INC., New York, N. Y. Filed Oct. 25, 1937. Serial No. 398,880.

Suit-able

For Ladies' Blouses, Dresses, and Suits.
Claims use since Nov. 16, 1936.

353,725. (CLASS 12. CONSTRUCTION MATERIALS.) VICTOR CUSHWA & SONS, Williamsport, Md. Filed Nov. 9, 1937. Serial No. 399,501.

CALVERT

For Brick.
Claims use since Jan. 1, 1935.

TRADE-MARK REGISTRATIONS RENEWED

118,973. CANDY. Registered October 16, 1917. JACOBS CANDY COMPANY, LIMITED, New Orleans, La., a corporation of Louisiana. Renewed October 16, 1937.

120,048. RUBBER BOOTS AND SHOES. Registered January 1, 1918. UNITED STATES RUBBER COMPANY, New York, N. Y., a corporation of New Jersey. Renewed January 1, 1938.

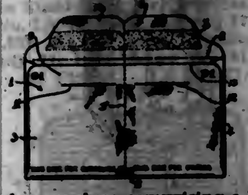
REISSUES



JANUARY 11, 1938

20,615
ENVELOPE

Joseph W. Beer, Roanoke, and Reybern R. Sublette, Vinton, Va., assignors to Double Envelope Corporation, Roanoke, Va., a corporation of Virginia

Original No. 2,001,240, dated May 14, 1935, Serial No. 657,410, February 18, 1933. Application for reissue February 11, 1937, Serial No. 125,254

2 Claims. (Cl. 229—30)

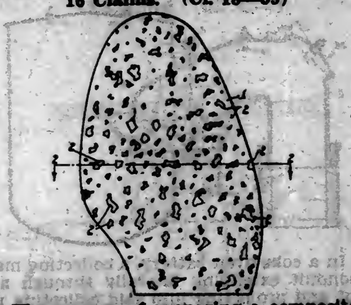
1. A duplex envelope comprising a body having front and back faces closed at the sides and bottom and having an opening at the top, the front face having a flap foldable over said opening, said front and back faces being pasted together along a transverse strip forming side-by-side pockets, said flap and the body of the envelope having a transverse line of weakness extending intermediately along the said pasted strip, the back of said envelope having straight line slits extending from the opposite edges of said transverse strip and substantially parallel to the edge of said opening, each slit being substantially longer than one-half of the width of the side pocket over which it extends, said flap having a gummed area in the form of a continuous gummed band spaced from and extending substantially parallel to the free edge of said flap, said band being symmetrical with respect to the transverse line and being at least equal in length to the combined lengths of said slits and the space on the back between the adjacent ends of said slits, the band being located when in sealing position to make adhesive contact with the back of said envelope above and throughout the lengths of said slits and with the solid part of said back between adjacent ends of said slits, the free part of said flap between the gummed area and the free edge overlying said slits when the envelope is sealed.

20,616
DOOR LOCK

Wilfred A. Beauchamp, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Original No. 1,877,262, dated September 13, 1932, Serial No. 457,939, October 11, 1930. Application for reissue March 30, 1934, Serial No. 718,193

9 Claims. (Cl. 292—284)



9. In a railway house car having a relatively stationary member and a slidable door member, a vertically reciprocable pin secured to one of said members, an abutment for said pin secured to the other of said members, said pin being engageable with said abutment prior to the full closed position of said door member to prevent opening movement thereof, said engagement between said pin and abutment determining the position of said pin, said pin being biased downwardly by the action of gravity, said pin during downward movement reestablishing engagement with said abutment as said door moved toward fully closed position, thereby preventing movement of said door in the opposite direction, means secured to one of said members to enable said door to be sealed, said pin being movable downwardly in the sealed position of said door member to automatically absorb slack introduced by the movement of said door member toward closed position.

20,617
SHOE SOLE OR THE LIKE AND PROCESS OF MANUFACTURING SAME

John E. Caldwell, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Original No. 1,973,748, dated September 18, 1934, Serial No. 696,758, November 6, 1933. Application for reissue January 7, 1935, Serial No. 737

16 Claims. (Cl. 18—59)

16. The process of preparing a composite rubber stock comprising dispersing small discrete particles of relatively highly abrasion-resisting resilient rubber which has been partially vulcanized throughout a body of rubber having less abrasion resisting properties and vulcanizing the composite stock.

20,618
ELECTRICAL ADAPTER MEANS

Harry A. Douglas, Bronson, Mich., assignor to Kingston Products Corporation, a corporation of Indiana

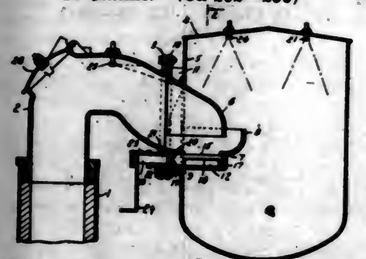
Original No. 1,956,289, dated April 24, 1934, Serial No. 637,717, October 14, 1932. Application for reissue August 15, 1935, Serial No. 36,322

12 Claims. (Cl. 173—329)

3. Electrical connection means comprising a receptacle formed of sheet metal having a rectangular central portion, a wing portion integral therewith at each four corners of the central portion, and end continuations of the central portion ex-

tending beyond the wing portions, with said central portion folded in a return bend to have its bight form a part of a terminal receiving portion and two of the walls of a socket portion and said wing portions laterally bent from said central portion to have adjacent edges of each pair of two wing portions disposed to form the other two sides of the socket portion, and said end continua-

tions overlapped transversely of the socket portion to form a bottom therefor, said wing portions having ears arranged with respect to each other and with respect to the bight of the central portion to define the remainder of the terminal receiving portion, and said end continuations circularly perforated with the perforation of the inner end continuation interiorly screw-threaded to receive a conductor.



20,619

COLLECTOR MAIN VALVE ASSEMBLY

Charles Vernon McIntire, Shorthills, N. J., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a corporation of New York

Original No. 2,027,548, dated January 14, 1936, Serial No. 628,343, August 11, 1932. Application for reissue September 16, 1937, Serial No. 164,200

17 Claims. (Cl. 202—256)

17. In a coke oven battery, a collecting main, a gas conduit extending laterally through a side wall of and projecting into said collecting main, means disposed within said collecting main for spraying liquid, a member within the collecting main disposed to collect liquid discharged by said spray means into which liquid the terminal portion of said laterally extending gas conduit extends to form a liquid seal which prevents flow of gas through said terminal portion into said collecting main, and means for breaking said liquid seal to permit flow of gas through said terminal portion into said collecting main.

20,620

TORQUE MEASURING WRENCH

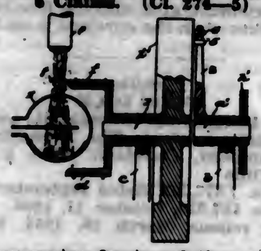
John H. Sharp, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., North Chicago, Ill., a corporation of Illinois

Original No. 2,007,880, dated July 9, 1935, Serial No. 538,292, May 18, 1931. Application for reissue December 14, 1936, Serial No. 115,889

6 Claims. (Cl. 265—1)

1. A torque indicating device comprising a housing portion with a manually operable handle extending therefrom, a wrench portion with a jaw adapted to engage a nut and a shank extending therefrom and with its end portion received in and pivoted to said housing, arms extending laterally from the pivoted portion of said shank, springs disposed in said housing and acting in the same general direction on opposite ends of said arms, so as to normally hold the shank in neutral position, generally aligned with the

handle, movable means engaging the ends of said springs away from said arms for adjusting the spring pressure, a dial on one face of said housing, a pointer pivotally mounted on said housing and movable over said dial, and means for transmitting motion from said shank to said pointer, upon movement of said housing and handle portion with respect to the wrench portion, for indicating the amount of torque applied to said device.



20,621

DEVICE FOR PHONOGRAPHS WITH LINEAR PHONOGRAM CARRIERS

Hans Vogt, Berlin-Steglitz, Joseph Massolle, Berlin-Gliencke, and Josef Engl, Berlin-Charlottenburg, Germany, assignors, by mesne assignments, to American Tri-Ergon Corporation, New York, N. Y., a corporation of New York

Original No. 1,712,726, dated May 21, 1929, Serial No. 126,530, March 20, 1922. Application for reissue February 18, 1937, Serial No. 126,530

6 Claims. (Cl. 274—5)

6. An apparatus for translating sound vibrations representative of speech, music or the like, to or from a film record strip by the use of a line of light varied in accordance with the sound, which comprises means for imparting to the film an arcuate, rapid and uniform motion longitudinally of the film past said line of light, and for retaining the moving film under tension at the area of translation, a source of light projection for providing a line of said light in fixed position,

and an objective lens in the neighborhood of said area of translation on the film but spaced therefrom for collecting said projected light and directing the same as a converged narrow line impinging directly upon the arcuately moving film at said area of translation and transversely of the direction of movement of the film, said means including a flywheel and means operatively connecting said flywheel with the film, which last named means imparts uniformity of motion of the flywheel to the film in passing through said line of light.

20,622

FILM MAGAZINE FOR AMATEUR MOTION PICTURE CAMERAS

Edwin Stanton Porter, New York, N. Y.

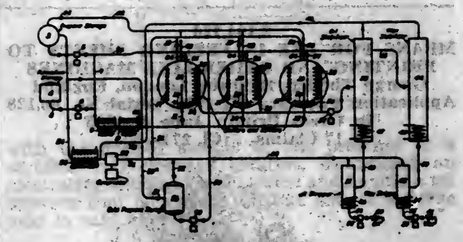
Original No. 1,954,941, dated April 17, 1934, Serial No. 540,050, May 26, 1931. Application for reissue July 31, 1936, Serial No. 91,794

16 Claims. (Cl. 88—17)

1. A removable film carrying magazine for cameras which comprises a magazine casing insertable into a recess in the camera, a spring element on the rear end of the magazine engageable by the door of the camera when the door is closed, to force the magazine into operative position within the camera.

11. A film magazine for cameras, a magazine including a casing having a base portion with lateral walls and a cover portion, a supply spool and a take-up spool in said magazine, a gate-plate disposed in said base portion adjacent the lateral wall, means projecting from the base portion of the casing and engaging the take-up spool for driving said spool in only one direction, ribs on the base and cover to strengthen the same, and reduce the lateral area of contact with the film, the lateral wall of the casing being off-set along the center to avoid contact with the picture sections of the film within the casing, and a plate extending from the adjacent end of the gate-plate to a point toward the take-up spool, said plate lying closely adjacent the wall of the magazine and forming a passage along which the film passes, the end of the latter plate adjacent the take-up spool being of a predetermined flexibility, the film passing over this flexible end and being continuously maintained in a state of tension as it is wound up on the take-up spool.

20,623



HIGH MELTING POINT WAX AND PRODUCTION OF SAME

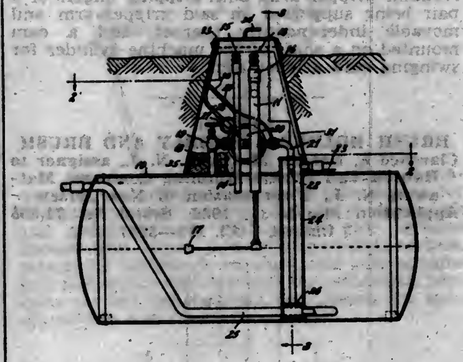
Claude F. Tears, Warren, Pa., assignor to The Petroleum Processes Corporation, Wichita, Kans., a corporation of Kansas

Original No. 2,000,427, dated May 7, 1935, Serial No. 698,223, November 16, 1933. Application for reissue May 6, 1937, Serial No. 141,024

5 Claims. (Cl. 196—30)

1. The herein disclosed process of producing a high melting point wax, which comprises dissolving petrolatum stock in a solvent, chilling the solution and cold settling under pressure in a closed vessel to precipitate the waxy content, withdrawing the oily content from the vessel,

heating the precipitated wax solvent layer to melt the wax and generate pressure by vaporization of the solvent to force said waxy layer from the closed vessel and separately stabilizing and stripping the withdrawn oily and waxy materials.



20,624

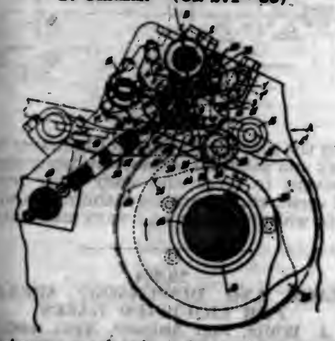
STORAGE AND DISPENSING APPARATUS FOR LIQUEFIED GASES

Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, a corporation of Texas

Original No. 2,042,429, dated May 26, 1936, Serial No. 42,837, September 26, 1935. Application for reissue October 20, 1937, Serial No. 170,133

12 Claims. (Cl. 62—1)

1. In a liquefied gas storage and dispensing plant of the class described, a storage tank; dispensing means connected to the tank for delivering gas at a low pressure therefrom; a service pipe leading from said dispensing means having a portion projecting into said tank; a water conduit around said pipe within the tank providing a heat exchanger for revaporizing condensed gas therein; and water pipes connected to said conduit for circulating water in heat exchanging relation to liquefied gas in the tank.



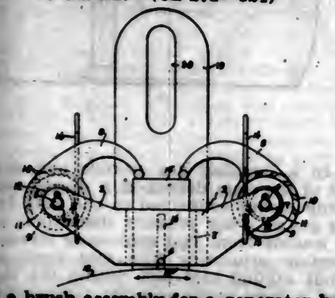
PATENTS

GRANTED JANUARY 11, 1938

2,104,720
MEANS FOR USE IN FEEDING SHEETS TO PRINTING AND OTHER LIKE MACHINES

George Thomas Baldwin, London, England

Application February 27, 1936, Serial No. 66,128
In Great Britain June 4, 1935
17 Claims. (Cl. 271—53)



1. Gripper mechanism for rotary sheet fed printing machines wherein the gripper mechanism comprises a plurality of pairs of gripping fingers each pair of which is suspended from a triangular arrangement of links adapted to be extended and reduced laterally in order to effect opening and closing of the gripping fingers, a rockable gripper arm, both gripping fingers of a pair being supported on said gripper arm and movable independently thereof, and a cam mounted on a shaft of the machine cylinder for swinging said gripper arm.

2,104,721
BRUSH HOLDER ASSEMBLY AND BRUSH

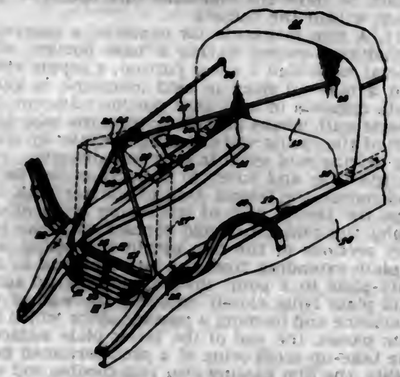
Clarence E. Berger, Matawan, N. J., assignor to Hanson-Van Winkle-Munning Company, Matawan, N. J., a corporation of New Jersey

Application March 31, 1936, Serial No. 71,958
7 Claims. (Cl. 171—324)

1. In a brush assembly for a generator having a commutator, a brush, means to support said brush for relative sliding and rocking movement with respect to a predetermined axis parallel to the axis of said commutator, and resilient means for engaging said brush at opposite sides of said predetermined axis and urging said brush toward said commutator.

2,104,722
PROCESS FOR THE PRODUCTION OF ARTIFICIAL SILK AND THE LIKE

Heinrich Bertsch, Chemnitz, Germany, assignor, by mesne assignments, to American Hyalsol Corporation, Wilmington, Del., a corporation of Delaware



No Drawing. Application December 3, 1931, Serial No. 578,849. In Germany December 4, 1930
13 Claims. (Cl. 106—40)

7. A process whereby artificial silk threads, films and the like obtained from cellulose products may be formed with improved properties which comprises, adding to the cellulose product before the spinning or forming operation employed in making the threads, films or the like, the reagent serving for the improvement together with a higher aliphatic alcohol having more than 5 carbon atoms in the molecule.

2,104,723
MOTOR VEHICLE

Frank C. Best, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan

Application October 26, 1932, Serial No. 639,251
4 Claims. (Cl. 280—152)

2. In a motor vehicle having a main frame and a dash, an auxiliary frame movably mounted on the main frame, a radiator fixed at its bottom on the auxiliary frame, a pair of brace members fixed to the auxiliary frame and pivoted to the upper portion of the radiator and another pair of braces fixed to the dash and pivoted to the upper portion of the radiator, said brace members being pivoted to allow movement of the radiator and frame in a vertical plane.

2,104,724
GLOVE AND METHOD OF MAKING SAME FROM STRIP MATERIAL

Joseph Bloom, New York, N. Y.

Application October 2, 1937, Serial No. 166,941
7 Claims. (Cl. 2—169)

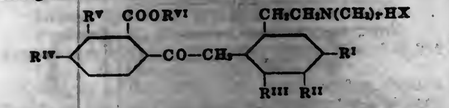
1. The method of making a fabric glove which comprises knitting laterally joined selvage strips, separating the selvage strips between the selvage edges for a predetermined distance to provide finger portions, transversely cutting the strips to

form a glove section, superimposing two such cut sections and securing the superimposed cut sections at the sides and around the edges of the finger portions.

2,104,725
BREAST SUPPORT

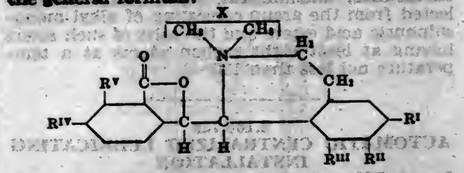
Pauline Boris, Chicago, Ill.

Application August 13, 1936, Serial No. 95,920
2 Claims. (Cl. 2—42)



1. A breast supporting device comprising a frame bent from wire, said frame having two side portions for disposition at the front of the body under the breast, and a forwardly projecting U-shaped upper portion connecting the upper ends of said side portions for disposition under the breast, a flexible sheet secured to said frame and cooperating with said upper portion thereof in forming a yieldable shelf to underlie the breast, and means connected with said frame for holding said support in position upon the body.

2,104,726
PRODUCTION OF HYDROHALIDES OF ALKYL ESTERS OF ISO-QUINOLINE ALKALOIDS

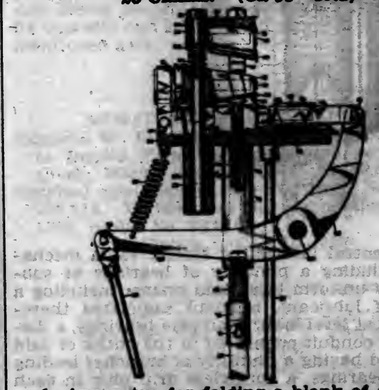


Carl R. Addinall, Westfield, and Randolph T. Major, Plainfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application May 17, 1934, Serial No. 726,122
9 Claims. (Cl. 260—95)

1. A process for producing hydrohalides of various alkyl esters of iso-quinoline alkaloids of the general formula:

wherein R^I, R^{II}, R^{III}, R^{IV}, and R^V may be selected from the group consisting of H and alkoxy radicals, and wherein adjacent pairs together may be an alkylene-oxy radical, attached to the benzene nuclei; X is a mineral acid radical, and R^{VI}, is an alkyl radical; which comprises refluxing the methyl halides of the corresponding alkaloids of the general formula:



with the desired alcohol in the presence of a suitable ring-cleavage catalyst, comprising an electrolyte soluble in said alcohol and having a pH between that of sodium ethylate and of salicylic acid in said alcohol.

2,104,727
METHOD OF AND APPARATUS FOR FOLDING SHEET MATERIAL

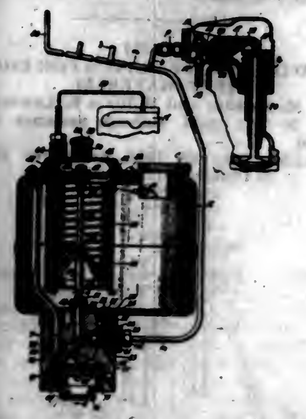
Maurice M. Balsam and William L. Lawson, New York, N. Y.; said Balsam assignor to said Lawson

Application May 20, 1936, Serial No. 80,682
25 Claims. (Cl. 93—39.1)

1. Apparatus for folding a blank of sheet material into a hollow shape comprising means for clamping an intermediate section of said blank and simultaneously folding the side sections thereof with respect to said intermediate section, means for folding portions of said side sections and restraining movement of the remaining portions of said side sections, and means for synchronously operating said means.

2,104,728
WETTING AND DISPERSING AGENTS AND PROCESS OF MAKING THE SAME

Heinrich Bertsch and Hans Stober, Chemnitz, Germany, assignors, by mesne assignments, to Böhme Fettchemie-Gesellschaft mit beschränkter Haftung, Chemnitz, Germany



No Drawing. Application August 1, 1933, Serial No. 683,223. In Austria March 9, 1933
8 Claims. (Cl. 260—41)

3. A quaternary ammonium salt of the general formula $RXSO_4H$, wherein "R" is an aliphatic hydrocarbon radical, containing at least eight carbon atoms, and "X" is the nitrogen atom in a pyridine or quinoline ring structure.

4. The process of making high molecular quaternary ammonium salts which comprises re-

acting a compound selected from the group consisting of pyridine, chinoline, iso-chinoline, N-alkyl piperidines, and the homologues of said compounds, and nicotin, with compounds selected from the group consisting of alkyl monosulphuric acid esters and the salts of such esters having at least eight carbon atoms at a temperature not less than 130° C.

2,104,729
AUTOMATIC CENTRALIZED LUBRICATING INSTALLATION
Joseph Bijur, New York, N. Y., assignor to Auto Research Corporation, a corporation of Delaware
Application December 29, 1928, Serial No. 329,172
25 Claims. (Cl. 184—6)

1. A central lubricating system for a mechanism including a plurality of bearings at substantially uniform level, said system including a source of lubricant, a pump associated therewith and at level lower than said bearings, a distributing conduit connected to the outlet of said pump and having a plurality of branches leading to said bearings, a springless drip plug in each of said branches, means for operating said pump, said operating means responding to a condition of operation of the mechanism of effectiveness disproportionate to the lubricant requirements of the bearings, and a spring-seated valve near the inlet of said conduit system draining back to said source, the excess of said pump discharge beyond the requirements of said system.

2,104,730
PROCESS AND APPARATUS FOR MAKING GUT STRING
Carl G. Bjerkman, Chicago, Ill.
Application July 7, 1936, Serial No. 89,249
11 Claims. (Cl. 117—2)

1. The process of making gut string which includes twisting a skein of gut ribbons of substantially uniform length in a bath of water.

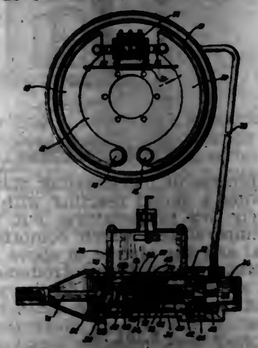
2,104,731
CLUTCH CONTROLLING MECHANISM
Caleb S. Bragg, Palm Beach, Fla., assignor to Bragg-Kliesrath Corporation, South Bend, Ind., a corporation of New York
Application April 17, 1935, Serial No. 16,748
10 Claims. (Cl. 192—.01)

1. In an automotive vehicle provided with a clutch and an accelerator, power means for operating the clutch to effect a disengagement and a multistage engagement thereof, said power means comprising a plurality of pressure differential operated motors, means interconnecting said motors and clutch, and accelerator operated valve means for controlling the operation of said motors.

2,104,732
ELECTROLYTE
Joseph B. Brennan, Fort Wayne, Ind.
Application July 26, 1934, Serial No. 737,086
8 Claims. (Cl. 175—315)

6. An electrolyte for electrolytic condensers consisting principally of a solution of ammonium lactate, ammonium borate and boric acid and containing a homogenizing agent consisting of a polysaccharide and formaldehyde.

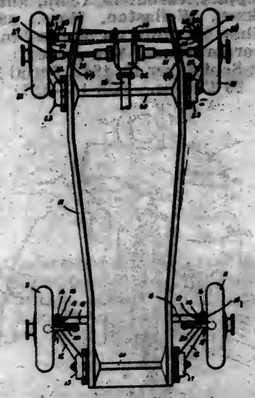
2,104,733
ELECTROLYTE AND METHOD OF MAKING SAME
Joseph B. Brennan and Emma Leona Marsh, Fort Wayne, Ind.; said Marsh assignor to said Brennan
No Drawing. Application February 2, 1935, Serial No. 4,624
9 Claims. (Cl. 175—315)



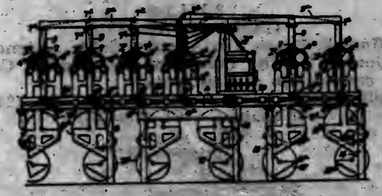
1. An electrolyte for electrolytic condensers consisting principally of a solution of a salt of a weakly ionized film-forming acid in a polyhydric alcohol and pyridine.

2,104,734
TRAILER
Arley D. Carpenter, Los Angeles, Calif., assignor to Comet Trailer Corporation, a corporation of Delaware
Application August 30, 1935, Serial No. 38,200
1 Claim. (Cl. 280—33.44)

The combination with a vehicle and a trailer, of draft means therefor to maintain axial alignment thereof and comprising a transverse bar pivotally mounted midway its ends to the trailer, housings secured to the trailer and receiving the opposite ends of the transverse bar to guide the same, lugs extending forwardly from adjacent the ends of the transverse bar, curved tongues having one of their ends connected to the lugs, toothed and wedge adjusting means included in the connecting means for the tongues, and means for detachably and adjustably connecting the opposite ends of the tongues to the vehicle.



2,104,735
BRAKE
Eugene G. Carroll and Cecil H. Taylor, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 18, 1932, Serial No. 612,136
16 Claims. (Cl. 60—54.6)

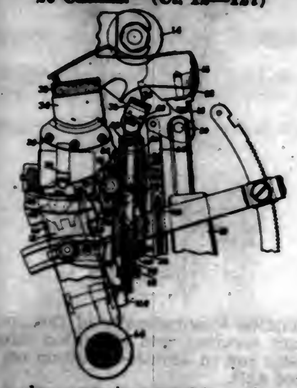


1. In a hydraulic brake system, a cylinder; an annular piston slidable therein; a concentric piston of smaller diameter extending forward from said annular piston and formed with a longitudinal bore extending to the front end thereof and with a port communicating with said bore; a valve member slidably mounted in said bore and extending rearwardly through said annular piston, said valve member being formed with a longitudinal bore extending through a part of its length and with a pair of intersecting bores, one adapted to register with said port and the other adapted to communicate at times with the portion of said cylinder rearwardly of said annular piston; a spring acting on said valve and normally maintaining said intersecting bores out of communication with said rearward chamber; an annular head through which the front end of said small area piston slides, and a packing cup associated with the front end of said valve member whereby fluid pressure in advance of said head acts on said valve to move it to open communication between the portion of the cylinder just in advance of said annular piston and the portion rearwardly thereof.

2,104,736
INDEPENDENT WHEEL SUSPENSION
Frederick E. Clemens, Indianapolis, Ind.
Application August 11, 1934, Serial No. 739,370
10 Claims. (Cl. 280—124)

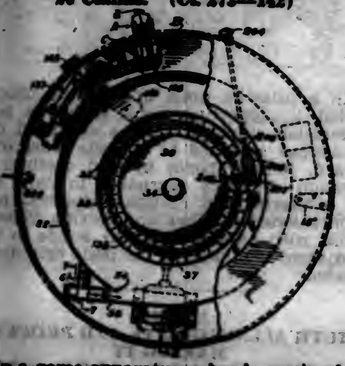
1. In an automobile, the combination with a frame, a load spring, and an automobile wheel, of an elongated wheel support structure connected to the load spring at one end, means pivotally supporting, remote from the spring connection, said structure upon an axis substantially parallel to the longitudinal axis of the automobile and upon an axis intersecting the first mentioned axis and approximately transverse to the longitudinal axis of the automobile, said structure extending longitudinally of the automobile, and means securing said elongated structure at its opposite end in adjusted position on the first mentioned axis.

2,104,737
NEWSPAPER PRINTING PRESS
Edmund W. Dean, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a corporation of Michigan
Original application June 4, 1934, Serial No. 729,013. Divided and this application April 5, 1935, Serial No. 14,910
7 Claims. (Cl. 101—220)



1. In a printing press unit of the character specified, a supporting frame having a plating side member provided with a standard on its top, castings attached to opposite sides of said standard, journal boxes in said castings, and impression cylinders journaled in said boxes, plate cylinders, and castings attached to the first mentioned castings and having depending portions with enlarged circular heads in which the adjacent trunnions of the plate cylinders are journaled.

2,104,738
BISMUTH ALLANTOINATE AND PROCESS OF MAKING IT
William H. Engels, Rahway, and Gustav A. Stein, Elizabeth, N. J., assignors to Merck & Co. Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application December 12, 1936, Serial No. 116,646
4 Claims. (Cl. 260—11)



1. As a new product suitable for therapeutic purposes, bismuth allantoinate.

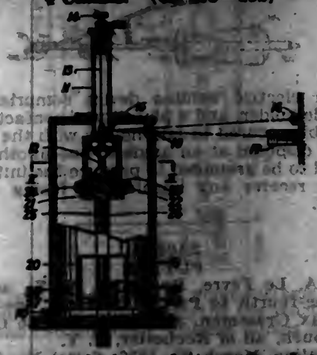
2,104,739
MACHINE FOR PEENING THE BOTTOMS OF SHOES
Andrew Eppler, deceased, late of Lynn, Mass., by Ella P. Eppler, executrix, Lynn, and James P. Frederickson, Wellesley, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application September 10, 1936, Serial No. 100,158
20 Claims. (Cl. 12—137)

1. In a shoe-pressing machine, the combination with means for pressing the bottom of a shoe, of means for supporting the shoe at the heel end and at the forepart in the pressing operation, an additional support for the shoe between the heel end and the forepart movable to a position determined by the shoe by pressure of the shoe on said additional support, and means for forcing said additional support more firmly against the shoe after it has been thus positioned by the shoe.

2,104,740
GAME APPARATUS
Clifford F. Evans, Los Angeles, Calif., assignor to Gordon Novelty Company, Los Angeles, Calif., a corporation of California
Application January 23, 1937, Serial No. 122,000
20 Claims. (Cl. 273—142)

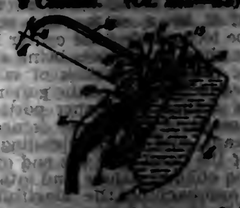
1. In a game apparatus, a bowl, a pair of disks mounted for rotation within said bowl, said disks being arranged one above the other, there being a row of perforations formed in the upper disk adjacent its edge, a motor for imparting rotary motion to the lower disk, the upper disk being mounted for vertical movement relative to the lower disk, and driving connections between the two disks, which driving connections are in engagement when the upper disk is in its lowered position.

2,104,741
PROCESS FOR HALOGENATION OF MATERIALS
Colin G. Fink, New York, N. Y.
Application October 25, 1935, Serial No. 46,816
8 Claims. (Cl. 75—112)



1. The process of halogenating materials in a vessel having a metal reacting with a halogen at relatively low temperatures but not at operating temperatures, which comprises heating such metal and the charge to above said reacting temperatures and then introducing the halogen as a gas to react with the charge.

2,104,742
TOY
Curt Hermann Fleischer, Wethersfield, Conn.
Application September 16, 1935, Serial No. 40,800
5 Claims. (Cl. 46—23)



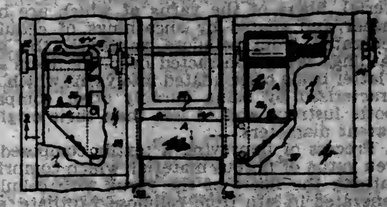
1. Interlocking building material for miniature toys such as doll houses, furniture, castles, bridges, and so forth, comprising a plurality of bars provided in their longitudinal edges with oppositely disposed notches extending at a right angle to the median line of the bars, of such width as to receive any other bar which may be inserted edgewise therein, the bars having their end edges perpendicular to the side edges and provided with oppositely disposed notches coinciding with the median line of the bars and of the same depth as the notches in the side edges and adapted to receive any other bar which may be inserted edgewise therein so that the bars may be keyed together to form siding, roofing, walks, chairs and the like, in combination with similar bars provided with beveled ends and notches formed in the ends normal to the bevel, there being other notches formed in the longitudinal edges similar in shape, in depth, and in angular inclination to the notches in the first named bars, the beveled ends permitting of the bars being butted end to end and slope or diverge from each other for building gables and other articles where the units will extend in the form of a V relative to each other, the notches in the beveled ends of the second named bars permitting the first named bars being received edgewise therein to key all of the bars together.

2,104,743
METHOD OF CORRELATING SUBSURFACE STRATA
Henry N. Barnes, Berkeley, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application January 23, 1937, Serial No. 122,187
4 Claims. (Cl. 175—183)

4. The method of correlating subsurface strata which comprises the steps of measuring the magnetic properties of samples from a series of otherwise unidentifiable strata and comparing the values thus found with values of magnetic properties of samples from a second series of strata so that strata common to both series may be identified.

2,104,744
POURING SPOUT CONTAINER
John M. Rothersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application September 15, 1934, Serial No. 744,239
9 Claims. (Cl. 222—83)

1. A container comprising a nozzle having inner and outer concentric walls adjacent its rim edge, a pouring spout removably engaged with said nozzle, said spout comprising a pouring lip and spout body, the latter being formed with spaced inner and outer concentric walls, the former having frictional engagement inside of said nozzle when the pouring spout is engaged to the container, and resilient means associated with said outer concentric spout wall for engaging outside of said nozzle adjacent its rim edge to hold the spout in position for pouring.

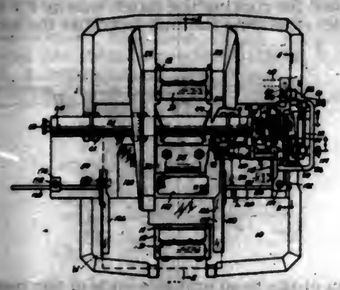


2,104,745
ROCKING BED [illegible]
Harry M. Newell, Richard H. Hastings, and Clarence E. Gardner, Kansas City, Mo., assignors, by direct and mesne assignments, to Clyde Leavenpaul, trustee, Kansas City, Kans.
Application April 29, 1936, Serial No. 74,820
2 Claims. (Cl. 155—35)

1. A hospital bed having head and foot ends and rockingly mounted intermediate its ends for swinging its ends in relatively wide arcs, an oscillating driven lever, a link connecting said lever to the bed for rocking the latter, means for longitudinally extending the link to adjust the angular

relation of the head and foot ends of the bed with respect to the horizontal, and means to shift the point of connection between the link and the rocking lever to vary the amplitude of rocking movement imparted to the bed.

2,104,746
DEVICE FOR ANCHORING INKING RIBBONS TO SPOOLS
Carl J. Hueber, Cleveland Heights, Ohio, assignor, by mesne assignments, to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application June 28, 1935, Serial No. 28,506
19 Claims. (Cl. 242—74)



1. A spool having a cavity and a slot connecting it with the exterior, the edge of the slot on one side registering with the side wall of the cavity, the edge of the slot on the other side overhanging the cavity to provide a ledge, a lip at the surface of the spool leading from the side of the cavity where the wall registers with the slot and projecting circumferentially toward the opposite side of the cavity, there being a recess in the body of the spool intersecting the ledge and extending opposite the lip, combined with a ribbon having a head with an intermediately located offset therein and a tongue extending from the offset, the offset coacting with the lip of the spool and the tongue of the head coacting with the recess of the spool.

2,104,747
LISTING MECHANISM FOR ADDRESSING MACHINES
Carl J. Hueber, Cleveland Heights, Ohio, assignor, by mesne assignments, to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application February 25, 1936, Serial No. 65,986
25 Claims. (Cl. 101—47)

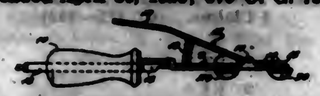
1. In a listing mechanism, the combination for means for making successive impressions on a

detached sheet, means to advance the sheet once for each impression made thereon, and a roller

and gripping means associated therewith to receive the impressed sheet and roll it up.

2,104,748
CRISP SHEER FABRICS AND PROCESS OF MAKING SAME
Harold I. Huey, Saylesville, and William W. Russell, East Providence, R. I., assignors to Sayles Finishing Plants, Inc., Saylesville, R. I., a corporation of Rhode Island
No Drawing. Application February 28, 1934, Serial No. 713,418
6 Claims. (Cl. 8—30)

2. A sheer fabric comprising cellulose fibrous material, fibers of the yarns of which are held together and coated by sheathings of cellulose regenerated from cellulose xanthate, the said sheathings being contracted over the fibers and the latter being consolidated into yarns which are characterized by being durably crisp, compact, smooth, lustrous and of less than their original apparent diameters.



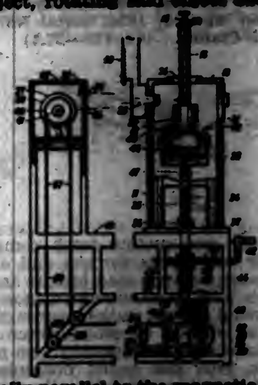
5. Process of improving a textile composed of woven yarns of fibrous material, which comprises sheathing the fibers of the yarns with cellulose regenerated in situ from cellulose xanthate, and subjecting the so-sheathed product to mercerization treatment while the same is under tension.

2,104,749
WELDING APPARATUS
James L. Jones, Washington, D. C.
Application November 2, 1935, Serial No. 48,961
2 Claims. (Cl. 219—4)
(Granted under the Act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. Apparatus for welding comprising a pair of electrodes; a circuit for supplying electric energy to said electrodes; and delayed action means controlled by the temperature of said electrodes for interrupting said circuit a predetermined time interval after welding temperature is reached.

2,104,750
WELDING APPARATUS
James L. Jones, Washington, D. C.
Application November 6, 1935, Serial No. 48,847
6 Claims. (Cl. 219—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. An electric welding device comprising an electrode holder, and a plurality of contact plates removably secured to said holder with the planes thereof disposed at an angle to one another and adapted to be grounded to produce the initial arc and to receive any burning or fusing caused thereby.



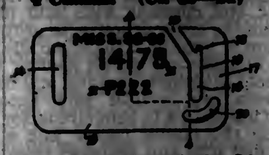
2,104,751
PUTTEE
Ralph A. Le Fevre, Rochester, N. Y., assignor of one-fourth to Parker E. Trout, one-fourth to Max Grossman, and one-fourth to Clayton D. Roush, all of Rochester, N. Y.
Application March 27, 1936, Serial No. 71,191
3 Claims. (Cl. 36—3)

1. A puttee for covering the lower leg, comprising a lower portion constituting a gaiter and adapted to cover the upper portion of the foot, said gaiter portion being made of two pieces joined together by a seam, said seam being adapted to be located over the center line of the instep of the shoe, said pieces being sprung upwardly along the lower portion of said seam, a band attached to one side of the gaiter and having a curved outline, the upper portion of said band being made of two pieces joined together by a long seam, said seam extending from the inner edge of the band near the end of the band and extending obliquely along and into said band to a point approaching the longitudinal midpoint of the band, and being sprung across said seam, said band being adapted to be wrapped around the leg up to and including the calf of the leg, and means for fastening the upper portion of the puttee in place on the calf of the leg.

2,104,752
METHOD AND MEANS FOR DETERMINING MAGNETIC POLARITY
Edward D. Lynton, Glendale, and Henry N. Herrick, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application January 25, 1937, Serial No. 123,164
10 Claims. (Cl. 175—182)

1. A method of determining the magnetic polarity of a body of weakly magnetized material having a generally known magnetic axis arrangement, comprising the steps of placing said body within the influence of a magnetic system of known magnetic characteristics in such a position that the magnetic lines of force of the known magnetic system are substantially at right angles to the magnetic lines of force of the weakly polarized object, rotating said object about an axis

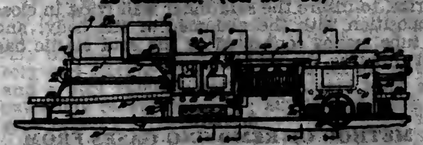
substantially parallel to the magnetic axis of said magnetic system, and measuring the reaction between the two magnetic systems during said rotation.



2,104,753
LOCAL ANESTHETIC
Randolph T. Major, Plainfield, N. J., and Albert R. Reese, Pittsburgh, Pa., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application November 14, 1934, Serial No. 752,949
6 Claims. (Cl. 260—465)

1. A phenyl-α-naphthyl carbamic acid alkylamine ester.

2,104,754
PROCESSES FOR THE MANUFACTURE OF COMPLEX METALLIC SALT
Daniel W. Marsh and Benjamin H. Marsh, Oakland, Calif.
No Drawing. Application November 30, 1935, Serial No. 52,196
14 Claims. (Cl. 23—93)



1. The process of making complex metallic salt which comprises reacting soluble cupric salts of the class consisting of the sulphate, chloride and nitrate with ammonia in aqueous solution added to alkalinity to form a suspension of insoluble copper salt in chemical combination with ammonia, and reacting said suspension with metallic copper and oxygen-containing gases.

2,104,755
COMBINATION COTTON TIE BUCKLE AND IDENTIFICATION TAG
Ruth Maxine, and Oliver H. Kemp, deceased, late of Memphis, Tenn., by Ruth Maxine, executrix, Memphis, Tenn., assignors to Ruth Maxine George, Vicksburg, Miss.
Application January 25, 1934, Serial No. 708,313
4 Claims. (Cl. 40—21)

1. A combination cotton tie buckle and identification tag comprising an elongated metal plate having at opposite ends thereof parallel transverse slots, said slots being widely spaced to leave a relatively large face between them for the reception of identifying characters, said plate having a slit leading to a side edge of the plate from one of said slots and defining a hook in the respective end, said last-named slot at one end intersecting the overhanging portion of the hook, and an arcuate reinforcing rib concentric with the other end of said slot, substantially as set forth.

2,104,756
METAL REMOVING MACHINE
Aleksandr Oberhoffner, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a corporation of Illinois
Application June 2, 1934, Serial No. 728,709
13 Claims. (Cl. 29—33)

1. A machine tool comprising, in combination, an elongated base, a plurality of work fixtures mounted in spaced relation along said base and adapted to support a series of like work pieces respectively in different angular positions, a tool head mounted on said base for movement in a unidirectional cutting stroke successively into operative relation with said fixtures to perform similar metal removing operations on different surfaces of said work pieces, and drive means for reciprocating said tool head first in said cutting stroke through a series of rapid approach and feed movements for each fixture and then in a continuous rapid traverse return stroke.

2,104,757
INSECTICIDE SPRAY
Walter C. O'Kane, Durham, N. H.
No Drawing. Application May 31, 1934, Serial No. 728,497
10 Claims. (Cl. 167—43)

1. As an insecticidal agent, a substantially non-aqueous combination of an oil selected from the class consisting of vegetable and animal oils, a contact insecticide selectively soluble in said oil, and an emulsifying agent soluble in said contact agent in proportions to give an unstable dispersion in water.

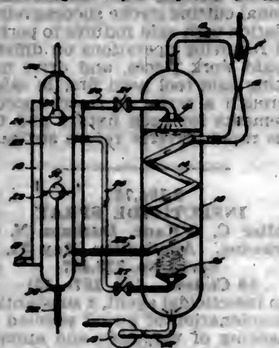
2,104,758
METHOD AND APPARATUS FOR CONTROLLING THE DISTRIBUTION AND PRESSURE OF CERTAIN HUMAN BODY FLUIDS AND CONTENTS
John R. Pepper, United States Navy
Application March 13, 1936, Serial No. 68,422
4 Claims. (Cl. 128—96)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device of the character described, an inelastic band adapted to embrace the body over the abdominal region; fastening straps longitudinally attached to the said band for securing the same about the body; perineal straps attached to the said band and downwardly suspending, and of such length as to extend to and engage with the rear section of the said band; an elastic bag attached to the inner surface of the said band, the said elastic bag having two

walls, an inner wall and an outer wall, the said outer wall secured against the inner side of the said band, and the said inner wall being connected with the said outer wall by bellows-like

strips, to insure the said inner wall lying in close apposition with the abdomen of the body; and a tube means connected to the said elastic bag for inflating the said bag.

2,164,759



METHOD OF REMOVING GASES FROM LIQUIDS

Bo Folke Randel, San Diego, Calif.

Application February 10, 1936, Serial No. 63,173

6 Claims. (Cl. 183—2.5)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of removing absorbed gases from a liquid in which they are in solution comprising vaporizing a non-miscible fluid and passing the same in diffused form through the liquid to absorb the dissolved gases, entraining the vaporized fluid and liberated gases in a jet of vaporized liquid, condensing the vapor and vaporized liquid and stratifying the same, vaporizing the condensed non-miscible fluid and passing the same again through said solution.

2,164,760

PLASTIC MATERIALS

Archibald Renfrew, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application November 22, 1935, Serial No. 51,172. In Great Britain September 17, 1934

6 Claims. (Cl. 260—2)

1. Process of polymerizing methyl methacrylate which comprises carrying out the polymerization reaction in the presence of a polymerization catalyst and a polymerization inhibitor.

2,164,761

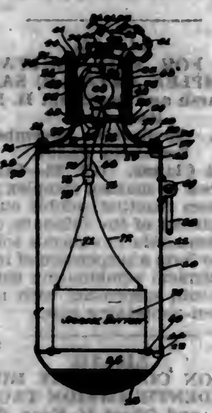
WELDING AND CUTTING TORCH

Carl R. Richter, Schenectady, N. Y.

Application April 8, 1936, Serial No. 73,291

5 Claims. (Cl. 158—27.4)

1. A welding and cutting torch comprising a tip, a handle and inlets for gas and oxygen, a mixing chamber between said handle and tip, an oxygen supply tube longitudinally disposed in said chamber having lateral outlet openings, a plurality of gas supply openings communicating with said chamber and disposed in an intersecting direction with said outlet openings, and a baffle in said chamber restricting the outlet passage thereof, said baffle comprising a substantially conical shaped casing surrounding said tube and having an opening at its small end through which said tube extends and through which the mixed gases pass, and a spreader on the extending end of said tube, said spreader overlying the open end of said baffle.



2,164,762

SAFETY WATER LIGHT

William B. Risor, Cincinnati, Ohio

Application June 2, 1936, Serial No. 83,113

4 Claims. (Cl. 177—329)

3. A safety water light comprising a closed buoyant weighted housing, a source of electrical energy within the housing, electrical illuminable means above and supported from the housing, means supported from the top of the housing encompassing and coacting with said illuminable means, when the latter is active, to provide a concentric beam of light on a plane parallel with the water, an illuminating circuit leading from said source to said illuminable means, and means suspended from and within said encompassing means and interposed in said circuit for normally maintaining the circuit closed, and a shiftable part extended into and operated from the exterior of said encompassing means for opening said circuit.

2,164,763

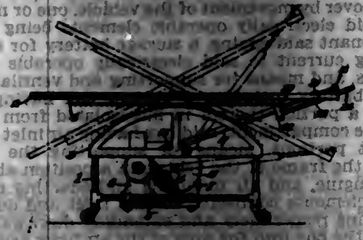
SPRAYING DEVICE AND REFILL FOR SAME

William A. Reeber, Lynbrook, N. Y.

Application January 23, 1937, Serial No. 121,662

4 Claims. (Cl. 239—58)

1. A spraying device of the class described comprising a rear header, having means for connecting it to a source of water supply, a front header, a stepped cylinder connected between the said headers with its large end connected to the rear header; a stopper removably disposed in the front header; an open-ended refill tube, containing the spraying material to be mixed with the water passing through the device, inserted in the small cylinder with its front end secured in said stopper, the stepped piston operatively disposed in the large cylinder and with its small end engaged in the refill tube, a passage formed transversely through the stopper; an orifice formed in the rear of the stopper through which the material from the tube is extruded; a by-pass leading from the rear header to the front header for carrying water through the passage in the stopper to mix with the material extruded from the refill tube by the action of the piston; and a nozzle for discharging the solution from the device.



2,164,764

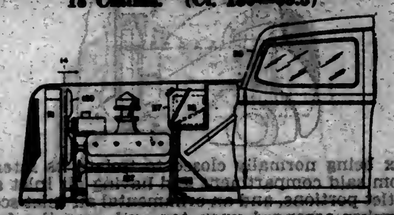
ROCKING PLATFORM FOR THERAPEUTIC TREATMENTS

Clarence E. Sennett, Detroit, Clarence and Harry H. Howell, Kansas City, Mo., assignors, by direct and mesne assignments, to Clyde Lonergan, trustee, all of Kansas City, Kans.

Application July 22, 1935, Serial No. 32,550

2 Claims. (Cl. 128—33)

1. In apparatus for therapeutic treatment, a base frame and an oscillatory bed frame superimposed upon the base frame for oscillatory movement thereon, a toggle connection between one end of the bed frame and the corresponding end of the base frame, the toggle comprising two arms pivotally jointed together at their adjacent ends, a motor-driven shaft, a crank-pin actuated for circuitous travel by and around the axis of the shaft, and a pitman pivoted at one end to the wrist pin and at the other end to the arm of the toggle directly attached to the bed frame and at a point on said toggle at the opposite side of the joint thereof from the point of attachment of the toggle to the bed frame.



2,164,765

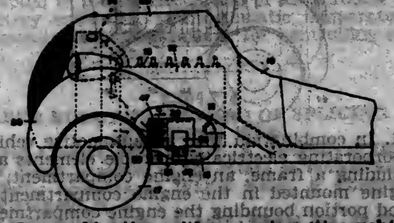
BATTERY INSTALLATION

Walter S. Saunders, Pontiac, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

Application February 20, 1936, Serial No. 64,909

18 Claims. (Cl. 136—93.5)

18. In a battery installation for motor vehicles, the combination with the motor hood, radiator and radiator-cooling fan of a vehicle, of a battery beneath the hood, a box receiving the battery and having an air inlet and an air outlet, and a duct communicating with said inlet and extending forwardly in the air delivery path of said fan.



2,164,766

STORAGE BATTERY INSTALLATION

Walter S. Saunders, Pontiac, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

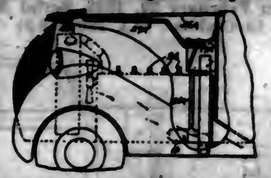
Application August 21, 1936, Serial No. 97,200

14 Claims. (Cl. 136—93.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and having an engine compartment and an outside panel defining at least one wall of said compartment, said engine compartment having an engine therein which develops heat during operation, one or more of said electrically operable elements being appurtenant said engine, a storage battery for supplying current to said electrically operable elements, supporting means for said battery, box projecting from the outside of said panel and having air inlet portions upon the outside thereof for inducing a ventilating draft through the box, said box having a cover removable from inside the compartment.

2,164,767

STORAGE BATTERY INSTALLATION



Walter S. Saunders, Pontiac, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

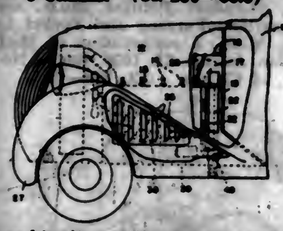
Application August 21, 1936, Serial No. 97,210

4 Claims. (Cl. 136—93.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and having a frame, an engine mounted in the frame, one more of said electrically operable elements being arranged appurtenant the engine, hood-like enclosing means defining a compartment for the

engine, a storage battery for supplying current to said electrically operable elements, and means for supporting and ventilating the battery including a battery box having at least one wall bounding a portion of said engine compartment, said

box being normally closed to isolate its interior from said compartment and having air inlet and outlet portions, and an ornamental air inlet scoop member arranged upon top and near the front of said hood-like enclosing means and connected to said inlet portion of the box.



2,104,768

STORAGE BATTERY INSTALLATION

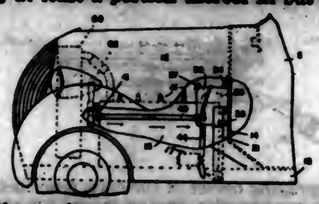
Walter S. Saunders, Pontiac, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

Application August 21, 1936, Serial No. 97,211

3 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and including a frame, an engine compartment, an engine mounted in the engine compartment, a hood portion bounding the engine compartment, a mudguard lying beside and outside said hood portion and engine compartment, one or more of said electrically operable elements being appurtenant the engine, a storage battery for supplying current to said electrically operable elements, and means for supporting and ventilating said battery including a box arranged adjacent the engine and substantially enclosing the battery, the box having air inlet and outlet portions, and means for introducing air into the box including forwardly directed air-scooping means arranged in said hood portion beneath the mudguard and substantially below the box, and an air inlet conduit extending upwardly from said air scooping means to the box.

2,104,769



STORAGE BATTERY INSTALLATION

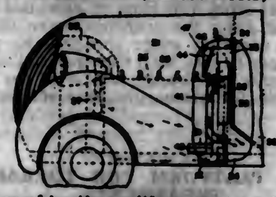
Walter S. Saunders, Pontiac, Mich., assignor to The American Forging & Socket Company, Pontiac, Mich., a corporation of Michigan

Application August 21, 1936, Serial No. 97,212

6 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and including a frame, an engine compartment, a passenger compartment, an engine, radiator, and air circulating fan in the engine compartment, one or more of said electrically operable elements being appurtenant said engine, a storage battery for supplying current to said electrically operable elements, and means for supporting and ventilating said storage battery including a battery box having at least a portion thereof in but isolated

from the engine compartment, said box having air inlet and outlet portions, and means defining a passage connected to the inlet portion and opening directly behind the fan, to direct into the box a part of the blast of the fan.



2,104,770

STORAGE BATTERY INSTALLATION

Walter S. Saunders, Pontiac, Mich., assignor to The American Forging & Socket Company, Pontiac, Mich., a corporation of Michigan

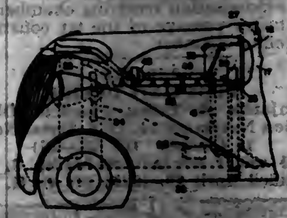
Application August 21, 1936, Serial No. 97,213

4 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and including a frame, an engine compartment through which movement of the vehicle tends to induce an air blast, an engine in the engine compartment, means for cooling the engine including a fan arranged to induce an air blast thereover in the same direction as air is induced to flow thereover by movement of the vehicle, one or more of said electrically operable elements being appurtenant said engine, a storage battery for supplying current to said electrically operable elements, and means for supporting and ventilating said battery including a battery box having at least a portion thereof in but isolated from the engine compartment, said box having air inlet and outlet portions, means for supporting the box from the frame of the vehicle in a position above the engine, and air inducting and educting conduit elements connected to said inlet and outlet portions respectively and extending downwardly from the box into the area of the air blast around the engine, the inducting conduit element projecting below the engine and opening forwardly with respect to such air blast, and the educting conduit element opening rearwardly with respect to such air blast.

2,104,771

STORAGE BATTERY INSTALLATION



Walter S. Saunders, Pontiac, Mich., assignor to The American Forging & Socket Company, Pontiac, Mich., a corporation of Michigan

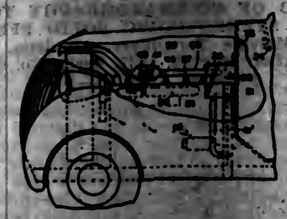
Application August 21, 1936, Serial No. 97,214

5 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and

including a frame, an engine compartment, an engine located in said engine compartment, one or more of said electrically operable elements being appurtenant the engine, a cooling radiator and engine driven fan for dissipating the excess heat of the engine, a storage battery for supplying current to said electrically operable elements, and ventilated supporting means for said battery comprising a battery box having at least a portion in but constituting an enclosure distinct from

the engine compartment, said box having air inlet and discharge portions, and means for inducing a positive circulation of air through the box including a draft fan assembly connected to one of said portions and comprising a casing, a blower fan portion within the casing, a motor fan portion outside the casing and connected to the blower fan portion to drive the same, said motor fan portion being located in and operable by an air draft which normally occurs over a portion of the vehicle when in operation.



2,104,772

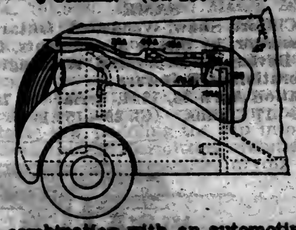
STORAGE BATTERY INSTALLATION

Walter S. Saunders, Pontiac, Mich., assignor to The American Forging & Socket Company, Pontiac, Mich., a corporation of Michigan

Application August 21, 1936, Serial No. 97,215

4 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and including a frame, an (internal) combustion engine carried by the frame having an intake manifold within which reduced pressure exists during operation of the engine, one or more of said electrically operable elements being appurtenant said engine, a storage battery for supplying current to said electrically operable elements, and ventilated supporting means for said battery comprising a battery enclosure arranged near said engine and having air inlet and outlet portions including an air inlet conduit connected thereto and extending to and having an inlet opening located in a position to intercept air unheated by the engine, an electrically operable draft fan connected to one of said portions and adapted to induce circulation of air through the battery enclosure, and automatic temperature-responsive switching means for controlling said fan.



2,104,773

STORAGE BATTERY INSTALLATION

Walter S. Saunders, Pontiac, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

Application August 21, 1936, Serial No. 97,216

6 Claims. (Cl. 180—68.5)

1. In combination with an automotive vehicle incorporating electrically operable elements and including a frame, an engine mounted in the frame which develops waste heat during operation, one or more of said electrically operable elements being appurtenant the engine, a storage battery for supplying current to said electrically operable elements, switching means for controlling delivery of such current, and ventilated supporting means for said battery, comprising a battery enclosure located relatively close to the engine and having air inlet and outlet portions, air conducting means connected to the inlet portion and projecting to a position to intercept air unheated by the engine, an electrically operable draft fan connected to one of said portions and adapted to induce circulation of air through the battery enclosure, and automatic temperature-responsive switching means for controlling said fan.

2,104,774

PAPER ROLL AND METHOD OF SPLICING TO EXPIRING WEB

David J. Scott, Plainfield, N. J., assignor to David J. Scott, executor of the estate of Walter Scott, doing business as Walter Scott & Company, Plainfield, N. J.

Application June 12, 1935, Serial No. 26,306

12 Claims. (Cl. 242—58)

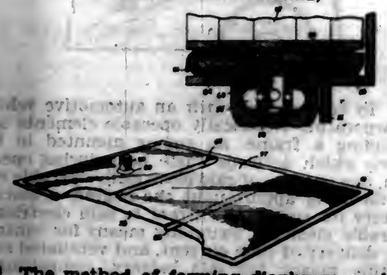
1. A roll of paper adapted for rotation on its axis and having an exposed leading end, a weakened area in said end, and means for connecting said weakened area to the body of the roll, for the purpose set forth.

7. The method of separating a web end, which is in connection with a web roll at a point on its leading edge, which consists in causing adherence of the web end to a running web, thereby tearing the web end beside the point of connection.

2,104,775

FIRE EXTINGUISHING LIQUID

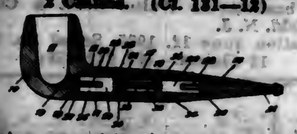
Jay Lawrence Scot, Fairfield, Conn.



No Drawing. Application June 17, 1936, Serial No. 85,926

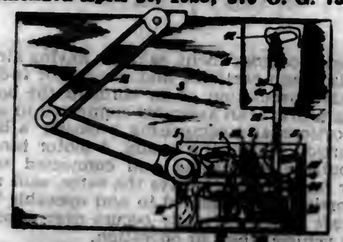
7 Claims. (Cl. 23—9)

2. A fire extinguishing liquid including a highly volatile non-combustible liquid substance, cellulose acetate mixed with said non-combustible



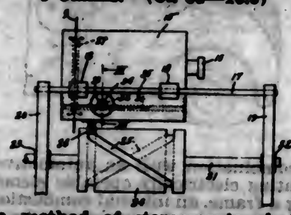
liquid, and an anti-freeze agent combined therewith, said cellulose acetate and anti-freeze agent combined being less than one-half of the total mass.

2,104,776
DIAPHRAGM AND METHOD OF MAKING SAME
William Clifford Shaw, Woodstock, Ontario, Canada, assignor, by mesne assignments, to Linderman Devices, Incorporated, Wilmington, Del., a corporation of Delaware
Application April 23, 1934, Serial No. 721,844
17 Claims. (Cl. 29—152.1)



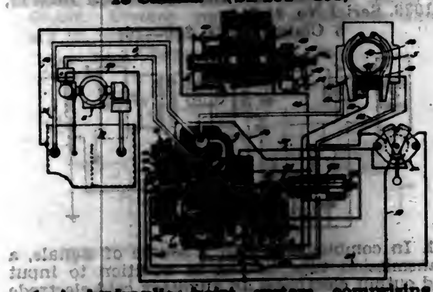
1. The method of forming diaphragms which comprises the steps of forming a metallic leaf with a transverse rib superimposing a second leaf on said first leaf and uniting said leaves peripherally to form a fluid chamber, bending both of said leaves simultaneously upon themselves along a line which was substantially the axis of said rib on the outside of the fold produced by bending the leaves upon themselves whereby a fluid passage around the fold is provided to form a communication between the different portions of the chamber formed by said leaves.

2,104,777
SMOKING PIPE
Frank Hedrekins Silvertherne, New York, N. Y.
Application July 6, 1935, Serial No. 30,669
2 Claims. (Cl. 131—12)



1. A pipe comprising a bowl having a shank, and a bit, the shank having a bore therethrough, said bore having a restricted opening at its inner end communicating with the bowl, a chamber, and an enlarged portion extending from the chamber to the outer end of the shank, said chamber having a diameter greater than that of the communicating passage and less than that of said enlarged portion, a trap positioned in the chamber, said trap comprising a cylindrical shell and a spout, said spout constituting a closure for one end of the shell and having an opening therethrough communicating with the interior of the shell, a tube extending through the opposite wall of the shell and in alignment with and fitting into the restricted opening of the bore, said bit having a communicating passage of small diameter at the mouth end thereof and of a larger diameter from an intermediate point in the length thereof to the opposite end of the bit, the diameter of the latter passage being greater than the external diameter of the adjacent end of the spout, said spout extending from the shell and projecting into the latter passage, said bit having a reduced portion fitting into the largest diameter portion of the shank bore and abutting the adjacent end of the shell, the communicating passage of small diameter in the bit having a tube fitted therein projecting into its adjacent and larger diameter communicating passage and spaced from the longitudinal walls thereof, said tubes and spout all being in alignment and spaced from each other whereby any liquids and precipitations in the smoke may be released from the smoke during its passage from the bowl to the tip of the bit, the shell constituting a condensation receiving chamber and the large diameter passage of the bit constituting a smoke cooling chamber.

2,104,778
PLOTTING DEVICE
Benjamin R. Talley, Fairfield, Ohio
Application November 24, 1936, Serial No. 112,500
14 Claims. (Cl. 33—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination with a plotting board, a support movable bodily over the board, means holding said support at a predetermined orientation for any position thereof on said board, stereoscopic means on said support for scanning graphic subject-matter on said board, and a plotting stylus carried by said support for tracing on said board the movement of said support.

2,104,779
METHOD OF CINEMATOGRAPHY TO PRODUCE STEREOSCOPIC SOLID EFFECTS
Ivan Melville Terwilliger, Altadena, Calif.
Application May 23, 1932, Serial No. 612,297
6 Claims. (Cl. 88—16.6)

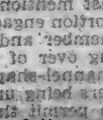
1. The method of stereoscopic photography, which consists in photographing a series of images of foreground and background objects upon a single film strip with both foreground and background objects in focus, photographing a second series of images of the same objects on the same fixed optical axis at a distance from the objects differing by a foot or less from the first position, the second series of exposures being lesser in number than the number of exposures in the first series, with the foreground object in sharp focus, and the background out of focus, and reducing the images of the foreground object to a common coordinate size with the same images in the first series and intermingling the exposures of the first series and the second series.

2,104,780
HYDRAULIC HOISTING UNIT AND CONTROL SYSTEM THEREFOR
Harry F. Vickers, Detroit, Mich.
Application September 22, 1932, Serial No. 634,630
Renewed April 1, 1937
13 Claims. (Cl. 254—168)

1. A hydraulic hoist system comprising a source of pressure supply, a motor-pump unit for said hoist, directional control means, orifices through which liquid flows to and from said unit, and means responsive to the position of said control means for effecting a predetermined pressure drop across said orifices whereby to control the rate of movement during hoisting or lowering.

2,104,781
GAS PRODUCING AND SMOKE CONSUMING FIREBOX AND DOWN DRAFT KILN
William Edred Warwood, Toronto, Ontario, Canada
Application June 13, 1936, Serial No. 84,803
1 Claim. (Cl. 75—145)

In gas producing and smoke consuming fire boxes and down draft kilns, a kiln comprising a combustion chamber having an arched crown and air passages leading through the crown portion and through the side wall adjacent to the crown portion, a floor beneath the combustion chamber and having a series of flues leading to a common flue, a plurality of gas chambers partially within said combustion chamber and having vertical discharge therefrom, fuel inlets leading into said gas chambers, a plurality of coke tables within said gas chambers adapted to hold the fuel, ash outlets leading into said gas chambers, said gas chambers having arches adjacent to the fuel inlets in downward step formation and terminating in the vertical discharges.



2,104,782
SULPHATED ESTERS OF POLYCARBOXYLIC ACIDS
James H. Werntz, Manchester, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 14, 1934, Serial No. 757,465
18 Claims. (Cl. 260—99.13)

13. A monosulphated ester of an aliphatic polycarboxylic acid having not more than 6 carbon atoms, said ester having the sulphate group attached solely to a carbon atom in the hydrocarbon residue of the acid.

2,104,783
MANUFACTURE OF POROUS BODIES
Maxwell L. Whitacre and Peter de Lacaw, Niagara Falls, N. Y., assignors, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
No Drawing. Application December 8, 1933, Serial No. 701,568. Renewed March 20, 1937
22 Claims. (Cl. 25—156)

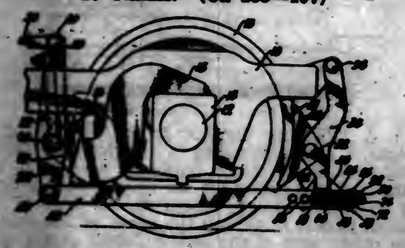
1. In the method of making porous bodies which comprises forming a slip containing gas generating material and permanent ingredients including a catalyst for the gas generating material, the steps comprising forming the ingredients into a stable slip, puddling the slip into a mold, unstabilizing the slip, permitting evolution of gas to swell the slip, and thereafter drying the slip.

2,104,784
ELECTRON DISCHARGE DEVICE
Erich Wiegand, Berlin-Waidmannslust, Wilfried Meyer, Birkenwerder, near Berlin, and Hans Pulfrich, Berlin-Wilmersdorf, Germany, assignors to Allgemeine Elektricitäts Gesellschaft, Berlin, Germany, a corporation of Germany
Application November 14, 1935, Serial No. 49,650
In Germany November 24, 1934
6 Claims. (Cl. 250—27.5)

1. In combination, an envelope insulating wall consisting of a higher metal oxide selected from the group consisting of titanium oxide, uranium oxide, or cadmium oxide and a ceramic insulating substance of the group consisting of quartz, magnesia, aluminum oxide or aluminum silicate, and a current conducting portion in said wall consisting of a lower oxide of the metal oxide selected from the first-mentioned group and one of said ceramic insulating substances.

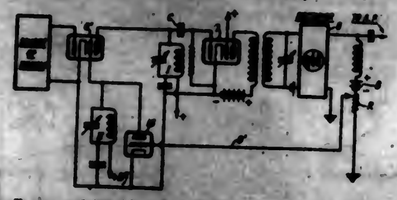
2,104,785
VIBRATING ENDLESS SCREEN
Swan M. Akerson, Long Beach, Calif.
Application December 10, 1934, Serial No. 756,824
3 Claims. (Cl. 209—329)

1. A vibrating endless screen comprising a frame, a shaft journaled in said frame adjacent each end of the frame, sprockets on each of the shafts, chains encircling the sprockets, a plurality of screen panels, means at one edge of the screen panels attaching the same to the chains, the other edge of the screen panels overlapping the adjacent panel, said screen panels extending transversely of the frame to form an endless screen, drive means extending to one of the shafts, a vibrating frame engaging the upper reach of said chains, resilient supporting means for said vibrating frame, an off-balance shaft journaled on the first named frame, a sleeve surrounding the last named shaft, means journaling the last named shaft in the sleeve, a resilient



means attaching said sleeve to the vibrating frame, and means to rotate said shaft whereby the vibrating frame is vibrated.

2,104,786
ELECTRICAL CONNECTOR
Gustaf E. Andre, Richmond, Ind., assignor to Belden Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 23, 1936, Serial No. 70,194
4 Claims. (Cl. 173—332)



1. A contact element for an electrical connecter comprising an elongated, channel-shaped contact member, and a second elongated contact member positioned co-extensive therewith, said last mentioned member having a generally flat portion engaging one end of said channel-shaped member and securely affixed thereto by swedging over of the adjacent side portions of said channel-shaped member, said contact members being unconnected at the other end thereof to permit the contact with which said contact element is used to be moved therebetween, one of said engaging portions having a transversely extending rib or projection formed therein and the corresponding section of the other contact member having a similarly shaped, complementary recess or depression formed therein, these complementary portions cooperating during the assembling of said contact element, to securely affix the conductor with which said connecter is used thereto.

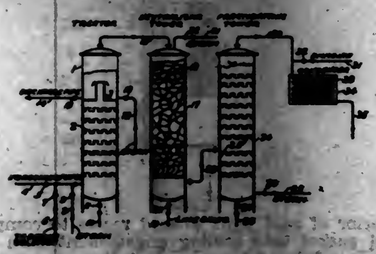
2,104,787
BRAKE SLACK ADJUSTER
Martin P. Stomberg, Hinsdale, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 15, 1937, Serial No. 120,653
16 Claims. (Cl. 188—197)

1. In a brake slack adjuster, the combination of a tension rod, a lever, a guide having a slot formed therein connected to the lever, a member slidably mounted in the slot, said tension rod being connected to said member, and an adjusting screw rotatably mounted within said guide, said screw being in threaded engagement with said member and being adapted when rotated to move said member in said slot.

2,104,788
AUTOMATIC FIDELITY CONTROL CIRCUIT
Rene A. Braden, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application July 29, 1933, Serial No. 682,742. Divided and this application June 17, 1936, Serial No. 85,644
8 Claims. (Cl. 250—20)

1. In combination with a source of signals, a transmission tube having in addition to input and output electrodes an auxiliary said electrode disposed in the electron stream to the anode, a circuit tuned to a desired signal frequency connected to the said output electrodes, said tuned circuit having a resonance curve characteristic of a predetermined shape, a reactive network tuned to said desired frequency connecting said auxiliary electrode and the tube cathode, an impedance in shunt with the reactive network, and means, responsive to variations in signal amplitude, for changing the magnitude of said shunt impedance thereby to control the effect of said reactive network on said characteristic shape.

2,104,789
HALOGEN SUBSTITUTED BUTADIENES AND PROCESS FOR PREPARING THEM
Wallace Hume Carothers, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 6, 1937, Serial No. 129,270
17 Claims. (Cl. 260—162)



1. Process which comprises treating a halogen-4-butadiene-1,3 with an isomerization catalyst and isolating the resulting halogen-2-butadiene-1,3.

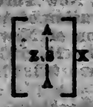
2,104,790
SYSTEM OF DERIVING DECORATIVE FINISHES ON ARTICLES OF MANUFACTURE
Lloyd V. Casto, Detroit, Mich.
Application July 31, 1935, Serial No. 34,634
31 Claims. (Cl. 41—36)

31. A decorative finish, comprising a ground color layer, a non-uniform layer containing pigment contrasting in operative effect with the ground color, a substantially transparent protective layer overlying the design, and a film adjacent one of said layers, thinner than the layer to which adjacent, said film containing a substantially uniform dispersion of lustering particles characterized by the property of imparting to the finish when illuminated and viewed from various angles a substantially uniform glowing appearance over relatively large areas of the subject without appearing to sparkle at any portion of such areas.

2,104,791
PROCESS OF TREATING HYDROCARBON OILS
Wallace A. Craig, Los Angeles, Calif., assignor to Vapor Treating Processes, Inc., Los Angeles, Calif., a corporation of California
Original application January 21, 1936, Serial No. 60,039. Divided and this application January 12, 1937, Serial No. 120,206
4 Claims. (Cl. 196—26)

1. In the process of refining hydrocarbon oil vapor by contact with aqueous maintained solution of a "heavy metal" salt selected from the group consisting of the chloride, bromide, sulphate, and nitrate of zinc, copper, cadmium, iron, chromium, manganese, aluminum, nickel and cobalt, at refining temperature, the improvement which comprises, modifying the temperature-vapor pressure-concentration relationship of said "heavy metal" salt solution sufficiently to refine the oil vapor, at required temperature and pressure, by adding thereto sodium chloride.

2,104,792
HIGH-FREQUENCY RESONANT SYSTEM
Alfred Crossley and Herbert E. Metcalfe, Chicago, Ill., assignors to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application August 14, 1936, Serial No. 95,624
14 Claims. (Cl. 178—44)



1. A selective high-frequency resonant system including three cooperating resonant circuits each having a capacitor and an inductor, said inductors being initially so mounted that their magnetic axes are mutually at right angles, one of said inductors being adjustable from its initial position to vary its coupling with the other two inductors, said other two inductors being so positioned that the direct inductive coupling between them is substantially zero.

2,104,793
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application March 5, 1937, Serial No. 129,622
14 Claims. (Cl. 196—4)

1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent comprising a product obtained by a mild gaseous oxidation of a chemical compound, by means of a medium containing oxygen in chemically uncombined form; said chemical compound being characterized by the presence of a polybasic carboxy acid residue and an oxygen-convertible fatty acid residue, and by a residue selected from the class consisting of polyhydric alcohol residues and non-oxygen-convertible fatty acid residues.

2,104,794
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application March 17, 1937, Serial No. 131,493
7 Claims. (Cl. 196—4)

1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a cation-active, surface-active substance of the formula type:

in which Z represents any monovalent hydrocarbon radical having at least six carbon atoms; AA represents at least one hydrocarbon radical and not more than two hydrocarbon radicals which replace two hydrogen atoms of the sulphonium radical; said hydrocarbon radicals being selected from the class consisting of monovalent hydrocarbon radicals and divalent hydrocarbon radicals, with the proviso that the total valency value of AA shall be two; and X represents a non-surface active, negative radical or component; the total number of carbon atoms present in AAZ being not over thirty-five.

2,104,795
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application June 21, 1937, Serial No. 149,474
12 Claims. (Cl. 196—4)

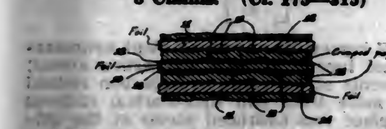
1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent comprising a high molecular weight polyether carboxy acid compound containing an acid radical, characterized by (a) being derived from an aliphatic polyhydric alcohol containing at least two carbon atoms and not more than four carbon atoms; (b) by the presence of at least one hydrocarbon radical having at least eight carbon atoms, said hydrocarbon radical being an aliphatic, cyclo-aliphatic, alicyclic, or aralkyl in nature; (c) said hydrocarbon radical being attached to an ether radical by means of an oxygen, sulfur, or nitrogen atom, or by means of a radical containing at least one of the said hetero atoms but said linkage still being through said hetero atom; and (d) the presence of at least two etheric oxygen atoms and by not more than three alkylene-oxy radicals directly attached to each other.

2,104,796

LUBRICATING OIL AND PROCESS FOR IMPROVING SAME

Melvin A. Dietrich, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 29, 1936, Serial No. 98,578
18 Claims. (Cl. 87—9)



1. A lubricant comprising a lubricating oil having incorporated therein a small amount of a compound having a molecular weight of at least 800 selected from the oil-soluble polymerized acrylic and alpha-alkyl substituted acrylic acid esters of amino alcohols and oil-soluble long-chain fatty acid salts of polymerized acrylic and alpha-alkyl substituted acrylic acid esters of amino alcohols, in which the amino alcohols are N-aliphatic substituted mono-hydric amino alcohols devoid of substituents other than aliphatic hydrocarbon radicals.

2,104,797

ELECTRICAL CONDENSER AND SPACING STRIP THEREFOR

Aniello Di Giacomo, New York, N. Y., assignor to Condenser Corporation of America, Jersey City, N. J., a corporation of New York

Application February 15, 1935, Serial No. 6,637
8 Claims. (Cl. 175—315)

4. In an electrolyte cell, a pair of metallic foils serving as electrodes, at least one of which foils is of film forming material, a spacer between them comprising crimped paper, the pockets produced in said spacer by the crimping thereof being substantially parallel, and of lengths substantially less than the over-all dimension of the crimp of said spacer as measured parallel to said pockets, and an electrolyte carried within and upon said paper and filling in said pockets.

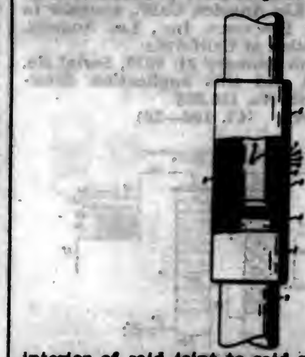
2,104,798

SPUN YARN FROM ARTIFICIAL STAPLE FIBERS AND METHOD OF MAKING SAME

Camille Dreyfus, New York, N. Y.

No Drawing. Application April 5, 1934, Serial No. 719,147
3 Claims. (Cl. 19—66)

1. Method of forming spun yarn, which comprises incorporating a weighting metal compound in short lengths or staple fibers containing organic derivatives of cellulose whereby the carding and drawing properties of said short lengths or staple fibers are greatly enhanced, associating said short lengths or staple fibers and spinning the same to form spun yarn.



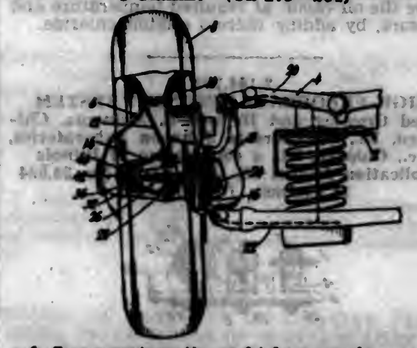
2,104,799

PACKING FOR PIPE JOINTS

Seth Evans, Houston, Tex.

Application December 20, 1935, Serial No. 55,405
4 Claims. (Cl. 285—146)

1. In a tool joint including one section having a threaded box member, and another section having thereon a tapered pin member threaded to engage with said box member, an annular recess formed at one end of said pin member, a seal ring shaped to fit within said recess and project slightly therefrom to contact with said box member when said members are screwed together, means to conduct pressure fluid from the



interior of said joint to said recess to compress said gasket into sealing engagement with said box member, and means to relieve pressure of fluid at the outer side of said ring.

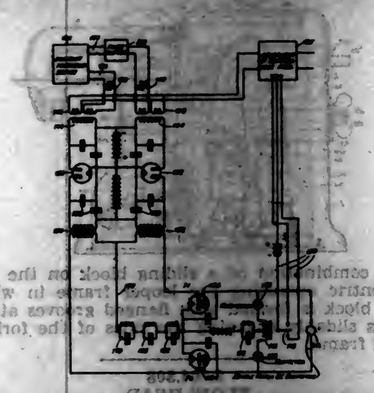
2,104,800

RADIO STATIC ELIMINATOR

Levi R. Grandy and Harry C. Deane, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application June 3, 1935, Serial No. 24,630
3 Claims. (Cl. 175—264)

1. In an automotive vehicle, an axle, a wheel having a pneumatic tire rotatably supported on an insulating lubricating film thereon, a hub in the wheel, a cap fitting in the open hub end, a resilient member secured within the cap and carrying contact means bearing against the axle end to electrically connect by a low resistance path the wheel with the axle bypassing the lubricating film.



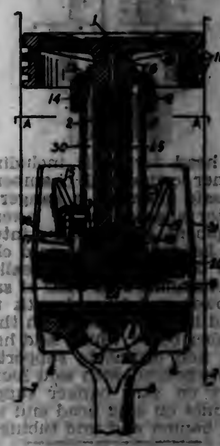
2,104,801

FREQUENCY CONTROL

Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Original application October 4, 1932, Serial No. 636,662. Divided and this application September 17, 1934, Serial No. 744,373
13 Claims. (Cl. 250—36)

1. The method of making a generator of controllable frequency substantially follow the frequency of a controlling source of substantially like frequency which includes combining two portions of energy from said controllable generator with two phase displaced portions from said source to produce a pair of phase displaced beats, the relative phases of which reverse when the frequency of said generator exceeds said source



and vice versa, and, utilizing the reversals in phase of the beats produced when said beats exceed a predetermined substantial frequency, to alter the frequency of the generator so as to substantially correspond in frequency to the frequency of the controlling wave.

2,104,802

PNEUMATIC DIFFERENTIAL PISTON FOR INTERNAL COMBUSTION ENGINES

Einar H. Hansen, Chicago, Ill.

Application March 15, 1935, Serial No. 11,190
2 Claims. (Cl. 123—78)

1. The combination, in an internal combustion engine, of a working piston, and a second reciprocatory member, a dash-pot device comprising a pneumatic cylinder, a piston rod extending through one end of the cylinder and connected at one end to the working piston and at the other end to a double-acting piston adapted to reciprocate in said cylinder, and cooling means for said rod comprising a relief valve suitably disposed at one end of the piston rod.

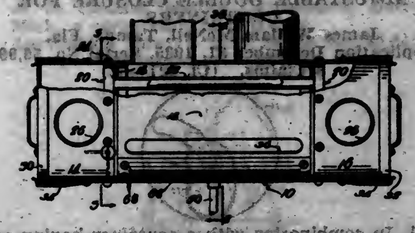
2,104,803

PROCESS FOR SEPARATING HIGHER ALIPHATIC ALCOHOLS FROM AQUEOUS EMULSIONS

Clyde O. Henke, Wilmington, Del., and Howard M. Parmelee, Salem, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 4, 1935, Serial No. 364
11 Claims. (Cl. 87—28)

1. A process of breaking an aqueous emulsion which is formed by diluting with water the reaction mixture obtained in the sodium-alcohol reduction of a higher fatty acid ester and which contains a higher aliphatic alcohol, a soap, caustic soda, a hydrocarbon solvent, and water, which comprises admixing said emulsion with an amount of a hydroxylated aromatic compound of the benzene series which is stoichiometrically equivalent to only a small part of the alkali present in the emulsion.



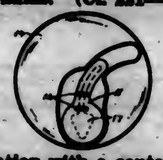
11. A process of breaking an aqueous emulsion which is formed by diluting with water the reaction mixture obtained in the alkali metal reduction of a higher fatty acid ester and which contains a higher aliphatic alcohol, a soap, caustic alkali, and water, which comprises admixing said emulsion with a small amount of a mixture of branched chain aliphatic acids having from eight to ten carbon atoms per molecule, said amount being stoichiometrically equivalent to only a small part of the alkali present in the emulsion.

2,104,804

HEAT CONSERVER AND HUMIDIFIER

Frank M. Hill, Walpole, Mass.

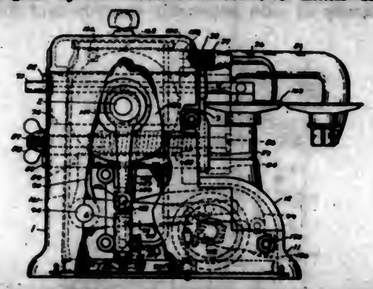
Application June 12, 1936, Serial No. 84,882
4 Claims. (Cl. 257—164)



2. A heat saving device adapted to be installed in the smoke passage between the furnace and the chimney of a home heating system comprising a substantially horizontal casing, said casing having headers intermediate the ends thereof, a plurality of tubes, the ends of which are mounted in said headers forming passages for the hot flue gases between the inlet and outlet chambers at the opposite ends of the casing, said casing having a central chamber between the headers and surrounding the tubes, said central chamber having a cold air inlet at the lower side thereof and a warm air outlet at the upper side thereof, means for maintaining a supply of water covering a few of the tubes at the lower portion of the central chamber and means for controlling the passage of the hot flue gases through said tubes to control the rate of vaporization of the water.

2,104,805
SUNDAE PACKAGE
Frederick T. Krein, Park Ridge, Ill., assignor to Dixie-Vortex Company, a corporation of Delaware
Application October 9, 1933, Serial No. 692,718
2 Claims. (Cl. 99—137)

1. A packaged confectionery product, including in combination, a conical-like cup having walls sloping inwardly from the mouth thereof, the end of said cup opposite said mouth being closed, a flavoring medium in said cup adjacent the closed end, and a hardened confectionery mass on top of said flavoring medium filling said cup, said confectionery mass being molded by said cup into similar shape as said container, whereby when said cup and its contents are inverted and the closed tip of said cup is squeesed said mass will be discharged with said flavoring medium on top thereof in position to gravitate over the sloping walls of said mass to form a sundae.



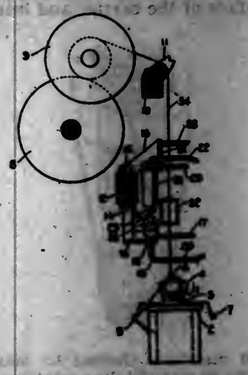
2,104,806
ADJUSTABLE DOUBLE CLOSURE FOR CONTAINERS
James William McNeil, Tampa, Fla.
Application December 31, 1935, Serial No. 56,997
8 Claims. (Cl. 221—63)

1. In combination with a container having an opening in the wall thereof, two closure members mounted to slide on opposite surfaces of the container wall from a position in which the opening is completely covered on both sides to a position in which said opening is at least partly uncovered.

2,104,807
SEWING MACHINE FOR FUR AND THE LIKE
Thomas C. Mladinich, New York, N. Y.
Application April 16, 1937, Serial No. 137,315
14 Claims. (Cl. 112—16)

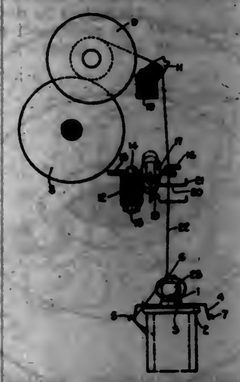
1. In a sewing machine for fur, and the like, of the type having feed discs for holding the material, a needle bar operated by a needle bar yoke, a looper operated by a looper frame, a feed disc arm resiliently holding one of the feed discs, and a main driving shaft with suitable eccentrics and cams for operating the respective parts, and in which the looper frame is provided with a fork having flat surfaces positioned to be engaged by an eccentric on the main shaft;

the combination of a sliding block on the said eccentric operating the looper frame in which the block is formed with flanged grooves at the sides slidably engaging the sides of the fork of said frame.



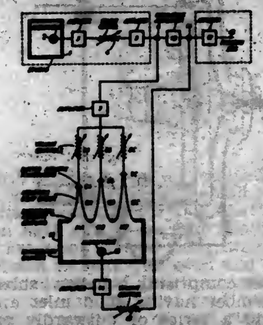
2,104,968
FLOW HEAD
Ralph Neuhaus and Fred C. Smith, Jr., Houston, and Lyle L. Payne, Midland, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application April 27, 1936, Serial No. 76,498
3 Claims. (Cl. 166—14)

1. A flow head for wells including a tubing head, an inner cylindrical chamber therein, a shoulder in said chamber, a hanger of uniform outer diameter adapted to be lowered through control equipment of the same internal diameter as said head and to fit said chamber and be supported on said shoulder, sealing rings on said hanger engaging with walls of said chamber above the lower end to seal with the same, a flange on said hanger, a flange on the inner wall of said chamber below which said hanger flange may engage, and means to support the tubing in sealing engagement with said hanger, including slip jaws on said hanger supporting said tubing, a bonnet on said head and sealing rings between said bonnet and said tubing.



2,104,969
DEVICE FOR TWISTING YARN
Leslie James O'Dowd, Drummondville, Quebec, Canada, assignor to Celanese Corporation of America, a corporation of Delaware
Application April 24, 1936, Serial No. 17,944
3 Claims. (Cl. 117—96)

1. Apparatus for applying twist to yarn, comprising a rotating vertical spindle adapted to support a yarn supply package, a take-up package, means to rotate said package at a constant rate, a flyer adapted to assist in applying twist

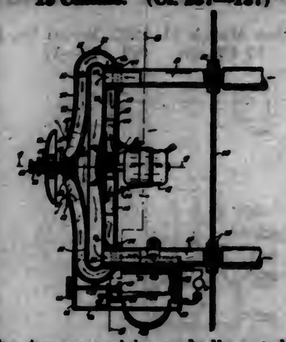


to the yarn, means for guiding the yarn through a constant path and means for guiding the yarn away from the axis of the flyer to relieve the tension in the yarn being wound on the take-up package.

2,104,810
MEANS FOR TWISTING YARN
Leslie J. O'Dowd, Drummondville, Quebec, Canada, assignor to Celanese Corporation of America, a corporation of Delaware
Application April 24, 1936, Serial No. 17,943
4 Claims. (Cl. 117—96)

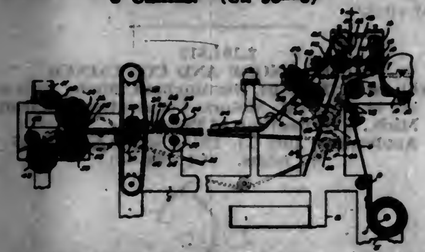
1. Apparatus for twisting yarn comprising a rotating vertical spindle adapted to support a yarn package from which the yarn is drawn off, a winding device adapted to wind the yarn whereby twist is imparted to the yarn, a flyer for assisting the twisting of the yarn, a guide for the yarn between the winding device and said flyer and means including an arm pivoted at said guide for guiding the path of the yarn between the flyer and said guide adapted to respond to the actual tension on the yarn for diverting the yarn between said flyer and said winding device from a line passing through the axis of the yarn package.

2,104,811
VARIABLE ACOUSTICAL REVERBERATION SYSTEM
Arthur Pfister, Woodside, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 21, 1935, Serial No. 12,211
17 Claims. (Cl. 179—1)



1. In a system for translating sound into characteristic electrical energy and for alternating the characteristics of the system electro-acoustically, an electrical circuit, means for deriving from a certain point in the electrical circuit a portion of said characteristic electrical energy, means for feeding said derived energy through an amplifier circuit to a plurality of electro-acoustical transducers, a plurality of tubes forming a plurality of acoustical delay circuits coupled to said transducers, each one of said tubes being of unequal lengths to give a variety of delay times unequally long with respect to each other and to any given point of the delay circuit.

2,104,812
NICKEL ANODE AND CONTAINER
William M. Phillips, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 17, 1935, Serial No. 31,845
4 Claims. (Cl. 204—4)

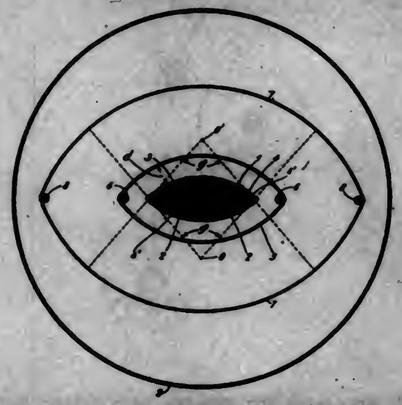


1. An anode comprising a box having apertured walls and an open top, a fabric bag fitting within said box, a conductor extending into said bag and through the bottom thereof and removably secured to the bottom of said box and fragmentary consumable anode material in said bag and contacting with said conductor.

2,104,813
HEAT EXCHANGER
Chester R. Pieper, La Crosse, Wis.
Application July 20, 1936, Serial No. 91,495
15 Claims. (Cl. 257—137)

1. A heater comprising a hollow, substantially discoidal member having fluid inlet and outlet openings and a series of outwardly projecting fins of substantially radial trend thereon, a jacket member mounted over said fins and with the discoidal member forming an air passage, and air inlet and outlet openings in said jacketing member.

2,104,814
PROCESS AND MACHINE FOR MAKING WINDOW BAGS
George W. Poppe, Brooklyn, N. Y., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y., a corporation of New York
Application August 6, 1936, Serial No. 94,586
3 Claims. (Cl. 93—8)

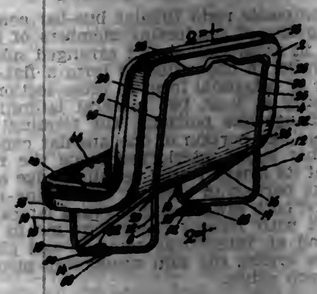


1. The method of making a window bag which consists in making cuts in a web of paper each cut defining an outline substantially one-half of the portion to be eliminated from the bag wall in the finished bag to form a window therein, folding the web to form a bag tube, severing the tube into bag sections and bottoming successive sections with the cut-out portions intermediate the ends of a bag section.

2,104,815
THREAD CARRIER DEVICE
Emil F. Richter and Joseph Earnest Garrett, Philadelphia, Pa., assignors to Artcraft Silk Hosiery Mills, Inc., Philadelphia, Pa., a corporation of Delaware
Application July 11, 1936, Serial No. 90,168
3 Claims. (Cl. 66—126)

1. In a yarn carrier of the character described, articulated upper and lower members, one of which has an offset section overlapping a section of the other member to provide a substantially flush front surface over which the yarn is fed, the adjoining flush surfaces of the members being respectively provided with yarn guide grooves in longitudinal continuation of one another, and spring biasing means disposed upon the rear surface of the carrier and interconnecting the said members thereof to maintain the same normally in straight-line relation while permitting deflection of the lower member relatively to the upper member should the carrier strike against an obstruction in the course of its travel.

2,104,816
ELECTRON DISCHARGE DEVICE
Horst Rothe, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application February 19, 1936, Serial No. 7,181
In Germany March 1, 1934
4 Claims. (Cl. 250—27.5)



1. An electron discharge device having an envelope and containing a straight thermionic cathode, a grid and another electrode, said cathode, grid and other electrode being lenticular in a transverse cross section and defined by intersecting cylindrical surfaces, the surfaces on one side having one common center of curvature and the surfaces on the other side having another common center of curvature oppositely disposed to said one common center of curvature, side rods for supporting said grid and other electrode, said side rods lying in a plane passing longitudinally thru the intersections of said cylindrical surfaces.

2,104,817
PHOTOELECTRIC RELAY
Samuel Ruben, New Rochelle, N. Y.
Application February 7, 1936, Serial No. 62,727
2 Claims. (Cl. 250—27.5)

2. A relay comprising essentially a two-element device housed in a closed envelope, one element being a cathode having an electron emitting surface coated with a photo-sensitive substance and the other element being an anode thermally responsive to electron bombardment, said anode having a movable contact, and a fixed contact spaced adjacent said movable contact.

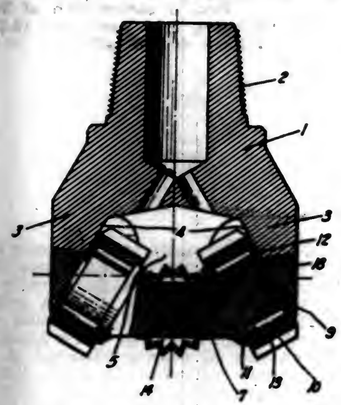
2,104,818
VEHICLE SEAT
Eric Olle Schjolin, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 31, 1935, Serial No. 56,934
3 Claims. (Cl. 155—179)

1. In a seat, a continuous length of tubing forming two legs and a support for the seat back, each leg being U-shaped and having the base of the U at the bottom and the support for the back being U-shaped and having the base of the U at the top of the seat, said length of tubing also comprising a forward member extending from one upright of the U-legs to the upright of the other U-leg and forming a transverse support, a pan forming a seat bottom and back mounted on and secured to the tubing and having its front end resting on the transverse support, the upper portion of said tubing being spaced from the back of said pan to form a robe rail, and a cushioning material adhesively secured to the pan to form a resilient seat and back.

2,104,819
ROLLER BORING DRILL
Robert W. Schlumpf and Ralph P. Sherman, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application March 9, 1935, Serial No. 10,257
2 Claims. (Cl. 255—71)

1. A drill head, a forwardly inclined cutter shaft thereon, a cutter enclosing the end of said shaft, anti-friction bearings for said shaft acting also to retain said cutter on said shaft, a reduced forward extension on said shaft, an annular raceway recessed in said extension and a longitudinally divided ring of bearing material in said raceway, the end walls of said recess limiting longitudinal movement of said ring.

2,104,820
THREE-CUTTER DRILL
Floyd L. Scott, Houston, Tex.
Application December 20, 1935, Serial No. 55,371
6 Claims. (Cl. 255—71)



1. A well drill including a head, a threaded shank thereon, three forwardly extending legs thereon, downwardly and inwardly extending shafts on said legs, said shafts being supported only at their outer ends, annular cutters mounted on two of said shafts to cut the outer portion of the hole only, and a third cutter of elongated conical shape, enclosing the end of its shaft and the smaller end of which extends between the two annular cutters, a toothed point thereon extending past the center of the hole, said cutters being toothed and acting together to cut the full bottom of the hole.

2,104,821
CROSS ROLLER BIT
Floyd L. Scott and Nelson B. Berleth, Houston, Tex.
Application January 25, 1936, Serial No. 60,793
7 Claims. (Cl. 255—71)

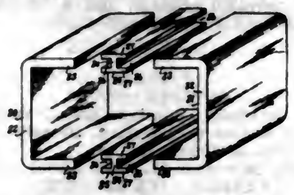
1. A roller well drill including a head, two opposed pairs of forwardly extending legs on said head forming a cutter receiving recess between them, the inner faces of one pair of legs being inclined upwardly and inwardly, a bridge, upwardly and outwardly inclined cutter supports thereon, the end surfaces thereof flattened to come approximately flush with said inclined faces, side

cutters rotatable on said supports adjacent said faces, a cross roller shaft extending through said bridge and having its ends arranged approxi-

mately flush with the inner sides of the other pair of said legs, cutters on said cross roller shaft, and means engaging the ends of said shaft and bridge to secure the same integrally to said legs.

2,104,822
DRILL CUTTER
Floyd L. Scott, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Texas
Substitute for abandoned application Serial No. 17,973, April 24, 1935. This application July 30, 1936, Serial No. 93,454
7 Claims. (Cl. 255—71)

1. A well drill, rolling cutters thereon positioned to cut the bottom and the side wall of the hole, teeth on said cutters the crests of which are of uniform width except at the outer ends, said outer ends of said crests being widened abruptly to provide a wide outer cutting area to bear against and cut the side wall of the hole.

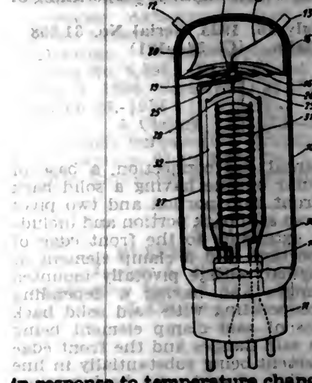


2,104,823
CUTTER FLUSHING DEVICE
Ralph P. Sherman, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware
Application June 11, 1937, Serial No. 147,745
5 Claims. (Cl. 255—71)

1. In a well drill, a head, a plurality of downwardly and inwardly inclined shafts thereon, a cutter on each of said shafts, said cutter being approximately conical in shape, but having an acutely tapered area adjacent to the base and a more obtusely tapered area adjacent to the apex, a fluid passage in said head for flushing fluid, and nozzles receiving fluid from said passage, one nozzle being directed approximately parallel to the acutely tapered area and the

other directed approximately parallel with the more obtuse area.

2,104,824
COMPOSITE BUS-BAR
Richard W. Shoemaker, Waterbury, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a corporation
Application October 2, 1934, Serial No. 746,503
9 Claims. (Cl. 172—13)



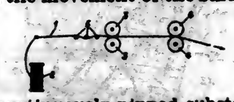
1. A composite rigid tubular bus-bar comprising a plurality of conducting-members of angular form in cross-section and arranged substantially parallel in opposition to form a flat-sided structure of polygonal form in cross-section and each having at least two integral laterally-extending flange-like portions; the terminal edge of a flange-like portion of one angular conducting-member being interlocked along the major portion of its length to the terminal edge of the flange-like portion of another conducting-member against both inward and outward lateral displacement with respect thereto by means of a groove and an interfitting tongue; and clamping-means urging the said conducting-members toward each other.

2,104,825
PHOTOELECTRIC RELAY
Terry M. Shrader, West Summit, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1934, Serial No. 745,905
6 Claims. (Cl. 250—27.5)

1. A photo-relay including an envelope containing an ionizable medium, and enclosing a pair of spaced cold electrodes between which a voltage may be applied just below that at which breakdown will occur between said electrodes, a photo-cathode within said envelope adjacent said electrodes to start ionization of said ionizable medium between said pair of electrodes

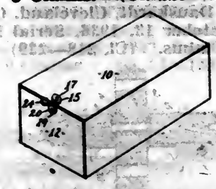
when said photo-cathode is exposed to a predetermined light intensity, one of said pair of electrodes comprising a material which expands

in response to temperature changes when ionization takes place, and a circuit opening and closing device connected with said one of said pair of electrodes to be controlled thereby.



2,104,826
DETACHABLE SLEEVE FOR GARMENTS
Domenick Stramiello, Brooklyn, N. Y.
Application August 21, 1936, Serial No. 97,192
2 Claims. (Cl. 2—126)

1. A sleeve comprising a short sleeve portion having its outer edge portion bent inwards, a flexible strip of material disposed against the inner face of said bent in edge portion and attached at its inner edge on said edge portion, hook elements on the outer edge portion of said flexible strip of material and adapted to interengage complementary hook elements associated with an extension portion for said sleeve to make a full length sleeve, a covering strip of material disposed against the inner face of said flexible strip of material and attached at its inner edge and extending over the free edge of said flexible strip to the outer face thereof, fastening elements on said covering material, and coacting fastening elements on the outer face of said flexible strip for holding the covering strip releasably in position to be releasable to extend over complementary hook elements of said extension portion.



2,104,827
OPERATION FOR THE PRODUCTION OF STAPLE FIBER YARNS FROM CONTINUOUS FILAMENTS
Harry Taylor and William Ivan Taylor, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application May 18, 1934, Serial No. 726,265
In Great Britain May 22, 1933
7 Claims. (Cl. 19—1)

1. Process for the conversion of continuous filaments directly into a product containing staple fibers, which comprises spreading out a bundle of continuous filaments, causing the spread filaments to pass in contact with a cutting surface moving in substantially the same direction as the filaments but at a peripheral speed different from the speed of the filaments, and pressing the bundle of spread filaments against the surface so that during the movement of the surface the fila-

ments are continuously nipped substantially at a point in the length of the bundle and are subjected at such point to a cutting action that at any one point severs part only of the filaments in the bundle, the movement of the filaments past the cutting surface causing the partial severing action to take place progressively along the length of the filaments.

2,104,828
SHOE BOX
Richard B. Brinnon, Wichita, Kans.
Application July 10, 1934, Serial No. 734,532
3 Claims. (Cl. 229—46)

1. A box, said box having an open end and a closure element therefor, said closure element being hingedly attached to said box and a flange bounding said closure element, a disk attached to the upper side of said box by an eyelet, a button on said flange, said button being so positioned that it will seat itself in the said eyelet when the closure element is in a closed position and functions to hold the closure element in said closed position, a second disk, said second disk being attached to said closure element, a string, one end of said string being attached to said closure element so that it may be used as a pull by which the closure element may be pulled open or the string may be intertwined beneath said disks as a means of securing the closure element in a closed position.

2,104,829
TINTED RESINS
William H. Carmody, Pittsburgh, Pa.
No Drawing. Application January 19, 1935, Serial No. 2,587. Renewed April 20, 1937
4 Claims. (Cl. 260—7)

1. The herein described step in the method of pretinting a resin comprising in its individual polymers a reactive cyclopentadiene structure, which consists in reacting at least one compound selected from the classes of aldehydes and ketones with the resin in the presence of an alkaline catalyst to produce development of the fulvene color structure therein.

2,104,830
OBSTETRICAL CHAIR
Saby Gertrude Collard, Cedar Rapids, Iowa
Application June 9, 1937, Serial No. 147,393
7 Claims. (Cl. 155—28)

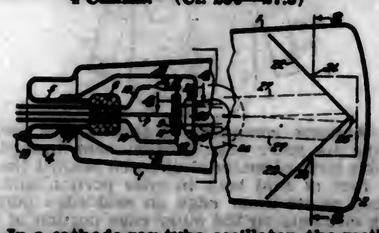
1. A folding obstetrical chair including a seat, rear supporting legs for the seat, front support-

ing legs for the seat hinged at one end to the seat at opposite sides of the latter, brace rails hinged at one end to said rear supporting legs and having free ends provided with notches, a round connecting the free ends of said front supporting legs and having its respective opposite ends extending laterally from said front supporting legs for engagement with selected notches whereby to support said seat at the desired angle of inclination relative to the horizontal.

2,104,221
SHELF BRACKET
Martin Dannhardt, Cleveland, Ohio
Application October 13, 1936, Serial No. 105,398
5 Claims. (Cl. 248—239)

1. In a double shelf bracket, the combination of a pair of members adapted for slidable interfitting in an aperture of a common support, each of said members carrying a horizontally extending flange adapted to occupy a common plane.

2,104,222
PICKER FOR LOOMS
William D. Dedenhoff, Greenville, S. C.
Application March 6, 1937, Serial No. 129,432
5 Claims. (Cl. 139—159)



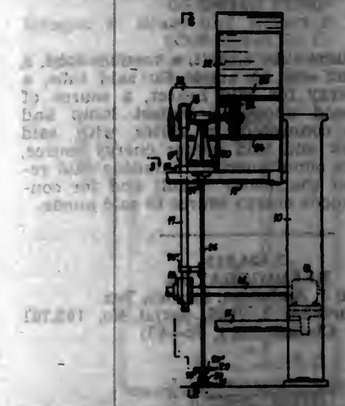
1. A picker for looms having a metallic shell provided with a squared cavity for receiving the upper end of the picker stick of a loom and having a pair of spaced vertically disposed projections on its forward edge and having a hole in the forward wall of the said metallic shell, a leather member adapted to fit between said projections and having a forward layer broader than the other layers to overlap the forward edges of said projections and also having a rear layer for fitting in said hole in said forward wall and means for securing said leather member in position between said projections.

2,104,223
BELT ORNAMENT END CONNECTION
Walter Forstner, Irvington, N. J., assignor to Forstner Chain Corporation, a corporation of New Jersey
Application July 16, 1935, Serial No. 31,558
1 Claim. (Cl. 24—191)

In an ornamental end connection, a base of general rectangular outline having a solid back portion and a front loop portion and two pivot ears struck up from said back portion and including side flanges extending to the front edge of the solid back portion, and a clamp element of generally rectangular outline pivotally mounted in said side flanges and having a depending clamp portion cooperating with said solid back portion, the sides of said clamp element being coextensive with said flanges and the front edge of said clamp element being substantially in line with the front edge of said solid back portion when said clamp element is in closed position, said front edge of said clamp element having a forwardly bent portion adapted to extend towards and substantially contact with the front edge of said solid back portion.

2,104,224
CATHODE RAY OSCILLATOR
Bernard C. Gardiner, Philadelphia, Pa., assignor to Farnsworth Television Incorporated, a corporation of California
Application December 12, 1933, Serial No. 702,141
4 Claims. (Cl. 250—27.5)

4. In a cathode ray tube oscillator, the method of operation which comprises generating electrons from a line source, restraining the electrons from diverging in planes parallel to the said source, causing said beam to diverge in planes perpendicular to said source, deflecting said beam cyclically about an axial position after divergence and normal to the direction of such divergence, and collecting said beam during deflection from said axial position.

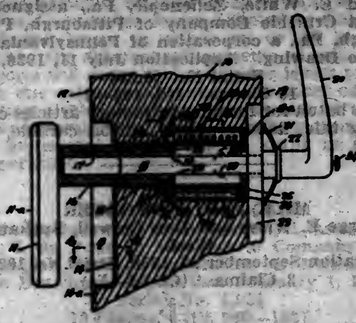


2,104,225
HEAT-RESISTING IMPLEMENT
Werner Hessenbruch, Hanau-on-the-Main, Germany, assignor to firm Heraeus-Vacuumschmelze Aktiengesellschaft, Hanau-on-the-Main, Germany
No Drawing. Original application March 7, 1935, Serial No. 9,266. Divided and this application July 7, 1936, Serial No. 89,372. In Germany, March 24, 1934
1 Claim. (Cl. 75—171)

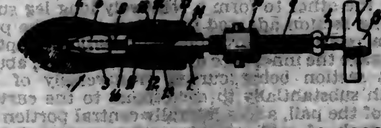
A high temperature oxidation resistant alloy containing 1 to 30% Cr, .01 to 1.2% Ce, from a small but effective amount up to 48% Fe, the balance of the alloy consisting of nickel.

2,104,226
HEAT-RESISTING IMPLEMENT
Werner Hessenbruch, Hanau-on-the-Main, Germany, assignor to firm Heraeus-Vacuumschmelze Aktiengesellschaft, Hanau-on-the-Main, Germany
No Drawing. Original application March 7, 1935, Serial No. 9,266. Divided and this application July 7, 1936, Serial No. 89,371. In Germany March 24, 1934
4 Claims. (Cl. 75—171)

1. A high temperature oxidation resistant alloy containing .01 to 1.2% Ce, 1 to 30% Cr, the balance consisting of iron group metals.



2,104,227
BUFFER ATTACHMENT
Joseph A. Hunt, Shelby, N. C.
Application May 10, 1937, Serial No. 141,773
2 Claims. (Cl. 12—1)



1. In a shoe repair machine having a main drive shaft and driven shaft, a frame in which said drive shaft is mounted for rotation, a pivoted frame in which said driven shaft is mounted, a buffer mounted on the driven shaft, a pulley on the main drive shaft, a second pulley on the driven shaft, a belt disposed around said pulleys and resting at all times on the second pulley and normally projecting below and out of contact with the pulley on the drive shaft, a foot lever for raising said driven shaft to cause said belt to engage the pulley on the drive shaft to impart rotation to the driven shaft, a suction hood disposed adjacent the buffer, and the pivoted frame being pivoted at its rear end whereby upon raising of the pivoted frame it will also move backwardly and upwardly into said hood and into the zone of suction so as to remove the material removed from a work piece by the buffer.

2,104,228
AUTOMOBILE DOOR LOCK
Albert J. Loesmann, La Canada, Calif.
Application August 20, 1936, Serial No. 96,469
4 Claims. (Cl. 292—1)

2. A latch mechanism for a door having a recess therein, said latch mechanism comprising a latch-operating shaft, a latch-operating handle having a shank adapted to be moved longitudinally relative to said latch-operating shaft and to telescope therewith, resilient means tending normally to resist telescopic movement between said shank and said shaft but resiliently permitting such relative movement, a tooth pivotally fulcrumed in a slot in said shaft, and resilient means pressing against one end of said tooth so as to urge the opposite end of said tooth from the slot in said shaft.

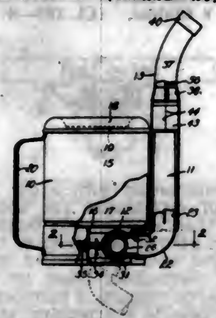
2,104,229
SHOE STRETCHER
Apostolo Panez, Long Beach, Calif.
Application March 29, 1937, Serial No. 133,630
6 Claims. (Cl. 12—128.3)

1. A shoe stretcher comprising a pair of blocks, a shaft extending into the blocks, block expanding means mounted on the shaft and operable thereby, a sleeve on the shaft, pins on said sleeve, said pins extending into the blocks, a ferrule engaging outer ends of the blocks and means removably mounting the ferrule on said sleeve.

2,104,240
RESILIENT SIDE BEARING ASSEMBLY
Arnold Stucki, Pittsburgh, Pa.
Original application October 10, 1935, Serial No. 44,282. Divided and this application June 3, 1936, Serial No. 83,377
3 Claims. (Cl. 105—4)

1. The combination with a car truck having a bolster, of articulated car bodies pivotally mounted at their ends on said bolster, side bearing arms mounted on said ends of the car bodies and projecting over said bolster with the arms on one car overlapping those on the other in vertically spaced relation, a member disposed between each pair of overlapping arms and suspended from the upper arm, and resilient means disposed between said member and upper arm for absorbing shock when the upper and lower arms move toward each other when the lower arm strikes the bolster.

2,104,841
REFRACTORY ARTICLES
Harold E. White, Zelienople, Pa., assignor to Lava Crucible Company of Pittsburgh, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application July 11, 1936, Serial No. 90,258
10 Claims. (Cl. 106—9)

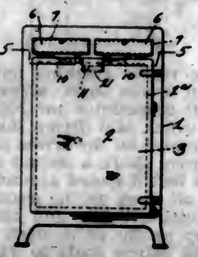


1. A batch for forming refractory articles comprising talc, flake graphite, silicon carbide, and binder.

2,104,842
MILK PAIL SUPPORTER
George E. Wiese and Don Calwell, Spokane, Wash.
Application September 23, 1936, Serial No. 102,132
3 Claims. (Cl. 31—54)

1. A milk pail supporter comprising a substantially rigid elongated plate bent upon itself to slightly less than a right angle on a line curved transversely to the longitudinal axis of said plate and the bight of said bend being curved to fulcrum on the upper periphery of the bead of a milk pail, the line of bend being nearer one end of said plate than the other to form a relatively long leg supporting section adapted to project from the pail and a relatively short abutment section adapted to engage the inner face of the pail, and said abutment section being curved transversely of its length substantially to correspond to the curvature of the pail, and a laterally central portion of the stock of said leg supporting section being struck out from the bight of said bend toward the free end of said leg supporting section and shaped to semi-cylindrical form for engagement with the outer and lower periphery of the bead to form a continuation of said curved bight.

2,104,843
DISPENSER
Ozro N. Wiswell, Los Angeles, Calif., assignor to Swingspout Measure Company, Los Angeles, Calif., a corporation of California
Application July 31, 1935, Serial No. 33,988
11 Claims. (Cl. 221—26)

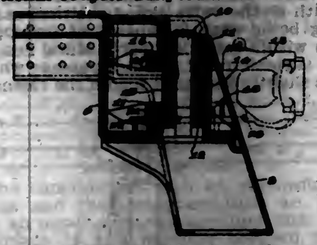


1. A spout comprising, telescopically assembled tubular members related for relative longitudinal and rotative movement, a valve within and carried by a member for controlling the flow through the spout and an operative connection between the valve and another member whereby the valve is governed by relative movement between said members.

2,104,844
VACUUM TUBE CIRCUIT
Herman Andrew Affel, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application January 22, 1937, Serial No. 122,062
13 Claims. (Cl. 250—27)

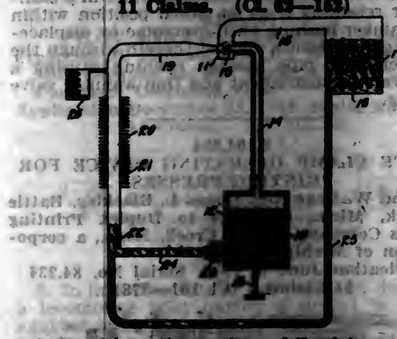
1. In a vacuum tube circuit, a vacuum tube, a heater element and an anode for said tube, a source of energy for said heater, a source of energy for said anode, a ballast lamp and a resistance connected in series with said heater element and said heater energy source, and means for simultaneously shunting said resistance out of the heater circuit and for connecting said anode energy source to said anode.

2,104,845
REFRIGERATOR
Edwin J. Anderson, Snyder, Tex.
Application October 2, 1936, Serial No. 103,761
7 Claims. (Cl. 62—89)



1. In a refrigerator, the combination with a casing having a cooling coil therein for the reception of freezing trays, of a drain tray beneath the coil and extending entirely across the refrigerator chamber, said drain tray comprising downwardly and inwardly inclined converging sections, said sections supporting in a suspended relation beneath their converging ends a drip pan, means whereby drainage from the sections will be discharged into the drip pan between the sections.

2,104,846
LOCOMOTIVE PILOT COUPLER
Jerome G. Bower, New York, N. Y., assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application December 2, 1935, Serial No. 52,592
16 Claims. (Cl. 213—4)



7. In combination, a pilot having a pocket, a pocket casting having a pilot-contoured plate for closing the mouth of the pocket, said pocket casting being movable about a vertical axis from

closing position to a projected position, and a conventional coupler adapted to be housed with-

in said pocket and movable about the same vertical axis.

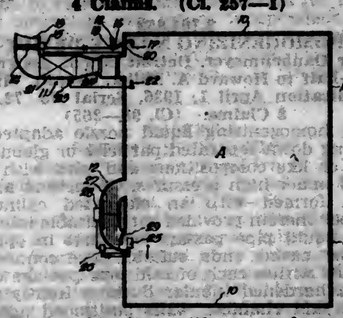
2,104,847
JET REFRIGERATING SYSTEM WITH OSMOTIC PUMP
Kemper P. Brace and Robert B. F. Crawford, Washington, D. C.
Application April 19, 1935, Serial No. 17,369
11 Claims. (Cl. 62—152)

1. A refrigerating system of the jet compressor type which comprises a boiler containing a solution of a non-volatile solute in a volatile solvent, an aspirator, an evaporator, means for supplying a vapor of said solvent from said solution at high velocity for operating said aspirator to draw refrigerant from said evaporator, a condenser and a receiver positioned to receive the fluid delivered thereto by said aspirator, and a semi-permeable membrane separating the liquid solvent in the receiver from the solution in the boiler.

2,104,848
ELECTRIC SWITCH
Gordon H. Clark, Pottstown, Pa., assignor to Hoffman Gas & Electric Heater Company, Louisville, Ky., a corporation of Delaware
Application November 11, 1935, Serial No. 49,242
3 Claims. (Cl. 200—137)

1. In automatic control apparatus for a plurality of heating coils, a lever, thermostatic means for swinging the lever in response to temperature changes, a conductor lever for each heating coil, adjustable spring supports carried by said first named lever one for each of said coils, springs attached at their ends to said supports and said conductor levers adapted to hold said conductor levers in either on or off position, whereby the different adjustments of said spring supports will cause said conductor levers to snap from one extreme position to the other extreme position either simultaneously or one at a time at predetermined points in a given movement of the thermostat in response to rising or falling temperature.

2,104,849
CELLULOSE PROCESS
Rollin F. Conaway, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 1, 1935, Serial No. 4,524
19 Claims. (Cl. 260—102)



1. Process for the saponification of a cellulose ester of an organic acid, which comprises bringing said ester in contact with an aliphatic monohydric alcohol of 1–2 carbon atoms in the presence of from 0.01 to 10% of a metal alcoholate.

2,104,850
GLASS TOP PLUG FUSE
Sears B. Condit, Boston, Mass., assignor to The Chase-Shawmut Company, Newburyport, Mass., a corporation of Massachusetts
Application April 16, 1936, Serial No. 74,633
12 Claims. (Cl. 200—120)

1. A glass top plug fuse having a closed top plug body provided with a transparent window at one end and a rim that is integral with the body and window, said plug body and rim being composed of glass, and a protective band enclosing and gripping said rim and overlying and enclosing a possible sharp edge thereof and overlying face portions of said body on opposite sides of the rim.

2,104,851
AIR CONDITIONING SYSTEM
Robert E. P. Crawford, New York, N. Y., assignor to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application November 14, 1932, Serial No. 642,483
4 Claims. (Cl. 257—1)

2. The combination with an enclosure to be conditioned, of a conditioning chamber having

substantially closed circuit communication with said enclosure for drawing air from said enclosure, passing it through said chamber, and returning it to said enclosure, means for creating such circulation of air through said chamber, means for varying such circulation, means in said chamber for conditioning the air passing therethrough, a second conditioning chamber drawing air from the atmosphere and discharging into said enclosure, means in said second chamber for conditioning the air passing therethrough, and means responsive to humidity in said enclosure for controlling the circulation of air through one conditioning chamber.

2,104,853

LIQUID FLOW CONTROL DEVICE FOR COMBUSTION ENGINES

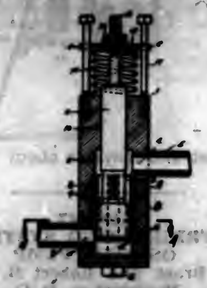
John B. Crumbie and Bruce H. Manning, Chicago, Ill.; said Crumbie assignor to Mildred Crumbie, Chicago, Ill.

Application April 11, 1934, Serial No. 720,663

5 Claims. (Cl. 261—115)

1. A liquid control device comprising a liquid supply receptacle, a liquid delivery conduit adapted to conduct liquid from the supply receptacle to a cylinder of an internal combustion engine, a control chamber communicating with the conduit, said delivery conduit being imperforate at least between the liquid supply receptacle and the control chamber, whereby liquid unmixed with gases will be delivered to the control chamber, a metering valve comprising a seat having a bore forming a part of the conduit and a valve stem cooperating with the bore, and means associated with the control chamber and responsive to the degree of vacuum produced by the operation of the internal combustion engine for supporting and moving the stem relatively to the bore whereby a controlled amount of liquid will be permitted to pass through the valve, and means for admitting a small quantity of air directly from the atmosphere to the control chamber.

2,104,853



HOMOGENIZING NOZZLE DEVICE

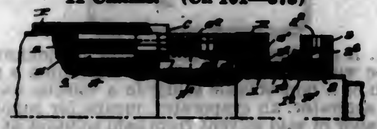
Homer Daubenmeyer, Detroit, Mich., assignor of one-half to Howard A. Miller, Detroit, Mich.

Application April 1, 1936, Serial No. 72,217

3 Claims. (Cl. 99—265)

1. A homogenizing liquid nozzle adapted for breaking down separated particles or globules in liquid or like compositions and used with such liquids under high pressures, comprising a body casing formed with an elongated cylindrical chamber therein provided with suitable inlet and outlet liquid pipe passage openings in opposite chamber casing ends, suitable pipe connections mounted within each of said pipe passage openings, a hardened tubular bushing tightly fitted within said chamber walls positioned approximately centrally between the inlet and outlet pipe passage openings, a release plunger valve with hardened valve bushing, slidably mounted within said chamber bushing forming joints therewith at the valve closed position, said valve bushing being slightly tapered at its upper end portion within said chamber bushing designed to form a variable relief annular passage when said valve is slightly displaced within the casing bush-

ing, spring means mounted on said casing and connected to said release valve member in a manner for retaining it in its closed position within the chamber bushing until overcome by displacement liquid pressure applied thereto through the chamber inlet pipe passage opening causing a slight valve displacement and thin annular valve opening.



2,104,854

PLATE CLAMP OPERATING DEVICE FOR PRINTING PRESSES

Edmund W. Dean and James L. Blackley, Battle Creek, Mich., assignors to Duplex Printing Press Company, Battle Creek, Mich., a corporation of Michigan

Application June 8, 1936, Serial No. 84,234

11 Claims. (Cl. 101—378)

1. In combination with a plate cylinder having a recess, a rotatable screw extending into said recess, a plate clamp threaded on said screw, a pinion on said screw, a gear member mounted on the plate cylinder and meshing with said pinion whereby the screw may be rotated to advance or retract the clamp, means whereby the said member may be manually rotated to project or retract the clamp, said screw being longitudinally movable, spring means adapted to force the screw inwardly, and means whereby after the clamp is engaged with the plate the gear member may be further forcibly rotated to cause the spring means to forcibly hold the clamp in engagement with the plate.

2,104,855

POLYMETHINE DYES

Walter Dieterle, Dessau-Ziebigk in Anhalt, and Karl Herst, Hoechst/Taunus, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York

No Drawing. Application September 18, 1933, Serial No. 689,974. In Germany September 23, 1932

4 Claims. (Cl. 260—44)

4. A bis-[3-alkyl-tetrahydronaphtho-thiazole-(2)]-trimethinecyanine salt.

2,104,856

EXPANSION JOINT FOR RAILS

Isaie Dion, Fall River, Mass.

Application May 21, 1937, Serial No. 144,063

10 Claims. (Cl. 238—283)

9. The combination with an expansible joint for rails and the like, comprising an element having an upper surface coinciding with the upper surface of and movable between the rail ends at the joint to compensate for expansion and contraction movements and connecting elements for the rail ends on each side of the rails, of lubricating means for the joint for supplying lubrication between the relatively moving parts of the joint comprising a lubricant chamber formed by one of the connecting elements and conduits extending lengthwise therefrom and through the rail webs.

2,104,857

PILOT AND COUPLER STRUCTURE

Frederick H. Einwaechter, Jr., West Hazlethorpe, Md., assignor to The Buckeye Steel Castings Company, Columbus, Ohio

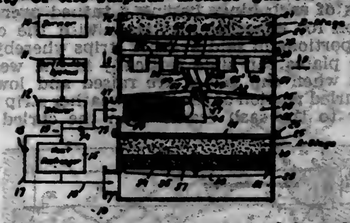
Application December 12, 1935, Serial No. 54,139

14 Claims. (Cl. 213—4)

6. In improvements of the character described, a locomotive pilot having a pocket, a coupler adapted to be housed in the pocket and movably mounted to permit the same to be moved from a position within the pocket to coupling position and vice versa, said coupler having a pilot-contoured plate substantially conforming with the contour of the pilot when the coupler is in housed position.

12. In improvements of the character described, a locomotive pilot having an internal pocket, a coupler adapted to be housed in the pocket and movably mounted to permit the same to be moved from a position within the pocket to coupling position and vice versa, said coupler having a knuckle and a vertically movable latch pin for locking and releasing the knuckle, a vertically swinging pin operating element connected with the pin and movable with the coupler, an uncoupling lever arranged on the pilot exteriorly of the pocket, and a vertically sliding pin actuating member operated thereby, said pin actuating member extending from the interior of the pocket to the exterior of the pilot and having a lateral lifting hook arranged to lie beneath the pin control element for engagement therewith when the coupler is in operative position.

2,104,858



MANUFACTURE OF SULPHURIC ACID

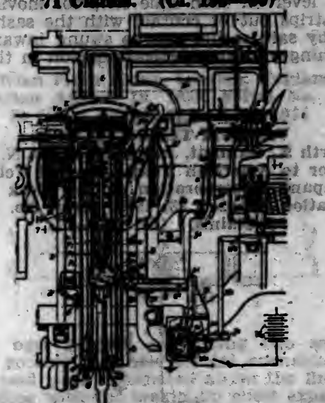
Robert B. Ferguson, Plainfield, N. J., assignor to General Chemical Company, New York, N. Y., a corporation of New York

Application January 22, 1935, Serial No. 2,615

14 Claims. (Cl. 23—176)

5. The method for forming a mixture of sulphur dioxide and another gas which comprises passing a stream of sulphur dioxide gas through a restricted passage to thereby increase the velocity of flow of the sulphur dioxide gas, introducing a second gas, moving at a velocity in excess of the velocity of the sulphur dioxide gas on entering

the restricted passage, into the sulphur dioxide gas while the latter is flowing through the restricted passage, and then causing at least part of the combined gases to flow in a direction opposite to the initial direction of flow of the combined gases.



2,104,859

SLUG CASTING MACHINE

Frank C. Frelander, Elizabeth, N. J., assignor to Mergenthaler Linotype Company, a corporation of New York

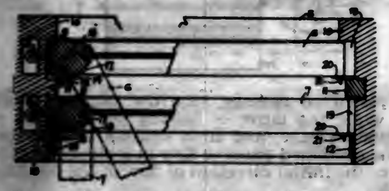
Application April 1, 1935, Serial No. 14,047

71 Claims. (Cl. 199—59)

1. In a slug casting machine, the combination of a pair of line clamping jaws, one movable toward the other for quadding, mechanism to effect such quadding movement of the jaw, means to condition said mechanism for a quadding operation, and means independent of the composed line to actuate the conditioning mechanism automatically during a given casting cycle when a quadding operation is to be performed.

2,104,860

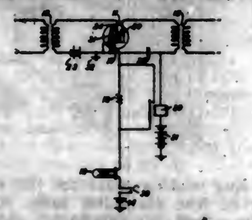
SASH CONSTRUCTION



Jacob Fuchsman, Brooklyn, N. Y.

Application June 29, 1935, Serial No. 29,048

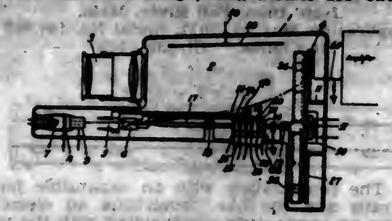
1 Claim. (Cl. 20—59)



In a sash construction, in combination, a sash frame, an upper outer sash, an inner lower sash, inner, outer and central sash strips on opposite sides of the frame defining grooves in which the sashes are disposed for vertical sliding movement, weather strips, an outer one of which is mounted on the face of said central sash strip and an inner one on the sash frame beneath said inner

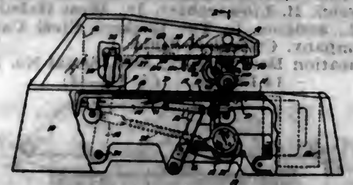
sash strip, said weather strips extending the length of said sash strips and each having a curled edge, spaced hinges including hinge plates secured adjacent the upper and lower corners of one side of each of said sashes, one of the hinge plates of each hinge having a turned over hook portion for interfitting relation with the curled edge portions of said weather strips whereby said hinge plates can slide vertically in the weather strips when the sashes are raised and lowered, the curled portion of the inner weather strip being closer to the sash frame than the curled edge

portion of the outer weather strip whereby the lower inner sash swings closer to the sash frame than the upper sash so that maximum swinging movement of both sashes is provided, slide strips constituting weather strips at the opposite edges of the sashes from said hinges for engagement with said inner and central strips, pin and slot means for attaching said slide strips to the sashes and a lever on each slide strip for moving said slide strips out of contact with the sash strips whereby said sashes can be swung inwardly on their hinges at any vertical position in the sash frame.



2,104,861
VACUUM TUBE CIRCUITS
Danforth K. Gannett, Jackson Heights, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application January 23, 1937, Serial No. 122,063
5 Claims. (Cl. 250—27)

1. In a vacuum tube circuit, a vacuum tube, a cathode and an anode therefor, a source of energy for heating said cathode, a ballast lamp connected in series with said cathode energy source, a resistance normally connected in series with said ballast lamp and means effective at the time said cathode approaches its normal operating temperature for shunting said resistance.



2,104,862
TELEVISION METHOD AND APPARATUS
François Charles Pierre Henrotean, Ottawa, Ontario, Canada, assignor to Electronic Television Company, Limited, Ottawa, Ontario, Canada
Application January 4, 1934, Serial No. 705,206
7 Claims. (Cl. 178—7.2)

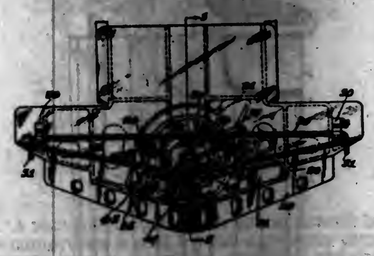
1. In a television system, an evacuated vessel containing a photoelectric screen of individual photoelectric cells, means for impressing an image on said screen, a scanning plate between the screen and the image, and means for causing

the scanning plate to pass before the photoelectric screen between impressions of the image on said screen.

2,104,863
PLATEN MECHANISM FOR PRINTING MACHINES
Carl J. Hueber, Cleveland Heights, Ohio, assignor, by mesne assignments, to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application February 12, 1936, Serial No. 63,575
22 Claims. (Cl. 101—274)

1. In a printing machine, means for supporting a form, a guideway extending above and parallel with said form, a carriage reciprocably mounted in said guideway for movement in a direction in a plane parallel with said form, a pair of links pivotally connected to the carriage, a second pair of links pivoted to the first-named links respectively and spaced apart from each other, a shaft journalled in the last-named pair of links, a roller platen rotatably supported on said shaft, resilient means normally acting to retain said links out of alignment with each other and thereby maintain the platen out of contact with the form; and periodically acting yielding means to act as a shock absorber and move the links of one pair into alignment with the links of the other pair to cause the platen to coact with said form.

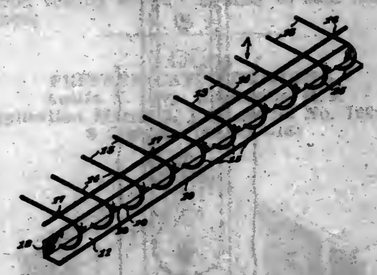
2,104,864
SUPPORT FOR BOOKS AND THE LIKE
Johan Richard Isberg, Uttran, Sweden
Application March 31, 1936, Serial No. 71,887
In Sweden April 15, 1935
1 Claim. (Cl. 211—43)



A support for books comprising a flat two-piece member provided with a longitudinal recess formed from complementary recesses in the contacting faces of the two elements of the member and an aperture communicating with the longitudinal recess on each side of said member, a removable flexible metallic strip with a vertical slot inserted into said recess, adjustable means passing through said slot and apertures for varying the combined length of the flat member and strip, a cylindrical member fixed transversely to the outer end of said strip and a ring of resilient material on the respective ends of said cylindrical member, the arrangement being

such that the flat member rests upon the lower shelf against a book in a substantially vertical

position and the rubber rings engage frictionally with the underside of the shelf above.



2,104,865
PILOT AND PILOT COUPLER
George T. Johnson and Harry H. Wolfe, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio
Application November 6, 1935, Serial No. 48,573
18 Claims. (Cl. 213—4)

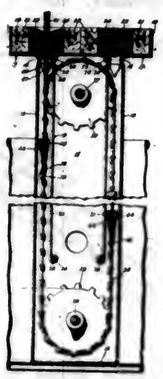
1. In improvements of the character described, a locomotive pilot having a pocket, a coupler adapted to be housed in the pocket and movably mounted to permit the same to be moved from a position within the pocket to coupling position and vice versa, said coupler having a pilot-contoured plate substantially conforming with the contour of the pilot when the coupler is in housed position, said coupler having a lock-lifting element and the pocket having a slot to accommodate said element when the coupler is moved into housed position.

12. In mechanism of the character described, a locomotive pilot having a pocket, a vertical pivot pin in the pocket, a coupler mounted for turning movement on said pin and having a pilot-contoured face, said coupler having a lock-lifting element, and means for lifting the last-mentioned element, said means having a swivel joint in line with the axis of the pin to allow a portion of said means to move with the lock-lifting element of the coupler when the latter is swung from a housed position with the pocket to coupling position and vice versa.

2,104,866
LOAD TRANSFER DEVICE FOR ROADWAYS
Louis B. Johnsen, Baltimore, Md., assignor to Dow-Weld Company, Inc., a corporation of Maryland
Application April 15, 1937, Serial No. 137,114
4 Claims. (Cl. 94—18)

1. A load-transfer device for roadways comprising a supporting member having horizontal and vertical flanges, a plurality of dowels positioned at spaced intervals extending above said member and transversely thereof, said dowels each having a vertical extension rigidly connected to said member.

2,104,867
BUST SUPPORT
Vivian Fitch Kemp, London, England
Application August 19, 1935, Serial No. 36,909
In Great Britain August 30, 1934
4 Claims. (Cl. 2—42)



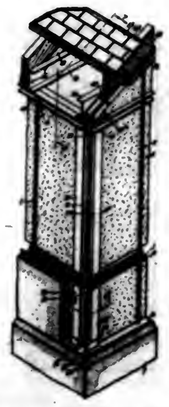
1. A bust support comprising two separate breast pockets; a single pivotal connection between said pockets situated above the line corresponding with the maximum chest expansion; a resilient coupling between said pockets situated below said line so that said pockets can move relatively about said pivotal connection to permit the girth measurement below the pivotal point to vary; shoulder straps respectively secured at one end to the upper edges of said breast pockets and at the other end to the back of said bust support and means for securing said bust support on the wearer.

2,104,868
SHINGLE STAINING MACHINE
Clarence W. Kraus, Buffalo, N. Y.
Application January 12, 1937, Serial No. 120,198
8 Claims. (Cl. 91—46)

1. In a shingle treating machine, a pair of substantially upright guide means, shingle gripping means slidable in said guides, means for raising and lowering the gripping means in one guide means and for simultaneously lowering and raising the gripping means in the other guide means, means for causing said gripping means to release upon approaching the uppermost position there-

of for receiving or releasing shingles, and brush means mounted above said guides for removing

excess liquid from shingles passing upwardly therethrough.



2,104,869
PREFABRICATED BUILDING
Austin T. Levy, Harrisville, R. I.
Application October 22, 1935, Serial No. 46,156
Renewed October 7, 1937
58 Claims. (Cl. 72—1)

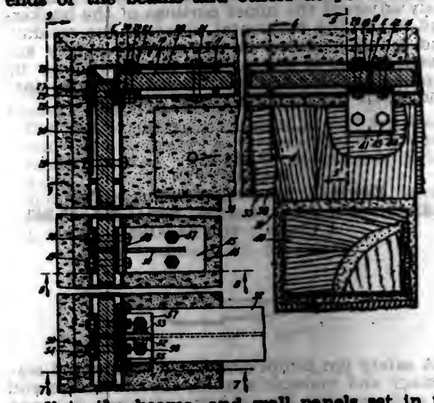
1. In a prefabricated building, a wall frame presenting a plurality of panel apertures, panel units assembled therein each comprising a wall board of story height positioned at its edges by said frame, said units being in side by side relation and having on an outer surface thereof external anchoring sheet material overlying said boards and a frame portion between said units, and a coating of cementitious material clinched by said sheet material and uniting said units.

2,104,870
BUILDING
Austin T. Levy, Harrisville, R. I.
Application December 14, 1935, Serial No. 54,429
29 Claims. (Cl. 72—1)

1. In a building, a wall frame including a plate portion, a wall forming panel unit within and supported by said frame having a body extraneous of said portion, and reenforcing means carried by

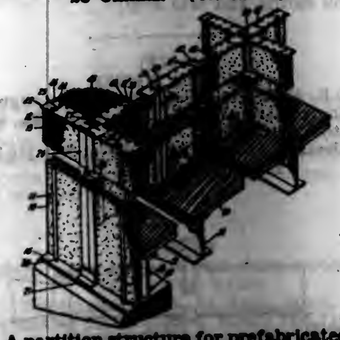
said unit at a face thereof and interlocked with said portion.

2,104,871
BUILDING
Austin T. Levy, Harrisville, R. I.
Application April 29, 1936, Serial No. 76,950
26 Claims. (Cl. 72—1)



1. A building comprising a foundation, an outer wall, and a roof having intermediate the ends thereof a plurality of rafters extending to a side of the building and widely spaced from each other, said outer wall including a plurality of stud members correspondingly located and spaced from each other by the distance between said rafters and located beneath and in alignment with said rafters to support all of the same directly.

2,104,872
BUILDING
Austin T. Levy, Harrisville, R. I.
Application July 10, 1936, Serial No. 89,961
Renewed November 19, 1937
21 Claims. (Cl. 72—16)

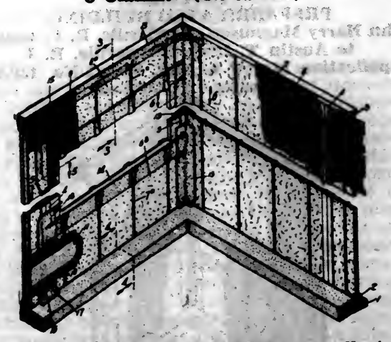


1. A building comprising a foundation, a floor having widely spaced beams extending to a side of the building, an outer wall including load bearing wall studs more narrowly spaced than said

beams, certain of said studs being located at the ends of the beams and others at points inter-

mediate the beams, and wall panels set in the spaces between said studs.

2,104,873
BUILDING
Austin T. Levy, Harrisville, R. I.
Application August 27, 1937, Serial No. 161,268
23 Claims. (Cl. 72—1)



1. A partition structure for prefabricated buildings comprising a stud having oppositely disposed channels and a partition carrying channel at right angles to and fixed to said channels, wall and partition forming panel units seated in said channels and having reenforcing means thereon, and plate members connected to said stud and overlying said units and cooperating with said reenforcing means in positioning the panels.

2,104,874
BUILDING
Austin T. Levy, Harrisville, R. I.
Application October 15, 1936, Serial No. 105,721
25 Claims. (Cl. 72—1)

1. In a building, a foundation wall, beams having their ends supported by said wall, a sill member supported on the wall parallel to said beams, stud members connected to said sill member, an upwardly projecting flanged member associated with said wall and located inwardly of said sill member, a nailing member supported by and on top of said flanged member, and a wooden floor supported on said beams and having a marginal portion resting on and secured to said nailing member.

2,104,875
PREFABRICATED BUILDING
Austin T. Levy, Harrisville, R. I.
Application March 4, 1937, Serial No. 129,092
8 Claims. (Cl. 72—16)

1. In a prefabricated building, a wall structure comprising a metal frame presenting panel apertures, panel means in said apertures, a clinched cementitious coating overlying said panel means and frame, and condensation preventing means between portions of said frame and said clinched coating.

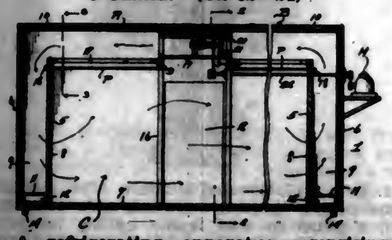
2,104,876
PREFABRICATED BUILDING
John A. Wetherbee, Harrisville, R. I., assignor to Austin T. Levy, Harrisville, R. I.
Application March 4, 1937, Serial No. 129,095
9 Claims. (Cl. 72—1)

1. In a prefabricated building, a foundation, a panel frame thereon including a bottom channel, a panel in said frame having its bottom edge in said channel, and waterproofing means in said channel and in which the lower edge of said panel is embedded, for sealing said edge.

2,104,877
PREFABRICATED BUILDING
Austin T. Levy, Harrisville, R. I.
Application March 4, 1937, Serial No. 129,093
7 Claims. (Cl. 72—1)

1. In a prefabricated building, a panel, a panel positioning frame including vertical and horizontal members and having apertures in said mem-

bers for receiving connecting means for said members, and pointed connecting means for

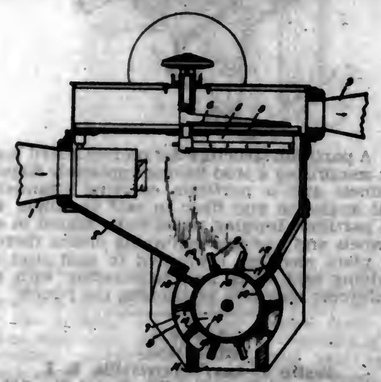


aligning said apertures as said connecting means is inserted.

2,104,878
PREFABRICATED BUILDING
John Harry Magnuson, Harrisville, R. I., assignor to Austin T. Levy, Harrisville, R. I.
Application March 4, 1937, Serial No. 129,694
8 Claims. (Cl. 72—1)

1. In a prefabricated building, a wall structure comprising a frame presenting panel apertures, panel means in said apertures carrying anchoring material spacing means, and continuous sheet means of anchoring material overlying a plurality of panel means and said frame and spaced by said spacing means.

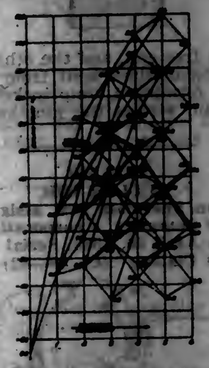
2,104,879
REFRIGERATING DEVICE
Guy Lindsey, Hawthorne, Fla.
Application April 16, 1936, Serial No. 74,734
6 Claims. (Cl. 62—24)



1. A refrigerating apparatus comprising a closed chamber, partitions extending across the opposite end portions of the chamber to provide ice bunkers, the lower portions of said partitions being of an open structure to permit circulation of air through the bunkers to the intermediate portion of the chamber, said open structure of the partitions extending upwardly a material distance from the bottom of the chamber, the upper or remaining portions of the partitions being imperforate, a conduit mounted and entirely contained within in the upper central portion of the chamber and in communication with the upper portions of the bunkers, said communication including horizontally disposed ice pans immediately adjacent the upper portions of the bunkers and below the horizontal plane of the conduit, and a fan mounted in the conduit closely adjacent to one of the bunkers for drawing air up through said bunker and forcing the same into and down through the second bunker.

2,104,880
SAFETY PIN
Edwin J. Lintner, Pittsburgh, Pa.
Application July 10, 1936, Serial No. 90,941
1 Claim. (Cl. 24—161)

A safety pin comprising a coil spring and stationary and movable shanks, the outer free end of said movable shank being pointed, a guard provided at the outer end of said stationary shank for the reception of the pointed end of said movable shank, an elongated loop provided on one of said shanks near said coil spring, the other shank being received in said loop whereby said pointed section will be guided in its movement, and a protective sheathing surrounding said coil spring and said loop.



2,104,881
VACUUM WHEEL
Robert E. McLemore, Columbus, Ga., assignor to Lummus Cotton Gin Co., Columbus, Ga., a corporation of Georgia
Application April 26, 1937, Serial No. 139,049
1 Claim. (Cl. 19—75)

Vacuum lock comprising a cylindrical casing having openings extending across opposite sides, the side walls of said openings being parallel to the axis of said casing, a rotor mounted coaxially in said casing including flexible extending vanes having their free edges parallel to the axis of the rotor and of such radial length as to engage the cylindrical wall of said casing for sealing it against pneumatic pressure, said vanes having their peripheral edges slightly oblique with respect to the direction of the axis of the rotor whereby the leading end of each vane will first make contact with the walls of the openings on the advance side with respect to the direction

of rotation of said rotor, the entire peripheral edges of the vanes thus progressively coming into contact with said walls.

2,104,882
HEAT TRANSFER AND REFRIGERATION
Thomas Midgley, Jr., Worthington, Albert L. Henne, Columbus, and Robert R. McNary, Dayton, Ohio, assignors to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application November 19, 1931, Serial No. 576,653. Divided and this application May 1, 1934, Serial No. 723,573
6 Claims. (Cl. 62—178)

5. The process of transferring heat which comprises condensing and subsequently evaporating any halo-fluoro derivative of ethane having the general formula $C_2H_nX_mF_{6-(n+m)}$, where X equals a halogen other than fluorine and n and m are never less than one.

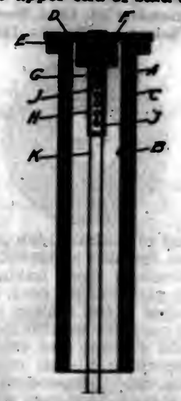
2,104,883
METHOD AND APPARATUS FOR CONTROLLING FUEL BEDS
Harold S. Merton, St. Paul, Minn.
Application April 7, 1934, Serial No. 719,582
2 Claims. (Cl. 236—15)

1. A static operated controller including, a housing, a pressure bell, adjustable means for balancing said bell within said housing, an air passage connecting the draft duct of the furnace with the combustion chamber thereof, a pressure reducing valve interposed in said air passage, a venturi positioned in the draft duct of the furnace connected under said bell, said valve in said controller operating to balance the reduced air pressure between the draft duct and the combustion chamber in relation to the velocity pressure from the venturi to provide a predetermined setting for said controller, and an electric switch carried by said bell and adapted to be operated by the unbalancing of the bell by a change in the static pressure or velocity in the draft duct or the combustion chamber of the furnace which unbalances said controller.

2,104,884
HIGH PRESSURE TUBE AND METHOD OF MAKING SAME
Bert L. Quarnstrom, Detroit, Mich., assignor to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan
Application September 24, 1934, Serial No. 745,213
8 Claims. (Cl. 29—183)

4. The method of making high pressure tubing which comprises, forming a plurality of independent tubular members each having overlapping parts from strip metal stock, each having a coating of high fusing point sealing metal between the overlapping parts for uniting said parts with a joint having cold working and extension properties which approximates such properties of the strip metal stock, said independent tubular members being of varying diameters so that the outside diameter of at least one tubular member is less than the inside diameter of another, some of the surfaces of the tubular members having a coating of said sealing metal thereon, telescoping the tubular members together by relative lengthwise movement to form a plural ply wall tubular structure with zones of sealing metal between the telescoping tubes and between the overlapping parts thereof, drawing the tubular structure to substantially simultaneously longitudinally extend the metal and reduce the diameters of the tubular members until the contiguous surfaces thereof are in tight engagement, and uniting said overlapping parts of the tubular members and the contiguous surfaces of the tubular members by fusing the said zones of fusing metal.

2,104,885
BUTTON FASTENER
George A. Robbins, Hilliar Township, Knox County, Ohio
Application September 17, 1936, Serial No. 101,287
6 Claims. (Cl. 24—90)



6. Means for fastening a button member to a button-like base member including a pair of stem portions each provided with an enlargement, said stem portions adapted to be forced through holes of said button member and thereby anchored by said enlargements, said stem portions each being of soft rubber.

2,104,886
ELECTRICALLY HEATED ANNEALING FURNACE
Wilhelm Rohn, Hanau-on-the-Main, Germany, assignor to the firm Heraeus-Vacuumschmelze Aktiengesellschaft, Hanau-on-the-Main, Germany
Application August 7, 1935, Serial No. 35,994
In Germany April 30, 1934
2 Claims. (Cl. 13—30)

1. An annealing furnace comprising a vertically sustained elongated chamber open at the top

and bottom to the atmosphere and having the vertical side walls thereof insulated against the passage of heat therethrough, a top end closure member detachably secured in end closing position, electrical resistance heating means centrally disposed in the upper end of said chamber, and a

roller element horizontally sustained above said heating means centrally within said chamber and depending from said closure member, said roller element being adapted to receive and impart a reverse bend to a metal strip passing thereto through the open bottom of said chamber.

2,104,887
DISPENSER OR CONTAINER

Herman W. Rueger, Lancaster, Pa., assignor to Liberty Can and Sign Company, Lancaster, Pa., a corporation of Pennsylvania

Application August 17, 1936, Serial No. 96,515
5 Claims. (Cl. 221—62)

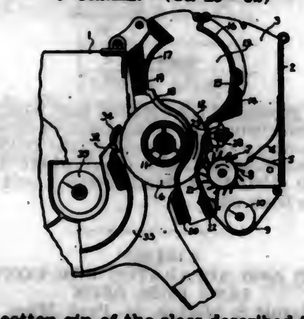
1. A dispensing container comprising a body member formed with an outwardly projecting tapering open ended neck, in combination with dispensing means comprising a slide and a cap each having dispensing openings, the said openings registering in one extreme position of the slide and being completely out of registry in the other extreme position of the slide, said cap being recessed and permanently secured on said neck with a tight frictional fit and having longitudinal laterally projecting flanges respectively extending from its respective side edges and being under compression, and said slide having flanges extending inwardly from its side edges and cooperating with the lower face of its top panel to permanently hold said cap under compression between the lower face of said top panel and the upper faces of said slide flanges, the fit between the slide and cap being such as to permit a snug frictional sliding movement of the slide with relation to said cap, said slide flanges being spaced at an interval from the opposing face of said body member.

2,104,888
ELECTRICAL CONNECTING DEVICE

Otto Spahr, Philadelphia, Pa.

Application October 16, 1933, Serial No. 693,732
4 Claims. (Cl. 240—10.61)

3. An electrical connecting device adapted to provide a lamp attachment for dry cells and comprising a single length of wire bent to form two legs extending at substantially right angles to each other, one leg being of considerably greater length than the other and being formed into



a point at its free end, and the other leg having a series of convolutions bent from adjacent its free end and forming a lamp socket and a convolution in said wire at the junction of the two legs.

2,104,889
HULLER RIB

John A. Stroun, Sherman, Tex., assignor to Hardwicke-Etter Company, a corporation

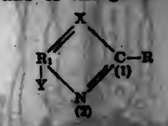
Application April 30, 1936, Serial No. 77,099
9 Claims. (Cl. 19—62)

1. A cotton gin of the class described including gin saws, hulling ribs associated with the saws, said ribs being interrupted to provide rib sections having a gap between the opposed inner ends of the ribs, and means adjacent the gap and extending into the slots between the ribs of one of the rib sections for moving the cotton lint collected thereon toward the gap and the gin saws.

2,104,890
PROCESS OF SEPARATING FROM PIG-IRON THE VANADIUM CONTAINED THEREIN

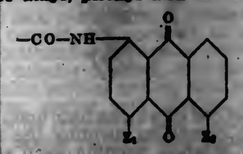
Nicolaas Wark, Scureth-Heerlen, Netherlands

No Drawing. Application December 5, 1933, Serial No. 701,961. In Germany December 14, 1932
2 Claims. (Cl. 75—52)



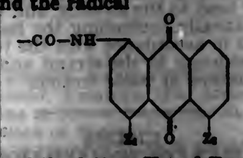
1. Process of obtaining vanadium from iron-ores, said process consisting in reducing said iron-ores to pig-iron in a blast furnace, placing the pig-iron thus produced in a basic converter, adding a strongly basic, very liquid and highly reactive slag to the pig-iron before oxidation of the vanadium contained therein by air can occur, removing the slag so prepared from the iron-bath after the combustion of said vanadium is completed, and recovering the vanadium from its slag.

2,104,891
VAT DYESTUFFS OF THE ACYLAMINOANTHRAQUINONE SERIES CONTAINING A THIAZOLIC RADICAL AND PROCESS OF MAKING SAME



Werner Zerweck and Wilhelm Kunze, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application March 3, 1934, Serial No. 713,950. In Germany March 9, 1933
3 Claims. (Cl. 260—44)



1. Vat dyestuffs of the general formula:

wherein X stands for a member of the group consisting of S and O, R_1 stands for a member of the group consisting of phenylene and naphthylene, R stands for a member of the group consisting of alkyl, phenyl and the radical

Y stands for a member of the group consisting of hydrogen and the radical

at least one of the letters Y and R representing the aforesaid radical, Z_1 standing for a member of the group consisting of hydrogen, a benzoylamino and methoxy radical, Z_2 standing for a member of the group consisting of hydrogen and a benzoylamino-group, at least one of the Z's representing hydrogen, which dyestuffs dye the vegetable fiber yellowish to yellowish red to yellowish brown shades of a particular fastness to light.

2,104,892
INTERNAL COMBUSTION ENGINE CONSTRUCTION

George H. Blettner, Chicago, Ill., assignor to Renette Company, Chicago, Ill., a corporation of Illinois

Application September 30, 1935, Serial No. 42,776
1 Claim. (Cl. 123—193)

In an internal combustion engine including an engine block casting having therein a cylinder, a piston reciprocally mounted in said cylinder, and an exhaust passage, the upper portion of the block between said passage and adjacent upper cylinder wall being relatively thicker than the portion of said block on the opposite side of said cylinder, localized clearance being provided between said upper cylinder wall portion and that portion of said piston which overrides said wall portion in its travel, whereby any growth of said wall portion is compensated for and tilting of the piston is prevented.

2,104,893
PISTON

George H. Blettner, Chicago, Ill., assignor to Renette Company, Chicago, Ill., a corporation of Illinois

Application April 23, 1936, Serial No. 75,917
9 Claims. (Cl. 309—14)

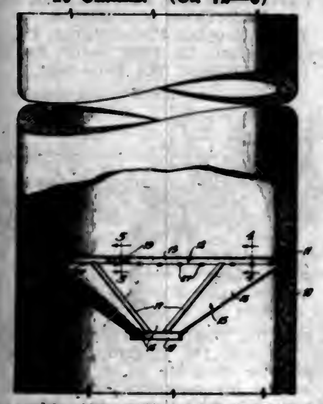
1. A piston structure comprising a head, a cylindrical skirt having diametrically opposite wrist pin openings, a hollow strut member having a cylindrical end bonded to said head and having outwardly flared portions providing arcuate surfaces of reduced width relative to said end conforming with and bonded to the inside of said skirt along areas intermediate said wrist pin openings, said strut member having wrist pin openings in opposed walls in alignment with said skirt wrist pin openings, and thimbles extending between said walls and skirt and secured in said openings whereby said skirt is rigidly supported from said head and is cross-braced by said strut and thimbles.

2,104,894
ELECTRIC CONTROL DEVICE FOR BLOCK PRINTING MACHINES

Oscar Brophy, Philadelphia, Pa.

Application June 23, 1936, Serial No. 86,760
24 Claims. (Cl. 101—198)

1. A printing machine having in combination a frame, means for intermittently advancing goods into the machine to be printed, printing heads, means for reciprocating the heads into printing relation with the goods, a latch movably mounted upon the frame adjacent to each head for latching the head out of action, a bearing arm mounted for oscillation and operatively associated with the latch for engaging the latter with the head, a part mounted for oscillation in

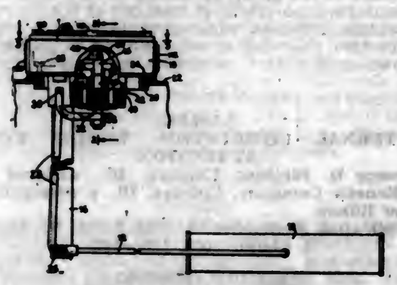


timed relation with the head, locking means upon the bearing arm and arranged for engagement with said part, an electromagnetic device mounted upon said arm and arranged for engaging said locking means with said part for moving said arm with said part, and a control device operatively associated with said electromagnetic device.

2,104,895
ENUNCIATOR
Harry F. Buses and Joseph N. Huser, Indianapolis, Ind.
Application August 13, 1935, Serial No. 35,977
3 Claims. (Cl. 40—65)

1. In an enunciator, a casing, a cover plate therefor, said plate having openings therethrough, a stationary sheet cooperating with one of said openings for exhibiting a legend thereon, a movable sheet adapted to cooperate with the remainder of said openings in said plate, said movable sheet having an opaque portion adapted to be disposed over certain of said openings when the sheet is adjusted to one position and a transparent portion having different legends thereon for registration with certain of said openings when the sheet is adjusted to different positions, means for shifting the position of the movable sheet for successively exhibiting the different legends thereon, and means for illuminating the interior of said casing.

2,104,896
BIN BOTTOM FOR CONCRETE STRUCTURES
Alexander Clever, Chicago, Ill., assignor of fifty-one one-hundredths to MacDonald Engineering Company, Chicago, Ill., a corporation of Illinois
Application December 17, 1936, Serial No. 116,304
10 Claims. (Cl. 72—6)



1. In combination with a structure of the class described, having a groove around its inner wall furnishing a ledge within the plane of the wall surface, a bin bottom having its upper margin entered within said groove and supported by the lower face of said groove.

2,104,897
METHOD AND MEANS FOR WAVING HAIR
George Decker, Cincinnati, Ohio, assignor to The Philad Company, Cleveland, Ohio, a corporation of Ohio
Original application June 5, 1929, Serial No. 368,545. Divided and this application August 28, 1933, Serial No. 687,049
6 Claims. (Cl. 132—36)

1. The method of waving hair upon the human head which comprises dividing the hair into a plurality of strands, winding each strand, supplying each strand with moisture, simultaneously applying heat to the strands, and individually and automatically controlling the heat supplied each strand in accordance with the temperature conditions existing at the strand and independent of conditions at other strands.

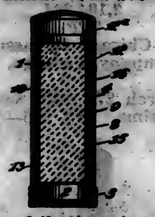
2,104,898
ELECTRICALLY CONTROLLED LIQUID LEVEL INDICATOR
Clarence A. de Giers, Forest Hills, N. Y.
Application May 10, 1934, Serial No. 724,857
3 Claims. (Cl. 201—48)

1. In a liquid level indicating apparatus, a housing adapted for attachment to a tank containing liquid, a rheostat within said housing, a flexible sleeve for sealing the interior of said housing from the contents of the tank, a movable member within said sleeve pivoted on said housing outside of said sleeve and sealed against the contents of said tank, means responsive to change of level of the liquid for swinging said movable member about its pivot, and means interconnecting said member and said rheostat whereby said rheostat is controlled by said member.

2,104,899
FUSE LINK CONSTRUCTION
Ralph H. Earle, Wauwatosa, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application June 4, 1936, Serial No. 83,496
12 Claims. (Cl. 200—117)

1. A fuse link comprising a tubular insulating member, a pair of end portions, at least one of said end portions being slidable outwardly from within said tubular member, said fuse link having a severable portion joining said end portions, and a spring urging said slidable end portion outwardly with respect to said tubular member, said spring having its inner end immediately adjacent said severable portion and electrically insulated therefrom.

2,104,900
CARBON REMOVING TOOL
Michael Helbut, Jennings, Mo., assignor to H & H Machine & Motor Parts Co., St. Louis, Mo., a corporation of Missouri
Application September 16, 1936, Serial No. 101,003
3 Claims. (Cl. 15—104.01)



1. In a tool of the class described, a disk-shaped head-member, an annular series of spaced parallel flexible rods each rigidly mounted at an end in the head-member, said rods being at their other ends unrestrained, a plurality of burrs disposed for rotation on the respective rods, and means for retaining the burrs loosely on the respective rods.

2,104,901
STOCKING
Oscar Walter Marden, Drexel Hill, Pa.
Application May 4, 1937, Serial No. 140,583
3 Claims. (Cl. 66—178)

1. As an article of manufacture a full-fashioned stocking blank having narrowing points extending along substantially the entire length of the leg portion thereof between the calf portion and the top of the heel portion, and in which the upper portion of the narrowing points which extend along the calf portion are substantially parallel with the selvedge edges, and in which the remaining narrowing points which extend down to the top of the heel portion gradually converge towards their respective selvedge edges so that several of the lowermost of said narrowing points are taken up in the seam when said blank is formed into a stocking.

2,104,902
LIPSTICK HOLDER OR THE LIKE
Simon Merrison, New York, N. Y.
Application July 26, 1935, Serial No. 33,283
8 Claims. (Cl. 206—56)

1. In a holder of the type in which a carrier is reciprocated in a slotted guide tube by relative rotation of a propelling sleeve which embraces the guide tube and is itself embraced by an exterior casing, the guide tube being open at one end and being provided at the other end with an operating head which is inseparable from the guide tube: the improvement which comprises a swivel connection between the operating head and one end of the exterior casing, said connection being effective to hold the exterior casing against longitudinal movement in both directions; an annular bearing formed in the head for one end of the propelling sleeve; and retaining means projecting inwardly from the other end of the exterior casing, said retaining means being effective to hold the propelling sleeve against longitudinal movement away from said bearing.

2,104,903
LUBRICATOR VALVE CONSTRUCTION
John C. Merrow, Chicago, Ill., assignor to Merrow Lubricator Company, Chicago, Ill., a corporation of Illinois
Application March 27, 1936, Serial No. 71,093
4 Claims. (Cl. 221—51)

1. In a plunger type lubricator, a lubricator body having a discharge outlet, a tubular guide in axial alignment with said outlet and having its adjacent end disposed in spaced relation with respect to said outlet, a valve normally closing

said outlet, a plunger rod movable within said guide and carrying said valve, a washer in the form of a truncated cone on said rod and working within said guide and disposed on the rod

with its face of greater diameter directed toward the lubricator outlet so as to increase the sealing effect between the washer and guide as the rod is moved in a direction to discharge lubricants through said outlet.

2,104,904

TIP

John C. Morrow, Chicago, Ill., assignor to Morrow Lubricator Company, Chicago, Ill., a corporation of Illinois

Application March 27, 1936, Serial No. 71,094

10 Claims. (Cl. 285—161)

10. A discharge tip for a high-pressure lubricator, comprising a skirted sealing member having a head of yieldable material, a passaged pin extending endwise through said member and having a portion outwardly of said head and constituting a pilot, and a sleeve about and in contact with another portion of said pin and about and in contact with a part of said member inwardly of said head, said sleeve being provided with means for connecting it to a lubricator.

2,104,905

LUBRICATOR CONSTRUCTION

John C. Morrow, Chicago, Ill., assignor to Morrow Lubricator Company, Chicago, Ill., a corporation of Illinois

Application February 18, 1937, Serial No. 126,749

2 Claims. (Cl. 285—51)

1. In a high pressure hand lubricator apparatus including a body for lubricants and a spout and wherein a plunger rod actuates a piston to trap a charge of lubricant in a chamber normally closed by a spring pressed closure and then ejects the charge under high pressure built up in the chamber by force applied to the charge by movement of the plunger rod and piston, distinguished by the fact that the rod is guided by a sleeve disposed within the body and with one end open to the atmosphere and having an aperture in it between its ends and the rod is provided with a washer working within the sleeve which washer opens said aperture to communicate between the

interior of the body and the atmosphere when the rod is moved to eject a charge and wherein the sleeve is sealed against lubricant and air escape to the atmosphere when the rod is in normal or inoperative position.

2,104,906

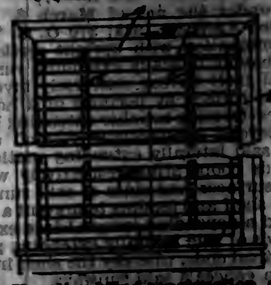
MEANS FOR CASTING ROLLS

Henry Mueller and Harry E. Watson, Pittsburgh, Pa., assignors to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application April 6, 1935, Serial No. 15,928

5 Claims. (Cl. 22—187)

1. Apparatus for casting mill rolls or the like, including a flask, heat insulating means completely defining a molding cavity in the flask, the cavity being positioned on the axis of the cast roll in substantially vertical, said heat insulating means surrounding the upper neck portion of the casting being substantially thick and adapted to maintain the surrounded portion of the casting molten, the heat insulating means adjacent substantially all the remaining portions of the casting being less resistant to the passage of heat, and also relatively thin, and high heat conducting means positioned directly behind the last referred to heat insulating means for readily absorbing and conducting away heat passing therethrough.



2,104,907

VENETIAN BLIND

David Nemerson, Chicago, Ill.

Application July 6, 1936, Serial No. 89,923

6 Claims. (Cl. 160—173)

1. In a Venetian blind construction, a tilting bar comprising two concavo-convex sheet members removably secured together along their margins and with the convex outermost, flat reinforcing plates within said bar extending crosswise and lengthwise, lengthwise spaced relation, plugs closing the ends of said bar, a supporting pivot projecting from one of said plugs and adapted to engage a supporting bracket, a pivot projecting from the other of said plugs and carrying a wheel keyed to it, a plate supporting the hub of said wheel as a journal, lengthwise extending reinforcing means interposed between said plug and plate to provide a longitudinal rigidity, said sheets and plates having apertured for passing raising straps therethrough, and the apertures in said sheets being longer widthwise of the bar than the apertures in the plates to enable oscillation of said bar about its pivotal support without bending said straps.

2,104,908

MACHINE FOR CLOSING AND SEALING CARTONS

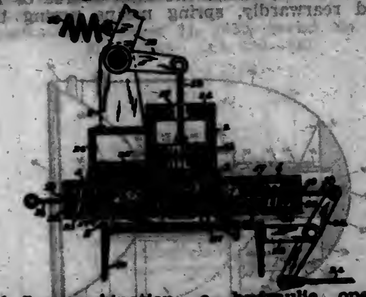
Cleopatra Leonita Eugenia Otis Hannah Tod Phillips and Elbert Bertram Phillips, Walmer, England

Application October 1, 1936, Serial No. 103,650

In Great Britain October 22, 1934

11 Claims. (Cl. 226—84)

1. A machine for closing and sealing cartons of flexible material having a rectangular mouth and a folded metal strip applied over the edges of said mouth with its inside projecting said mouth which includes in combination a rotatable folding member, a movable die forming a counter-abutment for said folding member, a fixed edge on said die disposed in the path of movement of said rotatable folding member, [illegible] to be moved out of its operative [illegible] ber, means to [illegible] die from movement during a [illegible] ment of said [illegible] die co-operating with said [illegible] to provide a pinching action [illegible] to actuate said rotatable folding member.



2,104,909

BRAKE OPERATING MECHANISM

John A. Rybczynski, Bradford, Pa.

Application September 4, 1934, Serial No. 743,584

4 Claims. (Cl. 60—54.5)

1. In combination, a hydraulic operating mechanism for motor vehicle brakes comprising, an integrally formed body portion constructed to provide a vertically disposed operating cylinder and two pairs of horizontally disposed brake cylinders, said pairs of brake cylinders being longitudinally aligned relatively to each other, each of said brake cylinders having a separate part to provide communication between same and said operating cylinder, said body portion embodying a fluid storage reservoir including a wall disposed directly under the bottom of said operating cylinder, and an automatically operable check valve mounted in the bottom of said operating cylinder.

2,104,910

RUG MARKER

Samuel C. Simonsen, Philadelphia, Pa.

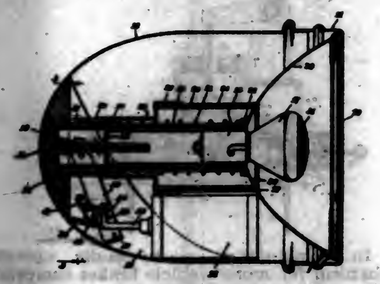
Application August 20, 1937, Serial No. 160,002

2 Claims. (Cl. 40—2)

1. In combination with a floor covering, a label of unitary construction formed of textile material and comprising end portions connected by an intermediate portion, the face of said label having suitable indicia thereon, a rubber compound adhesive on the back of said label, one end portion and an intermediate portion having their backs adhering together, the other end of the label affixed to the rear end of the floor covering, and a transversely extended tab interposed between the overlapping intermediate portion and the end portion of the label whereby said transversely extending portion may be readily viewed from the side, top, and bottom of the rug.

2,104,911

CHANGEABLE COLOR SPOTLIGHT



Robert E. Snyder, Pasadena, Calif.

Application May 29, 1936, Serial No. 82,867

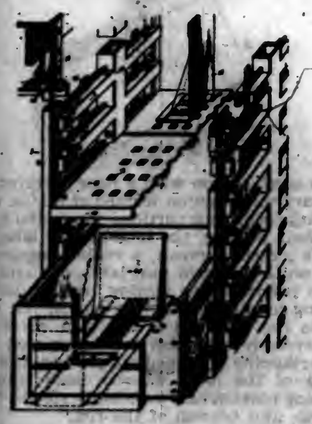
2 Claims. (Cl. 177—337)

1. A lamp structure comprising means providing a shell, a parabolic reflector in the shell, a lens over the reflector, a light source between the lens and the reflector, shield means between

the light source and the lens for preventing light from passing directly from the light source through the lens, a tubular color changer arranged about the light source adapted to be projected forwardly about the light source or retracted rearwardly, spring means urging the

color changer into retracted position, means for moving the color changer forwardly against the action of the spring means, means for locking the color changer in its forward position, and means for causing the locking means to release, enabling the color changer to be retracted by the spring means.

2,104,912



FILING AND STACKING EQUIPMENT

Charles J. Streeter, Jersey City, N. J.

Application April 19, 1935, Serial No. 17,291

13 Claims. (Cl. 312—107)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

6. An upright section for filing and stacking equipment comprising a centrally located column member, vertical side members and spaced horizontally disposed runways integral with said column and side members and adapted to support filing units, said runways joining the side members in spaced offsets inward of the outermost edges of the side members and joining said column member at one side thereof and flush with another side thereof.

2,104,913

FILING EQUIPMENT

Charles J. Streeter, Jersey City, N. J.

Application November 18, 1936, Serial No. 111,366

23 Claims. (Cl. 45—77)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. In combination with upright sections of a bookstack having laterally extending runways, a sheet metal shelf having conversely inverted L-shaped ends formed by portions of a horizontal shelf surface-forming member extending laterally over and beyond substantially vertical ends on said shelf, said laterally extending portions and vertical ends cooperating respectively with the horizontal surfaces and sides of said runways to support the shelf and tending to prevent a sagging thereof, and a depending integral face extending over the ends of said laterally extending portions and the vertical ends, whereby the shelf in operative position conceals said runways.

8. In combination with spaced upright sections of a cabinet having spaced laterally extending superposed runways, a shelf movably suspended between runways of adjacent upright sections and between and upon the superposed runways of said adjacent uprights with its upper surface on a plane immediately below that of the plane of the bottom of the runways next above the runways upon which the shelf is suspended and with its lower edge on a plane with that of the bottom of the runways upon which the shelf is suspended, and means on the ends of said shelf adapted to engage the sides of the runways upon which the shelf is suspended.

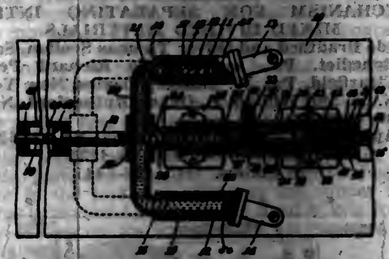
11. A book-end having an upright contact face portion continuing into a base portion at an angle thereto, and having shelf gripping means continuing from the base of and on a plane with said face portion into an angle beneath the plane of the base portion and terminating underneath said base portion.

14. A cabinet comprising compartments the side members of which are provided with equally spaced laterally extending runways, portable units each having a suspension element slidable along the side thereof, means for operably attaching said suspension element to the portable unit, said suspension element carrying anti-friction devices engaging with said runways and also carrying other anti-friction means for engaging said attaching means, and means for locking said suspension element immovably along the sides of said units when removed from the cabinet.

17. In a portable filing unit comprising an open-faced drawer-like case adapted to operably house a plurality of containers, means on the sides of said case adapted to support the same upon runways of a cabinet which means comprise a rearwardly positioned anti-friction element and a forwardly declining frictional element adapted to progressively engage the end of the runway surface.

22. A compressor and retainer unit adapted to removably sit within a drawer, said unit comprising a base having upright ends, an upright member carried by said base movable longitudinally

with respect to said base, guideways upon said upright member adapted to slidingly engage said base, manually releasable means on said upright member cooperating with said base whereby said upright member may be retained at desired positions upon said base, a material retaining member adapted to have material threaded thereon suspended between said upright ends and passing through said upright member, one of said ends being hinged whereby it may be lowered to free one end of said retaining member for the receipt and removal of said upright member and material.



2,104,914

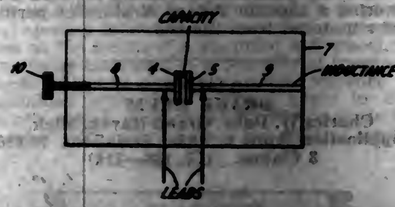
CIRCUIT BREAKER

Robert Temple, Jr., Hewlett, N. Y.

Original application April 24, 1933, Serial No. 667,686, now Patent No. 2,017,328, dated October 15, 1935. Divided and this application October 14, 1935, Serial No. 44,963

12 Claims. (Cl. 200—150)

1. A circuit breaker comprising stationary and moveable contact members, the latter having a fluid filled chamber, a piston free for movement independent of the movable contact member adapted to compress the fluid and thereby actuate the moveable contact member and explosively actuated means for moving the piston.



2,104,915

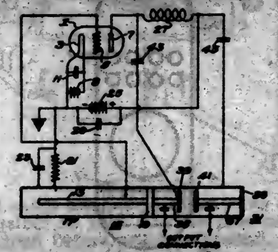
TUNED OSCILLATOR CIRCUIT

Browder J. Thompson, Summit, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 28, 1934, Serial No. 746,124

12 Claims. (Cl. 250—40)

1. An ultra high frequency tuned oscillatory circuit comprising a container in the form of a metallic surface of revolution, a damped capacitor substantially in the center of said surface of revolution, and connected to said surface by inductance in the form of support rods, and a lead within said surface of revolution connected to the outer surface of each of said support rods between the ends thereof and extending therefrom externally of and through said surface of revolution, said leads being physically separated from each other.



2,104,916

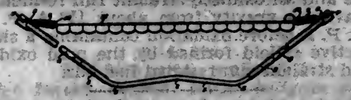
CONSTANT RADIO FREQUENCY GENERATOR

John Evans, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application October 31, 1935, Serial No. 47,563

20 Claims. (Cl. 250—36)

1. An oscillation generator comprising an amplifier having input and output terminals, a concentric line whose effective length is substantially equal to one-quarter of the fundamental wave connected to said input terminals, a tunable circuit connected to said output terminals including a concentric line whose electrical length is substantially half the length of the fundamental wave, means for compensating for the effects of temperature changes in said quarter wave line, and means for compensating for the effects of temperature changes in said tunable circuit, whereby there is obtained in said tunable circuit oscillations of a constant frequency corresponding to the frequency of the fundamental wave.



2,104,917

HAMMOCK

Theodore A. Tischler, Detroit, Mich., assignor to Joseph Sikora, Detroit, Mich.

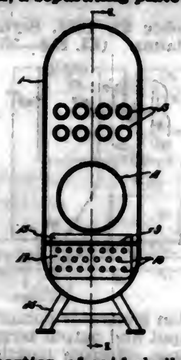
Application July 21, 1936, Serial No. 91,719

5 Claims. (Cl. 5—129)

5. A hammock frame assembly comprising two main frame members, said frame members each being in three sections with the mid-sections removable from the two end sections, each of said end sections being permanently secured to an end section of the other main member and collapsible thereagainst, each of said end sections being flattened, bent and notched at its outer end, the outer ends of adjoined sections being lying flat against each other with their notches alined, and hammock supporting means in the notches of adjoined end sections also serving as means to maintain said outer ends in contact during use.

2,104,918

WATER HEATER



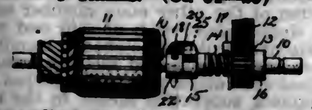
Lawrence R. Weymouth, Detroit, Mich., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland

Application April 27, 1935, Serial No. 18,638

2 Claims. (Cl. 122—33)

1. A combined steam or hot water boiler and storage tank water heater comprising, a circumferential enclosing shell, a flue sheet closing one end of said shell, an end plate closing the other end of said shell, a flue sheet spaced inwardly

from said end plate to form a smoke box, gas conducting flues extending between said flue sheets and having their opposite ends hermetically secured therein, a separating plate extending across



the bottom portion of said shell under said flues for providing a hermetically segregated storage water tank in intimate thermal coupled association with the heating medium circulating in the shell around said flues.

2,104,919
STABILIZED FUEL OIL
Gary Myron Whitney, Compton, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 5, 1936, Serial No. 83,699
2 Claims. (Cl. 196—142)

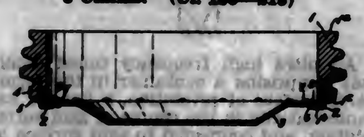
1. A blended non-sludging low-viscosity fuel oil having a gravity from 18° A. P. I. to 18° A. P. I. consisting of a cracked residuum having a gravity from 4° A. P. I. to 7° A. P. I. containing components which upon blending with an unoxidized straight run mineral oil form a carbonaceous sludge and an oxidized straight run residual fuel oil having a gravity from about 18° A. P. I. to 28° A. P. I. before oxidation containing a sludge-protective colloid formed by the mild oxidation of said straight run residual fuel oils.

2,104,920
COUPLING
Herman Yaskin, Newark, N. J.
Application February 14, 1935, Serial No. 6,506
3 Claims. (Cl. 64—29)

1. A coupling comprising a shaft having a member fixed to rotate when the shaft rotates, said member including a helical spring extending around the outside of the shaft, said spring having an inwardly extending hook on its free end, and a member arranged loosely on the shaft and having a projection to lie normally under the hook the hook being freely flexible only in an outward radial direction.

2,104,921
MATTRESS FOR BEDS
Albert M. Bank, Jersey City, N. J., assignor to Sylvia Bank, Jersey City, N. J.
Application June 17, 1936, Serial No. 85,688
17 Claims. (Cl. 5—345)

16. In combination, a mattress having side walls, a pair of members at said side walls, and means extending through the mattress and interconnecting said members, permitting separation of said members to a predetermined amount and preventing separation of said members more than



said predetermined amount, at least one of said members comprising a handle on the outside of one of said side walls and movable away from and toward said side wall, and means to yieldingly resist movement of said handle away from said side wall.

2,104,922
MECHANISM FOR SEPARATING INTERMIXED DIVIDED MATERIALS
Clyde Bradford and Oliver Thomas Scollon, Saint Benedict, Pa., assignors to Richard Peale, Clearfield, Pa., W. Sanders Davies, New York, N. Y., and William B. Oakes, Rutherford, N. J., as trustees
Application April 18, 1931, Serial No. 531,128
Renewed February 16, 1935
15 Claims. (Cl. 209—44)

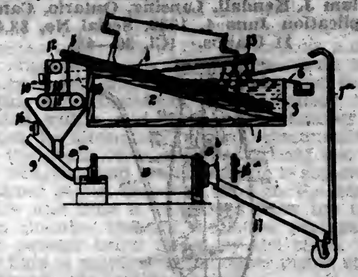
1. A mechanism for separating intermixed divided materials including in combination an air-pervious support, means for vibrating the support, means for feeding and maintaining a bed of the intermixed materials undergoing separation upon the support, means for passing lifting and loosening air currents through the bed, an apertured platform overlying the support, means for progressing the bed over said platform, means for delivering relatively fine heavy particles through the platform, means for traversing larger pieces of settled heavy material along the surface of the platform, and means for separately delivering a superior flotant stratum of purified lighter material from the bed.

2,104,923
BRAKE DRUM
Charles W. Dake, Grand Haven, Mich.
Application April 6, 1936, Serial No. 72,926
3 Claims. (Cl. 188—218)

1. A brake drum comprising a cast metal braking ring member having a plurality of bendable metal clips extending axially outwardly of the braking member, then radially inward and axially therefrom and a supporting back for the braking ring member secured to the axially extending portion of the said clips.

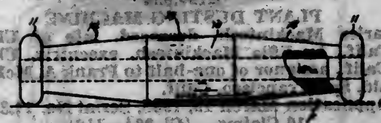
2,104,924
SHOE HEEL
Clayton Dudley, Detroit, Mich.
Application September 14, 1936, Serial No. 100,619
3 Claims. (Cl. 36—38)

1. In a shoe heel, a recessed member adapted for attachment to a shoe, a rubber heel movable vertically in the recessed member, a metal plate embedded in the rubber heel and having an extending tongue, one wall of the recessed member being grooved to receive said tongue and the groove being of sufficient width as to allow vertical movement of the rubber heel and tongue in the recessed member, a circular boss in the bottom of the recessed member having a threaded aperture therein, a helical coiled spring fitting about the said boss at the small end and engaging the rubber heel at the large end, the rubber heel being provided with a recess at one side of the metal plate and a screw extending through the metal plate said threaded into the threaded aperture in the boss, the recess in the rubber heel being arranged to receive the head of the screw and preventing the screw head from engaging the pavement.



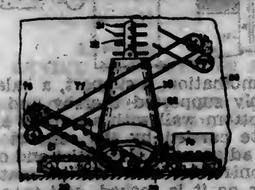
2,104,925
BUFFING WHEEL AND PROCESS OF MAKING SAME
Russell A. Gottsman, Cleveland, Ohio
Application March 14, 1936, Serial No. 68,912
1 Claim. (Cl. 51—193)

A ring-shaped buff wheel having a large central opening substantially equivalent to the waste area at the center of a standard buff wheel, said ring being composed of a plurality of trapezoidal blocks of multi-ply fabric sewed together and assembled with their inclined edges in overlapped sewed relation and with their smaller parallel sides defining the large central opening.



2,104,926
CLASSIFIER
Herbert E. T. Haultain, Toronto, Ontario, Canada
Application April 4, 1933, Serial No. 14,677
16 Claims. (Cl. 209—1)

1. In combination a classifier and a grinding mill in closed circuit, the classifier including a settling chamber having an overflow for the slimes or fine particles, the classifier also having a discharge end; means for drawing off settled sands from the settling chamber and discharging them over the said end; means for returning a predetermined quantity of the said discharged sands to the grinding mill so that they will be re-ground before re-entry to the classifier; and means for retaining any surplus

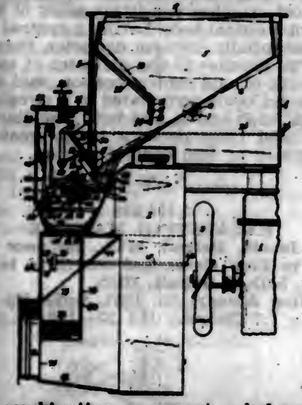


discharged sands directly to the settling chamber of the classifier so that such surplus sands will be re-classified before being re-ground.

2,104,927
EXERCISER
Harry L. Hussmann, Los Angeles, Calif.
Application April 12, 1937, Serial No. 136,328
2 Claims. (Cl. 272—57)

1. A foot exerciser consisting solely of an elongated symmetrical body having a central portion of a substantially uniform diameter, there being a uniform decrease in the diameter of said body at each side of said central portion, said decreasing diameter being terminated by a circular ridge portion at each end of said body, the diameter of each of said ridge portions being greater than the diameter of said central portion.

2,104,928
EXCAVATING MACHINE
George Jacobs, Detroit, Mich., assignor of one-third to Emil Geste and one-third to Joseph Grant, both of Detroit, Mich.
Application January 25, 1937, Serial No. 122,107
7 Claims. (Cl. 37—130)



1. An excavating machine for alluvial earth deposits consisting of a propellable chassis, an upwardly extending rotatable spindle at one edge of said chassis, earth agitating arms carried by said spindle and extending well beyond the projected area of said chassis, a shield or housing for the spindle and arms and enclosing the latter for the greater portion of the periphery thereof, but open over the earth contacting portion, a closure member at the bottom of said housing and having a discharge opening, a receiver for earth discharged from said housing, and means for rotating said spindle as said chassis is propelled.

2,104,929
SHAVING DEVICE
William J. Kendall, Lansing, Ontario, Canada
Application June 4, 1936, Serial No. 83,436
11 Claims. (Cl. 30—43)

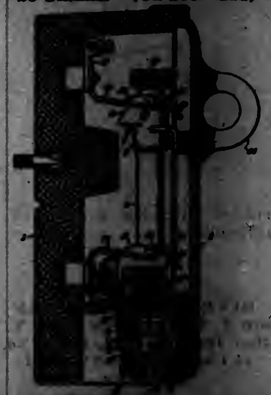
11. In a mechanism of the described class, a hollow shear bar having longitudinal slots defining an intermediate working portion cylindrically curved and arcuately slotted along each side of its longitudinal center line to provide shearing teeth.

2,104,930
PLANT DUSTING MACHINE
Charles Mackintosh, deceased, late of Ukiah, Calif., by Effie Mackintosh, executrix, Ukiah, Calif., assignor of one-half to Frank A. McDonald, San Francisco, Calif.
Application March 15, 1935, Serial No. 11,328
10 Claims. (Cl. 221—118)

7. In combination, a support, a balanced hopper rockably supported thereby and having an inclined bottom wall with an outlet at its lower end, a gate carried by the support and being positioned adjacent to the outlet end of the hopper for controlling the flow of material from the hopper as it is rocked, and manually controlled means for opening the gate.

2,104,931
CAP FORM FEEDING ATTACHMENT FOR PAPER BOTTLE CAPPING MACHINES
Irving F. Mandell, North Quincy, Mass., assignor to Reinforced Paper Bottle Corporation, New York, N. Y., a corporation of Delaware
Application July 14, 1934, Serial No. 90,575
8 Claims. (Cl. 271—37)

1. A cap form feeding device comprising a magazine for holding a vertical stack of cap forms, a perforated suction pad, a pivotally mounted suction tube leading thereto, means for lowering the pivotal mounting of the tube in a vertical plane to carry the tube downward and the pad into proximity to the uppermost cap form to draw the same into contact therewith and



for then raising the tube and its mounting, means for swinging the pad bearing end of the tube forward to convey the cap form adhering thereto to a point of deposit, and means for temporarily cutting off the suction from the tube to release the cap form.

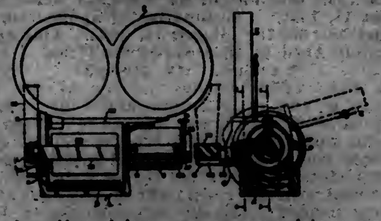
2,104,932
SIGNAL
Alvin O. Olafson, St. Paul, Minn., assignor to National Traffic Signal Company, St. Paul, Minn., a corporation of Minnesota
Application August 4, 1930, Serial No. 472,806
6 Claims. (Cl. 177—337)

1. A traffic signal comprising means to signal traffic to go, means to signal traffic to stop, a plurality of switches, circuits each containing one of said switches, means for periodically and sequentially energizing said circuits, an electric motor, means connecting said circuits to said motor, means operated upon a predetermined travel of said motor to open said energized circuit through the said switch in last said circuit, and to close the circuit to be next energized through the switch in its circuit, means connected to said signaling means and operating to alternate their signal display when the said motor is operated, and means operated only when said motor is operated to continually indicate the time remaining before the said signal display is changed.

2,104,933
CUT-OUT
William O. Schultz, South Milwaukee, and Alvin G. Steinmeyer, Milwaukee, Wis., assignors to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application June 15, 1936, Serial No. 85,214
28 Claims. (Cl. 200—114)

1. A fuse cutout comprising a support, a pair of vertically spaced stationary contacts, a substantially vertically positioned fuse tube normally connecting said contacts and subject to upward recoil to disconnect said fuse tube from said stationary contacts when properly supported from said support, and a fuse link carried by said fuse tube and normally restraining said fuse tube from upward motion, said fuse tube having at least one stationary contact normally electrically engaging a stationary contact, the recoil motion of said fuse tube moving the contact of said fuse tube away from the corresponding stationary contact.

2,104,934
RELIEF VALVE
Arthur G. Smith, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a corporation of Pennsylvania
Application November 5, 1936, Serial No. 109,230
3 Claims. (Cl. 137—63)



3. A pressure relief valve comprising a casing having a chamber adapted to be directly connected to a header, a piston valve mounted in said casing for controlling communication from the chamber to a free discharge, said piston valve having a piston mounted in a cylinder of greater area than the diameter of the main body portion of the valve, a passage for providing communication between the chamber in said cylinder on the lower side of said piston and said header, two passages of different areas leading into the chamber on the upper side of the piston from a check valve chamber, means for supplying fluid under pressure to said check valve chamber and for exhausting fluid therefrom, and a check valve mounted within said check valve chamber and adapted to alternately control communication from the check valve chamber to said two passages whereby fluid under pressure is supplied to the upper piston chamber through the smaller passage and fluid is exhausted from the upper piston chamber through the larger passage, the latter passage being closed by the check valve when fluid is supplied to the upper piston chamber through the smaller passage.

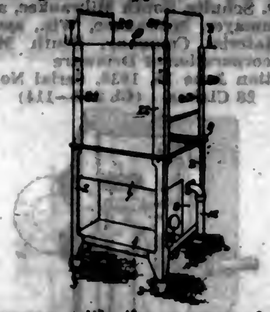
2,104,935
BRIEF CASE OR THE LIKE
Samuel Salesman, New York, N. Y.
Application April 9, 1936, Serial No. 73,445
8 Claims. (Cl. 150—1.6)

7. A brief case including front and back sections and flexible gussets of substantially uniform width connecting all edges of said sections, partitions connected to the bottom and side gussets and predetermining the line on which said gussets fold, said top gusset having a longitudinal slit therein, separable fastener means to close the slit, and elongated stiff reenforcing devices extending lengthwise of the top gusset at opposite sides of the slit and predetermining fold lines in said gusset which form continuations of the fold lines in the other gussets.

2,104,936
FOCUSING DEVICE FOR MOTION PICTURE CAMERAS
Robert Colby Stevens, Beverly Hills, Calif., assignor to Fox Film Corporation, Los Angeles, Calif., a corporation of New York
Application July 23, 1935, Serial No. 32,714
26 Claims. (Cl. 88—16)

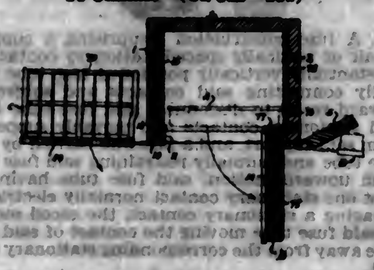
1. A motion picture camera comprising: a yoke having a photographing aperture in the front end

thereof and an optically aligned focusing aperture in the opposite end; a camera case having a photographing aperture and a focusing aperture centrally disposed in the front end thereof and a focusing aperture in the opposite end optically aligned with the focusing aperture in the front end of the camera, and means for rotatably mounting said case in said yoke so that the case may be rotated to selectively register the photographing aperture or the focusing aperture in the camera case with the photographing aperture in the yoke.



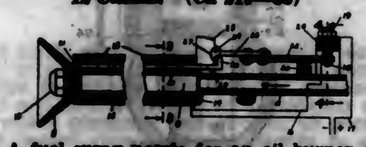
2,184,827
BOILER SUPERHEATER
Charles S. Turner, Detroit, Mich.
Application September 7, 1934, Serial No. 742,863
8 Claims. (Cl. 122—481)

1. In a locomotive construction, in combination with a fire tube boiler having a firebox at one end and a smoke box at the other and including fire tubes connecting said firebox and smoke box, said boiler also being provided with a collecting dome for saturated steam located above the water level, a superheater assembly comprising integrated steam and water conduit portions looped through the firebox and terminating at their upper extremities appurtenant the dome, said steam conduit portions having inlet means within the dome, the water conduit portions having discharge portions above the water level, at least the steam conduit portions of said assembly extending through the fire tube portion of the boiler and having discharge portions appurtenant the smoke box, and controllable water inlet means for the lower ends of the water conduit portions.



2,184,838
FRAMEWORK AND CASING FOR DISHWASHING MACHINES
George Webb, West Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a corporation of Connecticut
Division of application Serial No. 599,747, March 18, 1932, now Patent No. 2,051,232, dated August 18, 1936. Continuation of application Serial No. 660,731, March 15, 1933. This application April 19, 1935, Serial No. 17,306
7 Claims. (Cl. 220—83)

1. For a dishwashing machine of the type having a tank at the bottom and a dish support and spray devices above the tank, a main enclosing casing for the dish support and the spray devices comprising two vertical metallic sheets bent to form four vertical corner structures and arranged with the main walls at two sides of the casing formed integrally with the corner structures to which they are respectively adjacent, the corner structures adjacent the remaining two sides of the casing being additionally bent to provide two pairs of opposite vertical door re-



ceiving grooves with the grooves of each pair open toward each other.

2,184,909
REFRIGERATOR SHELF
John T. Whalen, New York, N. Y.
Application June 11, 1934, Serial No. 729,960
14 Claims. (Cl. 312—121)

9. A refrigerator including in combination a cabinet having a door at the front, a rectangular shelf mounted within the cabinet and slidably movable partially outside the cabinet through the opened door, and means for moving the shelf through an arc substantially greater than ninety degrees while maintaining the shelf in its original horizontal plane.

2,184,940
OIL BURNER
Horace E. Wesbery, St. Paul, Minn.
Application September 12, 1936, Serial No. 100,480
12 Claims. (Cl. 219—38)

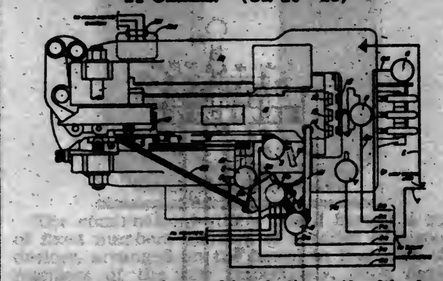
8. A fuel spray nozzle for an oil burner comprising a tubular member terminating in an ejector head, said tubular member having a longitudinal extending recess, an electric heating element disposed about the nozzle and annularly enclosing said recess, a thermostatic bar disposed in said recess, so as to be responsive to the temperature of said nozzle member, and extending at one end beyond the heating element, a circuit for supplying the heating element, and a switch in said circuit operatively connected with said bar end for actuation thereby.

2,184,941
RUG EDGE CANTER
Harold H. Raynton and James William Foster, Freehold, N. J., assignors to A. & M. Karaghensian, Inc., New York, N. Y., a corporation of Delaware
Application June 4, 1935, Serial No. 24,940
5 Claims. (Cl. 154—49)

1. A rug comprising a tufted stitched fabric, selvedge side strips of the fabric extending beyond the marginal stitched rows of tufting and folded back on the pile fabric, and a layer of fabric cemented over the tufted fabric including the turned-back selvedge side strips, the cement locking the loops of the tufts against removal.

2,184,962
PRESSURE BAILER
Elmer L. Condra, Long Beach, Calif.
Application January 13, 1936, Serial No. 58,797
7 Claims. (Cl. 166—19)

1. A bailer comprising a casing, a tube, said casing and tube being telescopically joined together, a conduit, said conduit being closed at the top and seated against the lower end of the casing whereby a valve is provided between the casing and tube said conduit being within the tube, spring means urging the conduit against the casing, a tapered surface in the tube, balls mounted around the conduit, a cooperating surface on the conduit engaged by the balls, said balls being movable transversely of the conduit when engaging the tapered surface, whereby the conduit is moved off of its seat.



2,184,963
BATHING SUIT
Simone d'Achon, Paris, France, assignor to La Société à Responsabilité Limitée dite "Irmsone," Paris, France, a limited liability corporation of France
Application May 28, 1934, Serial No. 728,630
In France June 10, 1933
3 Claims. (Cl. 2—97)

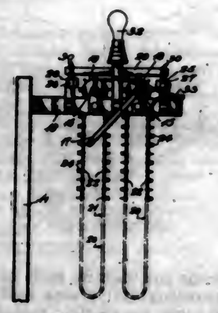
1. A bathing suit formed of elastic material, comprising a front and a back portion, the upper part of the suit terminating short of the shoulders of the wearer, and the back being cut extremely low, and a member, resilient in a transverse direction, along the upper edge of the front part and having, in prolongation, straps

extending to the rear part, where they cross each other below the back opening and between said opening and the waist line, after which they can be secured in their overlapping and tautened position.

2,184,994
MACHINE FOR MAKING BOLTS
John H. Friedmann, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio, a corporation of Ohio
Application November 13, 1935, Serial No. 49,479
14 Claims. (Cl. 10—23)

1. A machine for making bolts or the like having a co-operating bed frame and reciprocating header slide tools, an electric motor to drive said machine, a safety mechanism on said machine arranged to reverse the directional force or rotation of said motor upon mechanism actuation, and means to discontinue the application of said reversing force upon the stopping of said machine.

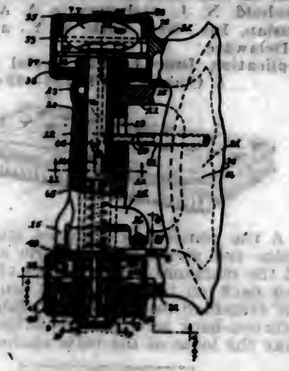
2,184,995
ELECTRIC PLUG LOCK
James G. Guinn, Vivian, La.
Application July 3, 1936, Serial No. 88,531
2 Claims. (Cl. 173—343)



1. An electrical connector comprising a socket member, a plug member adapted to rotatably and slidably fit in said socket member, said plug having a central reduced shank extending longitudinally from its inner end, said shank being square in cross section and having opposed longitudinal recesses in two sides of the shank, V-shaped contact arms having one end attached to the inner side walls of said socket member and their free ends extending in a direction towards the bottom of the socket member, and contact strips disposed in the recesses of said shank adapted to be engaged by the free ends of said contact arms when the plug and socket members are fitted together,

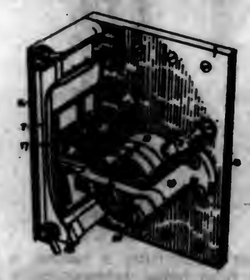
said contact strips being released from engagement with said contact strips only upon rotation

of said plug member through an angle of 90 degrees with respect to said socket member.



2,104,946
PATTERN TESTING ATTACHMENT FOR DOBBY LOOMS
Odus Cromer Hinson and Counsell Claudius Dawson, Cramerton, N. C., assignors to Cramerton Mills, Cramerton, N. C.
Application December 10, 1936, Serial No. 115,312
5 Claims. (Cl. 72—51)

1. A pattern testing device for dobby looms, comprising a master pattern chain having properly placed pins, a duplicate pattern chain having pins whose position is to be tested, a pair of rotating parallel drums on which the two chains are mounted, a series of pivotally mounted contact bars the opposite ends of which are adapted to be simultaneously engaged by the pins in said chains when the pins in the duplicate pattern chain are properly placed, while only one end of a bar is engaged when a pin is out of place, thereby tilting the bar, and visible means actuated by the tilting of a contact bar to indicate to the operator that the pattern being tested is incorrect.



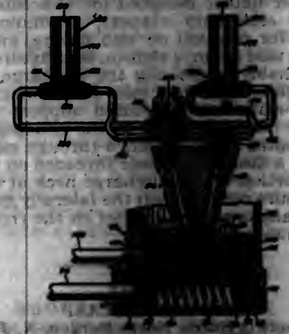
2,104,947
SANITARY DEVICE
Lee B. Jeesten, Grand Rapids, Mich.
Application June 27, 1935, Serial No. 28,693
2 Claims. (Cl. 4—236)

1. In a construction of the class described, a bowl, a seat hinged thereto, a cover also hinged thereto, means for retaining said cover in a raised position, a stop for limiting the upward movement of said seat, a spring for urging said seat upwardly against said stop, and means actu-

ated by a second upward movement of said seat for releasing said cover from its raised position.

2,104,948
MOTION PICTURE CAMERA
Grover Laube, Los Angeles, Robert Colby Stevens, Beverly Hills, and Charles Melvin Miller, Los Angeles, Calif., assignors to Fox Film Corporation, Los Angeles, Calif., a corporation of New York
Application May 31, 1935, Serial No. 24,240
10 Claims. (Cl. 88—18.4)

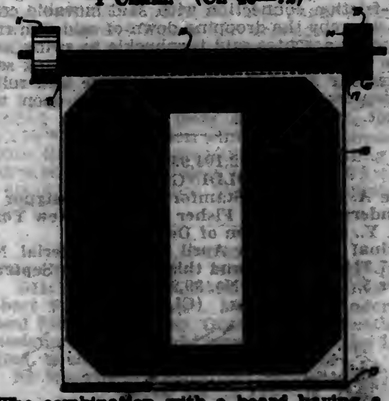
1. In a camera of the character described a film moving mechanism comprising: a take-down arm pivotally mounted at one end thereof with the free end extending short of engagement with the film; a slideway on said arm intermediate the pivot point and the free end thereof; a sliding member on said slideway; a drive shaft having an eccentric pivot thereon connected to said sliding member; a cam mounted on said shaft and adapted to rotate therewith and a take-down pin slidably mounted in the free end of said arm and adapted to engage said cam to be moved into and out of a film engaging position.



2,104,949
CRYSTALLINE FORMATION
Alvin M. Marks, Whitestone, N. Y.
Application March 22, 1933, Serial No. 662,690
18 Claims. (Cl. 23—1)

15. An article of manufacture, comprising a supporting medium having a substantially rigid surface coated with an optically active substantially continuous crystalline layer directly crystallized thereon from solution, and forming effec-

tively a single crystal of substantially uniform optical orientation.



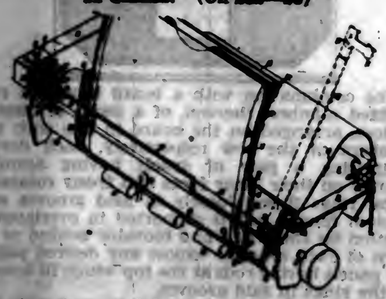
2,104,950
IRONING MACHINE
Andrew O. McCollum, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application March 1, 1934, Serial No. 713,596
18 Claims. (Cl. 38—35)

10. An ironing machine comprising a frame including a hollow column, an arm pivoted to the column having a part extending into the column, a head supported by the arm, manual means for moving the arm to swing the head into and from operative position, a lever pivoted on the frame cooperating with the arm and adapted to lock the arm against movement when the head is in operative position, a bunk for cooperation with the head, fluid pressure means for actuating the buck including a relief valve, means for actuating the fluid pressure means including means for actuating the relief valve, and means associated therewith for tripping the lever and actuating the means for moving the head to inoperative position.

18. An ironing machine comprising a pressure producing device including a fluid reservoir, a spring-pressed piston in the reservoir for creating pressure on the fluid in the reservoir, a cylinder communicating with the reservoir, a valve controlling the communication between the cylinder and the reservoir inhibiting flow of fluid from the cylinder to the reservoir, a piston reciprocable in the cylinder, a spring interposed between the piston and the valve for retaining the valve on its seat and for returning the piston to its retracted position, a chamber communicating with the cylinder and the reservoir, a check valve controlling the communication between the chamber and the cylinder inhibiting flow of fluid from the chamber to the cylinder, a relief valve controlling the communication between the chamber and the reservoir, a circulatory fluid line having its outlet and return communicating with the chamber intermediate the check valve and the relief valve, a member in the chamber between the outlet and return of the fluid line providing means for circulating the fluid through the chamber, fluid pressure actuated means connected in the circulatory fluid line, a buck connected to the pressure actuated means to be moved thereby, a head cooperating with the buck, and means for actuating the piston and relief valve successively.

2,104,951
DISPLAY DEVICE
George H. Beverman, Miami, Fla.
Application July 16, 1937, Serial No. 154,035
1 Claim. (Cl. 40—72)

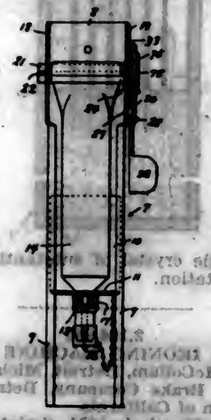
The combination with a board having a row of fixed numbers thereon, of a series of display devices, arranged on the board in line with the numbers of the row respectively, each device comprising a pair of spools having annular grooves on their inner faces and freely rotatable metal rings fitting loosely in said grooves and a set of hinged panels supported in overlapping relation on the board and movable behind or in front of each other to expose any desired panel, the panels having rods at the top which fit loosely on the rings in said grooves.



2,104,952
SWITCH FOR FIRE PREVENTION DEVICES FOR MOTION PICTURE MACHINES
Edmond Seslens, St. Boniface, and Celestin Moreau, Notre Dame des Lourdes, Manitoba, Canada
Application January 22, 1935, Serial No. 2,154,
1 Claim. (Cl. 200—52)

In a fire prevention device for moving picture machines including means for stopping the motor and interrupting the light beam upon the breaking of the film; a film riding roller mounted in a swingable frame, said roller and frame being adapted to drop down upon the breaking of the film, a turnbuckle having one end attached to said frame, a yoke swingably mounted at its base to a support, the other end of said turnbuckle being pivotally connected to said yoke between the

free end thereof and the base, a link having one end pivotally connected to the free end of said relay, a rocker bar pivotally mounted between its ends to a support, one end of said rocker bar being pivotally connected to the other end of said link, an anti-friction roller freely mounted on the other end of said rocker bar, a substantially horizontally disposed movable contact bar pivotally connected at one end to a support, a stationary contact above said bar, spring means normally maintaining said bar in engagement with said stationary contact, said roller having an anti-friction connection with said movable contact whereby the dropping down of said film riding roller actuates said turnbuckle to swing said yoke whereby to actuate said link to swing said rocker bar about its pivot and cause said roller to depress said movable contact to open the circuit.



2,104,953
MANIFOLDING DEVICE
Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Original application April 22, 1932, Serial No. 607,224. Divided and this application September 5, 1935, Serial No. 39,220
11 Claims. (Cl. 282—38)

1. A carbon-pack having a plurality of carbons joined at their lateral sides to ride a continuous work-web whose plies are threaded between adjacent carbons while several lines of the work-web are being typed, the carbons at the face of the pack being folded transversely to form a loop co-operative with a stop blade mounted adjacent a typewriter-platen above the printing point for arresting the pack, and a gage on said pack for collating a separate superposed work-piece with the work-web, said gage being in the form of a transverse strip of flexible and resilient material secured to the pack in juxtaposition to the back of said loop, said strip, in the direction of its narrow dimension, overlapping the bottom of said loop so as to be foldable around the loop to project outwardly from the face of the pack to form a stop-flange against which the lower edge of said work-piece is stoppable for collating said work-piece.

2,104,954
DEVICE FOR EXPRESSING CONTENTS FROM COLLAPSIBLE TUBES
Clinton Stanton, Toledo, Ohio
Application October 2, 1936, Serial No. 103,752
2 Claims. (Cl. 221—60)

1. In a device of the class described including an adapter fixture designed for attachment to a relatively stationary support, a winding drum mounted for rotation on said fixture, means for actuating said drum, a slide on said fixture, means for detachably connecting the discharge neck of a collapsible tube with said slide, comprising a laterally extending apertured support on said slide, the discharge neck of the collapsible tube being adapted to be extended through said aperture, and a discharge nozzle threaded on the projecting portion of the discharge neck of the tube into pressure contact with the laterally extending support, and a removable cap on the free end of said discharge nozzle.

2,104,955
GARMENT CLASP
Ludwig Stark, North Bergen, N. J.
Application May 20, 1936, Serial No. 80,697
2 Claims. (Cl. 24—230)

1. In a garment clasp, comprising a pair of jaw members pivotally connected intermediate of their ends, a locking member mounted on one of said members and disposed between the tail ends of said members and movable to a position to hold said jaw members closed, said locking member having an inner U-shaped end with a trunnion the elements of which pivotally engage one of said members, and one of said jaw members having a tail portion curved to conform with and engaging and terminating against the bend of said U-shaped portion when the locking member is in the same plane with the jaw members, said U-shaped portion being adapted to be moved out of position between the tail ends of said members for opening said members.

2,104,956
PURIFICATION OF HYDROCARBONS
Georg Stein, Merseburg, and Werner Reese, Leuna bei Merseburg, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application March 20, 1935, Serial No. 11,962. In Germany March 21, 1934
2 Claims. (Cl. 260—171)

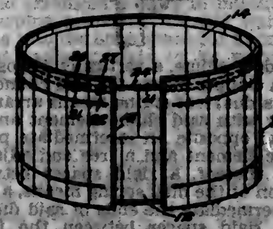
1. A process for the purification of a hydrocarbon mixture containing several acyclic dienes and several straight chain olefines and for the separation of the individual dienes present in the form of their addition products which comprises treating this mixture with an α,β-unsaturated aliphatic carbonyl compound whereby the individual dienes present are substantially completely separated from each other by adding this compound in portions to the said mixture, additions compounds of the said aliphatic carbonyl compound with the said dienes thus being formed, and separating from the hydrocarbon mixture the said addition compounds before adding a further portion of the said aliphatic carbonyl compound whereby a separation of the individual dienes present is effected.

2,104,957
PROCESS OF REDUCING THE VISCOSITY OF CELLULOSE DERIVATIVES
Kurt Thinius, Rheindorf, Cologne, Germany, assignor to Deutsche Celluloid-Fabrik, Eilenburg, Germany, a corporation of Germany
No Drawing. Application June 13, 1936, Serial No. 85,206. In Germany June 15, 1935
3 Claims. (Cl. 260—231)

1. In a process of treating cellulose derivatives containing nitro-groups to eliminate and stabilize the same and to reduce the viscosity thereof which comprises heating the dissolved cellulose derivatives in an aqueous medium under pressure at a temperature of from 100° C. to 150° C., the step of oxidizing the volatile products formed during said pressure heating and using said oxidized products as oxidizing agents for the pressure heating.

2,104,958
SMOKE BOX CONSTRUCTURE
Le Roy Thompson, Rabun, Ga.
Application February 15, 1937, Serial No. 125,630
2 Claims. (Cl. 110—97)

1. In a locomotive structure, a smoke-box, a smoke-stack and an injection nozzle arranged in vertical alignment in the top and bottom of the smoke-box and spaced intermediately in the longitudinal extent of the smoke-box, partition walls within the smoke-box defining a passageway for products of combustion from the rear to the front end of the smoke-box and thence rearwardly again to the smoke-stack, such passageway being of reduced cross-sectional area at the point where it turns rearwardly, and a bank of horizontally extending cinder-crushing louvre plates arranged athwart the passageway immediately to rearward of such point of reduced cross-sectional area and beyond such point of reduced cross-sectional area, so far as concerns the direction of stream-flow, the lower edge of each superior louvre plate overlapping the upper edge of the next lower louvre plate, whereby cinders borne on the stream of products of combustion are caused when traveling at maximum speed to impinge upon the surfaces of the louvre plates and the broken particles are borne thence at diminished speed.

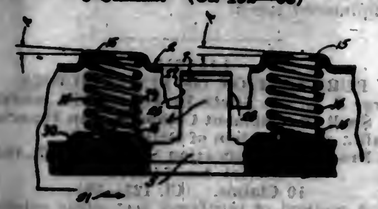


2,104,959
PURIFICATION OF SUGAR JUICES
George E. G. van Eijnatten, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 17, 1934, Serial No. 744,597
10 Claims. (Cl. 127—50)

5. A method of purifying beet sugar solutions which comprises lining the solution, adjusting the hydrogen ion concentration of the limed solution to from about 5×10^{-11} to about 8×10^{-11}, separating the resulting precipitate, increasing the hydrogen ion concentration of the partially purified solution to from about 10^{-9} to about 2.5×10^{-9} by carbonating while adding ammonium sulfite thereto and subsequently decreasing the hydrogen ion concentration to from about 3×10^{-9} to about 10^{-10} and again separating precipitated impurities.

2,104,960
PROCESS FOR THE MANUFACTURE OF DIHYDROXY ISODIBENZANTHRONE
Robert Fraser Thompson, Ian Bleiku Anderson, and Sidney Thornley, Grangemouth, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 15, 1936, Serial No. 91,469
2 Claims. (Cl. 260—61)

1. In the process of oxidising isodibenzanthrone to dioxy-isodibenzanthrone in sulfuric acid, the steps which comprise carrying out the oxidation in an acid concentration of from 88 to 93% at emperatures of from 0 to 25° C.



2,104,961
WOODEN TANK
Jay P. Walker, Tulsa, Okla., assignor of forty percent to Guy O. Marchant and six percent to C. G. Wells, both of Tulsa, Okla.
Application April 16, 1936, Serial No. 74,695
10 Claims. (Cl. 217—97)

1. A tank including, a side wall and a bottom and a top, the side wall and top being composed of staves having moisture joints therebetween

arranged so that the joints of the top cannot drain into the joints of the side wall, whereby the supply of moisture to the joints of the top and side walls may be separately regulated.

2,104,962
FRICTION CLUTCH
Arthur W. Andersen, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application August 24, 1936, Serial No. 97,569
5 Claims. (Cl. 192—68)

1. In a friction clutch, a cover plate, a pressure plate disposed within the confines of the cover plate, said cover plate having portions adapted to contact with portions of said pressure plate whereby to transmit torque from the former to the latter, said contacting portions being so arranged as to provide for axial movement of the pressure plate relative to the cover plate and compression springs interposed under compression between the opposed faces of the cover plate and pressure plate, and arranged relative thereto in such manner as to distort the springs when under compression to urge the opposite ends of each spring to shift out of axial alignment.

2,104,963
ELECTRIC DOOR CHIME
Edwin G. Anderson, San Diego, Calif.
Application May 21, 1934, Serial No. 726,966
3 Claims. (Cl. 116—149)

1. In a door chime, a vertically disposed chime element, a clapper means for said chime element including a dual leaf spring means arranged longitudinally with said chime element and having a fixed end opposite an intermediate portion of said chime element and a free end adjacent the extremity thereof, a rigid spacer between the free portion of the dual spring means, a yieldable spacer intermediate the ends of said dual spring means, a rigid spacer between the fixed end thereof, and a striker at the free end of the spring means engageable with the upper end of the chime element.

2,104,964
PYROPHORIC LIGHTING MECHANISM
Louis V. Arvanson, Newark, N. J., assignor to Art Metal Works, Inc., a corporation of New Jersey
Application March 20, 1935, Serial No. 12,036
3 Claims. (Cl. 67—4.1)

2. In a pyrophoric lighter, a sparking device comprising relatively movable members one of which is a pyrophoric element and another of which is a serrated element constable therewith, a spring motor, means for supplying said spring motor with energy sufficient to operate said sparking device a plurality of times, mechanism for releasing an increment of said energy to thereby operate said sparking device, and a torch arrangement for operating said mechanism, said torch arrangement comprising a wick positioned, when said mechanism is operated, in the path of sparks produced by said sparking device.

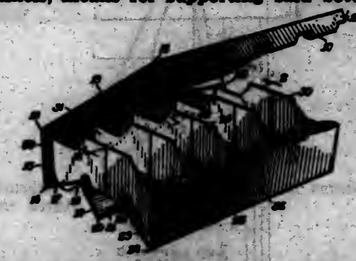
2,104,965
FLAME PRODUCING MECHANISM
Louis V. Arvanson, Newark, N. J.
Application May 23, 1934, Serial No. 727,066
4 Claims. (Cl. 67—4.1)

4. In combination, a casing, pyrophoric spark-producing means, a horizontal member connected to said spark-producing means, said horizontal member being mounted for reciprocatory movement while remaining in a horizontal position, spring means for operating said reciprocatory member, a vertical sleeve slidable vertically in said casing, means comprising a manually actuatable torch for operating said vertical sleeve to store energy in said spring means, a second vertical member slidably disposed adjacent said reciprocatory member, and means forming a disengageable connection between said second vertical member and said reciprocatory member.

2,104,966
PARACHUTE
Orvell A. Baker, San Gabriel, Calif.
Application November 27, 1935, Serial No. 51,703
2 Claims. (Cl. 244—145)

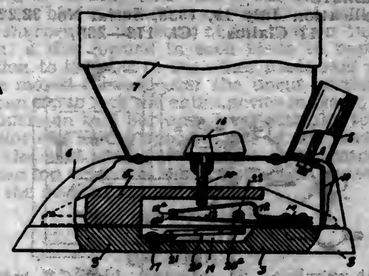
1. In a parachute, two spaced-apart canopies, both provided with central openings, a bulbous member secured over each of said central openings and to said canopies, shroud lines extending between said canopies; both said canopies provided with panels, and the said shroud lines being secured to one of said canopies at alternate panels.

2,104,967
APPARATUS FOR MOUNTING RACEWAY MEMBERS ON LOCOMOTIVE CRANKPINS AND THE LIKE
Henry A. Bouguet, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application March 20, 1937, Serial No. 132,529
4 Claims. (Cl. 29—6.2)



1. Apparatus for mounting roller bearings on hollow crank pins and the like, said apparatus comprising a threaded and headed through-bolt adapted to extend through said pin and having a nut on its projecting portion, a pilot sleeve whose inner surface has a sliding fit on said pin and whose outer surface is of a size to permit the inner raceway member of the bearing to slide on it, a pressure sleeve slidable on said pilot sleeve, and means for transmitting pressure from said nut to said sleeve.

2,104,968
PROCESS OF PREPARING PURIFIED GLYCYRRHIZINE
Simon Hendrik Bertram, The Hague, Netherlands
No Drawing. Application November 7, 1935, Serial No. 48,693. In Belgium November 10, 1934
5 Claims. (Cl. 260—199)

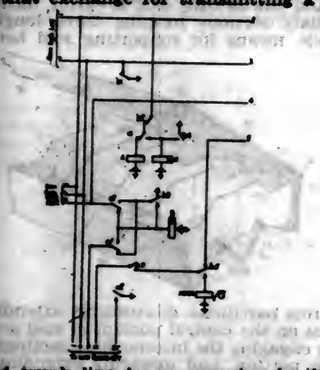


1. The process of preparing purified glycyrrhizine, which consists in treating the raw glycyrrhizinic acid with an alcohol capable of partially dissolving water but which is not homogeneously miscible in all proportions with water, treating the alcoholic solution with an absorbent medium, treating the resulting solution under strong agitation with a dilute solution of ammonium hydroxide, and separating the ammonium salt of glycyrrhizinic acid obtained.

2,104,969
CARTON
Martin Burger, Morris, Ill., assignor to Self-Locking Carton Co., Chicago, Ill., a corporation of Illinois
Application January 4, 1936, Serial No. 323
1 Claim. (Cl. 229—39)

A carton of the type described, comprising front and rear walls, cross partitions hinged to the upper portion of said walls, a bottom portion having inwardly and upwardly inclined outer sections and downwardly and inwardly inclined intermediate sections forming three longitudinal channels, means for supporting said bottom to said cross partitions, downwardly extending projections on the central portion of said cross partitions engaging the intermediate sections of said bottom portion, and upwardly extending cover-engaging projections opposite said downwardly extending projections.

2,104,970
AUTOMATIC TEMPERATURE CONTROLLER FOR ELECTRIC FLATIRONS, ETC.
Frank W. Carpenter, Minneapolis, Minn., assignor of one-half to Maurice H. Graham, St. Louis Park, Minn.
Application November 18, 1935, Serial No. 50,342
2 Claims. (Cl. 219—20)

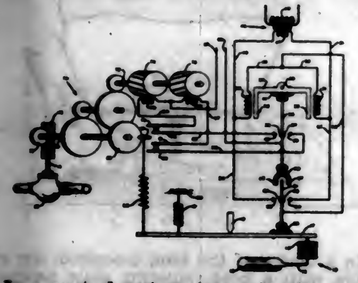


1. In a device of the kind described, the combination with a heat radiating plate having an electrical heat radiator associated therewith, of a supply circuit for said electrical heat radiator including a switch, and a switch actuator involving a short warp bar directly anchored to said radiating plate and provided with a relatively long non-warping extension arranged to control the opening and closing movements of said switch under varying temperatures of said radiating plate, said extension serving to multiply the angular warping movement of said warp bar and extending into the open space out of contact with said heat radiator plate in its varying switch operating movements.

2,104,971
TELEPHONE SYSTEM
Oliver Irving Carpenter and Benjamin Francis Moss, Coventry, England, assignors to The General Electric Company Limited, Coventry, England
Application December 2, 1935, Serial No. 52,532
In Great Britain December 19, 1934
7 Claims. (Cl. 179—27)

1. In a telephone system, an unattended exchange, a trunk line extending from said ex-

change to an attended exchange, means in the unattended exchange responsive to a fault on a line in that exchange for transmitting a signal



over said trunk line to an operator in the attended exchange, and means controlled over said trunk line by the operator for enabling such operator to ascertain the number of the faulty line.

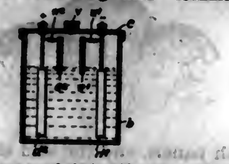
2,104,972

MOTOR CONTROL SYSTEM

Lewis L. Cunningham, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application July 19, 1935, Serial No. 32,224
11 Claims. (Cl. 172—239)

1. In a control system, in combination, a control member, a device to be positioned, electric motor means in control of said device, a switch in control of said motor means, electromagnetic means in control of said switch, a second switch in control of said electromagnetic means and controlled by the conjoint action of the motor means and said control member, and connections between said electromagnetic means and second switch by which the electromagnetic means increases the contact pressure of said second switch.



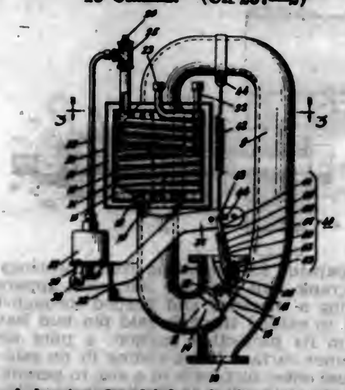
2,104,973

GALVANIC BATTERY

Adolf Dessler, Hagen, Germany

Application May 15, 1934, Serial No. 725,767
In Germany May 18, 1933
12 Claims. (Cl. 136—179)

1. In a galvanic battery comprising a receptacle containing an electrolyte with a gas chamber above the surface of the electrolyte and main electrodes in contact with the electrolyte, said main electrodes being capable of producing electrical energy in an external circuit connected therewith, means for preventing the accumulation of gas within the chamber above the electrolyte, such means consisting of a subsidiary electrode of gas-absorbing and -ionizing metal



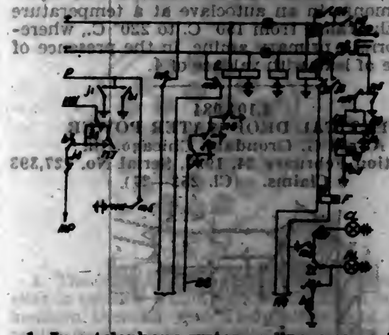
extending at one end into the gas chamber of the battery and at the opposite end into the electrolyte, and connected when the battery is in service to a source of electrical potential, relatively to the electrolyte.

2,104,974

FUEL HEATER FOR INTERNAL COMBUSTION ENGINES

Bailey P. Davee, Detroit, Mich.

Application June 15, 1936, Serial No. 85,263
15 Claims. (Cl. 257—2)



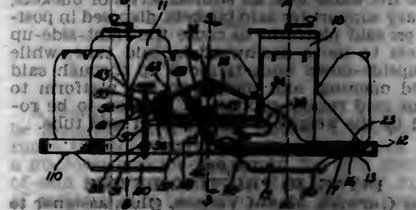
1. A heater for higher boiling distillates utilizable as fuel for an internal combustion engine comprising a conduit through which the hot exhaust gases from the engine are passed, a reservoir containing a liquid in heat exchange relation with the said conduit, a heating chamber through which the higher boiling distillate is passed mounted within the reservoir in spaced relation with the conduit and in heat exchange relation with the said liquid whereby a heat exchange is effected between the hot exhaust gases in the conduit and the distillate in the heating chamber, a valve for controlling the flow of hot exhaust gases through the said conduit, and heat responsive means for operating the said valve to control the flow of hot exhaust gases through the conduit, said heat responsive means including a thermo-expandible liquid in heat exchange with said aforementioned heat exchange liquid, said thermo-expandible liquid having a predetermined volume at a predetermined temperature to which said fuel distillate is heated, a fluid pressure responsive element actuated by the hydraulic pressure created by the expansion of the said thermo-expandible liquid beyond the said predetermined liquid volume as the temperature of the said thermo-expandible liquid increases and operative connections between said fluid pressure responsive element and the said valve whereby the valve is actuated to control the flow of exhaust gases through said heater conduit.

2,104,975

TELEPHONE SYSTEM

Reginald Griffith Bines, Chiswick Park, London, England, assignor to Siemens Brothers & Company Limited, London, England

Application November 9, 1935, Serial No. 49,663
In Great Britain November 14, 1934
4 Claims. (Cl. 179—18)



1. In a telephone system, a line, a second line, a group of finders having access to said second line, a start circuit for said finders, means responsive to the establishment of a connection between the first and second lines for placing a calling condition on the second line, thereby closing said start circuit, means responsive to the closure of said start circuit for starting a finder if one is available, means effective if all the finders are busy for transmitting a signal through the established connection between the first and second lines, and means individual to the first line and responsive to the signal for removing the calling condition on the second line.

2,104,976

APPARATUS FOR AERIAL PHOTOGRAPHY

Leon T. Eliel, Pasadena, Calif.

Application February 20, 1934, Serial No. 711,423
23 Claims. (Cl. 95—18)

1. A device of the character described for aerial photography, including: a pair of multiple-lens cameras in side-by-side relation, one of said cameras being so placed relatively to the other of said cameras that it will photograph areas of terrain in the hiatuses between areas on said terrain photographed by the other of said cameras.

2,104,977

CRAVAT OR NECKTIE

Marcus Page Rollins and Katherine Howard Rollins, Dallas, Tex.

Application February 10, 1936, Serial No. 63,189
2 Claims. (Cl. 2—145)

1. A cravat having its opposite longitudinal edges folded from end to end thereof, a reinforcing means located within the folds from end to end thereof, and stitching closely adjacent to said

reinforcing means for retaining said reinforcing means within the folds.

2,104,978

CAN OPENER AND COVER

Edwin J. Evans, Venice, Calif., assignor to E. B. McCabe, Salt Lake City, Utah

Application September 26, 1934, Serial No. 744,810
2 Claims. (Cl. 220—51)

1. In a milk can opener and cover the combination of a closed cylindrical cover to fit over the end of a milk can; a bar mounted transversely of said cover; depending piercing blades formed by turning each end of the bar down so that the blades extend transversely of said bar and sharpening the ends of the portion turned down; a slot formed in each blade in opposed relation to the slot in the other blade said slots to be moved forward over the uncut portion of the can top to lock the entire device in place; and shoulders on said bar on a level with the top of the slot and at the opposite side of the blade to said slot said shoulders to close the opening in the can top when the blades have been rotated to lock the device onto the can.

2,104,979

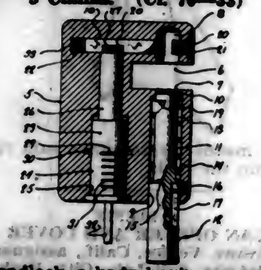
DIE BLOCK

William F. Finkl, Chicago, Ill., assignor to A. Finkl & Sons Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application August 7, 1935, Serial No. 35,164
4 Claims. (Cl. 75—69)

1. A die block for hot forging made of steel alloy consisting of carbon ranging from .25 to 1.10%, chromium .25 to 1.50%, molybdenum .05 to 2.00%, copper .25 to 6.00%, and the balance essentially all iron.

2,104,980



STEEL ALLOY

William F. Finkl, Chicago, Ill., assignor to A. Finkl & Sons Company, Chicago, Ill., a corporation of Illinois

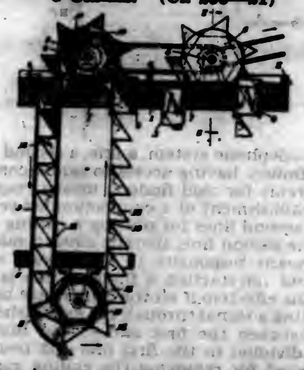
No Drawing. Application March 4, 1936, Serial No. 67,969
12 Claims. (Cl. 75—125)

1. A die block for hot forging characterized by its resistance to thermal rupture and substantial uniformity of hardness at working hardnesses, which comprises as its principal alloying elements carbon ranging from .30 to 1.00%, chromium from .25 to 1.25%, molybdenum from .05 to 2.00%, nickel from .50 to 2.50%, and copper from .25 to 4.00%, the remainder being substantially all iron.

2,104,961
LOCK
Bernard S. Falk, Leominster, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application November 6, 1936, Serial No. 109,414
5 Claims. (Cl. 70—33)

1. In a padlock, a body having spaced portions between which a part or parts to be locked are receivable, a shackle movable in the body to and from a locked position extending across the space between said spaced portions so as to pass through the part or parts to be locked whereby the active portion of the shackle is substantially entirely covered by the part or parts to be locked to prevent access to said active portion of the shackle, a spring to yieldingly urge the shackle to an unlocked position, a spring urged latch slidable endwise into interlocking engagement with the shackle to hold the same in its locked position, and key controlled means for retracting the spring urged latch to free the shackle for spring actuated movement to its unlocked position.

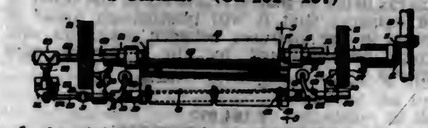
2,104,962
SEAT STRUCTURE
Arthur E. Forester, Cincinnati, Ohio
Application December 30, 1936, Serial No. 118,344
6 Claims. (Cl. 304—24)



1. In a seat structure, a seat member, legs on said seat member, arms extending forwardly therefrom and having downwardly extending portions, and a toggle member connected with one at least of said arms, whereby said structure may be placed in position with the leg engaging an abutment to prevent movement in one direction and the toggle member engaging beneath an abutment and preventing movement of the device in the opposite direction, the said leg resting on an exterior horizontal abutment to support the seat and the said toggle also preventing tilting movement of said seat.

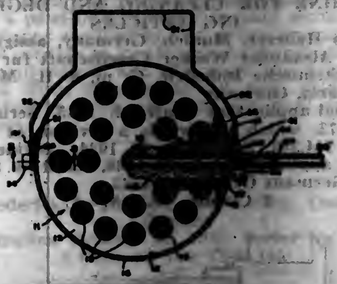
2,104,963
AMMONOLYSIS OF HALOGENO-AROMATIC COMPOUNDS TO PRODUCE AMINES
Robert Frye, Chicago, Ill., assignor to The Sherwin-Williams Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 16, 1936, Serial No. 80,413
14 Claims. (Cl. 260—130.5)

8. The process of preparing nitraniline which comprises treating nitro-chloro-benzene with aqueous ammonia in an autoclave at a temperature within the range from 150° C. to 220° C. whereby to form nitraniline in the presence of lead dioxide and a salt of a weakly ionized acid which is water-soluble in the autoclave under the conditions of reaction.



13. The process which comprises treating a halogen substituted benzene nucleus with aqueous ammonia in an autoclave at a temperature within the range from 150° C. to 220° C., whereby to form a primary amine, in the presence of an oxide of lead with valence of 4.

2,104,964
VERTICAL DROP WATER POWER
Alfred G. Grendahl, Chicago, Ill.
Application February 24, 1937, Serial No. 127,393
5 Claims. (Cl. 253—21)

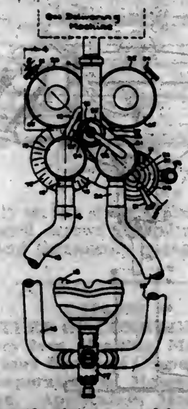


1. In water power apparatus, a horizontal platform for receiving a stream of water, having means to maintain a body of water thereon of the desired depth, means forming a walled opening in said platform, with the upper edge thereof disposed above the water line, so that normally the water will not overflow through said opening, a tube extending downwardly through said platform, with the open upper end thereof normally below the water line, an endless series of buckets, a rotary support for said buckets, disposed in position on said platform to cause the right-side-up buckets to move downward in said tube, while the upside-down buckets move up through said walled opening, and means on the platform to mount said rotary support in position to be rotated by the weight of the water in said tube.

2,104,965
INTAGLIO PRINTING DEVICE
Irving Gurwick, Mount Vernon, Ohio, assignor to Shellmar Products Company, Mount Vernon, Ohio, a corporation of Delaware
Application July 14, 1936, Serial No. 90,542
2 Claims. (Cl. 101—157)

1. An etched cylinder, a doctor blade mounted adjacent said cylinder in angular relation with respect thereto, a carrier for said doctor blade, universal joints on the ends of said carrier, horizontal shafts connected to said universal joints in different vertical positions, and means for transversely reciprocating said shafts.

2,104,966
WATER SOFTENER AND METHOD OF SOFTENING WATER
Helmer M. Haagensen, Excelsior, Minn.
Application April 11, 1935, Serial No. 15,812
9 Claims. (Cl. 210—24)

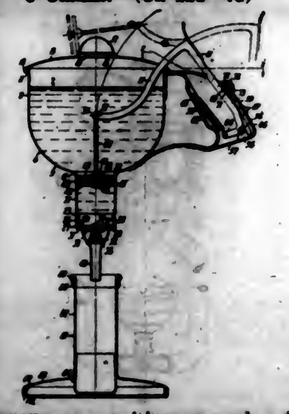


1. The method of softening water, which consists in causing water to flow through a softening medium therefor into a container, and concurrently moving said softening medium to and fro in water which has entered the container through the softening medium to thus force water through said softening medium in directions counter to the directions of flow of water through the softening medium into said container.

2,104,967
PLATFORM BRACKET FOR LADDERS
Simon J. Harding, West Baldwin, Maine
Application April 2, 1937, Serial No. 134,583
1 Claim. (Cl. 304—10)

A device of the class described, adapted to be mounted on a ladder having a plurality of rungs thereon, comprising in combination with a platform positioned between the side members of said ladder and supported at one end by one of said rungs, a hanger making pivotal connection, at its lower end, with said platform, a double-hook portion on the opposite end of said hanger, said portion having one open side, a flat spring normally closing the open side of said double-hook portion and extending for a predetermined distance above the top thereof, and means on said double-hook portion, including two oppositely disposed concave rung-seating pockets adapted to offer resistance to transverse displacement of said hook member from off its supporting rung, regardless of whether the hook attaching end of the platform is disposed in its normal position or raised by reason of pressure applied to its forward end, said means being in addition to the said flat spring which yields to permit entrance of the rung into the hook space and thereafter yieldingly acts to prevent its accidental displacement therefrom.

2,104,968
ANESTHETIZING MACHINE
Jay A. Heidbrink, Minneapolis, Minn.
Application May 4, 1936, Serial No. 77,724
7 Claims. (Cl. 128—203)

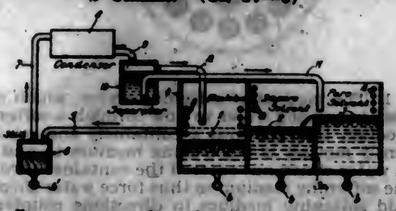


1. In an anesthetizing machine embodying a closed breathing line and a pair of containers of absorber material, a vertical passageway in said breathing line including valve mechanism to cause the exhaled gases to pass through one or the other or simultaneously through both of said containers, a second vertical passageway having an inhale check valve at one end and a rebreathing bag at the other, and an ether vaporizer in said breathing line connected with both said vertical passageways, whereby exhale gases will pass to the rebreathing bag on the inhale side of the breathing line through one or both of said containers first and thereafter through the ether vaporizer.

2,104,969
BUS BODY
Earl M. Hicks, Lebanon, Ind.
Application June 19, 1937, Serial No. 149,063
3 Claims. (Cl. 296—137)

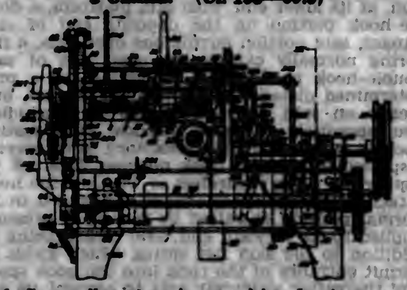
1. A bus roof structure comprising a multiplicity of laterally-spaced parallel inverted U bows of outwardly-mouthed channel section, roof plates laid upon and each bridging between an adjacent pair of bows, fastening means connecting the transversely-spaced ends only of the roof plates and the bows adjacent the springs of the arches, downturned front and rear edges of the roof plates extending into the channels of two bows, a finish strap laid over the arches of each bow and overlapping the front and rear edges of adjacent underlying roof plates and of such form as to leave said underlying edges free to shift relative to the strap and underlying bow, fastening means connecting only the ends of said straps to the underlying bow adjacent the springs of the arches, the portions of said roof plates and strap over the arches being capable of yielding relative to each other and the bow, and packing strips interposed between the edges of the finishing strap and the underlying roof plates.

2,104,900
DISPENSER
Dudley D. Hoefler, San Leandro, Calif.
Application December 31, 1935, Serial No. 56,929
3 Claims. (Cl. 221—78)



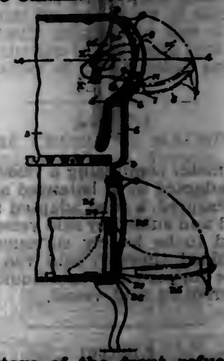
1. A dispenser comprising a vessel, a displacement pump for discharging the contents of said vessel, a slotted handle on said vessel, means passing through the slot in said handle and engageable by the thumb of an operator grasping said handle for actuating said pump, and means movable in the slot in said handle for varying the effect of said actuating means.

2,104,901
APPARATUS FOR CLEANING AND DEGREASING ARTICLES
Hanns Höllerer, Munich, Germany, assignor to Dr. Alexander Wacker Gesellschaft fur Elektrochemische Industrie, G. m. b. H., Munich, Bavaria, Germany
Original application September 17, 1934, Serial No. 744,893. Divided and this application April 22, 1935, Serial No. 17,572. In Germany October 20, 1933
5 Claims. (Cl. 87—6)



1. In a machine for cleaning and degreasing articles, a tank structure normally open for inspection and removal of the articles, said tank structure comprising a first compartment for containing a cleaning emulsion, a second compartment for containing a degreasing solvent at a predetermined normal level therein, and a third compartment for containing a degreasing solvent and having an overflow into said second compartment, a separator, a normally open pipe establishing communication between the first compartment adjacent the bottom thereof and the separator remote from the bottom thereof, a second normally open pipe establishing communication between the separator below the upper end of the first pipe and the second compartment adjacent and below the normal level of the solvent therein, a still communicating with the separator adjacent the bottom thereof, and a condenser connected to the still for receiving the distilled vapors therefrom, said condenser discharging the condensate into said third compartment.

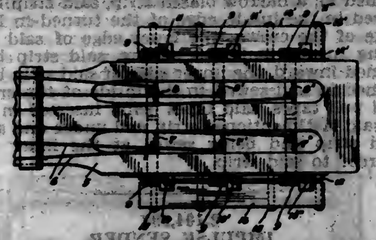
2,104,902
MACHINE FOR CLEANING AND DEGREASING ARTICLES
Hanns Höllerer, Munich, Germany, assignor to Dr. Alexander Wacker Gesellschaft fur Elektrochemische Industrie, G. m. b. H., Munich, Bavaria, Germany
Original application April 22, 1935, Serial No. 17,572, which in turn is a division of Serial No. 744,893, September 17, 1934. Divided and this application June 20, 1936, Serial No. 86,578. In Germany October 20, 1933
3 Claims. (Cl. 87—6)



1. In a means for cleaning and degreasing articles, an apparatus comprising three compartments normally open for insertion and removal of the articles, a first for containing a cleaning emulsion, a second for containing a degreasing liquid solvent at a predetermined normal level therein and of greater specific gravity than the emulsion, and a third for containing a degreasing liquid solvent at a predetermined normal level therein, said third compartment having an overflow opening to said second compartment and the latter being closed to said first compartment, a still, a conduit opening into said second compartment at substantially the normal liquid level thereof and into said still at a lower level, a separator, a condenser connected to said still and discharging into said separator, a conduit discharging into said first compartment from the upper portion of said separator, and a conduit discharging into said third compartment from the lower portion of said separator.

2,104,903
APPARATUS FOR FORMING SHEET METAL ELBOWS
Charles J. Holub, Columbus, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application October 17, 1936, Serial No. 106,296
2 Claims. (Cl. 153—69.5)

1. In an elbow forming machine, having a mandrel, a carriage reciprocable thereon adapted to receive one end of a tubular blank to be formed into an elbow, a reciprocable ratchet bar and a pawl on said carriage cooperating therewith whereby to advance the carriage step by step; a lever tiltably mounted on said carriage, a second lever pivoted thereto, a detent pivoted on the second lever and releasably engageable with the first, a pawl-holding latch on said second lever and means engaged by said detent on movement of the carriage to its extreme forward position, to trip said detent and disengage the first mentioned lever, whereby to tilt both said levers and thereby move said latch into pawl engaging position.



2,104,904
STOVE
Frederick E. Hughes, Port Lorne, Ontario, Canada
Application October 22, 1935, Serial No. 44,842
3 Claims. (Cl. 126—190)

1. In a stove of the front refueling type in which a refueling door is hinged to swing upwardly to discharge a quantity of fuel through the door opening into the interior of the stove, in combination therewith means forming a chute sloping continuously downward from the hinge side of the door directly into the firebox forming a non-obstructed passage from the door to the combustion zone of the firebox whereby lodgement of the fuel between the door and firebox is prevented, said chute-forming means including a front portion presenting an inner surface which forms a smooth unbroken surface continuation of the inner surface of the door when the latter is in its closed position.

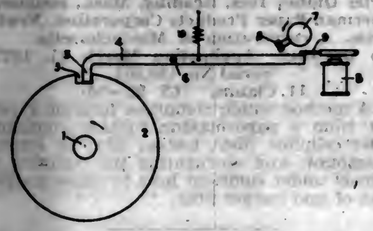
2,104,905
COMBINED PEG-LOCK AND GUARD FOR MUSICAL INSTRUMENTS
William Frederick Hutchesson, Hamilton, Ontario, Canada, assignor of one-half to Herbert James Laflamme, Toronto, Ontario, Canada
Application November 25, 1936, Serial No. 113,692
1 Claim. (Cl. 84—306)

A peg-lock and guard for a stringed musical instrument having a plurality of spaced pegs mounted transversely at the side of the neck and geared to the spindles on which the strings are wound; said peg-lock and guard consisting of a flat rigid guard plate spanning the pegs and extending laterally outward from the shanks thereof so as to shield the peg-heads from accidentally striking an object in the handling of the instrument, the guard plate being of a width greater than half the breadth of the peg-heads so as to extend laterally beyond the same, a comparatively thin clamping bar spanning the pegs and extending inwardly of the shanks thereof oppositely to the guard plate, said clamping bar being of a flexible character to

bind uniformly on the shanks, and a longitudinal series of headed screws extending through the guard plate and threadedly engaging the clamping bar.

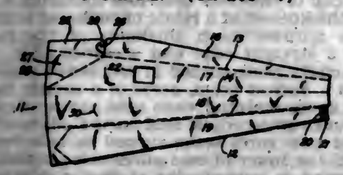
2,104,906
MANUFACTURE OF CORRUGATED PAPER
Charles Quincy Ives, Reading, Mass., assignor to Sherman Paper Products Corporation, Newton, Mass., a corporation of Massachusetts
No Drawing. Application March 11, 1937, Serial No. 130,283
11 Claims. (Cl. 92—76)

5. A method which comprises forming a paper sheet from a papermaking furnish containing, besides cellulose fiber, leather fiber in substantial amount; and corrugating the resulting paper sheet under sufficient heat to cause incipient fusion of said leather fiber.



2,104,907
NURSE'S CAP
Anna A. Lawrence, San Francisco, Calif.
Application July 13, 1936, Serial No. 90,406
2 Claims. (Cl. 2—198)

1. A cap of the class described including a cuff of two thicknesses of a fabric of sufficient stiffness for the purpose, each thickness of the fabric having a straight edge and a curved edge, said curved edges being turned in and sewed together to form a narrow seam, gores of a similar fabric or of a gauze material, each gore having straight edges and curved edges, said curved edges of the outer of said gores being turned in, said curved edges of the inner of said gores being turned in, said turned-in curved edge of one of said outer gores and said turned-in curved edge of one of said inner gores being sewed together to form a flat seam, likewise the turned-in curved edge of the other of said outer gores and the turned-in curved edge of the other of said inner gores being sewed together to form a flat seam, said straight edges of said inner gores being turned in and sewed together to form a flat seam and complete the crown of the cap, said straight edges of the two thicknesses of the fabric of the cuff being turned in, between which being inserted the front edge of the crown and being sewed together, a narrow biased strip, one edge being turned in and being sewed to the inside edge of the crown at the cuff, said

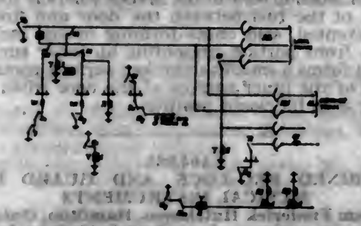


cuff being folded along the lower edge of said strip and being turned backward over the front of the crown, the lower edge of the crown being turned in, a narrow biased strip, said strip being sewed to the inside edge of the turned-in lower edge of the crown, the lower edge of said strip being turned in before sewing, said strip being turned inward, the upper edge of said strip being turned in and sewed to the inside of the crown, and pull tapes, said tapes being inserted in slits in said last, mentioned strip and under and along said strip and being sewed at the inner ends thereof to said strip.

2,104,998
IMPULSE SENDER
Friedrich Lill and Benedikt Kadrna, Vienna, Austria, assignors to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany
Application October 25, 1935, Serial No. 46,672
In Austria October 31, 1934
10 Claims. (Cl. 179—5)

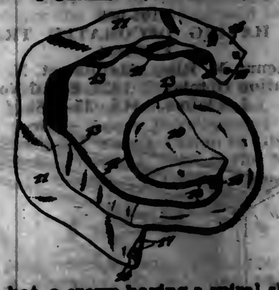
1. In an impulse sender for establishing telephone calls in which a setting member is employed for selecting any desired station to be called, means for operating said impulse sender after said setting member has been operated to establish a call to another station, and means for operating said impulse sender to establish a call to a different station independent of the operated position of said setting member.

2,104,999
INSPECTION WRAPPER FOR NECKTIE SETS
Oscar Markowitz, New York, N. Y.
Application November 25, 1936, Serial No. 112,633
8 Claims. (Cl. 206—7)



1. A packaging device for folded neckties, including a one piece member of relatively stiff paper and having preformed fold lines extending from end to end thereof to define fold sections that taper generally toward one end of the member to fit the neckties that are folded around one of the members as an insert for the neckties, said member being open ended in the folded condition thereof, and the insert section having a cut out at the small end of the member to accommodate the fold portions of the neckties, and one of the fold sections having a slit forming a flap that can be opened to expose the neckties without opening the device.

2,105,000
MANOMETER
Adolph F. Meyer, Minneapolis, Minn.
Application December 21, 1933, Serial No. 703,291
10 Claims. (Cl. 73—31)



4. A manometer comprising a vessel for receiving a liquid adapted to be balanced against pressure to be measured, a tube adapted to be floated by said liquid and guided by said vessel, and a rod float adapted to be loosely surrounded by said tube and guided thereby, said rod float being adapted to be supported by said liquid to indicate the level thereof in said vessel.

2,105,001
TELEPHONE SYSTEM
Walter Michaelis, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany
Application November 1, 1935, Serial No. 47,786
In Germany November 14, 1934
3 Claims. (Cl. 179—18)

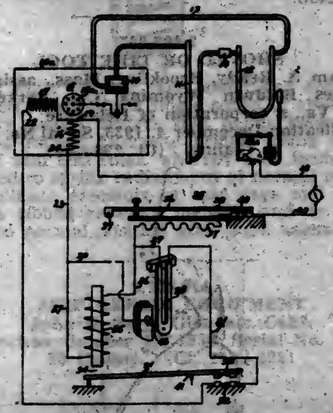
1. In a telephone system, a subscriber's line, a local finder and a trunk finder having access to said line, a key, a first and second relay, said first relay operated responsive to the closing of said subscriber's line for starting said local finder to find said line, said first and second relay operated responsive to the closing of said subscriber's line while said key is actuated, said second relay preventing the starting of said local finder, a third relay operated responsive to the operation of said second relay to prepare the starting circuit of said trunk finder, said second relay deenergized responsive to the restoration of said key to complete the start circuit for starting said trunk finder to find said line.

2,105,002
HAT
Marguerite Miller, Great Neck, N. Y.
Application March 20, 1937, Serial No. 132,063
4 Claims. (Cl. 2—175)

1. In a hat, a crown having a spiral slit therein extending from the periphery of said crown and circumferentially around the side of said crown and toward the top thereof and separable means adapted to allow of the opening and closing of said slit.

2,105,003
ORE CRUSHING MACHINE
Jacob Johannes Mosuk, Toronto, Ontario, Canada
Application April 11, 1934, Serial No. 720,020
9 Claims. (Cl. 83—9)

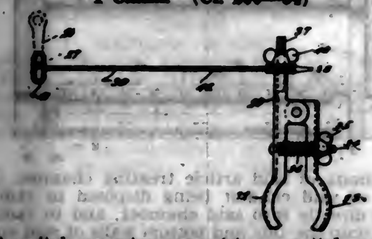
1. An ore crushing machine, comprising in combination a horizontal rotatable drum, means for rotating said drum, standards mounted adjacent to each end of said drum, a journal bearing supported from said standards at each end of said drum, a shaft journalled in said bearings and extending through said drum, a progressive series of crushing elements mounted on and rotating with said shaft within the drum, spring means interposed between each of said crushing elements and said shaft whereby each element is resiliently linked with and capable of yielding relative to the others and to said shaft while the crushing efficiency of the said remaining elements is maintained, adjustable spring means exerting a downward pressure upon each end of said shaft, said adjustable spring means acting through said shaft to simultaneously tension the spring means of all of said crushing elements and being adapted to yield when the cumulative tension on the spring means of the series of crushing elements becomes excessive, means for feeding ore pulp to one end of said drum, and means for removing the ground pulp from the other end of said drum.



2,105,004
FURNACE
John Morrison, Canton, Ohio
Application August 14, 1933, Serial No. 685,245
Renewed June 5, 1937
6 Claims. (Cl. 263—42)

1. A furnace, comprising: an enclosing shell, the lower portion of which provides a compartment adapted for the reception of heating means, and the upper portion of which defines an article treating chamber unobstructedly communicating with said heating means compartment; heating means disposed in said heating means compartment, and comprising a conduit for products of combustion, spaced from the bottom wall of said compartment, disposed below

the limits of said article treating chamber, the wall of said conduit being disposed to radiate heat directly into said chamber, and to radiate heat onto the side and bottom walls of said compartment, whence said radiated heat is reflected into said chamber; and means for supporting said conduit in position, and constructed and arranged to define vertical flues opening into said article treating chamber.

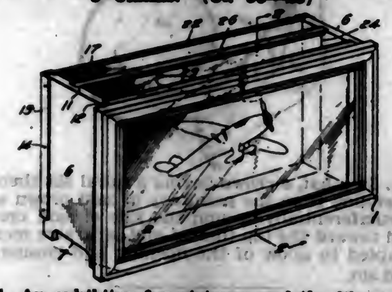


2,105,005
MOTOR CONTROL
George C. Pearce, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application October 12, 1932, Serial No. 639,461. Patent No. 2,018,896, dated October 29, 1935. Divided and this application May 20, 1935, Serial No. 22,422
18 Claims. (Cl. 172—279)

1. In combination, a motor having a starting winding and a running winding, a running lead line connected to said running winding, a starting lead line connected to said starting winding, an electromagnet in said running lead line, said magnet having an armature with means for closing said starting lead line when said armature is attracted to said magnet and for opening said starting lead line when said armature is retracted

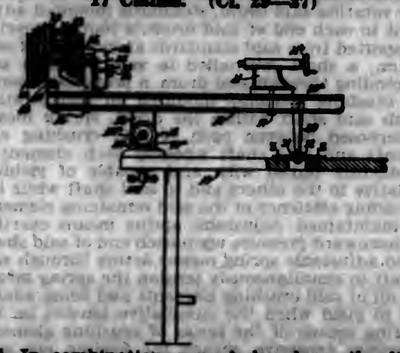
from said magnet, a shunt in said running lead line around said electromagnet, and a timing device operable following the closing of the starting lead line circuit and responsive to flow of current through said motor for closing said shunt after a period of time following the closing of said starting lead line.

2,105,006
BURGLAR ALARM SWITCH
Joseph Pichard, Chicago, Ill.
Application February 12, 1935, Serial No. 6,203
1 Claim. (Cl. 200—54)



A switch operator comprising a switch operating arm having an outstanding pintle, a door knob attaching clamp, said clamp consisting of an elongated member having a curved end portion, a leg pivotally secured at one end to the intermediate portion of the elongated member and having its opposite end portion curved and opposed to the curved end of the elongated member, a bolt and nut connecting the leg with the elongated member, a coiled compressible spring on the bolt having its ends impinging against the said elongated member and the leg, the upper end of the elongated member being provided with a threaded extension, a nut on the threaded extension, a connecting rod having a slotted end receiving the pintle on the switch arm, the other end of the rod being secured to the door knob clamp by the clamping action of the nut on the threaded extension.

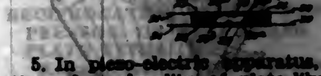
2,105,007
SHOVEL OR LIKE TOOL
William A. Roady, Brookline, Mass., assignor to Ames Baldwin Wyoming Co., Parkersburg, W. Va., a corporation of Delaware
Application December 4, 1935, Serial No. 52,863
4 Claims. (Cl. 294—49)



1. A shovel comprising a blade and a socket-forming portion having an enlarged head in the form of a major segment of a circle with the chord of the segment located substantially at the back edge of the blade, the segment being welded to the blade marginally around the arc thereof.

2,105,008
DEVICE HAVING DECORATED TRANSPARENCIES
Henry M. Riley, Manhasset, N. Y.
Application October 7, 1935, Serial No. 43,913
5 Claims. (Cl. 35—32)

1. An exhibitor for pictures and the like comprising a frame having an opening in the front thereof, a plurality of spaced apart transparent sheets independently movable and held in said frame in a position substantially parallel to said opening, said sheets being placed a substantial distance behind said opening, the area of said sheets being sufficient to practically fill said opening, said sheets adapted to bear interchangeable indicia, decorated material having designs thereon cemented to said transparent sheets and constituting said indicia, whereby all of said sheets are visible through said opening.



2,105,009
CONVERTIBLE MATERIAL WORKING MACHINE
Alvah C. Roebuck, Evanston, Ill.
Application November 16, 1936, Serial No. 110,999
17 Claims. (Cl. 29—37)

1. In combination a work bench or the like having a horizontal work surface, an elongated continuous rigid lathe bed disposed above said surface in spaced relation thereto, thereby leaving said surface unobstructed, the outer end of said bed overhanging the adjacent end of said bench and the inner end overlying the bench, a swivel joint supporting said bed at said end of said bench and intermediate the ends of said bed for both horizontal and vertical swinging movement, whereby the inner end of the bed overlying

the bench may be swung to a depending vertical position at the end of the bench, a combined lathe and drill head carried by said overhanging portion of the bed, and means for releasably securing said inner end of the bed rigidly in position on either the top or end of said bench.

2,105,010
PIEZO-ELECTRIC DEVICE
Charles Baldwin Sawyer, Cleveland, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application February 25, 1932, Serial No. 658,649
12 Claims. (Cl. 179—110)

5. In piezo-electric apparatus, the combination of a plurality of plate-like piezo-electric bodies adapted by flexing to convert electrical impulses into mechanical impulses, and vice versa, and means for operatively supporting said bodies in spaced relation to each other with a space substantially enclosed by them and the supporting means.

2,105,012
PIEZO-ELECTRIC APPARATUS
Alfred L. W. Williams, Cleveland, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application April 24, 1934, Serial No. 720,593
Renewed January 16, 1937
15 Claims. (Cl. 171—327)

1. In a piezo-electric device, a crystal unit comprising a plurality of parallel plates of crystalline material with two mutually intersecting axes of expansion and contraction, the faces of the plates being substantially parallel to the said axes and said unit being adapted to flex under the influence of electrostatic fields; and four operative connections for said unit comprising two connections disposed, respectively, substantially at the two ends of one of the two mutual axes of expansion and contraction of the unit and adapted to prevent substantial movement of the adjacent parts of the unit normal to the faces and further comprising a driving connection disposed substantially at one end of the other of said two axes and adapted to move with adjacent parts of the unit normal to its face.

2,105,013
TELEPHONE SYSTEM
Norman H. Saxe, Chicago, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 28, 1932, Serial No. 45,845
20 Claims. (Cl. 179—18)

1. In a telephone system, a distant exchange, a local exchange, and a toll exchange, trunk lines connecting the distant and local exchanges, dial-back repeaters in the local exchange, a hunting switch individual to each said trunk line having access to said repeaters, toll trunk lines connecting the local and toll exchanges, a selecting switch individual to each said repeater having access to said toll trunk lines, automatic subscribers' lines terminating in said local exchange, local connectors in said local exchange having access to said local lines, a local selector in said local exchange having access to said repeaters, said local connectors and to said trunk lines connecting the distant and local exchanges, and means whereby said local selector is accessible from said local subscribers' lines, said toll trunk lines, and said repeaters.

2,105,013
ROLLER BEARING CAGE
William L. Seymour, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application November 7, 1936, Serial No. 109,836
7 Claims. (Cl. 308—217)

1. A roller bearing cage comprising end rings connected solely by a single series of circumferentially spaced bridges that define pockets for bearing rollers, alternate bridges being free of one of said end rings, whereby such bridges are adapted to spring radially out of normal position to facilitate assembly of said cage and rollers and a ribbed raceway member and to spring back to normal position after such assembly.

2,105,014
SHIP REPAIR EQUIPMENT
John H. Segal, Glendale, Calif.
Application October 12, 1936, Serial No. 105,276
10 Claims. (Cl. 114—222)

1. In a ship repair and submerged hull maintenance equipment, a sheath for covering the

lower portion of the hull of the ship, said sheath comprising a plurality of sections of flexible water-proof material arranged end to end, joints between said sections transversely disposed relative to the ship's hull to which the equipment is applied, comprising a strip of flexible material secured to one end of each sheath section, said flexible section being provided with a longitudinally disposed channel, the opening into which channel is narrower than the inner portion of said channel, a strip of flexible material secured to the other end of each sheath section, the outer edge of which last-mentioned strip of flexible material terminates in a rib that is adapted to be removably seated in the channel in the edge of the next adjacent sheath section.

2,105,015

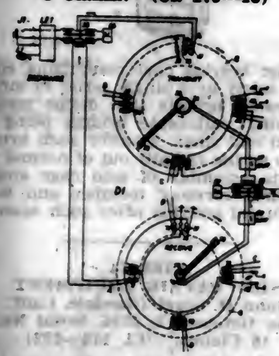
MECHANICALLY WORKING METAL ARTICLE

Fritz Singer, Nuremberg, Germany, assignor to Tubus A. G., Zurich, Switzerland

No Drawing. Application May 14, 1936, Serial No. 79,709. In Germany June 9, 1934

1 Claim. (Cl. 148—4)

That improvement in methods of mechanically working metal articles at temperatures below 300° F., for the purpose of extensive plastic deformation, which consists in coating the metal by treating it with a chemical solution which reacts with the metal to produce thereon a lubricant coating of an iron salt of the group consisting of phosphates and oxalates, the crystals of which coating are in heterogeneous crystalline joint with the metallic base and tightly grown together with the latter, and subsequently working the thus coated article to the extent that the coating is substantially removed.



2,105,016

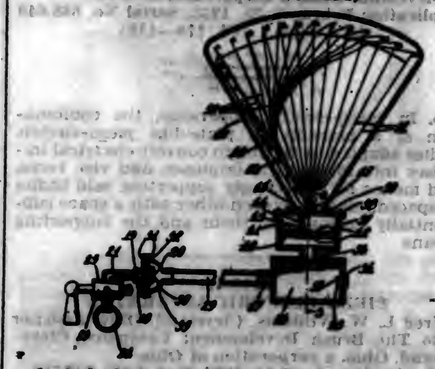
TELEPHONE TRANSMISSION SYSTEM

Howard H. Smith, Chicago, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application January 2, 1936, Serial No. 57,116

4 Claims. (Cl. 179—15)

4. In a multiplex telephone system, a plurality of lines and a trunk line, a distributor for distributing simultaneous voice currents from the lines over the trunk line successively, and for distributing received voice currents over the trunk line to the lines, said distributor comprising a rotating disc having one sound track around its periphery on which voice currents from all the lines are simultaneously recorded and reproduced and transmitted over the trunk line, said disc having another sound track, concentric with the first, and means for recording all voice currents received from the trunk line, on said last sound track and reproducing and distributing them to the various lines.



2,105,017

MEANS FOR METERING FLUID FLOW

Fay O. Saffron, Cleveland, Ohio, assignor to American Gas Association, Incorporated, New York, N. Y., a corporation of New York

Application May 27, 1936, Serial No. 81,040

10 Claims. (Cl. 73—194)

1. A device for metering the quantity of fluid flowing through an orifice, comprising: means communicating with said orifice, and constructed and arranged to cause a different quantity of fluid to flow through said orifice; and means, actuated by said different quantity of fluid, constructed and arranged to indicate said first quantity of fluid flowing through said orifice.

2,105,018

WELDING SHIELD

Louis G. Tatter, Chicago, Ill.

Application April 2, 1936, Serial No. 72,351

16 Claims. (Cl. 2—8)

1. As an article of manufacture, a shield for protecting the eyes of the worker against the dangerous or injurious rays of an electric arc, as in electric welding, comprising means forming the body of the shield, means forming a framed window in the front of said body, having colored or shaded glass to protect the eyes against said rays, movable means for producing a clear vision area in said window, of variable height and fixed horizontal length from one side of the window to the other, between the upper and lower edges of said window, causing a variable area of shaded glass between the upper and lower edges of the window, as well as a variable area of clear vision, and enclosed spring means entirely external of said body and carried by the latter below the middle of said window, capable of moving and maintaining said movable means in normal position, together with means outside said body and operable for overcoming the tension of said spring means, when said clear area is desired.

2,105,019

RECIPROCATING ENGINE, PUMP, OR COMPRESSOR OF THE SWASH OR WOBBLE PLATE TYPE

Kenneth Kestell Turner, London, England

Application June 1, 1936, Serial No. 82,696

In Great Britain June 12, 1935

13 Claims. (Cl. 74—60)

1. In a machine of the type wherein a plurality of pistons are operatively connected with a member to which is imparted a reciproco-undulatory movement such that any point in said member normally follows a figure-of-eight path in a spherical surface, means serving to apply to said member at not less than three equiangularly located points sinusoidally related yielding constraints affording in sum a constant resistance to rotation of said member and allowing said points to follow their figure-of-eight paths.

2,105,020

MANUFACTURE OF IRON

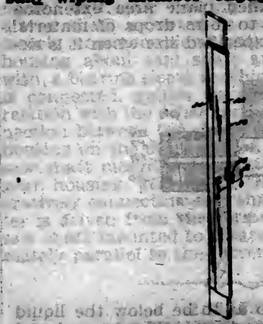
Marvin J. Udy, Niagara Falls, N. Y., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

No Drawing. Application December 3, 1934, Serial No. 755,767

9 Claims. (Cl. 75—65)

1. The process of eliminating impurities from molten iron alloys, and producing a substantially pure ingot iron comprising scavenging therefrom by oxidation a relatively large proportion of phosphorus, such proportion of phosphorus removed comprising more than 10% by weight of the alloy.

2,105,021



WINDSHIELD WIPER BLADE

Thomas R. Walton, Birmingham, Mich.

Application June 29, 1936, Serial No. 87,936

5 Claims. (Cl. 15—245)

1. A windshield wiper blade comprising, in combination, a backing member and a flexible wiping member secured therein with surface portions of said wiping member engaged by said backing

member and held thereby under lateral compression and longitudinal tension.

2,105,022

PIPE JOINT

Percy Hutchinson Wilson, Sherwood, Nottingham, and William Ridley, Dunstan, England, assignors of one-third to The Stanton Ironworks Company Limited, Stanton-by-Dale, near Nottingham, England

Application January 30, 1935, Serial No. 4,162

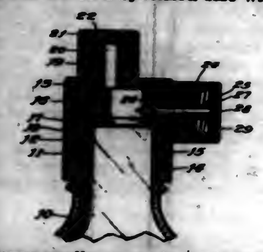
In Great Britain February 9, 1934

7 Claims. (Cl. 285—105)

7. In combination, a male pipe section, a sealing ring surrounding said section, a collar composed of segment portions arranged partially about said male section and having an inturned flange engaging said ring, pressure generating elements disposed parallel to the axis of and distributed around one end of said collar, a tubular element having a wedge surface sleeved over said male section to provide a seat for said sealing ring and having a lateral groove extending circumferentially unbroken around said tubular element within and distinct from said collar, said pressure generating elements being axially engaged in said groove to effect relative displacement of said collar axially with respect to said tubular element and cooperating with said flange to restrain said collar segments from radial displacement.

2,105,023

BOTTLE CLOSURE AND DISPENSING DEVICE



Joseph C. Winfield, Evansville, Ind., assignor to Mead Johnson & Company, Evansville, Ind., a corporation of Indiana

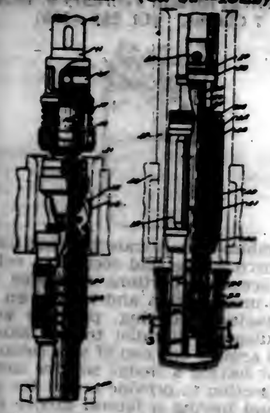
Application September 11, 1936, Serial No. 100,273

3 Claims. (Cl. 221—148)

1. A dropper for a container comprising a container cap, a stud adjacent to one side of the cap extending from the upper end thereof and having a small open vent orifice therethrough which is above the liquid surface in the container

and cap while in dispensing position, a stud extending laterally from the other side of the cap, a tip having a specified plane area extending from said stud so as to form drops of material in the container of a specified size when it is ex-

tended downwardly so as to be below the liquid level in a dispensing position, and said stud and tip having an orifice therethrough of a size to permit a restricted flow of fluid therethrough to control the rapidity of the drops.



2,105,624

HONING TOOL AND METHOD OF USE

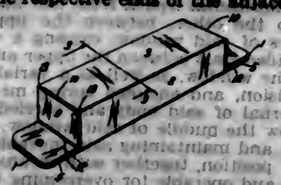
Kirke W. Canner, Detroit, Mich., assignor to Micromatic Hone Corporation, a corporation of Michigan

Application May 16, 1935, Serial No. 21,719

10 Claims. (Cl. 51—164.2)

1. A honing tool having driving and adjusting portions, an abrading head driven by said driving portion, a universal joint between said head and said portions, abrading means in said head and said portions, abrading means in said head expansible by said adjusting portion, and a guide disposed on said tool between the abrading head and said universal joint.

2,105,625



BOX AND BOX BLANK

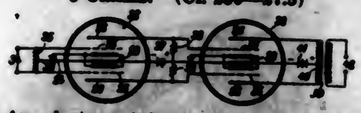
Jesse T. Curtis, Cleveland, Ohio

Application April 23, 1936, Serial No. 76,038

4 Claims. (Cl. 229—37)

1. A box blank including as a single unit a plurality of walls formed by folding said blank longitudinally the walls formed at opposite sides of the blank being substantially co-extensive in length and opposite ends of each of said walls extending beyond the ends of the intermediate walls of said blank, and an end closure formed at one end of one of said intermediate walls and provided with an extension adapted to overlie one of the respective ends of the adjacent co-extensive wall ends, when the blank is folded and assembled.

2,105,626



ELECTRON TUBE

Walter Dällenbach, Berlin-Charlottenburg, Germany, assignor to N. V. Machinenfabriek en Apparaten Fabrieken "Mesa", Utrecht, Netherlands

Application December 21, 1934, Serial No. 758,672

In Germany January 2, 1934

9 Claims. (Cl. 250—27.5)

1. An electron tube comprising a receptacle having a high vacuum therein, a plurality of anodes within said receptacle, an incandescible cathode and an exciting anode intermediate said first anodes, current leads extending from one end of said cathode and exciting anode, and means connecting the other ends of said cathode and exciting anode together.

2,105,627

COVER FOR TOPS OF CANS AND THE LIKE

George C. Davis, Chicago, Ill.

Application July 9, 1936, Serial No. 89,695

2 Claims. (Cl. 220—85)

1. In combination with a container for liquids having a neck, and a gutter surrounding said neck, a liquid absorbing member substantially the entire area of which conforms generally to the contour of the upper portion of the container adjacent said neck, apertured to permit the passage of the neck therethrough, and means for holding it in position in relation to said container, the outer edge of said member extending into said gutter.

2,105,628

SAFETY HEADGEAR

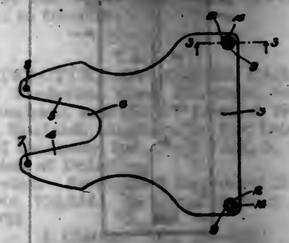
Robert Dickhoff, New York, N. Y.

Application January 7, 1937, Serial No. 119,399

3 Claims. (Cl. 2—3)

1. A safety head gear comprising a steel skull cap having an opening for the face, a U-shaped track extended along the sides and the bottom of said opening, an exchangeable bullet proof vision glass plate mounted on said track for closing said opening, and said pin bolts for holding said glass plate upon said track, each pin bolt

having a wing screw portion supporting a cam portion which may be turned upwards or downwards, and resilient means urging said glass plate upwards against the cam portion.



2,105,629

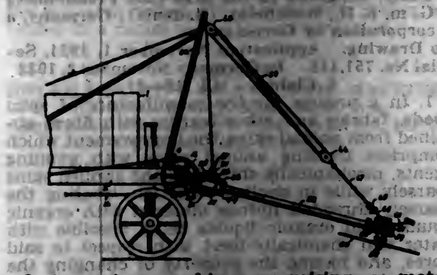
BIB

Myrle M. Doty, Sycamore, Ill.

Application October 4, 1935, Serial No. 43,533

3 Claims. (Cl. 2—49)

1. A bib comprising a body portion consisting of a piece of flexible material, means at one end for attaching it to the user, a vacuum cup near the other end thereof for attaching it to a fixed part, fastening devices for fastening the vacuum cup in position, comprising a sleeve through which the vacuum cup projects and two flanges, one on opposite sides of the material of the bib, the flanges and the sleeve being fastened together, the vacuum cup overlapping the fastening device on each side thereof.



2,105,630

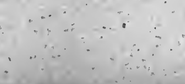
SAW

Robert M. Dunham, Houston, Tex., assignor to Brown & Root, Inc., Houston, Tex., a corporation of Texas

Application November 16, 1936, Serial No. 110,982

2 Claims. (Cl. 143—43)

2. A sawing machine comprising a motor vehicle having a frame, spaced anchors extending forwardly from the frame, gear casings rigidly connected together, said anchors and one of the casings being provided with means whereby said casings are mounted on the frame to pivot about a horizontal axis, gearing in said casings, a power takeoff from the motor vehicle operatively connected with said gearing to drive the same, a driven shaft mounted to swing in an approximately common plane with said axis, a shaft housing about said shaft and swingable therewith, a bearing sleeve to which said shaft housing is connected, guides on said sleeve in working relation with the other casing and forming a connection between the sleeve and its casing, a gear housing on the outer end of the shaft housing, a saw shaft mounted to rotate in bearings in the gear housing, gearing in the gear housing operatively connecting said shafts whereby the latter is driven from the former and a saw on the saw shaft mounted to rotate in a plane approximately parallel to the driven shaft.



2,105,631

CONTAINER CLOSURE

Edward M. Baker and Ralph E. Greenholtz, Baltimore, Md., assignors to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York

Application June 22, 1933, Serial No. 677,156

1 Claim. (Cl. 215—43)

In combination, a liner plate and a clamping sleeve having an inwardly projecting continuous thread and an inwardly projecting clamping seat at the upper end thereof, said plate comprising a disc-like body, a down-turned circumferentially discontinuous marginal flange, and an annular sealing gasket secured to the undersurface of the body adjacent the flange in position to cooperate with the mouth of the receptacle to be sealed, said flange of said plate being provided with a plurality of spaced slits extending from the lower edge thereof upwardly substantially to the plane of the body to provide a plurality of disconnected flange sections, the material of the flange at one side of each slit and including one edge of the slit being projected outwardly beyond the line of the intermediate portion of the flange to cause the edges thereof to lie on a circle of substantially greater diameter than the diameter of the land of the thread of said sleeve, the material of said flange and the relation of said diameters being such that said projecting portions of the flange will be permanently displaced from their original outwardly projected positions when said plate is forced into said sleeve past said thread by axial movement, said material having sufficient resiliency to cause the projections to spring back toward their original positions to overlie said thread, but short of contact with the inner periphery of the sleeve or the root of the thread, whereby said plate and sleeve can be separated only by relative rotation in an unscrewing direction to permit said projections to follow said thread and thereby be disengaged from said sleeve.

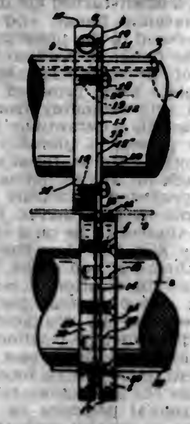
2,105,632

TRIMMING ATTACHMENT FOR SEWING MACHINES

Morris Feil, New York, N. Y.

Application September 10, 1937, Serial No. 163,163

1 Claim. (Cl. 112—129)



A trimming attachment for a multi-needle sewing machine, comprising a substantially horizontal plate member adapted to serve as the presser foot of the machine, and provided with

a number of slots of different lengths adapted to receive and guide therethrough tapes of respectively corresponding widths in superimposed relation whereby the longitudinal edges of any of the superimposed tapes lie intermediate the longitudinal edges of the tape immediately beneath it, and means to mount said plate onto the presser foot spindle of the sewing machine; said plate

being also provided with a series of apertures to permit passage of the needles of the machine to their respective shuttles; said apertures lying respectively in the path of travel of the respective tapes; each aperture being adjacent a longitudinal edge of one of the tapes, whereby said tapes may be sewn one on to the other along their longitudinal edges by a single run through the machine.

2,105,033
SLOTTER HEAD
Thomas S. Fitchett, Glen Arm, Md., assignor to F. X. Hooper Company, Inc., Glen Arm, Md., a corporation of Maryland
Application February 13, 1936, Serial No. 63,694
7 Claims. (Cl. 164—28)

3. The combination with a male slotter head adapted to be mounted for movement about an axis in cutting, said head having a support for positioning a plurality of male slotter knives, and said knives each having two parallel cutting edges spaced apart, and means for securing said knives on said support in different cutting positions one edge of each knife on the same side of said knives being in a single plane at right angles to said axis, of a female slotter head adapted to be mounted for movement about an axis parallel to said male head axis and in operative relation thereto, the female head having cutting slots of different widths placed end to end and aligned in the direction of their length, each having substantially parallel cutting edges at the opposite sides, the cutting edges on one side of a plurality of said slots being in a single plane at right angles to said axes, both said single planes being on the same side of the knives and slots, respectively and both heads being adjustable in the direction of the axes to bring these planes together.

2,105,034
LEVEL INDICATING DEVICE
Benjamin H. Flynn, Alexandria, La.
Application May 11, 1937, Serial No. 142,036
3 Claims. (Cl. 33—215)

1. A leveling device comprising a casing, a liquid partially filling said casing, a support pivotally hung in said casing and extending partially above and partially below the liquid level therein, a scale on said support above said liquid level, a pointer pivotally mounted on said support and extending partially below and partially above said liquid level, the upper end of said pointer being cooperable with said scale, and weighted operating means for said pointer mounted on said support, said casing having a view opening above said liquid level through which said scale and the upper end of said pointer are visible.

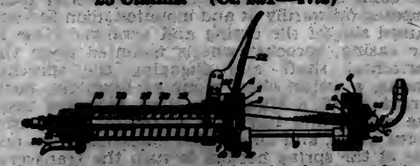
2,105,035
PROCESS FOR THE MANUFACTURE OF SPUN GOODS, FABRICS, AND THE LIKE
Richard Freudenberg, Hans Freudenberg, Roland Runkel, and Gustav Lange, Weinheim, Germany, assignors to the firm Carl Freudenberg G. m. b. H., Weinheim, (Bodensia), Germany, a corporation of Germany
No Drawing. Application November 1, 1934, Serial No. 751,112. In Germany November 2, 1933
5 Claims. (Cl. 19—3)

1. In a process for the manufacture of spun goods, fabrics and other textiles with fibres obtained from animal skins, the improvement which comprises treating animal skins with swelling agents, mechanically shredding the swollen skins coarsely while in swollen condition, treating the coarsely shredded fibrous material with organic liquids, said organic liquids being miscible with water and chemically inert with respect to said fibres, and having the property of changing the colloidal properties of the fibres, thereby removing the greater portion of the absorbed water and preventing the fibrous material from gumming up and becoming horny, and finely shredding the material so treated while still substantially free from water.

2,105,036
PROCESS FOR THE MANUFACTURE OF SPUN GOODS, FABRICS, AND OTHER TEXTILES
Richard Freudenberg and Gustav Lange, Weinheim, Germany, assignors to firm Carl Freudenberg G. m. b. H., Weinheim, Germany, a corporation of Germany
No Drawing. Application May 3, 1935, Serial No. 18,751. In Germany May 25, 1934
13 Claims. (Cl. 19—3)

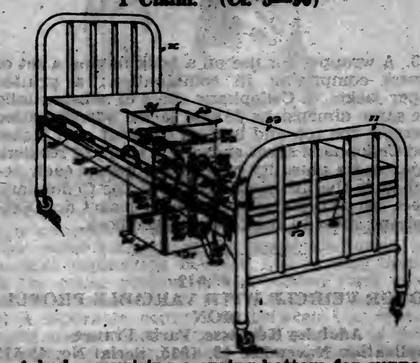
1. In a process for the manufacture of spun goods, fabrics and other textiles with the employment of fibres obtained from animal skins, the improvement which comprises treating animal skins with swelling agents, effecting coarse mechanical shredding of the skins while they are still in a swollen condition, treating the coarse fibrous material with substances having a tanning action which alter the colloidal properties of the fibres and prevent the fibrous material from gumming up and becoming horny on removal of the water and finely shredding the material so treated.

2,105,037
MANUFACTURE OF NICKEL CARBONYL
Charles Frederick Reed Harrison, Selly Oak, Birmingham, and Albert Edward Wallis, Clydach, England, assignors to The International Nickel Company Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application November 22, 1934, Serial No. 754,334. In Great Britain November 28, 1933
5 Claims. (Cl. 23—203)



3. The process of manufacturing nickel carbonyl from nickel matte constituted of sulphides which comprises forming an unfused, intimate, mechanical mixture of nickel matte with a multitude of separated particles of a metal of the group consisting of copper and iron in a state of fine division to combine chemically with substantially all the sulphur evolved by said sulphides, said mixture having said multitude of separated particles so distributed throughout the same as to provide metal particles within the zones of chemical reaction of substantially all of the particles of said sulphides, subjecting said unfused mixture containing said distributed multitudes of separated particles to the action of carbon monoxide under pressure to form cuprous sulphide or ferrous sulphide to facilitate the separation of said nickel from a residue containing precious metals and sulphides of said metal, calcining said residue to remove substantially all of the sulphur of said sulphides and reusing said calcined residue in the first step hereof whereby precious metals included in a nickel matte are concentrated.

2,105,038
BRUSH FOR DYNAMO-ELECTRIC MACHINES
Walter O. Helwig, Milwaukee, Wis.
Application November 30, 1936, Serial No. 111,763
4 Claims. (Cl. 171—325)



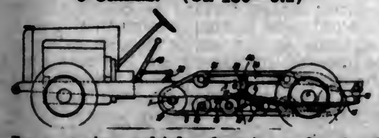
1. A brush for a dynamo electric machine comprising a body portion having a slot extending transversely therethrough, and a transverse, wedge-shaped body of treating material positioned within said slot and interlocking with said body portion.

2,105,039
METHOD AND APPARATUS FOR DISPENSING GREASE, OIL, AND THE LIKE, AND CAN THEREFOR
Richard E. Haines, Bradford, Pa., assignor to Kendall Refining Company, Bradford, Pa., a corporation of Pennsylvania
Application May 29, 1935, Serial No. 24,128
25 Claims. (Cl. 221—47.3)

1. A dispensing apparatus having a substantially ring shaped knife to cut out the end portion of a can, a plunger for applying pressure to the cut out can end for forcing it axially of the can towards the opposite end thereof, and for effecting the discharge of the can's contents through said opposite end, and means for puncturing said opposite discharge end to provide a discharge outlet.

2,105,040
HOSPITAL OR INVALID BED
Albert L. Hurst, Winston-Salem, N. C.
Application September 12, 1936, Serial No. 100,523
1 Claim. (Cl. 5—90)

A bed comprising a spring bottom for supporting a mattress having an opening formed therein, the spring bottom having an opening to be arranged adjacent to the opening in the mattress, the opening in the spring bottom being spaced a considerable distance from the sides and ends of the spring bottom, a vertical casing attached to and suspended from the spring bottom at the opening therein and entirely supported by the spring bottom to partake of the yielding action of the spring bottom, said casing having its opposite sides also spaced a considerable distance from the sides of the spring bottom, said casing having its opposite ends provided with longitudinal slots, a plug frame mounted within the casing to be moved vertically, vertical guide rods mounted within the casing and rigidly secured thereto and disposed adjacent to the slots and arranged between the plug frame and the ends



of the casing, brackets rigidly attached to the opposite portions of the plug frame and having guide sleeves slidably mounted upon the vertical rods, said brackets also extending through the slots to the outer sides of the ends, upper and lower spaced sprocket wheels mounted upon the outer side of each end of the casing adjacent to the ends of the slot, a sprocket chain mounted adjacent to each end of the casing and engaging the upper and lower sprocket wheels to provide a vertical run which is attached to the adjacent bracket between the sprocket wheels, both sprocket chains extending laterally from the upper and lower sprocket wheels to and beyond the same side of the casing, a horizontal shaft disposed outwardly of and mounted upon the last named side of the casing and arranged close to the casing, sprocket wheels mounted upon the horizontal shaft and engaging the sprocket chains, a worm wheel mounted upon the horizontal shaft, a transverse shaft mounted upon the casing and having a worm to engage the worm wheel, and an element accessible from one side of the spring bottom to turn the transverse shaft, the arrangement being such that the horizontal shaft, sprocket wheels carried thereby, and worm wheel are disposed inwardly of the spring bottom and covered by the spring bottom.

2,105,041
BOOK COVER
Melvin T. Kafka, New York, N. Y.
Application June 19, 1937, Serial No. 149,147
4 Claims. (Cl. 281—34)

2. A wrapper for use on a book having a set of covers comprising in combination; a printed paper jacket; a Cellophane sheet of substantially the same dimensions as said jacket superimposed thereon, the top and bottom edges of said jacket and Cellophane sheet encased in strips of resilient tape; and a plurality of securing means each attached to the unencased edges of the Cellophane sheet for securing said combined jacket and Cellophane sheet to the covers of the book.

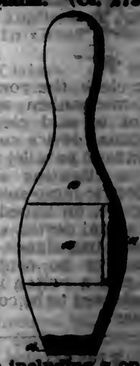
2,105,042
MOTOR VEHICLE WITH VARIABLE PROPULSION
Adolphe Kégresse, Paris, France
Application November 12, 1935, Serial No. 49,575
In France November 19, 1934
6 Claims. (Cl. 180—9.1)

1. In a motor vehicle chassis, a front wheel axle with steering wheels always in steering contact with the ground, a rear wheel axle with wheels always operable as driving wheels, elastic suspension means for said rear axle, an endless track driving axle fixedly mounted on said chassis between the front and rear wheel axles at a fixed predetermined distance above the ground, an endless track front driving sprocket on each end of said driving axle, an endless track carried by each sprocket, load-carrying rollers on each side of said chassis engaging the ground-contacting stretches of the endless tracks and disposed between the aforesaid fixedly mounted driving axle and the rear wheel axle of the chassis, a single load-carrying axle mounted on the chassis between said driving axle and the rear wheel axle of the chassis, and means on each end of the carrying axle for transmitting the load carried thereby to the load-carrying rollers.

2,105,043
RECIPROCATING ENGINE
John George Aubrebrock Kitchen, Bowness-on-Windermere, Westmoreland, England
Application September 25, 1936, Serial No. 102,616
In Great Britain December 5, 1935
2 Claims. (Cl. 121—1)

1. A reciprocating fluid-operated engine having a working chamber, comprising a series of at least three telescopically arranged non-contacting tubular elements whereof alternate elements are carried by two tube-carrying members which are relatively displaceable in the direction of the axis of the working chamber and which constitute a cylinder head and a piston head respectively, one of which heads has only one port therein arranged to permit a charge of working fluid under pressure to be admitted into the innermost tubular element of said series while the other head is devoid of ports, which tubular elements are of such length in relation to the stroke of the engine that the tubular elements carried by each head are always intercalated with those carried by the other head and which are also open at the ends opposite their heads so that the whole of each charge admitted through said port is compelled to traverse the sinuous path formed by the annular spaces between the tubular elements from the outermost of which spaces the exhaust issues at reduced pressure.

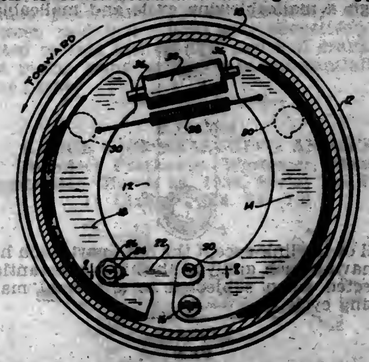
2,105,044
VACUUM BREAKING DEVICE FOR PREVENTING BACK SIPHONAGE IN WATER SYSTEMS
Emil J. Kocour, Chicago, Ill., assignor to Sloan Valve Company, Chicago, Ill., a corporation of Illinois
Application March 6, 1931, Serial No. 520,622
6 Claims. (Cl. 137—111)



1. A vacuum breaking device for use in a water system comprising a coupling section with means for connecting it in the system, the main body of the coupling section being provided with a ledge, a hollow downwardly projecting portion

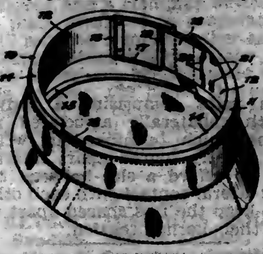
connected with said ledge through which the water passes, a baffle member surrounding said downwardly projecting portion and separated by a space from said ledge, the body portion of the

coupling section having a hollow extension with a passageway leading thereto, and a second hollow baffle member in said extension, said latter baffle member having an open free communication with the external atmosphere.



2,105,045
BOWLING PIN
Karl Kraft, Chicago, Ill.
Application November 4, 1936, Serial No. 109,165
1 Claim. (Cl. 273—53)

A bowling pin including a one piece wood body formed with a medial substantially cylindrical portion having one end intersecting an upper curved face near the head of the body and having its opposite end terminating at the inner end of a transverse shoulder formed inwardly of the lower curved face of the body, and a seamless band of wear resisting material of normally less internal diameter than the external diameter of said substantially cylindrical portion and forcibly engaged over said portion to compress the fibers of the wood and thereby be permanently held in place about the body of the pin, said band having its lower end abutting said shoulder and having its upper outer portion formed into a feather edge merging into the said upper curved face of the body intersected by said cylindrical portion, and also having its outer face opposite the shoulder merging into the lower curved face of the body.



2,105,046
BRAKE
Ludger E. La Brie, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application April 26, 1935, Serial No. 19,074
10 Claims. (Cl. 188—153)

1. A brake comprising a pair of generally semicircular shoes one of which has an anchor at one end and the other of which is unanchored, said shoes being so arranged that the unanchored shoe is self-actuating in forward braking, a link directly connecting the adjacent part of the unanchored shoe to the anchored shoe adjacent said anchor, and an applying device acting on the ends of said shoes opposite the anchor and which is constructed and arranged to apply a

balanced spreading pressure on said shoes while the anchored shoe swings on its anchor and the other shoe moves bodily to apply pressure through said link to the anchored shoe.

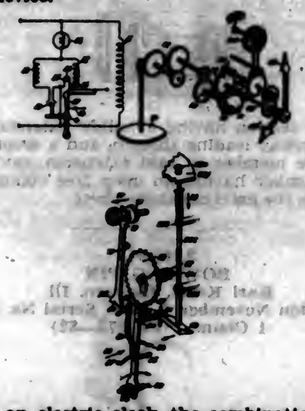
2,105,047
STRETCHER FOR UNIFORM CAP COVERS
Robert H. Lake, Takoma Park, Md.
Application October 10, 1936, Serial No. 105,107
6 Claims. (Cl. 223—25)

1. A stretcher for cap covers and the like comprising a pair of segmental forms each including a collar portion, a pair of links constituting a toggle connection between related end portions of the collar portions of the respective forms, a separable connection between one of said links and the collar portion of the related form adjustable circumferentially of said collar portion, and a separable connection between the other related end portions of the collar portions of the respective forms adjustable circumferentially of one of said collar portions.

2,105,048
COMPOSITE ARTICLE
Carl F. Lauenstein, and Clarence J. Brinkworth, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1935, Serial No. 28,365
2 Claims. (Cl. 148—3)

2. The process of forming a composite chain link which includes the following steps: forming a relatively hard ferrous metal link part, forming a mold for the composite link, placing said hard link part in the mold, said hard part being shaped to form a surface portion of the composite link when cast, pouring molten metal into the mold about the hard link part, causing said molten metal to flow about portions of the hard

part and to form with it a composite link, causing the composite link to cool, removing it from the mold and subsequently heating the composite link through a malleableizing cycle and malleableizing all of the link except the hard part, such hard part having such analysis that it is substantially unaffected when subjected to a normal malleableizing cycle.



2,105,049
PEN
Arthur N. Lungren, Evanston, Ill., assignor to The Wahl Company, Chicago, Ill., a corporation of Delaware
Application October 19, 1935, Serial No. 45,716
10 Claims. (Cl. 120—109)

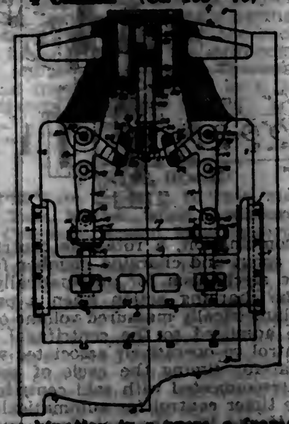
1. A pen point comprising a body portion formed with collaterally associated resiliently flexible nibs which terminate in writing tips which are slightly spaced apart laterally from each other to afford a slot between them, the nibs having lateral contact with each other above said slot to keep the tips spaced apart when the nibs are at their normal tension.

2,105,050
ELECTRICAL CLOCK DEVICE
Marcel Même, Paris, France
Application October 30, 1933, Serial No. 695,907
In France November 4, 1933
4 Claims. (Cl. 58—26)

1. In a clock including a clockwork mechanism and an electric alarm signal device having a circuit, the combination of two flexible blades fixed together, at least one of said blades being bent with an end normally out of contact with the end of the other blade, means for pivotally supporting said blades about an axis located in the plane in which both of these blades can be elastically bent, cooperating contacts, carried by said respective ends of said blades, electrically insulated from each other when said ends are normally out of contact with each other, said contacts being inserted in said circuit so as to keep it open when said blade ends are out of contact with each other, a pivoting lever, means operative by said clockwork mechanism for causing said lever to bend said blades at a predetermined time so as to close said circuit, a toothed member driven by said clockwork mechanism in a direction at right angles to said axis, means for engaging one of said blades with said toothed member, when said contacts are closed, so that both of said blades are caused to move in a direction at right angles to that in which they have been bent, and are allowed to unbend as soon as they have been moved past the edge of said lever, and means for returning all the parts to their initial respective positions after the working of the alarm device.

4. In an electric clock, the combination of an electric clockwork mechanism, means for feeding electric current to said clockwork mechanism, an electric signal device connected to said current feeding means in parallel with said clockwork mechanism, a vibrating element in said signal device, an electric lamp connected in series with said signal device, an impedance connected in shunt with said signal device, switching means inserted between said impedance and said signal device and adapted to be controlled by said vibrating element, and a switch in the circuit of said signal device adapted to be controlled by said clockwork mechanism.

2,105,051
DISPENSING ATTACHMENT FOR BEVERAGE CONTAINERS
George W. Myers, Bushnell, Fla.
Application January 22, 1936, Serial No. 60,442
5 Claims. (Cl. 225—32)

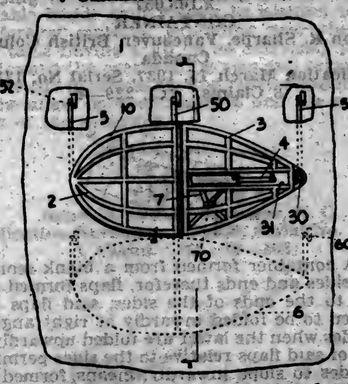


5. The combination with a container having a mouth portion and an outside flange carried thereby, of a dispensing attachment including in combination a plate portion serving as a cover to said mouth portion, of said container, a cup part depending as a flange from said plate portion, said cup part enveloping said mouth portion, clamping means on said cup portion, engaging said flange, a central tubular portion on said attachment, fitting into said mouth portion, there being a hole passing through said plate portion, communicating with said central tubular portion, a tube forming an extension to said tubular portion, reaching down into said container, positive sealing means between said dispensing attachment and said container at the said mouth portion thereof, a spring-closed valve device in said tubular portion, having the valve thereof normally closed from within by bold pressure within said container, said central tubular portion being positioned to be put in communication with faucet means and a valve being arranged for movement by engagement with an unseating element, carried by said faucet means; and a frangible seal on said plate portion, covering said hole in said plate portion, and having a portion of said seal in the path traversed by the faucet means, as the latter is moved into communication with the tubular portion.

2,105,052
PROCESS FOR MANUFACTURING PAPER
Johan Otimann, Groningen, Netherlands
No Drawing. Application April 22, 1936, Serial No. 75,287. In Great Britain and France October 8, 1931
7 Claims. (Cl. 92—21)

1. Sized paper containing up to 5% by weight of a cold swelling starch which is uniformly distributed throughout the paper; said cold swelling starch having been obtained by subjecting 1 part of raw starch mixed with 0.6 to 2 parts by weight of water to heat and pressure whereby said raw starch is simultaneously subjected to heat above the gelatinization point and to pressure so as to burst the starch granules and forming cold swelling starch granules of substantially larger size than the granules of said raw starch, said cold swelling starch being present as an irreversible colloid little affected by moisture and temperature changes, said paper being resilient, having high folding, bursting and tearing strengths and being non-sticking when printed.

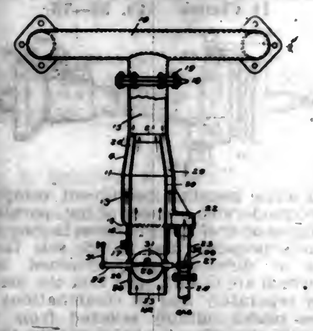
2,105,053
FOUR-POINT HYDRAULICALLY OPERATED PRESS
Isaac Patrick, Mount Gilead, Ohio, assignor by mesne assignments, to The Hydraulic Press Corporation, Inc., Wilmington, Del., a corporation of Delaware
Application June 15, 1934, Serial No. 730,822
4 Claims. (Cl. 100—70)



1. In combination in a press, a frame, a movable platen, links pivotally attached to said movable platen near the four corners thereof, a pair of bell cranks operatively connected to said links and pivotally mounted on said frame, and a hydraulic piston-and-cylinder assembly disposed between said bell cranks and operatively connected to said bell cranks, said bell cranks and said piston being arranged in substantially the same plane.

2,105,054
GAUGE FOR MEASURING ANGLES
Meindert Postuma, Worcester, Mass.
Application March 30, 1936, Serial No. 71,547
11 Claims. (Cl. 33—75)

1. An angle gauging instrument comprising a set of a considerable number of flat, parallel sided angle plates of uniform thickness having straight edge faces perpendicular to the side faces and meeting at different, predetermined, accurate angles which are of such sizes that the plates may be used separately and in combinations of two or three plates suitably selected from the set to measure directly all angles within the semicircle which vary uniformly by increments of not over 5 degrees, and a clamping device and means on each plate arranged to cooperate therewith which will serve to clamp together any edge face of one plate against any edge face of a second plate with either side of each plate exposed and the angle between the plates determined solely by the shapes of the contacting plates, so that the assembled plates will lie flat on a plane surface with the desired measuring angle unobstructed.



2,105,055
RETRACTABLE GUN MOUNT
John C. Sanders, Seattle, Wash., assignor to Boeing Aircraft Company, Seattle, Wash., a corporation of Washington
Application February 2, 1935, Serial No. 4,681
7 Claims. (Cl. 89—37.5)

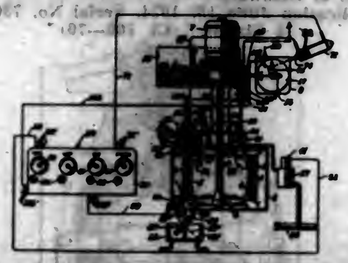
1. A gun mount for a streamlined aircraft structure having an aperture in its skin, a two-part shell enclosing the gun mount, means supporting the shell for movement from within the aircraft structure through such aperture, the

shell being of streamlined shape and substantially filling the aperture, and one of the parts of the shell being movable relatively to the other part, the gun mount being carried by the movable part, whereby the gun may be fired through an angular field.

2,105,056
FUEL-GAS AND AIR CARBURETOR
Page M. Sartell, Farmingdale, N. Y.
Application April 23, 1935, Serial No. 17,855
4 Claims. (Cl. 48—180)

2. In a fuel-gas and air carburetor for internal combustion engines, in combination, a mixing chamber of uniform cross-section area, two concentric coincident frusto-conical hollow portions of different cross-sectional areas, one within the other with a space intermediate them, the smaller diameter of the outer one of said portions being substantially of the area of and leading into said mixing chamber, a fuel-gas duct leading into the space between said portions, an air inlet leading into the larger diametered end of the inner one of said portions, and control means in said duct and inlet for controlling the rate of flow through said duct and inlet, whereby the pressure, velocity and fuel vapor carrying characteristics of the mixture flowing through the mixing chamber are maintained substantially constant.

2,105,057
CONTAINER
Gordon R. Sharpe, Vancouver, British Columbia, Canada
Application March 15, 1937, Serial No. 131,063
6 Claims. (Cl. 229—6)



1. A container formed from a blank scored to form sides and ends therefor, flaps formed at an angle to the ends of the sides, said flaps being adapted to be folded inwardly at right angles to the sides when the latter are folded upwardly, the angle of said flaps relative to the sides permitting the sides to slope inwardly, means formed with the ends adapted to interlock the sides and ends when said ends are folded upwardly, covers formed with the sides adapted to interlock when folded inwardly to form a roof for the container, means formed with the covers adapted to co-operate with the ends to hold the covers, when folded, in peaked formation and a plurality of openings in the blank for permitting air to circulate through the container when assembled.

2,105,058
NEST
Frederick T. Smith and Wilbert S. Smiley, Woodville, Pa.
Application October 21, 1936, Serial No. 106,828
1 Claim. (Cl. 119—48)

A cage of the character described comprising a reticulated body having sides, bottom, top, front and back, respectively, the said front being with an opening next to the bottom, a rack extending from the bottom forwardly of the front beneath the opening therein, an extended top and back at the rear uppermost portion of the body and constituting a substantially triangular shaped formation across the said body, means engageable with the said formation for the hanging of the body upon a support to have the entire bottom forwardly inclined with respect to the perpendicular when upon the support, a pan outside of the body beneath its bottom and disposed horizontally, a feed trough removably supported at the front of said body, a door at the front of the said body and held closed by said feed trough, the back of said body beneath the said formation being provided with an opening, and a watering trough supported next to said last-mentioned opening for access therethrough.

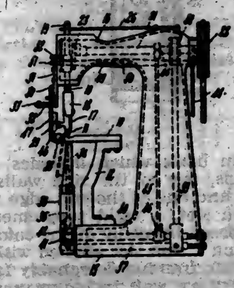
2,105,059
AUTOMATIC CENTRIFUGAL APPARATUS
Robert Alexander Stepp, Los Angeles, Calif.
Application September 29, 1931, Serial No. 565,751
17 Claims. (Cl. 210—71)

1. In combination, a rotatable centrifugal, a charging spout and charging member for same, automatic mechanism for automatically terminating the charging action when a pre-determined volumetrically measured volume of charge has been admitted to the centrifugal, a cycle timer control co-operatively associated with said centrifugal for timing the cycle of same, and means interconnected with said centrifugal and said cycle timer control for automatically starting the latter to time the centrifugal cycle when the charging action terminates.

2,105,060
NETWORK CABLE
Albert P. Strom, Wilkinsburg, Clinton L. Denault, Forest Hills, and Leon McCulloch, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a corporation of Pennsylvania
Original application March 10, 1931, Serial No. 521,500. Divided and this application February 14, 1934, Serial No. 711,159
7 Claims. (Cl. 173—326)

1. An electrical conductor including an inner conductor and a body of insulating material around said inner conductor, said body of insulating material being capable of extinguishing arcs when subjected to the heat thereof and including at least 20% of boric acid in the free state.

2,105,061
WALL HOOK
Edward H. Tate, Frank E. B. Tate, and Christopher Tate, Malden, Mass., assignors to E. H. Tate Company, Boston, Mass., a corporation of Massachusetts
Application September 16, 1935, Serial No. 40,784
4 Claims. (Cl. 248—301)



3. A wall hook comprising a strip of metal having a straight intermediate portion forming the back thereof, a lower end portion bent into hook form, and an upper end portion bent to form a closed loop, said back having a hole therethrough and a tongue struck up therefrom at the lower end of the hole to project forward, said upper portion of the strip having a second hole spaced from said hole in the back, the end of said upper portion of the strip engaging said tongue, and a pin projecting through said two holes and frictionally engaged by a face of said strip adjacent to said end thereof.

2,105,062
WALL HOOK
Edward H. Tate, Frank E. B. Tate, and Christopher Tate, Malden, Mass., assignors to E. H. Tate Company, Boston, Mass., a corporation of Massachusetts
Application December 24, 1935, Serial No. 55,906
3 Claims. (Cl. 206—79)

3. In combination with a display card, a wall hook comprising a strip of metal having its lower portion bent into hook form and having its upper portion attached to the card so as to hold the wall hook edgewise against the card, and means to prevent side swing of said lower hooked portion of the wall hook on said card, said means comprising a tab upstanding from said card and extending transversely within the hook of said lower portion from one opposing face to the other, the side edges of said tab being substantially in contact with said opposing faces respectively.

2,105,063
RIB SETTING AND TRIMMING MACHINE
Percy W. Valentine, Brooklyn, N. Y., assignor to Puritan Manufacturing Company, Boston, Mass., a corporation of Massachusetts
Application November 23, 1935, Serial No. 51,275
4 Claims. (Cl. 12—20)

1. A machine of the type having a base, a bracket rising from the base, and an overhanging arm, means for operating upon reinforced ribbed innersoles consisting of a narrow table projecting laterally from said bracket adapted to support the rib of such an innersole on its upper side and abut at its end against the surface of the innersole adjacent to the rib, a presser movable in the overhanging arm toward and away from the table to cooperate with the latter in gripping the innersole rib, and a knife similarly movable beside said presser in position to sever reinforcing material extending over the table, said table having a lip on its extremity projecting toward the overhanging arm and arranged to indent the innersole rib and reinforcing material in the angle between such rib and the adjacent body of the innersole.

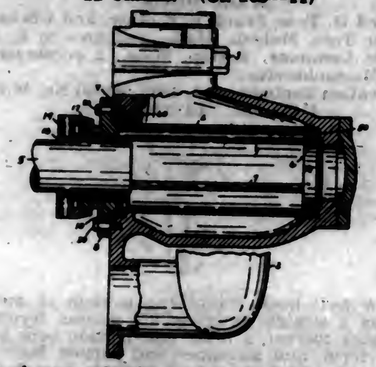
2,105,064
LAP STICK
James R. Wilson, Ramseur, N. C.
Application November 17, 1936, Serial No. 111,333
1 Claim. (Cl. 15—162)

A lap stick formed from a rod or iron having one end bent laterally at right angles to the rod

and then bent into a circular portion occupying a plane at right angles to the longitudinal center of the rod.

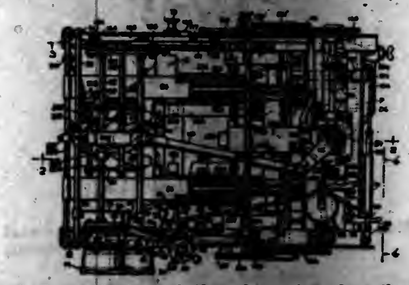
2,105,665
INDICATOR CONTAINER
David H. Zell, Brooklyn, N. Y.
Application November 25, 1933, Serial No. 699,685
5 Claims. (Cl. 235—100)

1. In a coin bank which includes side walls and edge walls, one of the side walls containing a window and one of the end edge walls containing a coin slot, a rigid supplementary end edge wall disposed inwardly of the coin slot edge wall and having a coin slot aligned with the coin slot of that wall, framing detachably fastened to said supplementary wall including a sheet disposed inwardly from and parallel to said window containing side wall and forming therewith a shallow chamber separated by the sheet from the hollow interior into which coins may be passed through said slots, a pair of cooperating disks in said chamber revoluble on parallel transverse axes carried by said framing and having dial faces for exhibit behind said window, a swingable member in the hollow interior adapted to be actuated by a coin pressed through said slots, extending into said chamber through a transverse slot in said sheet and pivotally mounted on said sheet in said chamber, and transmission mechanism within said chamber mounted on said sheet for operation by the actuation of said swingable member and having connection with one of said disks for imparting driving movement thereto, all of said working parts being removable as an entity arrangement with the detachable framing by which they are solely supported.



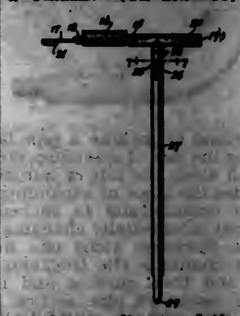
2,105,666
INDICATOR CONTAINER
David H. Zell, Brooklyn, N. Y.
Original application November 25, 1933, Serial No. 699,685. Divided and this application November 15, 1934, Serial No. 753,156
2 Claims. (Cl. 194—74)

1. In a coin bank including a casing having a coin receiving slot and an indicator dial; a coin guide carried by said casing beneath said slot, said casing having an elongated opening in opposite walls thereof, said openings being parallel with said guide, a substantially U-shaped coin moving member provided with lateral projections engaging in said openings, a rock lever carried by said casing disposed in the path of movement of the coin, and means connected to said



lever engaging said dial to rotate said dial upon rocking of said lever.

2,105,667
PUMP
Herbert Allen, Houston, Tex., assignor, by mesne assignments, to Abercrombie Pump Company, Houston, Tex., a corporation of Texas
Application June 29, 1934, Serial No. 733,079
11 Claims. (Cl. 103—44)

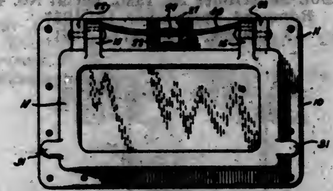


1. A pump having a barrel; inlet and outlet means for said barrel; said barrel having a counterbored opening in one end; a hollow expansible member insertible in said opening having an internal annular flange on one end to bear against that end wall of said barrel remote from said opening, and an external annular flange on its other end to bear against the shoulder of said counterbore; a support insertible into said member having a first ring to engage said internal annular flange and a second ring to engage said external annular flange; and a plurality of rods extending from said first ring into said second ring; a head on the counterbore end of said barrel engaging said rods; a gasket between said second ring and said head; adjustable means to move said head toward said barrel to compress said gasket and flanges; said second ring having fluid passageways extending substantially radially and circumferentially therethrough, and being in communication with the interior of said expansible member; said barrel having upper and lower ducts communicating with said passageways; pumping fluid in said expansible member, ducts and passageways; a piston reciprocable in said head and in co-acting relation with said pumping fluid; and means to pack said piston in said head.

2,105,668
FEEDING DEVICE
Adam Allendorf, Forest Hills, N. Y.
Application February 26, 1936, Serial No. 65,762
8 Claims. (Cl. 271—27)

1. In a device of the character described, a vertically movable table adapted to carry a stack of papers such as checks, bills, notes or the like, a conveyer belt mechanism, a vacuum means for lifting a piece of paper from said table, and transferring it to said belt mechanism and a trip lever and positive mechanical means for actuating it when said vacuum means picks up a paper from said table.

2,105,669
PERMANENT WAVING APPLIANCE
Max Arnold, New York, N. Y.
Application April 8, 1936, Serial No. 73,188
2 Claims. (Cl. 132—33)

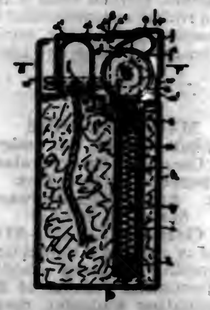


1. A hair waving appliance of the class comprising a clamping device for embracing a strand of hair near the scalp, and a rotatable spindle mounted upon said clamping device and upon which said strand of hair is to be wound; said clamping device being characterized by a body part providing a mount for said spindle, said body part being of generally planiform shape, and having a gripping edge and a serrated locking edge; a swinging clamping lever mounted pivotally upon said body member near one end of said gripping edge, being adapted to swing through an arcuate path into gripping alignment with said gripping edge, said swinging lever having pivoted at its free end a latch member provided at its free end with a pivotally mounted, freely swinging detent adapted to be swung by manual pressure applied sidewise against said detent into easy self-adjusting selective engagement with an appropriate tooth component of said serrated locking edge, according to the thickness of the strand of hair at any time embraced between said clamping lever and the complemental clamping edge of said body member, and further characterized by having said serrated locking edge formed as a sinusoidal cam, and by having said detent formed with a recurved terminal having a round, complemental tooth adapted to travel smoothly over the serrated cam to and from the position of selective adjustment.

2,105,670
MAGNETIC CORE
Adolph F. Bandur, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application February 16, 1934, Serial No. 711,552
7 Claims. (Cl. 175—21)

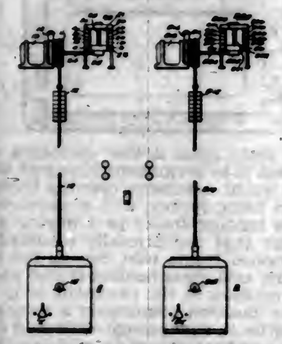
3. A method of making a magnetic body which comprises applying to finely divided magnetic particles an insulating coating of finely divided refractory insulating material, magnesium hydroxide and an alkali metal silicate, and heat treating the coating to cure the insulation.

2,105,671
FILTER GLASS HOLDER
Frederick M. Bowers, Chester, Pa.
Application October 1, 1937, Serial No. 166,799
3 Claims. (Cl. 2—8)



1. In a filter glass holder including a frame part adapted to be permanently secured to a welding shield about a window opening therein, said frame part being formed with a casement, and a filter glass holding frame part having a pair of spaced ears that are pivotally mounted on the first mentioned frame part, means for yieldably maintaining said glass holding frame part either in closed position in the casement or in an out-of-the-way position comprising a spring having its extremities in engagement with said ears, and means disposed intermediate said ears for placing said spring under tension.

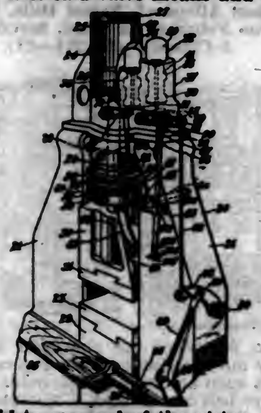
2,105,672
PYROPHORIC IGNITER
Arthur Dubsky, Vienna, Austria
Application August 1, 1936, Serial No. 93,758
In Austria August 6, 1935
7 Claims. (Cl. 67—7.1)



1. A pyrophoric igniter having a frame, a friction wheel, a wick, a wick cap adapted to rock about the friction wheel axis, a manually movable hollow pressure member attached to the wick cap, said cap and pressure member being movable in unison and a tension spring having one portion in pressing engagement with the hollow pressure member at a point above the wheel axis and normally to one side thereof and having another portion in fixed pivotal engagement with the frame at a point below the wheel axis, said spring being so shaped and so positioned relative to the axis of the wheel that it normally tends to accelerate the movement of said cap and pressure member to open or closed position when said pressure member is manually

moved to a point where the point of engagement between the spring and pressure member is in

alignment with the wheel axis and its point of pivotal engagement with the frame.



2,105,073
SIGNAL SYSTEM FOR ELEVATORS
William F. Ramse, Edgewood, Pa., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois
Application September 26, 1935, Serial No. 42,175
Renewed September 10, 1937
15 Claims. (Cl. 177—336)

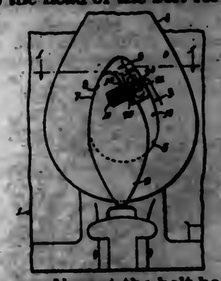
1. In a signal system for an elevator car serving a plurality of floors, a signal device on said car, a control device for each floor, means responsive to operation of said control devices for assigning selected calls exclusively to said car and for causing said signal device to give stop signals corresponding to the assigned calls, and means responsive to predetermined traffic conditions for modifying the operation of said first-mentioned means to restrict the number of calls assigned exclusively to said car.

2,105,074
FLUID ACTUATED HAMMER
Ernest G. Eppens, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application August 26, 1937, Serial No. 160,958
7 Claims. (Cl. 121—39)

1. In a fluid actuated hammer, the combination of a casing having a piston chamber and a reciprocatory piston therein, valve means to effect the distribution of pressure fluid to the piston chamber for actuating the piston, and other valve means for controlling the supply of pressure fluid to the first said valve means and to admit

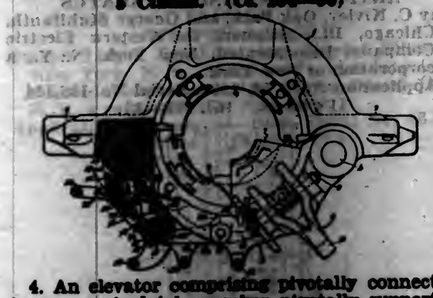
pressure fluid to one end of the piston chamber to hold the piston stationary.

2,105,075
METHOD AND APPARATUS FOR MAKING PIPE BENDS
Rudolph E. Fritsch, Louisville, Ky., assignor to Tube-Turns, Incorporated, Louisville, Ky., a corporation of Kentucky
Application October 8, 1935, Serial No. 44,032
4 Claims. (Cl. 153—32)



1. The method of making a pipe bend having the wall along the side of maximum radius thicker than the wall along the side of minimum radius, which includes the steps of expanding a straight pipe section eccentrically to increase the diameter without substantially changing the length, reducing the thickness along one side without substantially changing the thickness along the other side, and then curving and further expanding the expanded pipe section to shorten the thinner side without substantially shortening the thicker side and without substantially changing the thickness of either side.

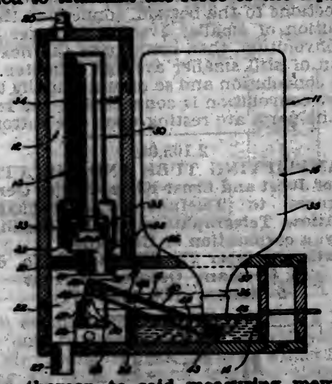
2,105,076
BALANCE STOP FOR DOOR TYPE ELEVATORS
Herbert E. Grau, Los Angeles, Calif., assignor to Byron Jackson Co., Huntington Park, Calif., a corporation of Delaware
Application March 20, 1937, Serial No. 132,066
6 Claims. (Cl. 294—61)



1. In a balance stop construction for door type slip elevators, the combination of a tubing elevator having a pair of pipe encircling members with hinge means connecting the same to enable the said members to swing apart to open the elevator, one of said pipe encircling members having a pair of oppositely disposed outwardly projecting lugs; a supporting link for each lug having an eye receiving its corresponding lug, at least one of said lugs having a balance bolt mounted therein with a head located in the space between the lug and

the adjacent face of the eye, and a cap removably attached to the head of the bolt for engaging the

face of the eye adjacent the bolt head to hold the elevator substantially upright when open.

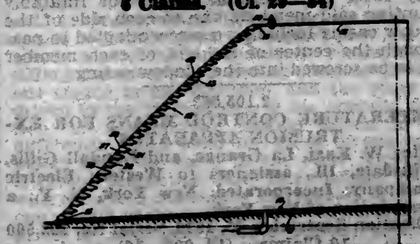


2,105,077
ELEVATOR LATCH
Richard K. Hertel, Vernon, Calif., assignor to Byron-Jackson Co., Los Angeles, Calif., a corporation of Delaware
Application May 9, 1936, Serial No. 78,830
5 Claims. (Cl. 296—99)

4. An elevator comprising pivotally connected jaws, a main latch member pivotally supported on one of said jaws, a lug on the other jaw adapted to be engaged by said main latch member when the jaws are closed and said latch is swung against the said other jaw, said latch member and lug having cooperating contact faces substantially normal to a radius extended thereto from the axis of said latch member, when the jaws are in closed position, a shoulder on said main latch member, and an auxiliary latch pivotally supported on the said other jaw adapted to engage said shoulder on said main latch when said jaws are closed and said main latch is engaged with said lug.

2,105,078
PROPORTIONING DEVICE
Charles B. Hill, El Monte, Calif., assignor to Hill Brothers Chemical Co., Inc., Los Angeles, Calif., a corporation of California
Application October 23, 1933, Serial No. 167,987
6 Claims. (Cl. 210—89)

1. In a proportioning device of the character described, the combination of: a supply tank; means for supplying liquid thereto; means for intermittently discharging liquid from said tank in measured quantities and at intervals controlled as a function of the volume of liquid supplied to said tank; a solution-holding vessel; an unbalanced measuring member normally submerged in the solution in said vessel to receive a measured quantity of said solution and having a discharge portion extending outside of said vessel; and an impact member positioned in the path of the liquid discharged from said tank and arranged to transmit the force of the liquid im-

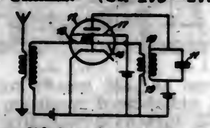


pinging thereon to said measuring member to overcome the unbalanced condition thereof and discharge said measured quantity of solution from said vessel.

2,105,079
ARC WELDING SYSTEM
Claude J. Holslag, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J.
Application October 29, 1936, Serial No. 108,131
2 Claims. (Cl. 219—8)

1. An arc welding system using bare metallic wire throughout as one electrode, in conjunction with the work to be welded as the other electrode, and means for automatically feeding a dry flux in sufficient quantity around the arc to completely shield the arc and cover the molten metal produced by the arc, and automatic means for picking up any excess flux and returning it to storage.

2,105,080
METHOD OF ERECTING COLLAPSIBLE GASHOLDERS
Konrad Jagschitz, Mainz, Germany
Original application February 21, 1936, Serial No. 65,004. Divided and this application March 25, 1937, Serial No. 132,961
6 Claims. (Cl. 29—84)



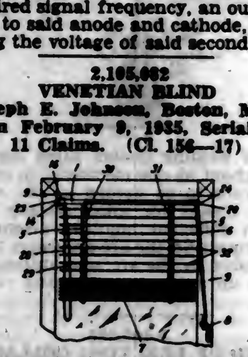
1. The method of erecting a collapsible gasholder whose shell is composed of a series of con-

volutions of diminishing average diameter from the bottom toward the top which comprises connecting the lowermost of the series of convoluted shell sections to the bottom, connecting the next convolution of smaller average diameter to the first convolution, then connecting the next convolution of still smaller average diameter to the second convolution and so on until finally the innermost convolution is connected to the roof, all while the parts are resting upon the bottom.

2,105,661
AMPLIFYING TUBE AND CIRCUIT

Gunther Jobst and Ernst Kletz, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application October 27, 1933, Serial No. 695,401
In Germany October 10, 1932
5 Claims. (Cl. 179—171)

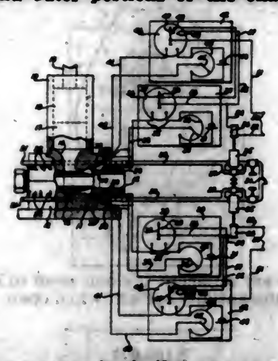


2. In an amplifying device, the combination of a vacuum tube having a cathode, an anode, a control grid located between said anode and cathode and constructed so as to control the electron current between one-half only of said cathode and anode, a second grid located between said anode and cathode and constructed so as to control the electron current between the other half only of said cathode and anode, means for varying the voltage of said control grid in accordance with a desired signal frequency, an output circuit connected to said anode and cathode, and means for varying the voltage of said second grid.

2,105,662
VENETIAN BLIND

Joseph E. Johnson, Boston, Mass.

Application February 9, 1935, Serial No. 5,752
11 Claims. (Cl. 156—17)



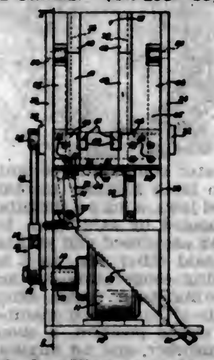
1. In a Venetian blind the combination of a tilt rail and means for rotatably supporting the same between the sides of a window casing comprising cup-like metallic members shaped to fit closely over the ends of said tilt rail and substantially cover its ends and means for rotatably mounting said members one to each side of the window casing including a screw adapted to pass through the center of the end of each member and to be screwed into the window casing.

2,105,663
TEMPERATURE CONTROL MEANS FOR EXTRUSION APPARATUS

Walter W. Kagi, La Grange, and Randall Gillis, Hinsdale, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application September 25, 1936, Serial No. 102,500
10 Claims. (Cl. 207—16)

1. An extrusion apparatus, comprising a walled chamber, means for heating the chamber wall, means for measuring the temperatures at the inner and outer portions of the chamber wall,



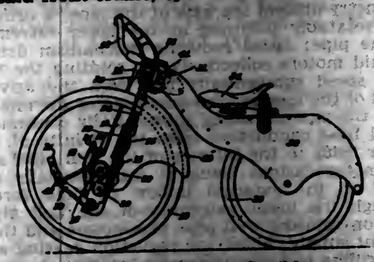
and means responsive to the average of said temperatures for controlling the heating means.

2,105,664
ARTICLE HANDLING APPARATUS

Ray C. Kivley, Oak Park, and George Stuhlfauth, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application April 10, 1937, Serial No. 136,124
11 Claims. (Cl. 198—33)

1. An article handling apparatus for sorting blanks comprising a rocking carrier, a magazine for feeding parts to said carrier, a pair of knife edged selectors associated with said carrier for receiving a blank from the carrier, and means for moving one of said selectors to cause a blank positioned on a pair of selectors to drop therefrom with a predetermined end of the blank downward.



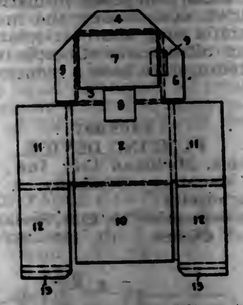
2,105,665
VEHICLE

Richard Laberda, Brooklyn, N. Y.

Application February 20, 1937, Serial No. 126,747
14 Claims. (Cl. 280—240)

1. A vehicle embodying therein a front frame, a rear frame pivotally connected therewith, a driving wheel mounted in said front frame, a wheel mounted in said rear frame, and means applying power to said driving wheel comprising oscillatory levers mounted in said front frame, a flexible connection having its opposite ends connected with said levers, and expansible and contractible means in the length thereof permitting

elongation and shortening of said flexible connection, means limiting the amount of expansion and contraction of said means, guides for said flexible connection carried by said front frame, and one-way clutch mechanisms carried by said front frame, operative upon said driving



wheel and actuated by said flexible connection, whereby the portion of said flexible connection between said expansible and contractible means and said lever may impart turning movement to said driving wheel independently of movement of other parts of said flexible connection.

2,105,666
SHIPPING CASE

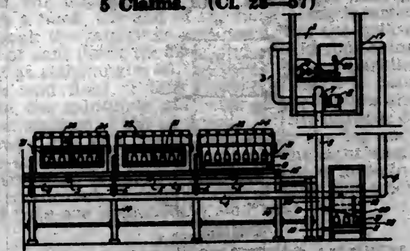
Joseph Liskin, Brooklyn, and Samuel Stimmel, New York, N. Y., assignors to Standard Corrugated Case Corporation, Long Island City, N. Y., a corporation of New York

Application January 14, 1936, Serial No. 58,998
4 Claims. (Cl. 229—37.5)

1. A one-piece folder providing a complete shipping package for a plate article, said folder comprising a main panel, a holder panel connected with one edge of said main panel to fold thereon, flaps on said holder panel to fold over and retain the article, two side flaps connected with other edges of said main panel to fold over said holder panel, and extension flaps connected with said side flaps and adapted to fold under said main panel.

2,105,667
CONDENSER POTTING COMPOSITION

Raymond P. Lutz, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York



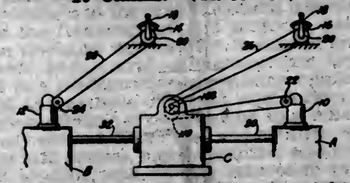
No Drawing. Application September 5, 1936, Serial No. 99,683
7 Claims. (Cl. 106—17)

1. A condenser potting composition for condensers impregnated with a halogenated hydrocarbon comprising a mixture of asphaltic material and a medium for inhibiting diffusion of said material.

2,105,668
APPARATUS FOR HUMIDIFYING TEXTILE YARNS

Timothy Lyden, Tenafly, and Patrick J. Lyden, Jersey City, N. J.

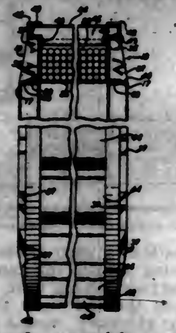
Application July 23, 1936, Serial No. 92,136
5 Claims. (Cl. 28—57)



1. In combination, a yarn chamber; a humidifying unit having means for humidifying with water air passing through the unit; a duct for conducting air from the unit into the chamber to pass through the chamber; means for causing the air to pass through the unit, duct and chamber; a heater for heating the humidifying water; heat sensitive means in said air between the point of humidification and before its discharge from the chamber and the air after it passes the chamber respectively; and means cooperating with said sensitive means for causing said heater to raise the temperature of the humidifying water whenever the temperature in the duct is at least a predetermined amount lower than the temperature of said air that has passed through the yarn chamber.

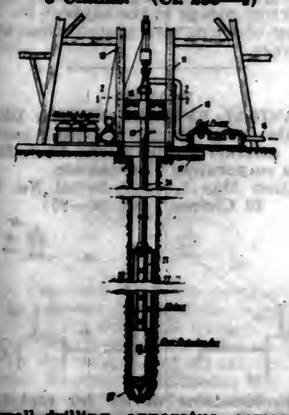
4. In combination, a yarn box comprising a pressure chamber and a yarn chamber; hollow perforated yarn supports in the yarn chamber and communicating with the pressure chamber; and restricting means in the support for limiting the amount of air passing thereto from the pressure chamber.

2,105,669
MECHANICAL SYNCHRONIZING DEVICE



Erle Martin, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application May 7, 1936, Serial No. 78,395
10 Claims. (Cl. 60—97)

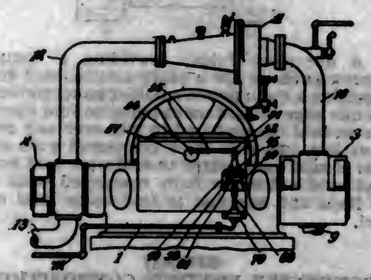


1. A synchronizing device for matching the speeds of jointly operating engines provided with speed controlling mechanisms comprising, a differential mechanism having one side driven by one engine in one direction, and the other side driven by the other engine in the opposite direction, an intermediate portion driven by said differential sides when the speed of one engine differs from the speed of the other, means operatively connecting said intermediate portion with the speed controlling mechanism of at least one of said engines, and means for releasing the drive to said intermediate portion when the speeds of said engines differ by more than the predetermined amount.

2,105,890
REEL
Paul S. McCann, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 11, 1936, Serial No. 58,636
7 Claims. (Cl. 206—59)

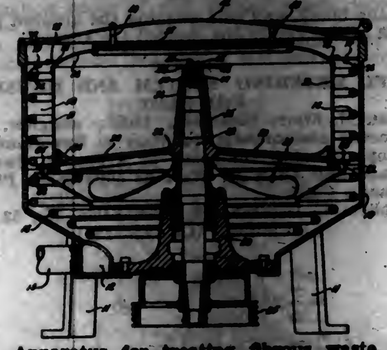
1. A cable reel comprising spaced metallic heads, a drum connected therebetween, and channel shaped lags for enclosing the reel, each head having an annular peripheral member adapted to support opposite ends of said lags, said channel lags having their side arms narrowed at their ends where they rest on said members for increasing their resistance against deformation by impact stresses.

2,105,891
WELL DRILLING RIG
Charles W. MacKay, Tulsa, Okla.
Application April 4, 1936, Serial No. 72,766
5 Claims. (Cl. 255—4)



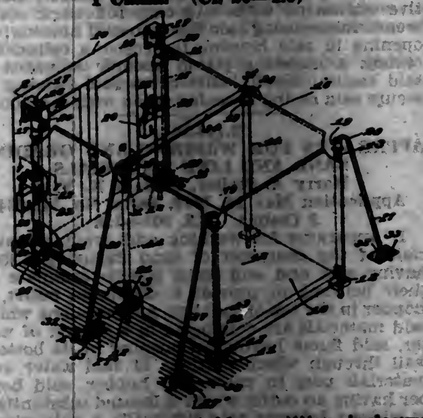
1. A well-drilling apparatus comprising, in combination, a sectional well pipe constructed to extend from the surface of the ground continuously to the vicinity of the bottom of the hole, and to supply a substantially rigid unit throughout its length, to resist both torque and vertical thrust and to supply a heavy downward thrust to aid in the drilling operation; means at the surface of the ground for holding the well pipe against rotation; means also at the surface of the ground for raising, lowering and suspending the pipe and regulating its downward thrust and the effect thereof on the drilling operation; means also at the surface of the ground for forcing fluid downwardly through the pipe; a plurality of electric motors mounted upon the pipe near its lower extremity, with their rotor axes parallel with each other and with the axis of the pipe, said rotor axes being spaced from the axis of the pipe and disposed with geometric symmetry around the axis of the pipe; a drilling tool rotatably mounted at the lower extremity of the pipe; speed reducing mechanism driven by said motors collectively for rotating the tool at a speed substantially less than the driving speed of the motors; the mounting of the motors upon the pipe providing substantially continuous metal heat conduction from the vicinity of the motor fields to the interior of the well pipe, and the motor casings being at least partially exposed to the external upflow of fluid forced through the lower extremity of the well pipe; the non-rotating well pipe, the motors and their current supply cables, the reduction gearing and the drilling tool comprising an integrated organization extending throughout the length of the hole and movable upwardly and downwardly, through handling at the top of the hole, as a structural unit.

2,105,892
MAGNETIC MATERIAL
Charles C. Neighbors, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application October 31, 1934, Serial No. 750,220
6 Claims. (Cl. 175—21)



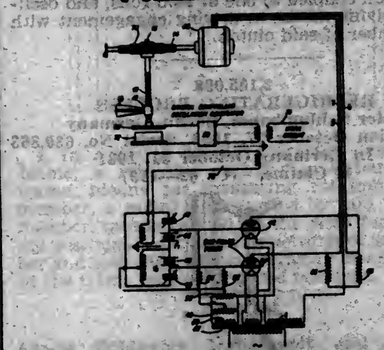
1. A method of making a compressed magnetic dust core, which comprises insulating magnetic dust particles, compressing the insulated particles to form a core, and heat-treating the core in a nascent nitrogenous atmosphere containing sufficient hydrogen to have a reducing effect.

2,105,893
PUMPING DEVICE
Warren Noble, Michigan City, Ind., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application September 20, 1934, Serial No. 744,838
2 Claims. (Cl. 103—38)



1. In combination, in a pump, a crank shaft, a cylinder, a piston therein, operative driving connections between said crank shaft and said piston including mechanism adjustable to effect different lengths of piston stroke, and means governed by the terminal pressure of said pump, actuated by said crank shaft and having an operative connection with the latter independent of said operative driving connections first mentioned for adjusting an element of said mechanism to change the length of piston stroke.

2,105,894
APPARATUS FOR AND THE METHOD OF TREATING FIBROUS WASTE FOR JOURNAL BOX USE
Edwin S. Pearce, Indianapolis, Ind., assignor to Railway Service & Supply Corporation, Indianapolis, Ind., a corporation of Indiana
Application January 28, 1934, Serial No. 707,698
16 Claims. (Cl. 141—9)

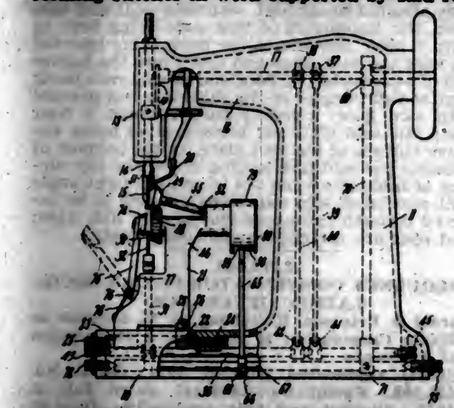


1. Apparatus for treating fibrous waste for journal box use, comprising a casing for receiving and holding a treating liquid, means within said casing for heating the liquid therein, a perforated rotatable container mounted in said casing for receiving and holding the waste to be treated, means in said casing and outside of said container for effecting a forcible passage of said treating liquid through said container and hence through said waste, with consequent transfer to said liquid of at least some of the objectionable content of said waste, means for effecting the removal from said casing of the major portion of said treating liquid, and means for rotating said container to remove from said waste an appreciable portion of the treating liquid therein.

2,105,895
PORTABLE PARTITION
Alfred G. Peterson, Milton, Mass.
Application December 7, 1936, Serial No. 114,530
1 Claim. (Cl. 20—1.6)

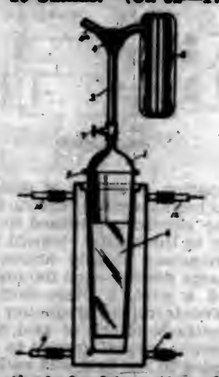
In an improved portable partition inclosure adapted to surround the inside area of a room adjacent the outside entrance, the said enclosure comprising a vertical fabric wall supported by means of hollow posts attached to said fabric wall and mounted in the floor of said room, a central strap member transversally positioned across the upper central area of said fabric wall having anchor rings located at the ends thereof, rigid brace rods adapted to connect with said wall and said floor, the upper end of said rods being bent to form a hook, the end of the hook being inserted through the said rings and down into the hollow end of said posts, the floor end of said rods being bent at right angles to the said rods and parallel with said floor, a link pinned through a floor plate, the said plate pin being located below the upper surface of the said plate for the purpose of allowing the said link to drop below the top surface of said plate when not in use, the right angle bent portion of said rods being adapted to be inserted through the upper end of said link when said rods are attached to said wall posts.

2,105,896
FREQUENCY COMPENSATOR FOR AN OSCILLATION GENERATOR
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application June 5, 1931, Serial No. 542,206. Patent No. 2,007,145, dated July 2, 1935. Divided and this application June 6, 1935, Serial No. 25,258
6 Claims. (Cl. 250—36)



1. In combination, a source of oscillatory energy, means including a piezo-electric device having at least one electrode disposed in adjustably spaced relation to the crystal element thereof for varying the frequency of said source, a pair of electron discharge devices each having an anode, a cathode and a grid, a piezo-electric crystal ground to a predetermined frequency coupled to the grid and cathode of one of said devices, another piezo-electric crystal ground to a different frequency coupled to the grid and cathode of the other of said devices, means coupling said source to said crystals, and, means responsive to the output of either of said electron discharge devices for controlling the electrode spacing of the first mentioned piezo-electric device thereby to adjust the frequency of said source so as to lie intermediate the frequencies of the two crystals last mentioned.

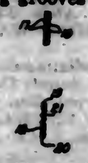
2,105,897
SEWING MACHINE WITH ROLLER FEED
Jesse V. Poole, Abington, Mass., assignor to Puritan Manufacturing Company, Boston, Mass., a corporation of Massachusetts
Application June 12, 1935, Serial No. 26,173
9 Claims. (Cl. 112—67)



1. A sewing machine comprising a base, a

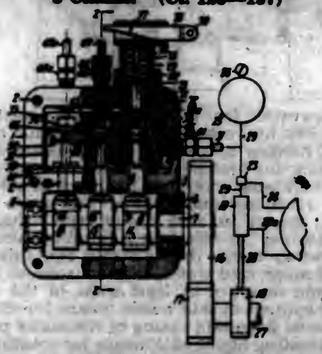
standard rising from said base, a feed roll mounted on said standard in position to support and propel the work, an element of stitch-forming mechanism guided in said standard to act in forming stitches in work supported by said roll,

a cooperating press roll arranged to bear against work supported by the first-named roll, a one-way clutch coupled to one of said rolls, and oscillative driving means in driving engagement with one member of said clutch.



2,165,098
REFRIGERATING PROCESS
Peter Schlumbohm, Berlin, Germany
Application October 27, 1933, Serial No. 639,863
In Germany October 31, 1931
10 Claims. (Cl. 62—179)

1. The method of refrigeration which comprises evaporating a refrigerant to produce refrigeration and causing an absorption of the refrigerant vapor by frozen absorbing material that melts to a liquid during the absorbing.

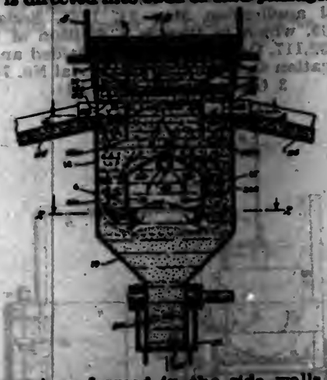


2,165,099
METHOD OF MANUFACTURING KEYS
Andrew L. Schuyler, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application August 31, 1935, Serial No. 38,703
2 Claims. (Cl. 76—110)

1. A method of forming keys for rotor center tumbler type locks which comprises forming a blank of a predetermined contour from sheet metal stock, milling grooves in opposite surfaces

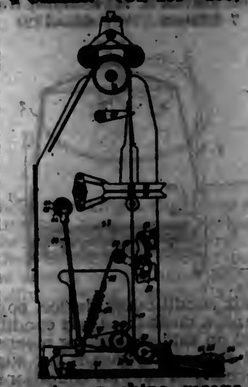
of the blank, and cold swaging the grooved portion of the key to the desired thicknesses.

2,165,100
FUEL METERING SYSTEM AND HOUSING FOR SAME
Allan M. Starr, Piedmont, Calif., assignor, by mesne assignments, to Starr & Sweetland, a copartnership composed of Ernest J. Sweetland and Allan M. Starr as copartners, Piedmont, Calif.
Application December 2, 1935, Serial No. 52,463
3 Claims. (Cl. 123—137)



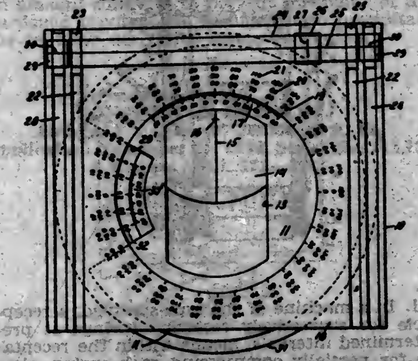
2. A fluid metering mechanism comprising a housing; a partition in said housing; a cam shaft on one side of said partition; a plurality of cam followers slidably mounted within said partition and in operative alignment with cams on said cam shaft; a cover-plate to enclose a side of said housing; a fluid-metering block on the side of said partition opposite said cam shaft; a plurality of metering valves mounted in said block in operative alignment with said cam followers; screw means for securing said block in said housing; an opening in said housing to receive a cylindrical casing; a metering piston slidably mounted in said casing; means exterior to said housing to secure said casing in sealed union with said block.

2,165,101
APPARATUS FOR WASHING AND GRADING SAND AND LIKE MATERIALS
Harry A. Stelley, Buffalo, N. Y.
Application May 15, 1937, Serial No. 142,824
3 Claims. (Cl. 209—158)



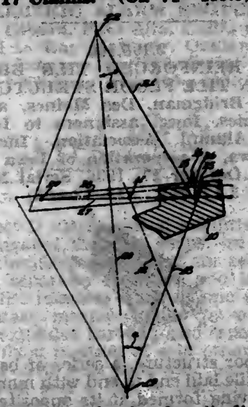
1. Apparatus for washing and grading materials of the character of sand including a box having side and end walls which terminate at their bottoms to provide a discharge outlet, a hopper in the top of said box, a flume along which said materials are conducted in a stream of water, said flume having an opening in its bottom wall through which portions of said water and materials pass to enter said hopper, said hopper having an outlet which is located substantially midway between said side walls, a gate which is adjustable in the direction of said end walls across said last named outlet to regulate the amount of material which is permitted to pass

through said hopper, a deflector arranged under said hopper and being of a length such that its ends abut the end walls of said box, said deflector having oppositely sloping top walls and depending sides which are spaced from the side walls of said box to provide passages, the ridge provided by the top walls of said deflector extending in the same direction and being located below and substantially midway between the longitudinally extending edges of said hopper outlet, whereby to divide the water and entrained materials into two substantially equal streams, one of which is directed into each of said passages, over-



flow openings formed in the side walls of said box above said deflector, angular baffles which fit against the side walls of said box above said overflow openings, said baffles having depending sections which are spaced from said side walls and which extend below said openings and means for introducing water into said box in such a manner that it is caused to flow upwardly through said passages to said outlet openings, the rate of flow of said water through said passages being regulated so that foreign materials are carried out through said openings while the materials to be recovered settle to the bottom of said box over said discharge outlet.

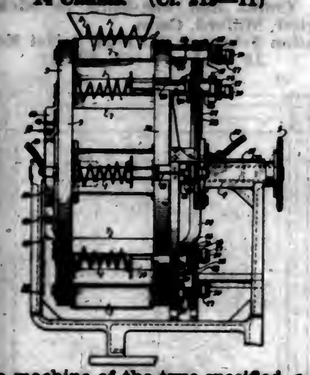
2,165,102
WARP FEED FOR WIRE WEAVING LOOMS
Herbert L. Thompson, Elgin, Ill., assignor to Reynolds Wire Co., Dixon, Ill., a corporation of Illinois
Application October 8, 1935, Serial No. 44,821
4 Claims. (Cl. 139—189)



1. In a weaving machine, means for feeding warp wires to the machine, a whip roll forwardly in the machine from said means and resting on the advancing warp wires, means for pivotally mounting the whip roll to swing on an axis between the whip roll and the warp feeding means, a rotary element adjacent the whip roll, means associated with said element for imposing pressure on the whip roll for pressing the whip roll against the warp wires.

2,165,103
NAVIGATION INSTRUMENT
Nicholas Sinitsin-White, Westport, Conn., assignor of one-third to John L. R. Glover, Fairfield, Conn., and one-third to Nicholas N. Solovieff, Milford, Conn.
Application February 24, 1936, Serial No. 65,377
10 Claims. (Cl. 33—1)

4. In a device of the character described, a frame, a rotatable member mounted in said frame, means for measuring rotation of said member, a radial slide carried by said rotatable member, means carried by the slide for indicating positions determined by settings of said member and said slide, and cooperating means carried by the frame for marking said positions.

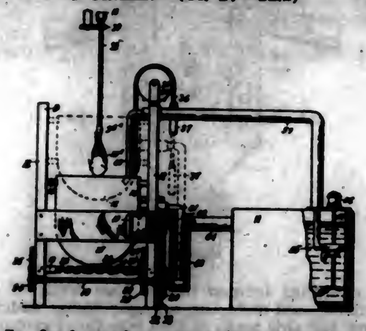


2,165,104
GEAR
Ernest Wildhaber, Irondequoit, and Allan H. Candee, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a corporation of New York
Application October 13, 1936, Serial No. 105,884
17 Claims. (Cl. 74—459.5)

1. A tapered gear having longitudinally curved

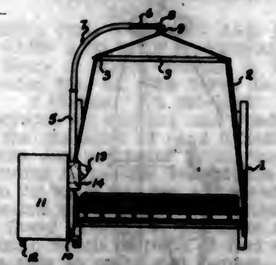
teeth and tooth spaces of tapering depth from end to end whose opposite side faces are conical and have their axes inclined at other than right angles to the root plane of the gear.

2,105,105
MACHINE FOR ELECTRICALLY HEATING SPRINGS
Fred R. Zimmerman, Chicago, Ill., assignor to Nachman Spring-Filled Corporation, Chicago, Ill., a corporation of Illinois
Application August 19, 1936, Serial No. 96,715
14 Claims. (Cl. 219—11)



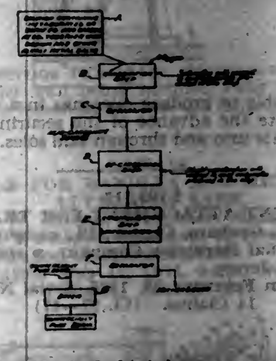
1. In a machine of the type specified, a receptacle for successively receiving springs at predetermined intervals, means within the receptacle for partially compressing each spring, electrically conductive members constituting terminals of an electric circuit carried by said means, mechanism for actuating said means to compress the spring and maintain the same compressed during a predetermined time interval, mechanism for rotating one of said members relatively to the other thereof for engaging the same with and disengaging the same from terminal end portions of the spring at the beginning and end, respectively, of said time interval for closing and opening the circuit through the body of the spring, and mechanism for restoring said means to normal position and effect complete release of the spring and its discharge from the receptacle immediately following its disengagement from said members.

2,105,106
PRECAST REINFORCED TILE BEAM AND SPAN TILE FLOOR STRUCTURE
Charles T. Bridgman, Des Moines, and Henry Glase, Ames, Iowa, assignors to Iowa State College Alumni Association, Incorporated, Ames, Iowa, a corporation of Iowa
Application October 27, 1936, Serial No. 107,838
2 Claims. (Cl. 72—66)



1. In a floor structure, a series of beams, each comprising tile laid end to end with mortar joints, each tile having formed at its opposite sides below its top laterally projecting, upwardly opening channels, the channels being substantially filled with reinforced concrete, hollow span tile laid upon and between the successive beams with their ends resting directly on the horizontal shoulders thus formed, and concrete above the beams and span tile bonded to the interior of the span tile and to the first-named concrete and to the upper side walls and tops of the beams.

2,105,107
APPARATUS FOR TREATING POULTRY
Albert W. Bruce, Ottumwa, Iowa
Original application May 21, 1934, Serial No. 726,709, which in turn is a division of Serial No. 692,117, October 6, 1933. Divided and this application October 15, 1934, Serial No. 748,280
3 Claims. (Cl. 17—11.1)



3. In fowl waxing apparatus, a waxing tank for holding molten wax, a conveyor for fowls and means actuated by the conveyor for causing the fowls to be coated with wax from said tank when they reach a certain position of their travel on the conveyor, said means including a tank, mechanism for raising and lowering the tank and a device actuated by the travel of the conveyor for putting said mechanism into operation, and means for maintaining the wax at a constant level in the tank in all of its positions.

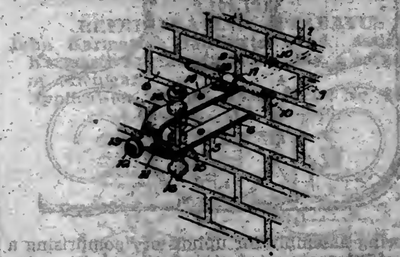
2,105,108
DEVICE FOR CONDITIONING AND COOLING AIR
Powel Crosley, Jr., Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application March 2, 1934, Serial No. 714,687
7 Claims. (Cl. 62—129)

1. In an air conditioning device, portable supporting means, a mechanical air conditioning device mounted on said supporting means, a standard on said supporting means for supporting a canopy externally of said air conditioning means, a canopy so supported and connections between said canopy and said air conditioning means, and means for causing a forced circulation of air through said air conditioning means, connections and canopy, one of said connections being adjustable to direct a blast of cooled air to desired positions within said canopy.

2,105,109
PROCESS FOR PRODUCTION OF BORAX
Paul T. Dolley, Bartlett, Calif., assignor to Pacific Alkali Company, Los Angeles, Calif., a corporation of Delaware
Application November 19, 1934, Serial No. 753,701
6 Claims. (Cl. 23—59)

1. The method of obtaining commercially pure borax from an aqueous solution saturated with respect to an acid carbonate of sodium and containing substantial amounts of borax which comprises removing carbon dioxide of the acid carbonate to the extent that the solution becomes unsaturated with respect to acid carbonate at the temperature at which borax commences to crystallize from the solution, slowly cooling the solution to crystallize borax therefrom, and separating the commercially pure borax from the solution.

2,105,110
RING BUOY AND METHOD OF MAKING THE SAME
Richard J. Driscoll, White Plains, N. Y., and John H. Driscoll, Edgewater, N. J.
Application November 20, 1936, Serial No. 111,100
6 Claims. (Cl. 9—17)



1. A method of making a ring buoy which comprises cutting two ring-shaped strips of casing material, sewing the outer peripheries of the two strips together, turning the two strips inside out to bring the sewing of the outer peripheries inside the casing, sewing together the inner peripheries of the two casing strips, sewing buckets to the strips and to a rope before filling the casing with filling material, and inserting filling material through an opening in the casing located beneath a bucket until the casing is substantially rigid.

2,105,111
NONSHRINKING WOODLIKE PLASTIC COMPOSITION
Gustavus J. Esselen, Swampscott, Mass., assignor to The A. S. Boyle Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application December 23, 1935, Serial No. 55,044
9 Claims. (Cl. 106—40)

1. A doughy putty-like plastic composition containing a cellulose derivative, a volatile liquid which is a solvent for the cellulose derivative, a liquid which is a non-solvent for the cellulose derivative and a finely divided cellulose filler in such proportion as to harden upon mere exposure to the air to substantially the rigidity and solidity of wood, said non-solvent liquid being present in an amount sufficient to prevent shrinkage of the hardened product and insufficient to precipitate the cellulose derivative from the solution.

2,105,112
INSULATOR BRACKET
Archibald T. Flower, Lambertown, Pa.
Application November 21, 1936, Serial No. 112,187
6 Claims. (Cl. 173—321)

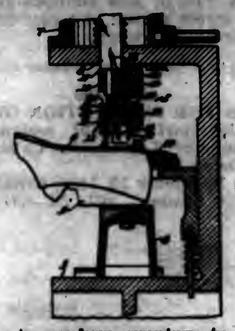
4. An insulator bracket for attachment to a masonry wall formed of a single strip of flat metal bent substantially U-shape to provide spaced parallel arms, the free ends of said arms being adapted to pass through respective horizontal seams of the wall in bridging relation to a transverse vertical seam of the wall, and tangs struck from said arms adapted to enter the transverse vertical seam of the wall.

2,105,113
ELECTRIC ALARM SWITCH
Florian G. Gibson, Palo Alto, Calif., assignor of one-third to Ray Matheny, Oakland, Calif.
Application January 21, 1936, Serial No. 60,015
2 Claims. (Cl. 200—142)

1. An electric alarm switch comprising, a pair of flat elongated metallic strips, an insulation separator therebetween, means for securing said strips and separator together and in substantially parallel relation adjacent one end of said strips, contact means carried by one of said strips and extended through said separator to an outwardly fixed position of said other strip, said last named strip and separator having aligned cross grooves, and a fusible element removably mounted in said grooves and for holding said last named strip spaced from said contact means.

2,105,114
ALLOY STEEL TOOL
James P. Gill, Latrobe, Pa., assignor to Vanadium-Alloys Steel Company, Latrobe, Pa., a corporation of Pennsylvania
No Drawing. Application November 13, 1937, Serial No. 174,467
1 Claim. (Cl. 75—126)

A tool composed of a readily forgeable and machinable high speed alloy steel of the molybdenum type, said steel containing from .75% to 1.20% carbon, from 3.75% to 4.75% chromium, from 8.25% to 10.00% molybdenum, and from 2.00% to 4.25% vanadium, the ratio of the vanadium to carbon being in excess of two and one-half to one and below three and one-half to one, with the remainder of the alloy substantially all iron.



2,105,115
UPHOLSTERY SPRING ASSEMBLY
William W. Gleason, Chicago, Ill., assignor to Nachman Spring-Filled Corporation, Chicago, Ill., a corporation of Illinois
Application July 20, 1936, Serial No. 91,462
1 Claim. (Cl. 5—269)

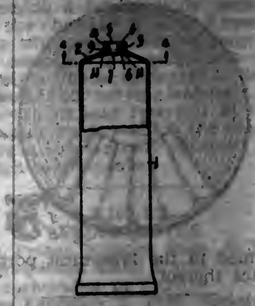
A spring assembly for upholstery comprising a group of interconnected springs disposed in relative positions to form a rectangular structure, channeled L-shaped sheet metal corner members, each secured to and embracing the outermost portion of the terminal coil of a corner spring and the outermost portions of the terminal coils of the two marginal springs next adjacent the respective corner springs, resilient wires projecting at their ends into the arms of said corner members and in tangential relation to the terminal coils of the last-named marginal springs and secured to the latter by said corner members, said border wires being secured to the outermost portions of the terminal coils of the remaining marginal springs and rendering yielding the edge portions of the assembly disposed between the portions embraced by said corner members by flexing of said last-named portions of said border wires and said corner members being substantially inflexible and causing load disposed upon any one or several springs embraced thereby to be transmitted to all of the said springs to which said members are secured.

2,105,116
APPARATUS FOR SECURING METALLIC HEEL FASTENERS TO SHOES
Hiram Gordon and Albert C. Beggs, Columbus, Ohio, assignors to Lock-On Heel Company, Chicago, Ill., a corporation of Illinois
Application October 5, 1936, Serial No. 104,004
5 Claims. (Cl. 1—19)

1. In apparatus for securing metallic heel attaching plates to shoes, a driving head embodying a plurality of sections, means formed with one of said sections to detachably engage a heel attaching fastening plate of the type having spaced prongs therewith, and sole penetrating tines carried by the other section of said head

and operable to produce openings in a shoe sole to facilitate the advance of the securing prongs of said plate into and through said soles.

2,105,117
IMPLEMENT ATTACHMENT FOR TRACTORS
William S. Graham, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 29, 1936, Serial No. 66,354
14 Claims. (Cl. 97—47)



1. In a tractor attached implement comprising a boom structure extending rearwardly from said tractor, said tractor having a power lift attachment operated from the motor of said tractor, lifting means mounted on said boom structure and actuated from the power lift attachment, the combination with said boom structure of an implement frame connected to said tractor and positioned underneath the lifting means to which the implement frame is connected whereby the weight of the implement frame may be properly distributed in transport position upon the operation of said power lift attachment, said implement frame comprising a main transverse frame, a subframe, ground engaging tools mounted on said subframe, and means for slidably mounting said subframe for a free lateral movement of translation whereby said ground engaging tools are free to follow the furrows of plant rows.

2,105,118
CLOSURE FOR TUBES OR CONTAINERS
Douglas Henderson, Toronto, Ontario, Canada
Application June 18, 1936, Serial No. 85,847
9 Claims. (Cl. 221—[illegible])

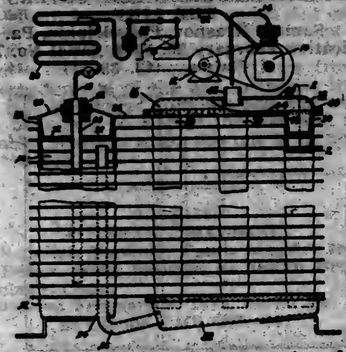
1. A tube or container having a neck portion at its discharge end and an internal shoulder surrounding said neck portion, said neck portion having an outlet formed therethrough; a valve shaped as a truncated cone, controlling said outlet; and a spring member normally tending to seat the valve secured intermediate its ends to the truncated end of said cone and having its ends engaging said internal shoulder; the outer part of said outlet wall forming a seat for said valve,

the inner part of said outlet wall being inclined away from said valve to form an annular ma-

terial receiving recess; the intermediate part of said outlet wall being inclined away from said valve at a lesser angle than the inner portion.

2,105,119
FERRULE FOR HANDLES AND METHOD OF ATTACHING SAME
Howard W. Rhodes, Worcester, Mass., assignor to The Washburn Company, Worcester, Mass., a corporation of Massachusetts
Application May 11, 1935, Serial No. 21,040
1 Claim. (Cl. 29—94)

The method of attaching a ferrule in a handle construction which consists in providing a metallic shank with a groove having a rim at one side thereof and forcing a metallic ferrule, having an opening initially smaller than the shank adjacent to the groove, on said shank by the pressure of a handle carrying the ferrule until said ferrule is seated in said groove, accompanied by deformation of the rim of said groove to clamp the ferrule between said rim and the end of said handle.

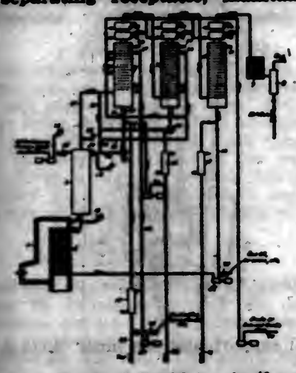


2,105,120
FURROW OPENER FOR GRAIN DRILLS
Arnold E. W. Johnson, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 8, 1936, Serial No. 84,092
7 Claims. (Cl. 209—121)

1. A bearing construction comprising, in combination with a cylindrical support, a ball bearing race rigidly secured to the outer end of said support, an outer bearing race and a plurality of balls adapted to radial and axial loads mounted on said race, a retaining structure comprising a sleeve concentric with respect to the cylindrical support and a portion secured to the outer race, a flexible sealing annulus secured to the outer bearing race, a sealing member of resilient material contacting one face of said annulus and one face of the inner bearing race, and an annular sealing member abutting the outer surface of the

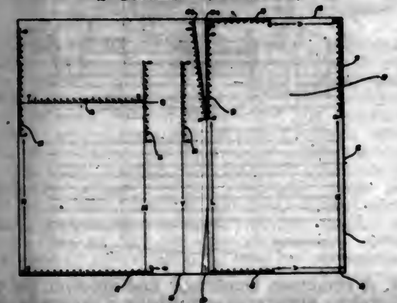
cylindrical support and the inner surface of the sleeve.

2,105,121
REFRIGERATING APPARATUS
John Karmazin, Huntington, Ind., assignor to Karmazin Engineering Company, a corporation of Michigan
Application May 31, 1935, Serial No. 24,277
4 Claims. (Cl. 257—46)



3. A combined condenser and receiver for refrigerating apparatus comprising a vertically disposed chamber, a plurality of vertical condensing tubes, a plurality of horizontal fins extending across said tubes and said chamber, header means for connecting the ends of said tubes in a refrigerant flow circuit and for closing the ends of said chamber and including means for conducting refrigerant first through said tubes and then into said chamber.

2,105,122
ART OF CRACKING HYDROCARBONS
Thomas B. Kimball, Hammond, and Orin G. Kaasa, Munster, Ind., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application June 30, 1932, Serial No. 619,618
16 Claims. (Cl. 196—53)



1. In cracking and coking petroleum oils, the improvement which comprises forcing a stream of oil to be cracked through a heater and heating it therein to a temperature approximating 1000°-

1150° F. and reducing another oil to coke by direct heat exchange with this stream of heated oil in a coking receptacle, cooling the vapors from the coking receptacle to separate a residual tar in a separating receptacle, maintaining that

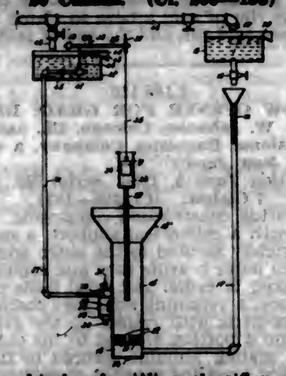
minimum volume of liquid tar in the separating receptacle necessary to maintain liquid discharge from the lowermost part thereof, discharging liquid tar from the lowermost part of the separating receptacle and introducing part but only part of this discharged tar into the coking receptacle.

2,105,123
MEANS FOR MAKING SLIP COVERS AND THE LIKE
Samuel Krasnow, Philadelphia, Pa.
Application February 20, 1934, Serial No. 712,145
2 Claims. (Cl. 33—1)

1. A sheet-like master pattern for use in making slip-covers for upholstered furniture and the like of a transparent or translucent more or less form-retaining material and of rectangular form, having thereon a series of operatively co-related rectilinear scales, and having marker holes therethrough through which the various dimensions may be marked from the various scales onto material for the slip-cover or for a subsidiary pattern, at least two of said rectilinear scales lying along meeting edges of the pattern, the pattern having a base line which is adapted to be superimposed upon or placed in coinciding relation to an edge of the material to be operated on.

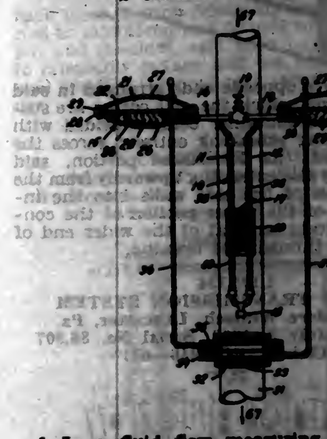
2,105,124
PROTECTED TUBING
Howard J. Little, Fort Thomas, Ky., assignor, by mesne assignments, to The Andrews Steel Company, a corporation of Delaware
Application May 7, 1935, Serial No. 20,224
7 Claims. (Cl. 138—79)

1. A sheet metal tubing having a lower-most section of the interior wall provided with a moldable plastic material having a longitudinal



groove formed in the lowermost portion of the wear surface thereof.

2,105,125
MOWER
Charles L. Meinhold, Topeka, Kans., assignor of one-fourth to Fred P. Martin and one-fourth to Charles H. Martin, both of Topeka, Kans.
Application January 4, 1936, Serial No. 57,576
13 Claims. (Cl. 56—25)



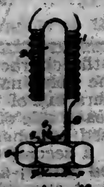
1. In a mower, a wheel supported frame, a subframe, means pivotally and swingingly mounting the subframe on the wheel supported frame, means for yieldingly retaining the subframe from swinging movement on the wheel supported frame, a sickle, means for pivotally mounting the sickle on the subframe, means for actuating the sickle including means for propelling the wheeled frame, and means for rendering said actuating means ineffective responsive to swinging movement of the subframe.

2,105,126
CLASSIFICATION
Jackson S. Pellett, Franklin, N. J., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
Application April 1, 1936, Serial No. 72,914
20 Claims. (Cl. 209—158)

1. In a hindered settling classifier, a chamber in which mineral particles are permitted to settle against a rising current of water and provided with a free discharge for classified pulp, means for maintaining a substantially constant rising current in the chamber, a control reservoir communicating with said classified pulp discharge, means for establishing a hydrostatic pressure in said reservoir to oppose discharge of the classified pulp, and means for varying inversely the hydrostatic pressure in said reservoir in response to changes in pulp density within the chamber while maintaining a substantially constant rising current through said chamber.

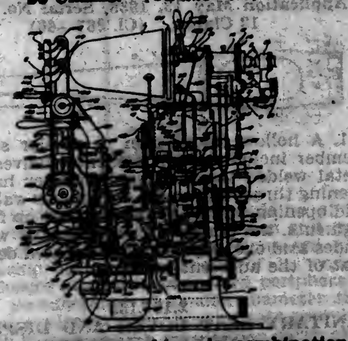
2,105,127
FLUID METER
Gregory A. Petree, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application February 5, 1936, Serial No. 62,487
2 Claims. (Cl. 73—205)

1. In a fluid flow measuring device, a differential manometer having two communicating arms, a pair of housings, a self-sustaining diaphragm of thin flat metal which is resistant to the action of chlorine extending transversely across each of said housings and dividing each of them into two non-communicating chambers, one manometer arm communicating with one chamber in one housing and the other manometer arm communicating with one chamber in the other housing, a differential pressure-creating means, the other chambers of said housings communicating respectively with opposite sides of said differential pressure-creating means, two immiscible liquids of different densities completely filling the manometer and the chambers communicating therewith, whereby any change of pressure on either side of the differential pressure-creating means will cause pressure to be transmitted directly and positively through the diaphragm in one chamber and said liquids to the diaphragm in the other chamber, said liquids having characteristics such that the line of demarcation between one liquid and the other is readily discernible.



2,105,136
KITE STRING RIDER
John F. Plant, Long Beach, Calif.
Application August 26, 1936, Serial No. 97,784
8 Claims. (Cl. 244—135)

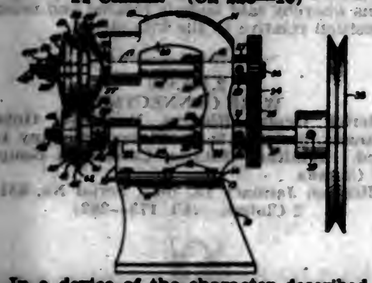
1. A kite string rider comprising a body, means attached to the body and slidably mounting said body on the string, said body being rotatably mounted on said means, trip means on the body,



and means operable when released by the trip means whereby said body is rotated and reversed in position relative to the kite string.

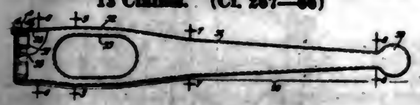
2,105,139
WIRE CONNECTER
Frederick George Ridgers, Hamilton, Ontario, Canada, assignor to M. Slater Company Limited, Hamilton, Ontario, Canada, a company of Canada
Application January 12, 1933, Serial No. 651,583
2 Claims. (Cl. 173—263)

1. In a wire connecter, the combination with a bolt element having an open ended slot extending upwardly therein for the reception of wires and a nut threadable upon the bolt to close the slot, of a bendable tongue protruding from the nut reception end of the bolt to receive the nut when it is disengaged from the bolt and adapted to be bent over to engage the nut and retain it against rotation when the nut is in position upon the bolt.



2,105,150
POUNCING MACHINE
Paul Schulze, Danbury, Conn., assignor to John C. Doran, doing business as Doran Brothers, Danbury, Conn.
Application February 9, 1935, Serial No. 5,757
23 Claims. (Cl. 223—20)

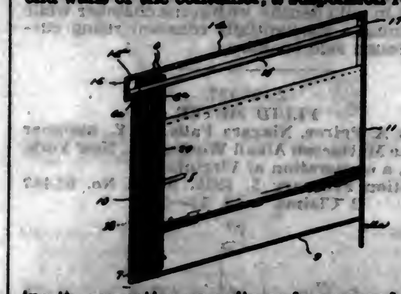
1. In a finishing machine, in combination, a hat support, hydraulic means adapted to impart axial movement to said support, a tool adapted to operate upon the surface of a hat mounted upon said support, hydraulic means adapted to cause relative movement between said support and said tool in a path extending from the apex



to the brim of the hat, and valve means adapted to control the direction of operation of said hydraulic means.

2,105,121
TRIMMING APPARATUS
John C. Smith, Norwalk, Conn., assignor to Hat Corporation of America, Norwalk, Conn., a corporation of Delaware
Application May 15, 1936, Serial No. 79,915
14 Claims. (Cl. 223—16)

1. In a device of the character described, for trimming a hat, the combination of a rotary cutter; a pair of rollers, one of the pair of rollers being positioned on each side of said cutter, having angularly disposed peripheral faces defining an annular groove; a second cutter cooperable with said first named cutter; a roller associated with and positioned at one side of said second cutter, said second cutter and associated roller having angularly disposed peripheral faces complementary to the angularly disposed peripheral faces of said pair of rollers and extending into the annular groove defined thereby to cooperate with said pair of rollers in guiding the hat relative to the cutters; and a guide extending toward said cutters and in line with said annular groove for partially supporting and for directing the hat to the cutters and rollers.

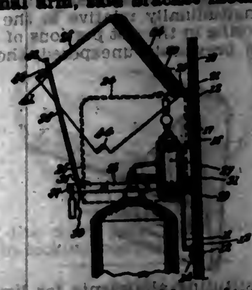


2,105,122
TORQUE ARM AND SIMILAR STRUCTURAL MEMBER
John D. Seehner, Valley Stream, and Henry S. Holmes, Brooklyn, N. Y., assignors to Metropolitan Engineering Company, Brooklyn, N. Y., a corporation of New York
Application May 13, 1936, Serial No. 79,482
13 Claims. (Cl. 267—66)

1. A hollow torque arm or similar structural member including two segmental halves of thin metal welded together, said member having an opening through it, and a continuous wall around said opening formed by flanges bent up from said segments, the portion of said member which includes said opening being of increased depth over that of the adjacent portions.

2,105,123
SANITARY SEAT COVER AND DISPENSING CABINET THEREFOR
Arve E. Wiitala, Ashtabula, Ohio
Application December 17, 1936, Serial No. 116,414
1 Claim. (Cl. 312—60)

In an apparatus of the character described, a dispensing container comprising a bottom wall disposed at an angle to the horizontal, side and end walls rising from said bottom wall, one of said side walls being curved outwardly toward the top to provide an increase in width at the top of the container to accommodate a plurality of segmental seat covers conformably fitted in the container, a removable cover member for the top of said container, said container being provided with internal grooves at the upper ends of the end walls of the container, a suspension rod having its respective opposite ends arranged in said grooves and from which the seat covers are suspended and said container being provided with a slotted opening extending entirely across the bottom adjacent its lowermost portion, said slotted opening also extending upwardly from the bottom of each of the side walls into the increased width of the upper portion of the container to facilitate removal of the wider end of the seat cover through the opening.

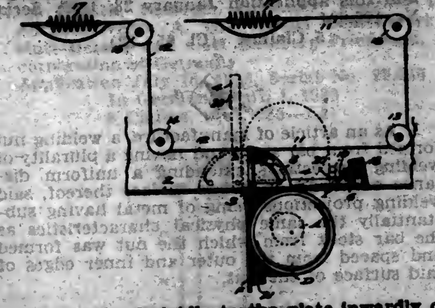


2,105,124
CURRENT TRANSMISSION SYSTEM
Max Theodore Wintsch, Lancaster, Pa.
Application July 2, 1936, Serial No. 88,907
10 Claims. (Cl. 246—63)

1. In a current transmitting system in which the rails of a track section are supplied with alternating current of a predetermined standard cycle for control of train carried apparatus, a train-carried receiving circuit including a receiver for said control current, a tuned-reed relay in said circuit having a set of reeds each carrying contacts and tuned to a band of frequencies approximating and including said predetermined standard cycle, said tuned-reed relay being selectively independent of filtering means, and another circuit including a master-relay controlled by current flowing through the reeds and contacts in said tuned-reed relay, said reeds and contacts being included in the circuit of the master-relay.

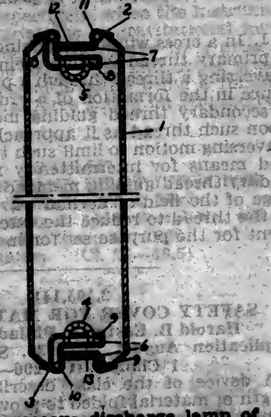
2,105,125
GAS INSTALLATION HOUSING
Peter A. Anderson, Portland, Maine
Application May 25, 1937, Serial No. 144,757
3 Claims. (Cl. 312—112)

1. In a housing installation, a back plate having means to support the same from a support, a hood hinged to said back plate to open upwardly, a bracket composed of angularly joined arms with a diagonal arm extending forwardly therefrom and a perforated terminal flange on the diagonal arm, said bracket mounted on the back plate, a prop releasably and rotatably carried by said flange and formed with a cooperating pin and shoulder, said hood having an opening to releasably engage said pin with an adjoining wall whereby the hood may rest upon said shoulder.



2,105,126
OIL CLARIFIER AND FILTER
Southwick W. Briggs, Glenmont, Md.
Application July 27, 1933, Serial No. 682,507
12 Claims. (Cl. 210—131)

1. In a pressure filter, a container having a jacket thereabout and opening at one end into the jacket, a liquid pressure feed pipe opening into the jacket to feed liquid under pressure through the jacket to regulate the temperature of the container and through the container, a filtering body in the container to filter the liquid passing therethrough, a return pipe connected to the jacket to carry off the liquid passing therethrough, a reducer in the return pipe for checking the passage of liquid through the jacket and increasing the pressure of the liquid therein to force a desired proportion of the liquid through the container, and a second return pipe leading from the other end of the container to take off the filtered liquid.

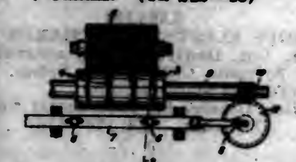


2,105,127
RETRACTABLE LANDING LIGHT
Donald L. Bruner, Coral Gables, Fla.
Application November 13, 1934, Serial No. 753,763
2 Claims. (Cl. 244—7.7)

2. In an airplane retractable landing light, an airplane wing structure having a bottom opening, a plate normally closing said opening and hingedly mounted to swing downwardly thereof, an electric lamp assembly carried by said plate for projecting a beam of light downwardly and outwardly of the line of flight in the downwardly swing position of the plate and means for lowering and raising the said plate including a pair of

quadrants fixed rigidly to the plate inwardly of the hinge with their arcuate edges concentric to the hinge axis of the plate, guide pulley fixed to the wing structure, cables connected to the said quadrants and extending in relatively opposite direction from the quadrants and around the pulleys to a point within convenient reach of a pilot of the airplane.

2,105,128
GASEOUS ELECTRIC DISCHARGE LAMP
James L. Cox, Danvers, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts
Application October 26, 1936, Serial No. 106,017
2 Claims. (Cl. 176—126)



1. An electric gaseous discharge lamp of the type having a filling of an inert gas and mercury vapor and comprising an elongated glass tube having sealed across each of its ends a metal closure disc with an inward peripherally-grooved protuberance of smaller diameter than said disc, a wire wrapped around said protuberance and in said groove, an alkaline earth oxide coated electrode supported from said wire, and a refractory insulating coating over the interior surface of the disk and over the wrapped wire, said coating bonding the disk and wire into conductive contact and insulating them from the gas filling inside the lamp.

2,105,139
WELDING NUT
Leo Dumbeuld and John Kay, Berea, Ohio, assignors to The Ohio Nut & Bolt Company, Berea, Ohio, a corporation of Ohio
Original application April 20, 1936, Serial No. 75,266, now Patent No. 2,072,467. Divided and this application January 28, 1937, Serial No. 122,321
5 Claims. (Cl. 85—32)

1. As an article of manufacture, a welding nut formed from bar stock and having a plurality of welding projections extending a uniform distance outwardly from one surface thereof, said welding projections being of metal having substantially the same physical characteristics as the bar stock from which the nut was formed and spaced from the outer and inner edges of said surface of the nut.

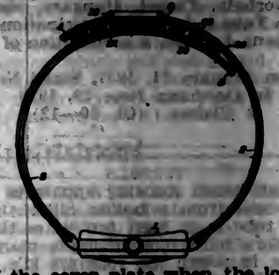
2,105,140
CROSS WINDING MACHINE
Heinrich Dersen, Crefeld, Germany, assignor to Maschinenfabrik Carl Zangs A.-G. (Herm. Schroers Nachfl.), Crefeld, Germany
Application May 6, 1936, Serial No. 78,273
In Germany August 22, 1935
7 Claims. (Cl. 242—43)

1. In a cross winding machine, in combination, a primary thread guiding member for normally traversing a thread through a predetermined distance in the formation of a cross wound bobbin, a secondary thread guiding member for acting upon such thread as it approaches the end of its traversing motion to limit such traversing motion, and means for intermittently moving said secondary thread guiding member laterally into the edge of the field of normal traversing movement of the thread to reduce the extent of such movement for the purpose set forth.

2,105,141
SAFETY COVER FOR MATCH BOOKS
Harold B. Eastman, Philadelphia, Pa.
Application August 15, 1936, Serial No. 96,264
1 Claim. (Cl. 206—29)

A device of the class described including a length of material folded to provide a back, a retaining flap extending from one end of the back, a closure flap extending from the other end of the back, matches secured between the back and the retaining flap and adapted to be partly enclosed by the closure flap, and a striking material extending throughout the width of the closure flap at one end thereof, said end and the striking material thereon, being normally positioned between the retaining flap and the matches, there being an elongated slot in the retaining flap the walls of which are located inwardly from the edges of the retaining flap, a portion of the striking material being exposed through the slot for engagement by the head of a detached match and the remaining portion of the striking material being normally concealed by the retaining flap, the length of the slot being such as to expose sufficient striking surface to enable the lighting of a match, the closure flap being shiftable laterally and longitudinally relative to the retaining flap for exposing in the slot portions of the striking material previously unexposed, the walls of

the slot constituting abutments for limiting the striking movement of a match head on the exposed portion of the striking material thereby to hold the head, when sparking and ignited, away from the side edges of the book, and said walls of the slot furthermore constituting guards for intercepting sparks moving along the striking material during frictional contact of a match head with said material.



2,105,142
CONVEYER
John W. Forsythe, Wilkinsburg, Pa.
Application May 11, 1936, Serial No. 79,129
4 Claims. (Cl. 198—35)

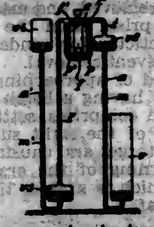
1. A conveyer comprising a plurality of parallel shafts, each pair of said shafts being connected together adjacent their ends, a conveyer roll carried by each of said shafts, and means connecting adjacent connected pairs of shafts, said means being disposed adjacent the ends of said connected pairs of shafts and comprising a plurality of normally stationary frames, each of said frames being constructed and arranged to provide seats for the ends of said connected pairs of shafts, one end of said conveyer being connected to a normally stationary support, the other end of said conveyer being connected to a tensioning device whereby said conveyer presents a substantially flat conveying surface.

2,105,143
FASTENER FOR WRIST WATCH STRAPS
Charles B. Greenberg, New York, N. Y.
Application December 5, 1935, Serial No. 52,943
2 Claims. (Cl. 24—266)

1. A fastener for a pair of strap ends comprising, a guide-way forming member secured to one of said strap ends, a series of studs secured to the other strap end and adapted to slide through said guide-way, a cover plate above the guide-way forming member having an elongated opening and further having a ledge beneath one end of the opening, and a locking element pivoted in the guide-way forming member for engagement with said studs, said locking element including a lifting arm disposed within said opening and resting on said ledge in the

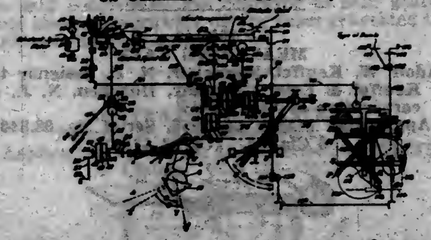
plane of the cover plate when the locking element is in locking position.

2,105,144
CHASSIS-FRAME FOR MOTOR-VEHICLES
Edward George Grisbrook, Coventry, England, assignor of one-half to The Standard Motor Company Limited, Coventry, England
Application October 20, 1936, Serial No. 106,670
In Great Britain May 21, 1936
11 Claims. (Cl. 280—106)



1. For a motor-vehicle, a chassis-frame comprising inwardly-facing channel-section members, said members having parts which are sharply inwardly offset and contact with one another, said offset parts being secured to one another where they contact to form an X between the ends of the frame with a relatively short length of box-section at the junction of the X limbs, and independent longitudinally-extending members arranged at the rear of the frame, said independent members having inwardly-inclined limbs which are parallel to and extend into the rear X limbs and are secured thereto.

2,105,145
SILO CHUTE
William W. Gurney, Winona, Minn., assignor to Madison Silo Company, Madison, Wis., a corporation of Wisconsin
Application April 28, 1937, Serial No. 139,799
8 Claims. (Cl. 72—6)

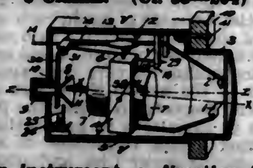


1. The combination with a silo having superposed door frames, of a sheet metal chute having vertical side edges built into the wall of the silo on opposite sides of said frames respectively.

2,105,146
GRAVITATION MEASURING INSTRUMENT
Hans Haalck, Potsdam, Germany, assignor to Askania-Werke A. G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friedenau, a corporation of Germany
Application July 10, 1936, Serial No. 90,626
In Germany April 1, 1935
8 Claims. (Cl. 265—1.4)

1. A gravity responsive instrument comprising, in combination, two vertically spaced first vessels; a charge of gas in each first vessel; a first conduit connecting said first vessels; a first mercury column in said first conduit, thereby tending to vary the expansion and compression of the gas in the upper and lower first vessels, respectively, when the instrument is subjected to variations in gravitational force; two vertically spaced second vessels; a charge of gas in each second vessel, a second conduit connecting said second vessels; a second mercury column in said second conduit, thereby tending to vary the expansion and compression of the gas in the upper and lower second vessels, respectively, when the instrument is subjected to variations in gravitational force; and indicating means responsive to a pressure differential in the lower first and upper second vessel, the differential pressure being a function of the gravitational force acting on said mercury columns.

2,105,147
BOMB SIGHT AND PILOT DIRECTOR
Henry B. Ingle, Flint, Mich.
Application February 8, 1930, Serial No. 426,998
Renewed June 15, 1936
32 Claims. (Cl. 33—46.5)



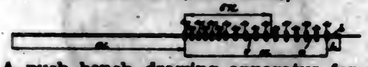
1. In a bomb sight, a computing means for computing a correction factor (S_x) comprising a cam settable in accordance with altitude, a second cam settable in accordance with the bomb characteristics, a parallel bar for each cam moved laterally thereby, a member settable longitudinally of said bar in accordance with a function of air speed, a diagonal lever having a sliding connection to the altitude bar and with said air

speed member, a second diagonal lever having a sliding connection with said bomb characteristic bar, a bar slidable in a direction parallel to said parallel bars and having a slidable connection at one point with the altitude bar and first named lever and at another point with said second mentioned lever, and means for transmitting the correction movement in the direction of said parallel bars of the sliding point of intersection of said bomb characteristic bar and said second mentioned lever.

9. In a computing mechanism, a sighting device including a removable reticule and a prism, means to prevent the removal of said reticule, said prism lying in the path of movement of said reticule when being removed, and means operated by removal of said prism from the path of movement of said recticule for rendering ineffective said means to prevent removal.

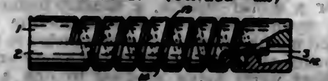
25. The method of approaching a target with bombing aircraft having a bomb sight rotatable in azimuth which comprises, setting up a variable rate of turn of the sight sufficient to keep the sight on the target and causing, by such act, signaling for turning of the craft at a predetermined rate which is greater than the rate of turning of the craft.

2,105,148
PILOT DIRECTOR
Henry B. Inglis, Fenton, Mich.
Original application February 8, 1930, Serial No. 426,906. Divided and this application January 15, 1935, Serial No. 1,971
3 Claims. (Cl. 33—204)



3. In an instrument, a direction indicator, a signaling indicator adapted to be displaced from a predetermined starting position corresponding to the starting position of said direction indicator in the same or in opposite sense to the direction of indication of said direction indicator, and means simultaneously zeroing both indicators upon predetermined angular movement in either direction of said signaling indicator from its initial position.

2,105,149
MEASURING TAPE
Adolf W. Keuffel, Montclair, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application March 14, 1936, Serial No. 68,840
6 Claims. (Cl. 33—137)



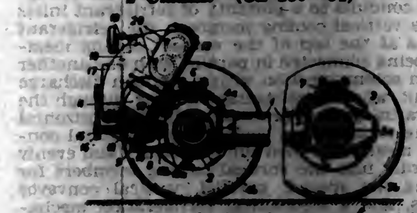
1. In a device of the character described, in combination, an end loop having extremities, an end of a tape disposed between the extremities of the end loop and opposed resilient spring strips between the tape and the respective extremities the free ends of which have a normal position on the opposite side of the tape tending to oppose and follow flexing movement of the tape with respect to the extremities.

2,105,150
TUBE PUSH BENCH
Károly Kerbuly, Csepel, Hungary, assignor to the firm Tube Industrial Participation Limited, Bregazzona-Lugano, a corporation of Switzerland
Application January 21, 1937, Serial No. 121,677
In Germany June 29, 1936
2 Claims. (Cl. 80—12)

1. A push bench drawing apparatus for producing a tube from a hollow billet, the length of which tube is at least ten times the length of the hollow billet, comprising a mandrel and roll passes, in which the rolls are idle, disposed in front of the mandrel, the number of said passes being greater than the figure indicating the relation between the length of the drawn tube and the original length of billet, said passes being disposed at such distances apart and decreasing successively in cross-sectional area in forward direction in such stages that the tube on entering the last and smallest pass reaches a length which extends at least to the last third of the total length of the whole series of passes and is acted on simultaneously by not less than one-third of the total number of passes.

2,105,151
SMOKE BAFFLING DEVICE
Max Kernblatt, Bronx, N. Y., assignor of one-half to Philip Kernblatt, Bronx, N. Y.
Application November 12, 1936, Serial No. 110,446
4 Claims. (Cl. 131—13)

1. A baffling device comprising a relatively small cylindrical unit split longitudinally on a horisontal plane, and internally threaded and adapted to be inserted in the stem of a smoker's article with the threads forming a spiral passage passing therethrough, through which all smoke formed in the article must pass, and a filler comprising a solid cylindrical member engaging the threads of said unit, and blocking out the center thereof.



2,105,152
ARTIFICIAL SLAB
Richard Latterf, Hanover, Germany, assignor to The United Limmer and Vorwohle Rock Asphalte Company Limited, London, England, a British company
Application September 4, 1935, Serial No. 39,189
In Germany April 12, 1934
2 Claims. (Cl. 94—15)

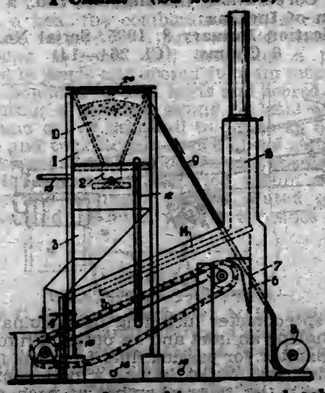
1. An artificial stone unit for building purposes comprising a layer of substantial thickness consisting of granular natural stone with a matrix of hydraulic mortar and a layer of substantial thickness of a mass containing asphalt, characterised in that the slab consists solely of the two

layers united directly together so that the one layer is keyed or bonded into the other, the first-mentioned layer forming the wearing surface of the slab, while the asphalt-containing layer forms the base of the slab for attachment directly to the surface on which the slab is laid, at least a part of the particles of granular natural stone having a rough texture and being of sufficient size to key the two layers together.

2,105,153
MOTOR VEHICLE CHASSIS
Hans Ledwinka, Koprivnice, Czechoslovakia
Application April 6, 1937, Serial No. 135,235
In Czechoslovakia March 27, 1936
2 Claims. (Cl. 180—54)

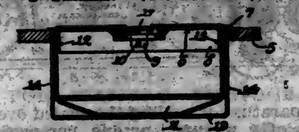
1. A motor vehicle chassis comprising a bracket-like extension extending away from the centre of the vehicle beyond one of the axles and on which the engine and change-speed-gear are mounted, the latter comprising an auxiliary shaft driven by means of an intermediate gear and lying in alignment with the longitudinal driving shaft of the vehicle, said auxiliary shaft being connected at one end to said driving shaft and at the other end being provided with means for driving an auxiliary mechanism.

2,105,154
SPRAY NOZZLE
Norman G. Mason, Ladysmith, Wis.
Application June 7, 1937, Serial No. 146,915
2 Claims. (Cl. 299—107)



1. A nozzle of the class described, comprising a member having a tapered bore, a tapered member located in the bore and forming a passageway between itself and the walls of the bore, a member extending transversely across the first member adjacent the inner end of the bore thereof and rotatably supported in said first member and the tapered member having its inner end connected with the central portion of the transverse member.

2,105,155
NITROCELLULOSE EMULSIONS
Malcolm C. Moore, Newark, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 7, 1935, Serial No. 5,695
13 Claims. (Cl. 134—79)



1. A nitrocellulose emulsion comprising a substantially water-immiscible solution of nitrocellulose emulsified with water through the medium of an emulsifying agent comprising methyl cellulose and a sodium salt of a half-ester sulphate of a higher aliphatic alcohol, the methyl cellulose being in amount not in excess of about 0.65% by weight of the non-volatile ingredients of the nitrocellulose solution and not less than an amount sufficient to have appreciable emulsifying action.

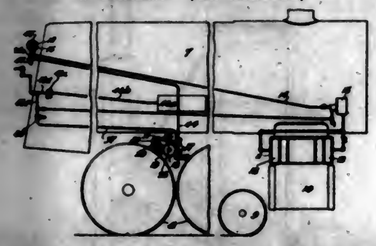
2,105,156
APPARATUS FOR HEATING COAL
John Stanley Morgan, near Wingate, England
Application April 7, 1934, Serial No. 719,581
In Great Britain April 8, 1933
1 Claim. (Cl. 202—109)

An apparatus for making gas and coke from a distillable fuel, comprising an enclosed mixing chamber of a size adapted to serve as a distillation chamber and having distributor means therein, a coal hopper above and adapted to discharge into said mixing chamber, a coke hopper above and adapted to discharge into said mixing chamber, an inclined and enclosed endless conveyor grate having the lower end thereof disposed below said mixing chamber and adapted to receive a mixture of coal and coke therefrom, means for supplying air to said grate to raise the mixture of coal and coke to incandescence, means for collecting incandescent coke discharged from the upper ends of said grate, a compressed gas conveyor for conveying part of the incandescent coke to said coke hopper from said collecting means, means for returning the hot gas produced in said compressed gas conveyor to said grate, and means for drawing off the gases generated in said mixing chamber.

2,105,157
ASHTRAY AND COASTER
Thomas R. Moss, Dyersburg, Tenn.
Application March 26, 1937, Serial No. 133,282
3 Claims. (Cl. 131—59)

4. In an ash receiver, a supporting section adapted to be fitted in an opening of a supporting surface, the lower ends of the supporting section extending below the lower surface of the supporting section and having openings, a re-

ceptacle fitted against the lower edge of the supporting section, and a supporting wire fitted against the bottom of the receptacle, the ends of the wire extending upwardly at oblique angles with respect to the bottom of the receptacle, and disposed in opposite directions, and portions of the supporting wire extending into the openings removably securing the wire and receptacle to the supporting section.



2,105,158

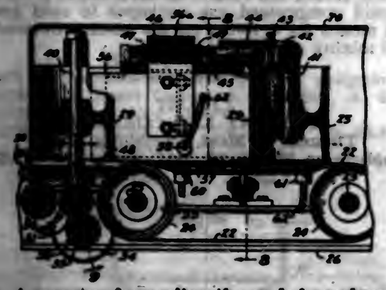
SPEEDOMETER

Edwin S. Pearce and Edmond C. Karibo, Indianapolis, Ind., assignors to Transportation Devices Corporation, Indianapolis, Ind., a corporation of Indiana

Application January 8, 1935, Serial No. 837

6 Claims. (Cl. 264—14)

1. A speedometer including in combination, a casing having an inlet and an outlet, a rotor having a chamber for passing fluid from the inlet to the outlet, said outlet having a port communicating with the rotor chamber at each side of the point where the inlet communicates with said chamber, whereby the fluid may be metered regardless of the direction in which the rotor may be turning, means for driving the rotor in ratio with the speed of the vehicle, a gauge for reading the metered air in terms of speed, and vented means for delivering metered air from said outlet to said gauge.



2,105,159

WRAPPING MACHINE

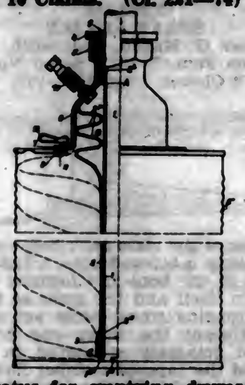
Charles H. Petskaven, Davenport, Iowa, assignor to Micro-Westco, Inc., Bettendorf, Iowa, a corporation of Delaware

Application June 1, 1935, Serial No. 24,515

13 Claims. (Cl. 93—2)

7. Apparatus for cooling the sealed overlapping portions of a wrapped article, comprising horizontally arranged heat exchanging conveyor means for engaging the underside of the wrapped article, spaced, parallel, vertically arranged heat exchanging conveyor means disposed above the horizontal conveyor for engaging opposite ends of the wrapped article, a vertical cooling member for each of the vertical conveyor means in heat exchanging contact therewith, said members each having a refrigerant inlet and a refrigerant outlet, the outlet being at the top and remote from the inlet, a plurality of horizontal cooling members for the horizontally arranged conveyor means in heat exchanging contact therewith, said horizontal cooling members each having a refrigerant inlet and a refrigerant outlet, a plurality of refrigerant inlets of the horizontal cooling members connected in parallel by refrigerant conduits and in communication with a common refrigeration feed conduit to receive fresh refrigerant from a common source, a plurality of refrigerant outlets of the horizontal cooling members individually connected by separate refrigerant conduits to a plurality of refrigerant inlets of the vertical cooling members, the refrigerant outlets at the top of the vertical cooling members being connected in parallel with one another and in communication with a common discharge conduit, whereby refrigerant flowing through the apparatus passes first through the horizontal cooling members for cooling the horizontal conveyor means and then simultaneously and evenly upwardly into the vertical cooling members for cooling the spaced, parallel, vertical conveyor means, and a mechanical refrigeration mechanism for feeding fresh refrigerant to the inlets of the horizontal cooling members and for receiving refrigerant from the outlets of the vertical cooling members.

2,105,160



APPARATUS FOR EMPTYING DRUMS CONTAINING VERY THICK LUBRICANTS OR OTHER VISCOUS MATERIALS

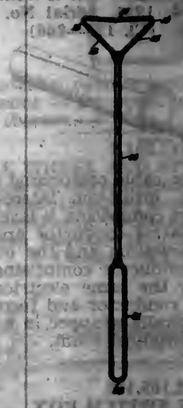
Emile Piquerez, St. Cloud, France

Application December 8, 1936, Serial No. 114,845

In France December 17, 1935

10 Claims. (Cl. 221—74)

1. Apparatus for emptying drums containing very thick lubricants or pasty materials, comprising a bag made of flexible material which is impervious to air and to the material contained in the drum, and adapted when inflated to fill the drum and displace the material therefrom, a tube hermetically passing through said bag, said tube having its lower part outside the bag, said tube having an inlet opening in its lower part outside the bag, and also at its upper part an outlet opening, the bag and drum constituting an assembly adapted to engage in a drum through an opening in the drum, so that the lower opening of the tube comes near the bottom portion of the drum, a support for said assembly, said support being adapted to be hermetically connected with the drum at the opening thereof, and means for supplying compressed fluid into the bag.



2,105,161

HANDLE FOR IMPLEMENTS, UTENSILS, AND THE LIKE

Stephen A. Platt, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a corporation of Illinois

Application March 19, 1936, Serial No. 69,019

1 Claim. (Cl. 16—110)

A handle for implements, utensils, and the like, including, in combination, a handle element composed of a suitable single length of wire or rod, an open triangular securing loop composed of a single piece of wire or rod bent to form a horizontal leg and downwardly converging legs whose free ends are bent inwardly and brought into facing juxtaposition with each other to form the apex of the triangle, which apex is located adjacent the upper end of the handle element where the parts are secured together by means of a weld, and a looped gripping element composed of a single piece of wire bent to form a loop whose free ends are brought into facing juxtaposition with each other and secured to the lower end of said handle element by a weld.

2,105,162

PLOW

Jan Erik Santmann, Overum, Sweden

Application December 1, 1936, Serial No. 113,656

In Sweden May 23, 1935

2 Claims. (Cl. 97—125)

1. A plow comprising a plow frame, a detachable share point, and a share plate, said share point being substantially wedge-shaped and having a rearwardly extending central shank, the wedge-surfaces of said share point being cut off obliquely at the rear end to conform to said share plate, and said plow frame forming a trough-shaped socket, the bottom of said trough-shaped socket enclosing a substantial portion of the lower wedge-surface of the share point.

2,105,163

SCHOLAR'S COMPANION

Nicholas Scandore, Brooklyn, N. Y.

Application July 1, 1936, Serial No. 88,471

10 Claims. (Cl. 229—15)

8. In a box, the combination of, a casing, a receptacle secured to a part of said casing and comprising a front wall including a portion bounded by kerfs and scored fulcrum means, the portion bounded by said kerfs and scored means constituting a member swung on said fulcrum means and out of said wall to define an opening therein and constitute a flange above said opening, a drawer slidably guided in said opening, and article-holding means mounted within said receptacle and having a portion seated on said flange to hold the latter against the sides of said drawer.

2,105,164

WEATHER STRIPPING

Norman C. Schlegel, Rochester, N. Y., assignor to The Schlegel Manufacturing Company, Rochester, N. Y., a corporation of New York

Application December 16, 1936, Serial No. 116,169

2 Claims. (Cl. 20—69)

2. Weather stripping for sealing the space between cooperating closure and frame members, comprising a flexible woven body section having a brush-like sealing section substantially in the plane thereof and forming a direct continuation of one of the side edges of said body section, said brush-like section comprising relatively long stiff pile interwoven with said body section and adapted to yieldingly engage one of said members, and a mounting strip for supporting said body section on the other of said members disposed on and substantially paralleling one side of said body section and having its inner edge terminating adjacent the portion of the body section from which the sealing section extends so that a substantial portion of said sealing section is left free to yield and be deflected upon contacting the member to be engaged thereby during movement of the closure member to final closing position.

2,105,165

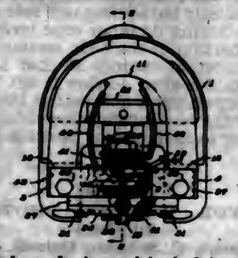
DEVICE FOR WASHING PHOTOGRAPHIC PRINTS

Frederick C. Schnelz, Detroit, Mich.

Application April 9, 1937, Serial No. 135,262

4 Claims. (Cl. 95—97)

1. In a device of the character described, for use with a tray or like container adapted to receive photographic specimens or the like, a com-



bination of a tubular nozzle member adapted to be projected into said tray, said nozzle member having a first substantially vertical row of orifices through which liquid may be discharged to effect a circulation within the container, and having a second substantially vertical row of orifices through which liquid may be discharged in substantially horizontal streams to maintain said specimens in a separated condition, said rows being angularly displaced from each other.

2,105,166
ELECTRICAL HEATING ELEMENT
Paul Schwarzkopf, Reutte, Austria
No Drawing. Application October 21, 1936, Serial No. 106,886. In Austria June 27, 1936
12 Claims. (Cl. 201—76)

12. Electrical heating element adapted for operation in oxidizing atmosphere at temperatures of and above about 1400° C., comprising a core of metal selected from a group consisting of tungsten, molybdenum and tantalum and a sintered cover consisting of metal oxide selected from a group consisting of alumina, magnesia, thoria, silica and beryllium oxide, the inside of said cover consisting entirely of at least one of said oxides melting above 1800° C. selected from said group and present in its pure state, the outside of said cover consisting of a sintered gas-tight product of silica and at least one of said metal oxides.

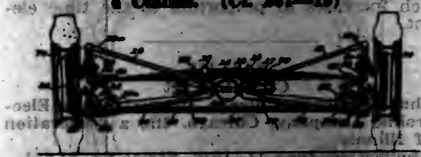
2,105,167
SOUND RECORDING AND REPRODUCING APPARATUS
Chester M. Sinnett, Westmont, and Emile C. Gueden, Audubon, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application October 31, 1935, Serial No. 47,658
15 Claims. (Cl. 179—100.41)

1. In a pickup device subjected to a source of disturbing magnetic flux, a translating coil, a housing therefor, means for magnetically inducing useful electrical currents in said coil in accordance with sound waves, a neutralizing coil connected in series opposing relation with said coil, and structure for mounting said neutralizing coil on said device adjacent to said translating coil, but substantially independent of magnetic induction by said means, whereby both coils are subjected substantially in like manner to said disturbing flux for balancing out the effects of said flux.

2,105,168
ELECTRIC CABLE
Horace A. Staples, Plainfield, N. J., assignor to Phelps Dodge Copper Products Corporation, New York, N. Y., a corporation of Delaware
Application May 4, 1935, Serial No. 19,763
3 Claims. (Cl. 173—266)

1. A two conductor cable comprising a pair of co-axial conductors, insulation interposed between the conductors comprising a layer of rubber adjacent the central conductor and a bedding between the insulation and the outer conductor, the outer conductor comprising a tube having substantially the same electrical resistance as the central conductor and formed from a continuous tape spirally wrapped in a plurality of layers with a longitudinal seam.

2,105,169
SAFETY SWITCH BOX
Walter F. Sutherlin, Birmingham, Ala., assignor of one-half to G. J. Jobelce, Birmingham, Ala.
Original application December 26, 1935, Serial No. 56,194. Divided and this application December 19, 1936, Serial No. 116,728
3 Claims. (Cl. 247—2)

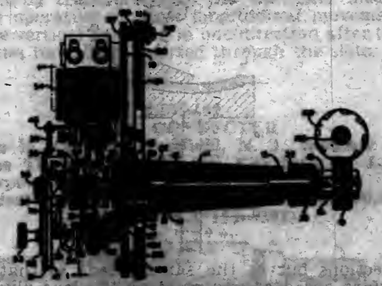


1. A switch apparatus comprising a switch box, a door for the switch box and a lock therefor, meter connections in the switch box terminating in sockets in the upper part of the box, a meter mounted on the top of the box, prongs carried by the meter fitting into the sockets, there being corresponding openings in the upper end of the box to permit the prongs to enter the sockets, a bar extending across inside the switch box, and resilient latch members carried by the meter and engaging the bar when the meter is mounted on the box.

2,105,170
NURSING BOTTLE AND NIPPLE THEREFOR
Robert C. Tarrant, Port Washington, N. Y.
Application April 13, 1937, Serial No. 136,465
5 Claims. (Cl. 215—11)

1. In combination, a nursing bottle having an open end, and a nipple having an enlarged end adapted to be positioned upon the open end of the bottle, said enlarged end having an annular row of internal cavities having open ends which are adjacent to the bottle when the nipple is in position thereon.

2,105,171
VEHICLE WHEEL AND SPRING SUSPENSION
John Tjaarda, Birmingham, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application January 17, 1936, Serial No. 59,568
4 Claims. (Cl. 267—19)



1. In a vehicle, a pair of steering wheels, a vertical king pin for each wheel, a sleeve fixed to each wheel and slidable on a king pin, a transverse leaf spring terminating at each end in an eye, a yoke pivotally connected to each sleeve and pivoted intermediate its ends to the spring through the medium of the spring eye, the yoke having a bearing on said spring at a point spaced inwardly from the eye, said yoke having forked ends straddling the sleeve, and hanger links connecting same to said sleeve.

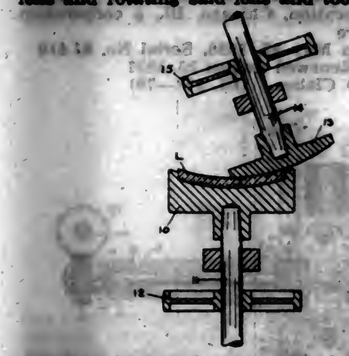
2,105,172
UMBRELLA COVER
Fred Vecklor, Astoria, Long Island, N. Y.
Application November 19, 1936, Serial No. 49,233
7 Claims. (Cl. 135—33)

5. An umbrella cover of waterproofing material having a gore in one part thereof and a slide fastener attached to the edges of said gore for contracting and fastening said gore.

2,105,173
START-STOP REGENERATIVE REPEATER
Walter J. Zenner, Des Plaines, and Stephen Jankowski, Chicago, Ill., assignors to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application May 23, 1936, Serial No. 81,410
Renewed August 25, 1937
9 Claims. (Cl. 178—70)

1. In a start-stop telegraph repeater, a structural frame, a rotary shaft journaled in said frame, a plurality of coaxial rotary cams occupying relatively fixed separate planes upon said shaft, cam followers for said cams severally and separately mounted on said frame, a pair of oppositely faced annular shoulders upon said shaft, and a screw threaded member adjustably engaged with said frame and engaging said two annular shoulders to control adjustably the axial position of said shaft to align a cam with its associated cam follower.

2,105,174
METHOD OF MANUFACTURING MULTIPART GLASS ARTICLES
Willard P. Zimmerman and Minot K. Holmes, Muncie, Ind., assignors to Owens-Illinois Glass Company, a corporation of Ohio
Application May 20, 1936, Serial No. 80,326
1 Claim. (Cl. 49—82)



The method of effecting a glass-to-glass bond between molded glass parts which consists in dipping only those surfaces to be united and surfaces in close proximity thereto into a bath of molten material which will not adhere to the glass yet will render said surfaces semi-plastic and capable of adhesion to each other and bringing these surfaces together under pressure while still semi-plastic.

2,105,175
METHOD AND MEANS FOR ABRADING LENSES
Carl E. Andersen, Hackensack, N. J., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 7, 1936, Serial No. 423,934
Renewed May 14, 1937
11 Claims. (Cl. 51—131)

7. A method of abrading lenses which comprises placing a circular abrading tool having a continuous surface in contact with a circular lens having a surface whose area and diameter are

substantially the same as the area and diameter of the surface of the tool, holding said tool with its center substantially at the periphery of said lens and rotating said lens and tool in opposite

directions but at the same speeds so that the surface speed of any point on the lens plus the surface speed of the point on the tool which contacts with said point on the lens will be a substantially constant sum.

2,105,176

BRAKE CONSTRUCTION

Charles S. Ash, Milford, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

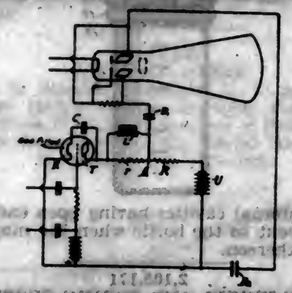
Application March 18, 1935, Serial No. 11,718

14 Claims. (Cl. 188—264)

1. A brake construction for the road engaging wheels of a motor vehicle, comprising a drum having a brake flange, brake friction means housed within the drum and engageable with the inner surface of the brake flange, means for collecting air from high pressure areas in advance of the vehicle created by forward motion thereof, and means for directing a portion of the air against the outer surface of the brake flange and for circulating another portion of the air throughout the interior of the drum.

2,105,177

DEVICE FOR CONTROLLING CATHODE BEAMS



René Barthélemy, Fontenay aux Roses, Seine, France, assignor to Compagnie pour la Fabrication des Compteurs et Matériel d'Usines a Gaz, Montrouge, France

Application March 14, 1936, Serial No. 11,172

In France March 28, 1935

5 Claims. (Cl. 250—36)

1. Device for producing a tension which increases in proportion to the time element, which comprises a condenser, a charging circuit therefor, a self-inductance connected in series with said charging circuit and having one terminal in common with said condenser, a resistance connected in parallel with the self-inductance, and two connections for picking up the desired tension connected respectively to the terminals of the condenser and of the self-inductance not

common to these two members, the said self-inductance and the said resistance being of such value that the sum total of the tensions between the terminals of the condenser and the said self-inductance give rise to a resultant tension which increases in proportion to the time element.

2,105,178

CONNECTER

Arthur A. Berndt, Chicago, Ill., assignor to Electroline Company, Chicago, Ill., a corporation of Illinois

Application June 11, 1936, Serial No. 84,651

2 Claims. (Cl. 173—331)

1. A connecter for connecting wires and the like to an anchorage comprising a wire engaging member, said member including a tubular casing having one end thereof closed by an apertured disc and having its other end reduced in diameter to form a tapering end portion, gripping members within said tapering end portion for gripping and holding a wire, resilient means for maintaining the gripping members in engagement with their tapering walls, cup-shaped members providing seats for the respective ends of said resilient means, one cup-shaped member being located between the gripping members and the resilient means and having an apertured base, and the other cup-shaped member being located between the disc and the resilient means and also having an apertured base, the openings in said cup-shaped members being in alignment with each other and with the opening in said disc.

2,105,179

BOX OR RECEPTACLE

Wilson F. Best and William Kremer, Grand Rapids, Mich., assignors to Grand Rapids Sample Case Company, Grand Rapids, Mich.

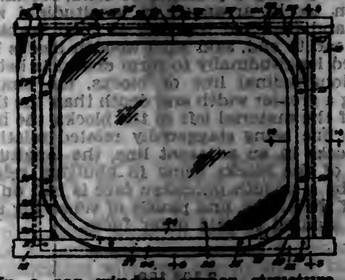
Application January 14, 1935, Serial No. 1,728

13 Claims. (Cl. 220—97)

10. A receptacle comprising a bottom and side and end walls, angled corner brackets having oppositely looped portions providing end bearings, the corner brackets overlapping and being

secured to said walls, said brackets being looped over said end walls, and bails having end arms

terminating in inturned pintles disposed in said end bearings in said corner brackets.



2,105,180

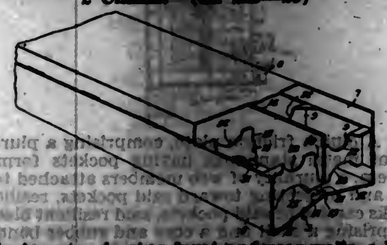
CAR WINDOW STRUCTURE

Siegfried E. Blessin, Summit, N. J., assignor to The National Lock Washer Company, Newark, N. J., a corporation of New Jersey

Application July 8, 1936, Serial No. 89,843

3 Claims. (Cl. 160—44)

8. In a car window corner structure, right angular frame portions meeting at their ends and forming a right angular corner opening, a filler member secured in said corner having right angular sides adapted to engage said corner and having a curved side extending between the adjacent sides of said square corner opening and adapted to give to said corner opening a rounded configuration, and a window sash engaged and secured in said corner opening comprising a frame having a corner corresponding in configuration to said corner opening, and a sash glass carried by said frame.



2,105,181

EGG CARTON

Andrew E. Buescher, Chicago, Ill., assignor, by mesne assignments, to Consolidated Carton, Inc., Chicago, Ill., a corporation of Illinois

Application December 27, 1932, Serial No. 648,973

2 Claims. (Cl. 229—39)

1. A carton having front and rear walls, a bottom member joining said walls, said bottom member having longitudinal slots along its middle portion, a vertical central longitudinal partition positioned above said slots, said partition being provided with downwardly extending hook-like tongues insertable through said slots to hook under the bottom, the bottom wall having a portion located adjacent at least one of said slots on that end opposite the hook, said portion constituting means in the form of two opposing tabs extending transversely to the slot, said means being operative to resist longitudinal movement of the vertical partition in one direction after the tongues have been inserted through the slots.

2,105,182

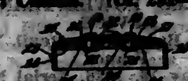
WIRE CONNECTER

Louis H. Church, Westfield, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey

Application October 26, 1934, Serial No. 750,087

4 Claims. (Cl. 173—303)

1. A wire connecter comprising means having an internal conical surface, a contractile sleeve adapted to fit over the wire and having an exterior conical surface engaging the internal conical surface, the contractile sleeve having its smaller end spaced from the end of the wire and its larger end adjacent to the end of the wire, the contractile sleeve having a flexible end extending substantially outwardly and engaging the wire beyond the end of the internal conical surface to provide a yieldable support for the wire where it enters the connecter, an operating nut carried by the aforesaid means for initially contracting said contractile sleeve to grip the wire by enforcing relative movement between the contractile sleeve and the internal conical surface, and the operating nut extending outwardly beyond the contractile sleeve and adapted to engage the wire.



2,105,183

VALVE

Harvey S. Cover, South Bend, Ind.

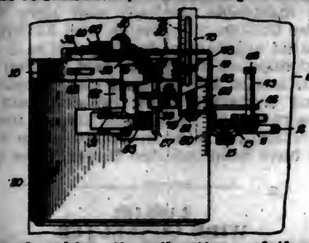
Application November 19, 1934, Serial No. 753,573

3 Claims. (Cl. 251—119)

2. In a valve, a plate provided with an aperture and a supporting pin; and a movable flexible valve element adapted to open and close upon said aperture and provided with an opening to receive said pin, said opening being smaller in circumference than the pin whereby the adjacent portion of the valve element is flexed.

2,105,184

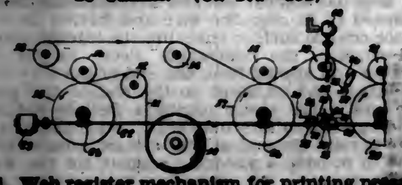
ATTACHMENT FOR SEWING MACHINES



Sarah M. Crewdson, Chicago, Ill., assignor of one-third to Robert H. Goodhart, Chicago, Ill.

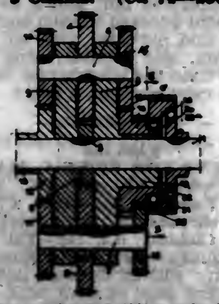
Application February 22, 1935, Serial No. 8,626

13 Claims. (Cl. 112—124)



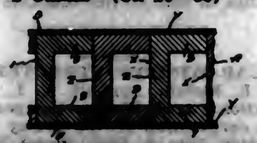
1. An attachment for sewing machines comprising a rotary cutting element, means operatively connecting said element with a movable member of the sewing machine, whereby said element is rotated by the action of the machine, a scale adapted to be secured to a member of the

machine and extending laterally with respect to the needle, means for adjustably securing the attachment to said scale, and means provided on the



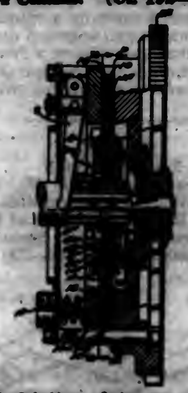
scale for absorbing the vibrations of the sewing machine whereby they are not transmitted to the attachment.

2,105,185
WEB REGISTERING MECHANISM
James Degnan, Corona, N. Y., assignor to Speedry Grovure Corporation, New York, N. Y., a corporation of New York
Application March 4, 1937, Serial No. 128,888
15 Claims. (Cl. 101—181)



1. Web register mechanism for printing presses having a plurality of printing cylinders comprising means responsive to preconditioned portions of the web, a plurality of electro responsive means, electric circuits for each of the last named means, rotatable means in timed relation with the printing cylinders for making a connection to the circuits alternately and at regular intervals, and means actuated by the means responsive to the preconditioned portions of the web for controlling the circuits.

2,105,186
VARIABLE SPEED POWER-TRANSMITTING DEVICE
Christian de la Haye de Nantouil, Versailles, France
Application May 16, 1936, Serial No. 80,116
In France May 21, 1935
5 Claims. (Cl. 74—230)



1. In a power-transmitting device, a driving shaft, a driven shaft, a rotating member freely mounted on the driving shaft and mounted to turn about the same axis as the driving shaft, an eccentric journal engaging with the said rotating member mounted to turn about an axis eccentric to its center and the same as that of the driving shaft, means driven by the driving shaft for causing said journal to move about the driving shaft, means for kinematically connecting said journal to the driven shaft, and means for exerting a variable braking action on the rotating member.

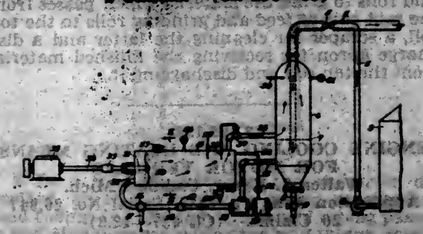
2,105,187
VENEERED DOOR
George L. Gilkey, Merrill, Wis.
Application December 16, 1936, Serial No. 116,156
1 Claim. (Cl. 20—35)

As a new article of manufacture, a composite door comprising a plurality of solid, rectangular wooden blocks arranged in longitudinal alinement and matched together at their transverse edges end to end, said solid wooden blocks being grooved longitudinally to form channels between each longitudinal line of blocks, the channels having a greater width and depth than the thickness of the material left in the blocks, the blocks in one line being staggeredly related relative to the blocks in an adjacent line, the longitudinal edges of the blocks being in abutting relation, whereby a smooth unbroken face is had on each side of the blocks, and panels of veneering adhesively secured to said outer faces.

2,105,188
CLUTCH
Frederick M. Guy, Detroit, Mich., assignor to Guy and Morton, Incorporated, Detroit, Mich., a corporation of Michigan
Application June 26, 1936, Serial No. 87,436
4 Claims. (Cl. 192—68)

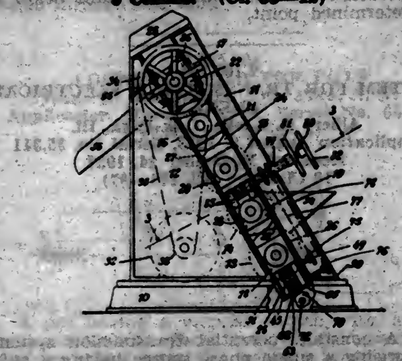
4. A clutch friction plate, comprising a plurality of metal stampings having pockets formed therein, a plurality of web members attached to a hub and projecting toward said pockets, resilient blocks carried in said pockets, said resilient blocks comprising a shell and a core and rubber bonded therebetween, said shell and said core having edges extending beyond the surface of said rubber, whereby said resilient blocks may be rigidly held in place without impairing the resilient flow of said rubber, and means for attaching said web members to said cores.

2,105,189
FOUNTAIN PEN
Benjamin W. Hasle, Elizabeth, N. J., assignor to Eagle Pencil Company, a corporation of Delaware
Application August 12, 1935, Serial No. 35,907
4 Claims. (Cl. 120—32)



1. A fountain pen of the vacuum filler type, comprising a barrel having suction applying means at the outer end thereof and having a grip section at the forward end thereof, a feed section frictionally fitted in said grip section and having a restricted ink passage therealong in communication with the barrel, an air tube secured in said feed section and protruding into said barrel and having communication at its outer end with the ink passage of the feed section, said grip section having an extension protruding into the barrel, of diameter slightly less than the bore of the barrel, and slightly greater than the outer diameter of the lower end of the air tube encircled thereby and thereby resisting the escape of the ink from the barrel to the feed section.

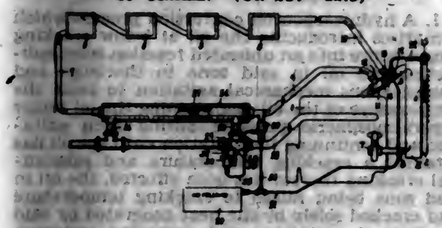
2,105,220
WOVEN FABRIC
Howard B. Jackson, Kings Mountain, N. C., assignor to Neisler Mills, Inc., Kings Mountain, N. C.
Application July 20, 1935, Serial No. 32,633
1 Claim. (Cl. 139—418)



A woven ribbed fabric comprising a ground of fine warp threads disposed in close side by side relation, ribs formed by pairs of relatively coarse weft threads which are held on one surface of said ground by a few widely spaced warp threads and projecting substantially maximally from said surface, the threads of each pair being disposed in contiguous relation, said pairs of weft threads being disposed in spaced relation on said ground whereby the latter is exposed to view between successive pairs of said weft threads, a fine weft thread lying close to a coarse weft thread of each pair, each of said coarse weft threads comprising a pair of twisted strands of differently colored pre-dyed yarn twisted together with a similar pair of twisted strands whereby the ribs have a variegated appearance, said exposed portions of the ground between successive ribs being composed substantially exclusively of said closely arranged fine warp threads.

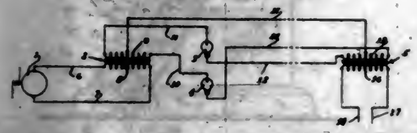
2,105,191
METHOD FOR CRACKING PETROLEUM OILS
Thomas Kenney, Robinson, Ill., assignor of one-fourth to Sylvia S. Lee, Kenilworth, Ill., and one-fourth to Ira J. Wilson, Wheatsika, Ill.
Application October 21, 1933, Serial No. 45,942
2 Claims. (Cl. 196—63)

1. A hydrocarbon oil conversion process which comprises introducing the oil at below cracking temperature into an unheated reaction zone, subjecting the oil in said zone to thorough and homogeneous mechanical agitation to raise the temperature of the oil, maintaining the oil under superatmospheric pressure during such agitation and continuing the agitation until the oil has attained a cracking temperature and substantial cracking thereof has been effected, the oil in said zone being raised to cracking temperature and cracked solely by the heat generated by said mechanical agitation, and removing resultant cracked products from said zone.



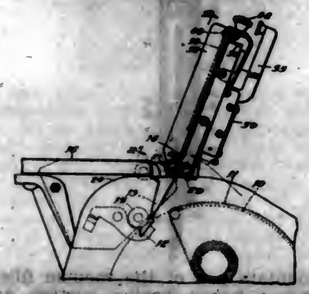
2,105,192
ROLLER MILL
James W. Kent, Brooklyn, and Elmer P. Peters, Richmond Hill, N. Y., assignors to Kent Machine Works, Inc., a corporation of New York
Application November 28, 1936, Serial No. 112,633
5 Claims. (Cl. 83—12)

2. In a roller mill for grinding paints and like substances in combination a plurality of grind-



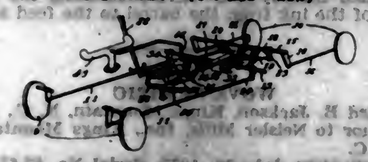
ing rolls supported in a single row on an incline, said row of rolls including a fixed roll at the top, individually shiftable gravity actuated rolls below the top roll, a pair of feed and grinding rolls below the shiftable rolls, a movable gravity actuated framework in which said feed and grinding rolls are supported by gravity, means movable with said framework for adjusting the space between the feed and grinding rolls, means for raising the said movable framework to bring the feed and grinding rolls into operative relation with the lowermost shiftable rolls and all of the latter into operative relation with the top roll, said raising means being capable of reverse movement whereby to separate the shiftable rolls from the top roll and from each other and to separate the feed and grinding rolls from the shiftable rolls without disturbing the adjustment between said two rolls, fixed means for receiving and supporting the shiftable rolls after they have been separated as aforesaid, means for operating all of said rolls to grind the material which passes from the said pair of feed and grinding rolls to the top roll, a scraper for cleaning the latter and a discharge apron for receiving the finished material from the top roll and discharging it.

2,105,193
ENGINE COOLING AND HEATING MEANS FOR MOTOR VEHICLES
Walter A. Kyser, Cadillac, Mich.
Application June 17, 1935, Serial No. 26,947
20 Claims. (Cl. 237—12.3)



19. The combination with a water cooled internal combustion engine, of a cooling water controlling system including a radiator, a shutter unit therefor, and a heating system, and a control means for said shutter unit including a thermostatic device subject to the temperature of the return water of said heating system, said control means closing the shutter unit when the temperature of said return water falls below a predetermined point.

2,105,194
SYSTEM FOR TRANSMITTING ELECTRICAL ENERGY
Albert R. Locke, Oak Park, Ill.
Application August 8, 1935, Serial No. 35,311
Renewed November 24, 1937
16 Claims. (Cl. 171—97)



3. A constant potential transmission system comprising a single phase source having a pair of end terminals providing voltages of opposite polarity and a mid-point terminal or neutral, a three-wire transmission system connected to said terminals to provide a pair of outer legs and a neutral, a half-wave rectifier interposed in each of said outer legs and adjacent their connection to said source, and a static transformer having its primary connected to the three wires of the transmission system and adapted to supply single phase current from its secondary.

2,105,195
DUPLICATING APPARATUS
Alfred Marchev, La Grange, Ill., and Verlin M. Leach, Rushville, Ind., assignors to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application May 8, 1937, Serial No. 141,366
12 Claims. (Cl. 271—61)

1. In a duplicating machine, a sheet positioning tray, a sheet guide on said tray, said guide being movable from a functionally inoperative position below the sheet receiving surface of said tray to a functionally operative position where it projects above said surface.

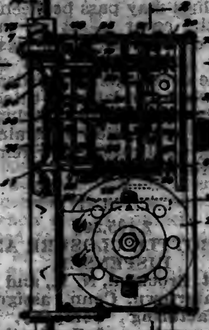
2,105,196
BRAKE OPERATING MECHANISM
Ernest G. McCauley, Pittsburgh, Pa.
Application May 20, 1931, Serial No. 538,669
8 Claims. (Cl. 188—153)

1. In combination, a suction source, a brake, a working chamber having a movable working element therein suitably connected with the brake, a rotatable two-part valve controlling communication between the suction source and the working chamber and between the working chamber and the atmosphere, so constructed and arranged to connect the chamber on one side of the working element with the suction source and simultaneously the chamber on the other side of the working element with the atmosphere, or vice versa, and a manually operable device for applying or releasing the brake and connected with the one part of the valve, to rotate said valve a predetermined distance for a predetermined movement of the device, the other part of said valve being arranged to be rotated in the operation of the working element, and automatically proportion the movement of the brake by the working element to the movement of the manually operated device in either direction.

2,105,197
MEDICAMENT
Adelia McGraw, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application July 12, 1933, Serial No. 680,020
3 Claims. (Cl. 260—99)

1. A therapeutic agent for treatment of fungous infection of the type of dermatomycosis, epidermomycosis and epidermophytosis comprising an ointment base, salicylic acid, mercury salicylate and chlorbutanol.

2,105,198
HEAT CONTROL MECHANISM
William L. McNamara, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a corporation of Delaware
Application February 7, 1936, Serial No. 62,770
11 Claims. (Cl. 277—4)



1. In a regulating device, the combination of a fuel conduit, a rotatable disc having a series of graduated apertures thereon adapted to be brought into registry one at a time with said conduit to vary the amount of fuel delivered through said conduit, an air conduit, a second rotatable disc having a series of graduated apertures therein adapted to be brought into registry one at a time with said air conduit, to vary the amount of air delivered through said air conduit, and means for rotating said discs simultaneously to control the amount of fuel and air supplied.

2,105,199
DISPLAY CONTAINER
Albert H. Nonnemacher, Camden, N. J., assignor to Delaware [illegible]
Application July 24, 1936, Serial No. 92,250
3 Claims. (Cl. 206—56)

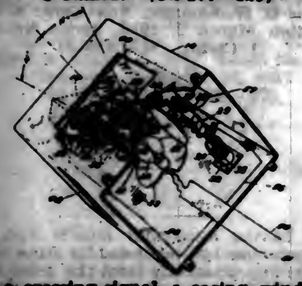
1. A container adapted for the display of goods contained therein and the dispensing of the same therefrom comprising a generally prismatic structure formed with [illegible] sheet of transparent flexible material forming the vertical walls, right metallic edge members secured to the upper and lower edges of said structure, a removable floor member positioned upon said lower edge member and horizontal anchoring tabs fixedly secured in said lower edge member for supporting said floor.

2,105,200
SURGICAL PUMP
Hugh G. Phelps, Milwaukee, Wis.
Application April 25, 1934, Serial No. 723,237
3 Claims. (Cl. 128—230)

2. In a medical device of the character described, an elastic tubing, a casing surrounding said tubing and through which said tubing passes, a first stop member contacting said tubing, means on said stop member constantly urging the stop member into engagement with said tubing, to completely close said tubing to the flow of fluid therepast, means periodically rendering said last named means inoperative to permit the flow of fluid past said stop members, a second stop member mounted in said casing, means on said second stop member constantly urging said second stop member into engagement with said tubing to completely close the tubing to the flow of fluid therepast, means periodically rendering said last named means ineffective, a third stop member, means on said third stop member constantly urging said third stop member into engagement with said tubing to compress fluid trapped between said first and second stop members, when said first and second stop members are both in their "stop" position, means rendering said last named means ineffective and permitting the flow of fluid past said third stop member, and means to successively actuate said three stop members to pump liquid through said tube.

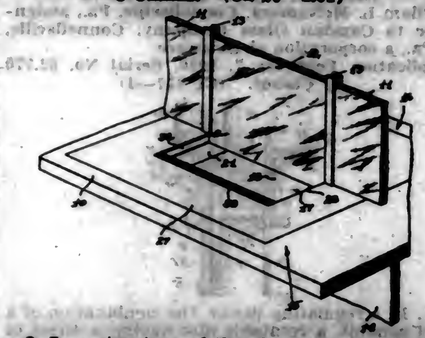
2,105,201
LOCKING COVER FOR POTS
Isaac D. Richheimer, New York, N. Y.
Application March 2, 1926, Serial No. 66,636
1 Claim. (Cl. 53—3)

A pot having a circular mouth with a rim and arcuate ribs spaced inwardly from said rim and projecting integrally from the inner walls of the pot with flat top and bottom sides in planes approximately parallel with the plane of said



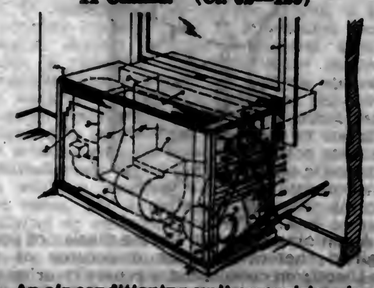
rim and with their ends spaced apart at diametrically opposite sides of the pot, and a cover having a perimetral flange resting on the top side of said ribs, an integral depending cylindrical skirt on said cover extending inwardly of the pot from said flange beyond said ribs, and diametrically opposite lugs projecting integrally from the outer side of said skirt and inclined in the same composite circumferential and longitudinal direction relative to said skirt and merging at one end into said flange on the cover, whereby said lugs may pass between the ends of said ribs as the cover is set on said ribs and upon rotation of said cover said lugs will engage with a wedge action the bottom sides of said ribs to lock the cover against accidentally falling from the pot when the latter is tilted, said skirt, flange and lugs mutually reenforcing each other at the points of application of strains and blows thereon during application and removal of the cover to and from the pot.

2,105,202
COMBINED BOTTLE CLOSURE AND LIQUID DISPENSER
Le Roy F. Rost, Brooklyn, N. Y., and Francis O'L. Killeen, Watertown, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application August 19, 1937, Serial No. 159,894
8 Claims. (Cl. 221—147)



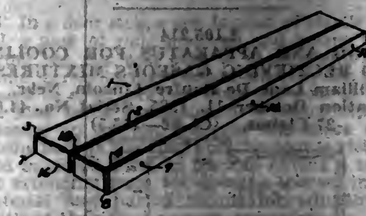
1. A combined bottle closure and liquid dropper comprising a closure cap adapted for attachment to a container and having an annular outwardly disposed top portion, an inner shell having an outwardly disposed annular flanged portion seated on the outwardly disposed top portion of the cap, a flexible diaphragm having an outwardly disposed annular flange secured between the flanged portions of the cap and the flanges of the inner shell member forming a chamber, the said shell member having a central depending spout communicating with said chamber.

2,105,203
HIGHWAY SIGNAL
Thornton J. Simpson, Chula Vista, Calif.
Application September 5, 1936, Serial No. 99,597
4 Claims. (Cl. 177—329)



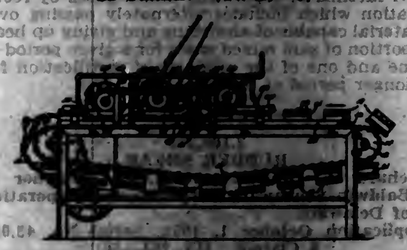
3. In a crossing signal, a casing, windows disposed in adjacent walls of said casing, a pivotal support mounted in said casing, a frame rockably mounted on said support, said frame comprising a sleeve concentric to said pivotal support, a pair of angularly shaped brackets depending from said sleeve, each of said brackets having a light reflecting surface, a lamp mounted upon one of said reflecting surfaces, and means to rock said frame and thereby cause a swinging movement of the light beam reflected thereby thru said windows.

2,105,204
BARRIER WICKET
Joel Sederholm, Minneapolis, Minn.
Application February 8, 1937, Serial No. 124,705
8 Claims. (Cl. 20—1.01)



8. In a structure of the character described, a barrier including an upright pane, a tray disposed beneath said pane contiguous thereto, a portion of said tray at one side thereof opening at one side of the pane and the opposite portion of said tray opening at the other side of said pane, companion closure panels, one for each of said portions of said tray, said panels being movable into and out of their respective tray closing positions, each panel in its closed position occupying a plane also occupied by a lower marginal portion of said pane.

2,105,205
AIR CONDITIONING APPARATUS
Hans K. Steinfeld, Henry L. Galson, and Arthur S. Locke, Philadelphia, Pa., assignors to Baldwin-Southwark Corporation, a corporation of Delaware
Application February 25, 1933, Serial No. 658,610
11 Claims. (Cl. 62—129)

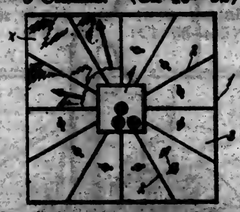


8. An air conditioning unit comprising, in combination, a refrigerating system having a pair of complementary heat exchange elements, means for circulating room air over one of said elements and outside air over the other of said elements, and means forming a separable passage for diverting a portion of said outside air to the flow of room air.

2,105,206
METAL SHELVING AND METHOD OF MAKING THE SAME
Robert T. Stophlet, Toledo, Ohio, assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio, a corporation of Ohio
Application March 26, 1935, Serial No. 13,094
5 Claims. (Cl. 113—116)

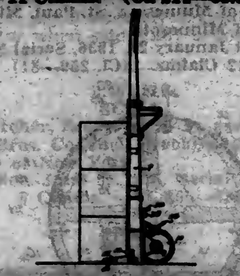
2. The method of making a shelf which includes the steps of cutting a flat blank of sheet metal having openings therethrough adjacent its ends, forming a stiffening bead in said blank, said bead extending across and being completely interrupted by said openings, and bending the ends of said blank to form flanges extending in planes substantially perpendicular to the plane of said blank and intersecting the plane of said blank along lines lying across said openings.

2,105,207
FISH CLEANING AND FILLETING MACHINE
Carl G. Ulin, Seattle, Wash.
Application April 1, 1935, Serial No. 14,695
11 Claims. (Cl. 17—3)



11. The method of cleaning a fish which consists in the steps of cutting a strip from the belly of the fish to which is attached the entrails, dislodging the strip and the attached entrails collectively, and washing the entrail cavity from which the entrails have been removed.

2,105,208
MANUFACTURE OF VINYL RESINS
Maurice Bellue, Paris, France, assignor to Societe Usines Francaises, Paris, France, a joint-stock company of France
No Drawing. Application April 23, 1935, Serial No. 17,094. In France May 2, 1934
11 Claims. (Cl. 260—45.5)

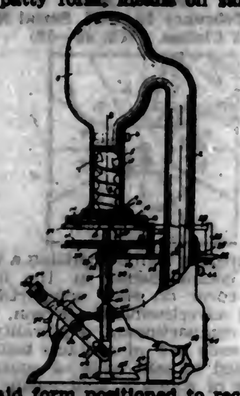


1. A resin prepared from a polyvinyl alcohol and an aliphatic aldehyde having incorporated therein an antioxidant of the polyhydroxybenzol type effective to suppress yellowing at a temperature of 100° C.

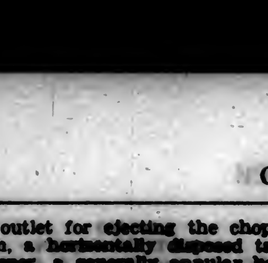
2,105,209
ADVERTISING SIGN
Ray A. Bennett and Marion A. Smead, Long Beach, Calif.
Application February 19, 1934, Serial No. 711,964
5 Claims. (Cl. 40—53)

1. An advertising sign comprising a housing, a plurality of compartments in the housing, a transparent cover on each compartment, said cover having advertisements thereon, a bulb in each of the compartments, a plurality of rows of contacts, each row of contacts being electrically connected to said bulbs, a contact finger for each row of contacts, and means to rotate said contact fingers at different rates of speed relative to each other, each contact finger continuously closing a circuit to a bulb while engaging a contact.

2,105,210
WAREHOUSE TRUCK
William A. Bley, Yakima, Wash.
Application January 31, 1936, Serial No. 61,656
11 Claims. (Cl. 214—65.5)



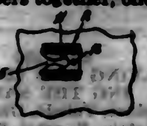
1. In a warehouse truck, in combination with a wheeled vehicle of the character described, and a pair of opposing clamping arms supported thereby for span-regulating movements transversely of the vehicle, rotary means, coupling means connecting said rotary means with the clamping arms for expanding the clamping arms in response to movement of the rotary means in one direction of rotation and for retracting the clamping arms in response to movement in the opposite direction of rotation, means for actuating said rotary means in selective directive rotations, means by which the arms are automatically locked in selected span-regulating positions, said automatically operated locking means permitting free contraction movement and preventing expansion movement of the arms only, and means acting to release said locking means simultaneously with the operation of said means by which the arms are expanded.



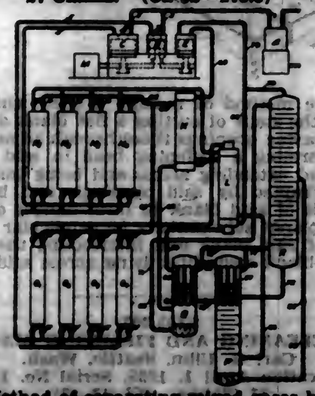
2,105,211
HAMBURGER PATTY FORMING APPARATUS
Marshall C. Bassenette, Medford, Oreg.
Application April 6, 1933, Serial No. 70,911
16 Claims. (Cl. 17—32)

4. In apparatus for forming hamburger steak patties, a meat chopper having a downwardly

directed outlet for ejecting the chopped meat therefrom, a horizontally disposed table below said chopper, a generally annular horizontally disposed patty form, means on said table supporting said form positioned to receive chopped meat from said outlet, means for moving said form vertically toward and away from said outlet, and means for moving said form horizontally from below said outlet.



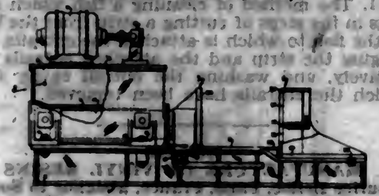
2,105,212
CHURN
Frank G. Clark, Minneapolis, Minn., assignor to Crane Co. of Minnesota, St. Paul, Minn., a corporation of Minnesota
Application January 23, 1936, Serial No. 60,475
12 Claims. (Cl. 259—81)



1. A butter churn comprising a cylinder, end walls for said cylinder, a supporting spider frame adjacent said end walls, radially extending legs on said frame, an arcuated shoe on said legs adapted to form a support for the ends of said cylinder, a clamping band circumferentially extending about the ends of said cylinder, and bolt means adjustably connecting said shoe and band to support the ends of said cylinder.

2,105,213
SLIDE FASTENER
Mabel V. Clark, Los Angeles, Calif.
Application October 1, 1934, Serial No. 746,287
7 Claims. (Cl. 24—233)

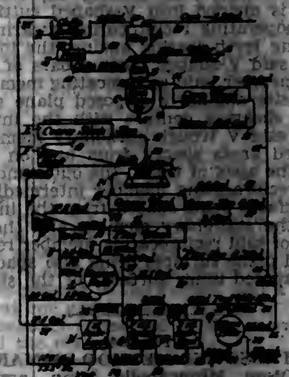
6. A slide fastener comprising a pair of complementary members, one of said members having a head formed thereon, the other member having a slot formed therein, a constricted neck in the slot, said head being adapted and arranged to slide past the neck whereby the members are releasably held together, one of said members having a depression therein and the other member having an upstanding lug thereon, said lug entering the depression to assist in holding said members together, one of said members having a longitudinal groove adjacent each side thereof, said groove being adapted and arranged to receive the fastening thread.



2,105,214
METHOD AND APPARATUS FOR COOLING AND RECTIFYING GASEOUS MIXTURES
William Lane De Baufre, Lincoln, Nebr.
Application October 11, 1935, Serial No. 44,616
27 Claims. (Cl. 62—175.5)

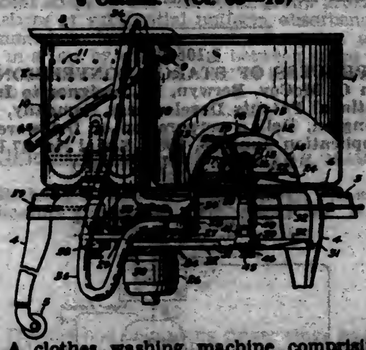
7. Method of separating mixed gases by rectification which includes alternately passing over material capable of absorbing and giving up heat, a portion of said mixed gases for a given period of time and one of the products of rectification for a longer period of time.

2,105,215
RUBBER SHEAR
Richard W. Bland, Narberth, Pa., assignor to Baldwin-Southwark Corporation, a corporation of Delaware
Application October 1, 1935, Serial No. 43,959
8 Claims. (Cl. 164—56)



1. A rubber shear comprising, in combination, a base, a knife structure supported thereon and having open ends whereby rubber enters one end and is discharged through the other end, a hydraulic ram and cylinder supported by said base, a platen actuated by said ram and movable over a bale table portion of said base located between said knife structure and cylinder, and means located beneath said table for directly and primarily supporting said platen.

2,105,216
DOOR STOP
Anton Evalich, San Francisco, Calif.
Application July 1, 1936, Serial No. 88,408
2 Claims. (Cl. 16—86)



1. In a door stop, a cup formed of elastic material, a plug of rigid material and means for securing the cup and plug to a door and a door frame in registering relation whereby the plug is caused to enter the cup when the door is closed, the plug being dimensioned to exert expansive pressure on the cup whereby the shock of the closing door is absorbed and the door is yieldingly held in closed position, the cup having a tapered slit extending from the opening thereof into the material and having means for adjusting the width of the slit.

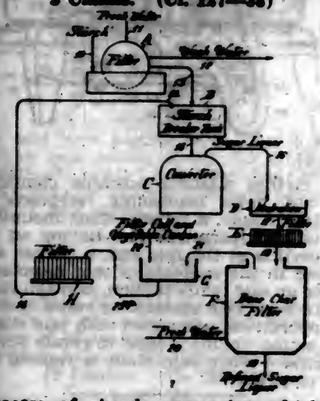
2,105,217
MANUFACTURE OF STARCH
Alfred H. Kalling, Oak Park, Ill., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
Original application June 13, 1935, Serial No. 26,612. Divided and this application June 4, 1936, Serial No. 83,836
15 Claims. (Cl. 127—68)

2. The process of manufacturing starch from corn in which substantially all process waters, except the steep water and water absorbed in the discharged solids, are re-used in the process comprising: steeping and comminuting the corn; subjecting the comminuted corn to separating operations in water; concentrating the mill starch by extracting water therefrom and returning said water to the separating operations; subjecting the concentrated mill starch to a series of centrifuging operations, against a wash liquid introduced into the last centrifugal, in which a part of the overflow from each centrifugal, except the first, goes to the next centrifugal in advance and the rest of the overflow is returned to the centrifugal from which it came; and reusing the water of the overflow from the first centrifuging operation for steeping corn.

2,105,218
LAUNDRY MACHINE
James R. Kirby, West Richfield, Ohio, assignor, by mesne assignments, to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio, as trustee
Application October 29, 1932, Serial No. 640,252
6 Claims. (Cl. 68—15)

3. A clothes washing machine comprising a fabric and liquid containing receptacle and a supporting frame, a vertical shaft mounted centrally of said receptacle and having an oblique crank portion at the free end, a clothes agitator immersed in the contents of said receptacle and mounted on said crank portion, said agitator comprising a base with upstanding vanes, a source of power operatively associated with said shaft, and means acting simultaneously to gyrate and rotate said agitator when said shaft is rotated by said source of power.

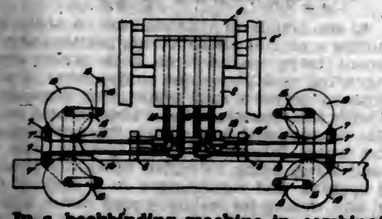
2,105,219
SCALE
Paul J. Kircher, Brooklyn, N. Y., assignor to The Locke Reg. Co. Inc., Brooklyn, N. Y., a corporation of New York
Application June 2, 1933, Serial No. 673,257
6 Claims. (Cl. 265—55)



1. As an article of manufacture, a scale base including a pair of plates having portions of their adjacent faces spaced from each other, means for securing said plates one to the other, a strap interposed between said plates and disposed in line with the spaced portions thereof and in intimate contact with said plates, the upper of said plates being formed with an opening, the end of said strap being extended upwardly through said opening and terminating in a bearing portion, and means for securing said plates against movement with respect to each other and with respect to said strap.

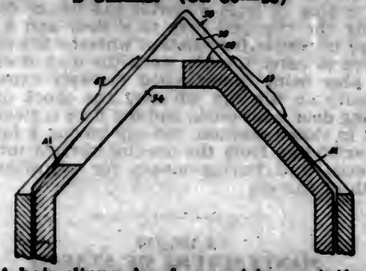
2,105,220
FERROUS METAL
Carl F. Lauenstein and Clarence J. Brinkworth, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 7, 1935, Serial No. 25,412
5 Claims. (Cl. 148—21.7)

1. The process of heat treating white cast iron



which iron includes an alloying element of the carbide forming group of elements consisting of manganese, molybdenum, chromium and vanadium and is substantially free from ferrite, which process includes the steps of heating the iron to a temperature above the critical temperature, holding it at that temperature approximately one half hour and quenching it.

2,105,221
PROCESS OF STARCH CONVERSION
Rush O. McCoy, Berwyn, Ill., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
Application June 25, 1936, Serial No. 87,192
2 Claims. (Cl. 127—38)

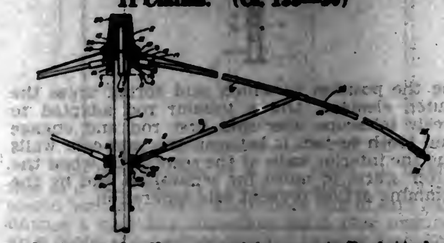


1. Process of starch conversion which comprises converting the starch; filtering the converter liquor through bone char; flushing the bone char with water; purifying the bone wash water; and re-using the purified bone wash water in the process by mixing it with starch to be subsequently converted.

2,105,222
BOOKBINDING
John Murray, Mimbridge, Chobham, England
Application July 10, 1935, Serial No. 30,589
In Great Britain July 13, 1934
2 Claims. (Cl. 11—1)

1. In a bookbinding machine in combination with scrim rolls and feed rolls for feeding the scrim to the back of the books, means for delivering a plurality of relatively narrow tapes with the scrim to the feed rolls and to the back of the books in a constant position in relation to the width of the scrim from a plurality of relatively wide tape reels affording supplies of tape, said means including a plurality of tape reels in spaced relation, said reels disposed with their axes at right angles to the axis of the scrim roll, a plurality of guide rollers for receiving the tapes from said reels, said guide rollers spaced from one another along the width of the scrim with their axes at right angles to the axes of the reels, and guide rods disposed parallel with the feed rolls receiving tapes from the guide reels and delivering the tapes to the feed rolls.

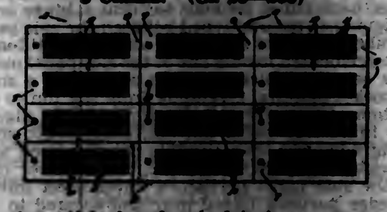
2,105,223
HAIR CLIPPER
Lyle C. Nicholl, Los Angeles, Calif., assignor to Nicholl, Inc., Los Angeles, Calif., a corporation of California
Application February 5, 1937, Serial No. 124,210
2 Claims. (Cl. 30—43)



2. A hair clipper head comprising a stationary shearing member in the shape of a V trough, the exterior of which defines two skin-contacting faces angularly positioned relative to each other and intersecting substantially at the apex of the V, said member having slots extending across said apex and a substantial distance therebeyond on either side whereby the end of said member is divided into V-shaped cutting bars, and a cooperating reciprocating shearing member having teeth seating against the inner surfaces of said V-shaped cutting bars of the stationary member, said reciprocating member having opposite angularly disposed plane side surfaces in shearing contact with the inner surfaces of said V trough stationary member over juxtaposed areas spaced from and on opposite sides of the apex of the V, the outer end surface of said reciprocating member intermediate said plane surfaces being spaced from the inner surface of the stationary member and the lateral surfaces of said reciprocating member rearwardly of said plane surfaces being also spaced from the juxtaposed inner surfaces of the stationary member.

2,105,224
MATTRESS AND METHOD OF MAKING
Gilbert Olsen, Minneapolis, Minn., assignor to Sanitary Mattress Company, Minneapolis, Minn., a corporation of Minnesota
Application November 6, 1933, Serial No. 696,850
17 Claims. (Cl. 5—351)

13. A mattress having in combination, a spring unit, padding overlying said unit, a boxing surrounding said unit at the sides thereof comprising an outer layer of fabric and a layer of filling at the inner side thereof, said layer of filling having an enlarged portion at its side, an outer cover for said mattress permanently sewed to the edge of said outer layer of fabric of said boxing, stitches independent of said outer cover engaging said enlarged portion of said filling anchored in said padding, securing and pulling said enlarged portion inwardly about the corners of said spring unit to form an edge roll and an outer cover at the other side of said spring unit having its edge sewed to the edge of said outer layer of said boxing.



2,105,225
UMBRELLA
Adolph E. Pollack, New York, N. Y.
Application August 29, 1936, Serial No. 98,527
11 Claims. (Cl. 135—30)

3. An umbrella comprising a staff slotted at its upper end, a crown having ribs detachably secured thereto and embracing the staff, and provided with a projection extending into the slot of the staff, and a seamed cover provided at its apex with a grommet extending into the slot of the staff to position the seams of the cover in registration with the ribs.

8. An umbrella comprising a staff, a crown secured to the staff, said crown having a plurality of outwardly and upwardly bowed prongs forming between them slots, a plate resting upon the tops of the prongs and provided with an annular channel into which the upper ends of the prongs are received to brace the prongs and maintain them against bending in either an inwardly or an outwardly radial direction, a rib socket associated with each slot and provided with a tongue extending through the slot into the interior of the crown and there provided with laterally extending trunnions, a rib projecting into each socket and having a detent normally engaging with the socket to lock the rib against removal therefrom, a runner slidable on the staff, stretcher sockets pivoted to the runner, and a stretcher secured at one end to each rib, and at the other end detachably connected to the corresponding socket of the runner.

2,105,226
GROUP TEST STRIP
Francis G. Pratt, Seattle, Wash.
Application June 8, 1937, Serial No. 542,883
3 Claims. (Cl. 23—253)

1. An article for chemical test purposes comprising a sheet of absorbent paper such, for example, as Whatman's No. 40, the texture and thickness of which affords relatively like absorbency throughout slit longitudinally to adjacent the extreme upper and lower edges to provide a plurality of ribbon-like strips, said slitting operating to retain borders along the upper and lower edges of the strips to maintain the strips in group formation, the relativity which exists between the adjacent strips of the connected group providing like strips of substantial uniform absorbency to accommodate sensitising and subsequent accuracy in a test by comparison between strips used with solutions of the chemical of known and unknown strengths.

2,105,227
FINGER RING AND METHOD FOR MAKING THE SAME
Richard E. Richter, Montgomery, Minn.
Application October 3, 1936, Serial No. 104,617
4 Claims. (Cl. 63—15)

1. The method of making finger rings and the like which includes partially shaping a plurality of plastic elements, joining said elements with a transparent adhesive to form the body of the ring, flattening a portion of said body to provide an ornament receiving head, securing a base block to said flattened head, securing an ornamental element to said head with a block of transparent plastic material of substantially greater thickness than said ornament, and shaping the outer surface of said ring body and said block of transparent plastic material, the shaping of said block being done in a manner which will produce the optical effect of enlarging said ornament and giving it a third dimensional appearance.

4. A finger ring and the like comprising a centrally positioned, substantially circular ring element, laterally positioned substantially semi-circular elements secured to the sides of said ring with a transparent adhesive, said semi-circular elements being of a shape and size substantially equivalent to transversely cut halves of said ring, said built up body being provided with a flattened head portion, an ornamental device on said flattened head, and a relatively thick transparent plastic block secured to said head portion over said ornamental device, said ornamental device being of irregular shape and thickness and being embedded in said transparent plastic block, and said block being adhesively secured to said head.

2,105,228
SHUTTER TRIGGER LATCH
William A. Riddell, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application October 30, 1936, Serial No. 108,392
9 Claims. (Cl. 95—62)

3. In a shutter for photographic cameras, the combination with a shutter casing, of shutter

mechanism therein including a power spring, a movable setting member for placing the spring under tension, a trigger adapted to be manually actuated for releasing the shutter mechanism and means for latching the trigger against movement, and cooperating parts on said means and shutter setting member adapted to release the latching means when the shutter setting member is moved to one position.

2,105,229

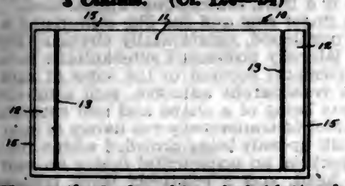
ROUND HEEL IRON

Abe O. Samuels, Rochester, N. Y., assignor to Samson-United Corporation, Rochester, N. Y.

Application November 14, 1935, Serial No. 49,837

15 Claims. (Cl. 219—25)

12. In an electrically heated iron, a heavy sole plate having a forward toe portion and a downwardly rounded rear heel portion, an electrical heating element carried by said sole plate and having a substantially filar heel portion thereof carried by the heel portion of said sole plate, the cross-sectional contour of the outer surface of the heel portion of said sole plate being substantially circular about a point in said heel portion of said element as a center.



2,105,230

DESK BLOTTER HOLDER AND METHOD OF MAKING SAME

Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application November 27, 1936, Serial No. 112,839

3 Claims. (Cl. 129—24)

1. The method of making desk blotter holders which comprises hinging narrow pocket forming side panels to a central blotter supporting panel by applying a unitary cover sheet to the panels in flat form and thereafter swinging said side panels about their hinges into overlying relation with the end portions of the main panel and securing the upper and lower end portions of the side panels to the main panel whereby the unsecured portions of the side panels form pockets for the reception of the side portions of a blotter.

2,105,231

LOOSE LEAF BINDING POST CONSTRUCTION

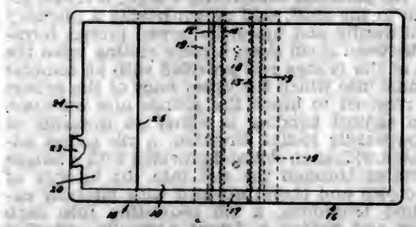
Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application May 5, 1937, Serial No. 140,782

4 Claims. (Cl. 85—4)

1. A loose leaf binding post construction comprising a rod having a head at one end and an axial bore at the other end, a coiled spring seated in the bore, a clutch element made up of a guiding stem in said bore contacting the end of the spring and an offset tooth portion on the stem having shoulders placed to ride on cam walls provided by a cut-out portion of the rod, said stem having enough side play in the bore to permit said tooth portion to lie within the transverse circle of the rod when the tooth is at one position with respect to the cam walls and to lie outside said circle when at another position with respect to the cam walls, said second position be-

ing the position to which said spring urges the clutch element, and a tubular rod adapted to freely telescope over said first rod and engage said tooth to jam it between the said cam walls and the interior walls of the second rod when the latter starts to move for separation and by the jamming action prevent said separation.



2,105,232

BOOKBINDER CASING AND METHOD OF MAKING SAME

Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application May 5, 1937, Serial No. 140,783

5 Claims. (Cl. 281—31)

5. In a loose leaf binder, a casing structure composing outer back and side panel members formed as an integral sheet, a thin reenforcing strip secured to the inner face of the back panel portion of said sheet, an inner back panel member secured to the reenforcing strip to enclose said strip between the back panel members, inner side panel members having their respective top, bottom, and outer side edges coinciding with the corresponding edges of the side panel portions of said sheet, the inner side edges of said inner side panels being spaced from the side edges of the inner back panel member to form a hinge zone, stiffening strips positioned between the side panel members adjacent said hinge zones, said stiffeners being cemented to only one of the side panel members between which they are positioned, a sheet of pocket material extending from the top to the bottom of the casing structure along the edge of one inner side panel portion, said pocket sheet being narrower than the side panel portion with its outer long edge cemented to the outer edge of the side panel portion, a cover sheet having its edge portions folded over and secured to the inner side panel members and pocket member to hold the side panel members in position and close

the short edges of the pocket, and a lining sheet extending across the inner face of the binder casing but not closing the open edge of the pocket.

2,105,233

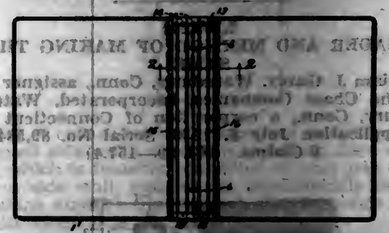
PERFORATING DEVICE FOR LOOSE-LEAF SHEETS

John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application May 5, 1937, Serial No. 140,784

5 Claims. (Cl. 129—7)

1. The combination of a stiff sheet for insertion as a loose leaf in a binder, a spring clip with bowed legs fastened to such sheet, one of said legs having a hole and the other leg a plug making up a perforating device adapted to work from the opposite sides of a hole in said sheet, said legs being bowed in the same direction so that after being flattened against opposite sides of said sheet to punch paper the latter will be stripped from the punch by said stiff sheet.



2,105,234

LOOSE-LEAF BINDER

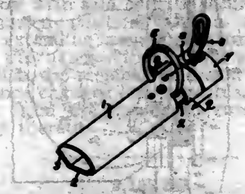
John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application July 21, 1935, Serial No. 32,963

11 Claims. (Cl. 129—33)

3. A binder comprising covers hinged to a back panel, an angle plate of two flat sides angularly arranged to span the space between the hinge lines with a slight downward pitch from the center line toward each cover, retaining wires for pamphlets adapted to slide freely down said flat sides, and means at the opposite ends of the binder to hold said wires loosely in relation to said plate.

2,105,235



RING BINDER MECHANISM

John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts

Application March 3, 1936, Serial No. 66,878

4 Claims. (Cl. 129—6)

1. In a loose leaf mechanism the combination of two toggle plates, one set of ring halves fastened on and immovably mounted with respect to each toggle plate to match the ring halves in the other set, the tip ends of said ring halves having hook-shaped locking portions for engagement

and disengagement by relative lateral movement as distinguished from pivotal movements, a mounting for the toggle plates, and means to longitudinally shift the toggle plates relatively to engage and disengage said ring ends.

2,105,236

PORTABLE FOLDING BED AND CABINET

Louis W. Stebel, Chicago, Ill., assignor to Interstate Metal Products Co., Chicago, Ill., a corporation of Illinois

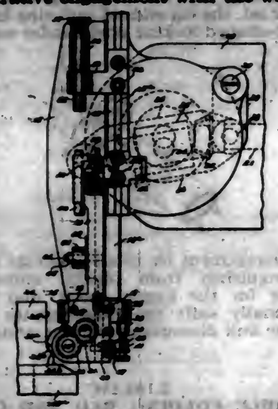
Application August 6, 1936, Serial No. 94,620

3 Claims. (Cl. 5—127)

1. In an article of the class described, a compartment adapted to wholly contain and support a bed vertically foldable thereinto, said bed being adapted to be unfolded and lowered therefrom to its operative horizontal position whereby the compartment is freed from the weight and tension of said bed, curved channel guideways secured to the inner sides of said compartment adjacent the base thereof, a bed frame having rollers extending into said guideways and operable therein, folding foot legs pivoted to said frame, folding head legs engaged to said frame and adapted to limited longitudinal movement thereof, spaced links secured to said compartment and said head legs and extending therebetween and adapted to maintain said head legs in substantially vertical position and to extend them outwardly of said compartment and for longitudinal movement in relation to said frame, whereby said head legs will support the head end of said bed independent of said compartment.

2,105,237

METAL CUTTING MACHINE



William H. Welch, Rochester, N. Y., assignor to Cochrane-Ely Company, Rochester, N. Y., a corporation of New York

Application December 20, 1935, Serial No. 54,671

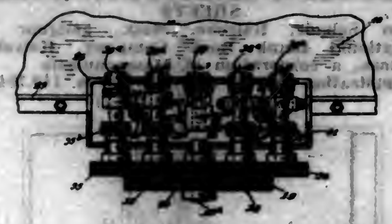
24 Claims. (Cl. 90—24)

5. In a machine of the class described, a frame, a support reciprocally mounted on the frame, means for reciprocating the support, a cutting tool movable on the support, means for holding the tool in operative engagement with the work and against movement relative to the support during movement of the support in one direction,

and means for moving the tool in a curved path and in operative engagement with the work dur-

ing a portion of the period of movement of the support in the opposite direction.

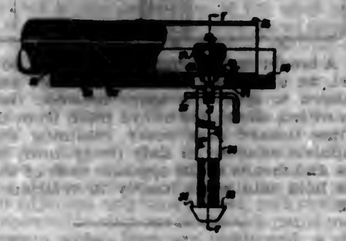
2,105,228
FILM STRIP
Otto Wittel, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey
Application December 18, 1934, Serial No. 758,085
5 Claims. (Cl. 242—74)



4. As an article of manufacture, a film strip including only on the inner end thereof, a plurality of flexible embossings provided and arranged so as to form a resilient inner layer for the film when wound into a coil.

2,105,229
TOOL HANDLE
Edmund Bachtold, Whitewood, Saskatchewan, Canada
Application April 1, 1935, Serial No. 14,164
1 Claim. (Cl. 30—151)

Improvements in tool handles comprising a tubular sheath to receive a cutting instrumentality, a projection on said instrumentality extending at right angles thereto and at a point above the open end of the sheath, a spring leaf extending along the outer surface of the sheath and in a plane of said projection and provided with an orifice adjacent one end thereof, said orifice being adapted to receive said projection and means for spacing a portion of said leaf from said handle to permit disengagement of said instrumentality.



2,105,240
METHOD OF AND MACHINE FOR BENDING SHEET METAL
Harold G. Flagler, Chicago, Ill.
Application January 29, 1927, Serial No. 162,892
15 Claims. (Cl. 153—33)

1. In the formation of a sheet metal joint member, the method of procedure which comprises initially and simultaneously forming a 90 degree offset in said metal and a 45 degree offset in the portion of said metal on one side of said 90 degree offset, then increasing said second offset to a 90 degree bend and thereafter completing said joint member by folding the metal comprised in said portion into parallelism with the main body of metal, the first formed 90 degree offset being continuously maintained throughout all of the folding operations.

10. In a sheet metal forming machine, an initially contacted set of forming rolls for producing a 90 degree offset in said metal to form the inner edge of a folded joint, and a plurality of subsequently contacted forming rolls for retaining said initially formed 90 degree offset and for acting upon said metal outwardly of said offset to produce a pair of oppositely disposed 180 degree bends therein to form a folded joint having a plurality of parallel folds in parallelism with the main body of metal on one side of said offset.

2,105,241
HEADER AND METHOD OF MAKING THE SAME
William J. Geary, Waterbury, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a corporation of Connecticut
Application July 8, 1936, Serial No. 90,594
6 Claims. (Cl. 29—157.4)

1. A header formed from an annealed wrought tubular member which has been finish-formed by a sinking operation without the use of an internal mandrel, by flanging out a plurality of tubular flanges spaced apart longitudinally along the side of said tubular member with said tubular flanges extending transversely of the longitudinal axis of said tubular member.

2,105,242
PAD FOR USE UNDER HORSESHOES
Bertram Barnett, Queen Alexandra Regiment, Aldershot, England
Application [illegible], 1935, Serial No. 10,114
In Great Britain [illegible], 1934
12 Claims. (Cl. 168—14)

1. A horseshoe pad including a pad member capable of application to, or removal from, the shoe without removing the latter and a retaining member for securing said pad member detachably to said shoe, end parts of said retaining member adapted for detachable engagement with the toe and a part adapted to abut against the front of the pad member in a detachable manner to enable removal or replacement of said retaining means independently of the removal or replacement of the pad member.

2,105,243
HOOK
Clarence E. Gruber and William F. Gruber, French Lick, Ind.
Application May 22, 1936, Serial No. 80,114
Renewed June 11, 1937
27 Claims. (Cl. 294—16)

27. A collapsible box comprising foldably connected side walls, a bottom including flaps each of which is foldably connected at only one edge to a side wall, and means mechanically interlocking another edge of each flap to a side wall with which it is not foldably connected.

2,105,244
WRENCH
Lars E. Hagbo, Bremerton, Wash.
Continuation of application Serial No. 651,920, January 18, 1933, now Patent 2,015,295, dated October 1, 1935. This application August 19, 1935, Serial No. 36,872
5 Claims. (Cl. 81—99)

1. In a wrench, a handle having associated therewith a fixed jaw, a saddle pivotally mounted adjacent said fixed jaw and including a guide generally parallel to the handle and ears disposed one at each side of the handle, a slide received in said guide and carrying a movable jaw, means engageable with said slide to secure the same in any adjusted position, and a spring-pressed member extending transversely through an aperture in the handle, the handle aperture being larger than the member, and said member having its ends engaged one in each saddle ear, and reacting from the handle to swing the saddle relatively thereto.

2,105,245
SHEATHING
Russell L. Hohl, Shaker Heights, Ohio
Application March 5, 1934, Serial No. 714,021
4 Claims. (Cl. 189—35)

1. Building wall sheathing structure comprising a support member generally of channel form disposed with its channel cavity opening outwardly of the general plane of the wall, a metallic sheathing panel having a rectangular face part, with an inwardly turned lip part on one edge extending into and along said channel cavity, said support member having a laterally projecting longitudinally extending flange cooperative with the channel side part of said support member to provide a shoulder recess, and an insulating board backing for said panel face part having an edge part seating in said recess and there confined by said panel face part.

2,105,246
TRAILER
George Hemfield, Warren, Pa., assignor to Warren Trailer Parts Manufacturing Company, Inc., Warren, Pa., a corporation of Pennsylvania
Application January 7, 1935, Serial No. 614
10 Claims. (Cl. 280—33.4)

5. In a wheeled vehicle, a caster wheel mounting including relatively rotatable telescoping elements, one of said elements being secured to said vehicle, yieldable means associated with and acting between said elements, a device acting on one

of said elements to dampen movements thereof, and a wheel support depending from one of said elements.

2,105,247

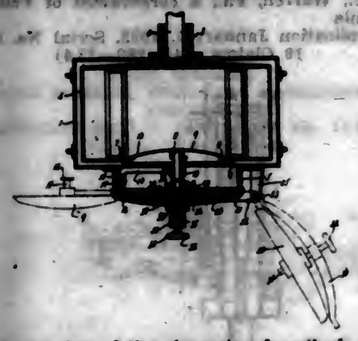
METHOD AND APPARATUS FOR ELECTRICAL EXPLORATION OF THE SUBSURFACE

John Jay Jakosky, Los Angeles, Calif.

Application November 26, 1935, Serial No. 51,742

23 Claims. (Cl. 175—183)

1. A method of electrical exploration of the subsurface which comprises: maintaining a pair of electrodes in continuous contact with the earth while moving at least one of said electrodes along the surface of the earth to vary the distance therebetween; passing electric current through the earth between said electrodes as the distance therebetween is varied, so as to vary the depth of penetration of said current within the earth; and measuring variations in a quantity influenced by the flow of said current and by the electrical characteristics of the earth traversed thereby, as the distance between said electrodes is so varied.



2,105,248

CLOSURE CONSTRUCTION FOR WASHING MACHINES

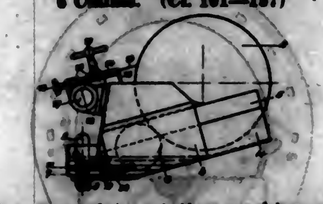
George W. Johnson, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio

Application September 11, 1935, Serial No. 40,916

8 Claims. (Cl. 68—18)

1. Apparatus of the character described, comprising a stationary casing having an opening, a drum rotatable in the casing having an end opening which registers with the opening in said casing and which is substantially concentric with the axis of rotation of said drum, a drum closure, a support hinged on the casing and in which said closure is rotatably mounted, and a closure for the casing mounted upon the casing for movement independently of said support, said drum closure when the casing closure is in open position being adapted by movement of its support to swing through the casing opening to or from closed position.

2,105,249



COPPER PLATE PRINTING MACHINE

Karl Theodor Lang, Gruenau-Dresden, Germany, assignor to Bruno Richter, Liebigstr. Schnellpressen-Fabrik A. G., Gruenau, Germany

Application May 20, 1936, Serial No. 80,772

In Germany May 22, 1935

6 Claims. (Cl. 101—157)

1. A copper plate printing machine, comprising a frame, a copper plate cylinder in said frame, an inking apparatus, a doctor device mounted on said inking apparatus and guides in said frame for guiding the inking apparatus with the doctor device mounted thereon towards and away from said cylinder.

2,105,250

WARNING SIGNAL FOR DISSOLVING SHUTTERS

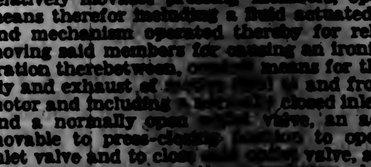
Donald B. Lyman and Joseph Seeley, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey

Application August 11, 1936, Serial No. 95,383

10 Claims. (Cl. 88—19.3)

1. In a motion picture apparatus, the combination with a dissolving shutter including a pair of blades which may be moved relatively to an open position and to a closed position, and an operating member connected to said blades and for relatively moving the same, of a signal means movably mounted and normally inoperative, and a selective connection between said operating member and said signal means and operative to move said signal means into an operative position only when said operating member is moved to a position corresponding to the closed position of said blades.

2,105,251



HYDROMECHANICAL MOTOR

Howard F. Hinchliffe, Mount Gilead, Ohio, assignor, by mesne assignments, to The Hydraulic Press Corporation, Inc., Wilmington, Del., a corporation of Delaware

Application June 1, 1932, Serial No. 613,272

3 Claims. (Cl. 121—38)

3. In combination, a frame, a hydraulic cylinder thereon, a plunger therein, a platen on said plunger, guide members arranged on opposite sides of said plunger, a tie member mounted for reciprocation along said guide members and having an aperture substantially surrounding the outer surface of said cylinder in relatively slidable relationship therewith whereby the cylinder is adapted to assist the guide members in retaining the tie member in its proper position and path of motion, a pair of pulleys mounted on

said tie member, a pair of flexible members secured to said platen and passing over said pulleys to anchorages at their opposite ends, and yielding means arranged to urge said tie member in a direction adapted to oppose the working stroke of said plunger.

2,105,252

HYDROLYSIS OF CELLULOSE ESTERS

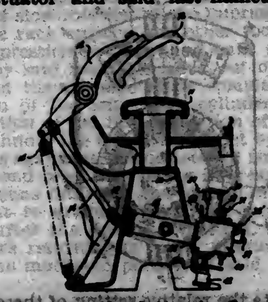
Carl J. Malm, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey

No Drawing. Application December 4, 1935, Serial No. 52,576

4 Claims. (Cl. 260—226)

1. In a process of making a lower fatty acid ester of cellulose by procedure including esterifying cellulose with a bath containing acetic anhydride and a catalyst, subsequently hydrolyzing the cellulose ester by treatment of the esterification mixture to obtain the ester of intermediate acetyl content which comprises adding to said esterification mixture a quantity of lower fatty acid containing not more than four carbon atoms, but not greatly in excess of that necessary, to convert any anhydride present to acid, cooling the mixture to the hydrolysis temperature, then adding thereto further aqueous lower fatty acid in an amount sufficient to induce hydrolysis, an excess of sulphuric acid sufficient to accelerate the hydrolysis, and maintaining the mixture at a hydrolyzing temperature until the desired product is obtained.

2,105,253



FLUID CONTROL [illegible] FLUID OPERATED

Clifton S. Malick, [illegible], assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio

Application January 21, 1936, Serial No. 2,693

8 Claims. (Cl. 121—38)

1. In a pressing machine, a pair of coacting relatively movable pressing members, operating means therefor including a fluid actuated motor and mechanism operated thereby for relatively moving said members for causing an ironing operation therebetween, [illegible] means for the supply and exhaust of [illegible] and from said motor and including a [illegible] closed inlet valve and a normally open [illegible] valve, an actuator movable to press-closing position to open said inlet valve and to close said outlet valve, said actuator having a connection [illegible] additional movement beyond said press-closing position, fluid actuated power means for moving said actuator, a timing device controlling said additional movement of said actuator, [illegible] circuits for said power means, [illegible] said circuits including an operator-operated control member, the other of said circuits including a valve normally preventing the effective flow of motive fluid therein, and an operative connection between said actuator and said last-named valve and

effective to move the latter to flow establishing position upon completion of the action controlled by said timing device.

2,105,254

FILM GUIDE FOR FILM MAGAZINES

Lawrence E. Martin, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey

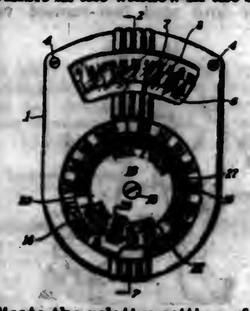
Application December 26, 1935, Serial No. 56,269

8 Claims. (Cl. 88—17)

1. In a film magazine, the combination with a casing adapted to contain a supply film roll, a takeup film roll, and a film strip therebetween, mounting means for supporting said film rolls so that some of the space occupied by the supply film roll is subsequently occupied by the takeup film roll, and a film moving means for maintaining in said film strip a pre-formed film loop with a portion of said film strip between said film rolls, of a guide member mounted to move between said film loop and one of said film rolls and for preventing the film strip forming the film loop from being wound prematurely upon said one film roll.

2,105,255

EXPOSURE METER



Joseph Mihalyi and Newton R. Green, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey

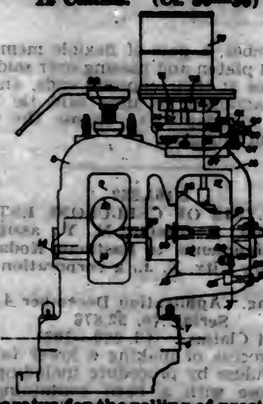
Application February 15, 1936, Serial No. 64,068

3 Claims. (Cl. 235—85)

1. A scale for exposure meters comprising a base member bearing an arcuate scale, a second disc-like member pivotally attached to the base and including an arcuate slot covering a large part of the disc from the remainder, a window in the second member between the ends of the arcuate slot, and a third disc-like member coaxially mounted on the same pivot as the second member, the third disc-like member having a flange carrying a scale adapted to project through the arcuate slot, whereby the movement of the third member relative to the second is

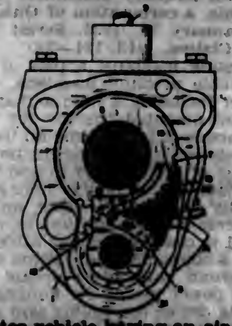
limited by said slot, and a scale on the third member visible in the window in the second member to indicate the relative setting of these members.

2,105,256
CAMERA
Joseph Mihalyi, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey
Application August 11, 1936, Serial No. 95,274
2 Claims. (Cl. 95—44)



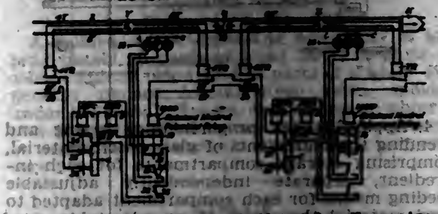
1. In a camera, a sleeve, mounting means supporting the sleeve for rotation on its axis but holding it against axial movement, an outer tubular member surrounding the sleeve and having a screw connection therewith, an axial extending key-way in said mounting means, a key on the outer tubular member slidably engaging said key-way to hold said tubular member against rotation, a lens detachably fastened to said tubular member, means for rotating said sleeve relative to the mounting means, whereby axial movement is imparted through the screw connection to said tubular member and the lens, a range finder including a movable optical member connected to said tubular member, a view finder adjustable to alter its field of view, and means for adjusting the view finder in accordance with the rotational movement of said sleeve to compensate for parallax between said finder and the lens.

2,105,257
STIFFENING RIB FOR SUPPORTING GARMENTS
John V. Moore, Pawtucket, R. I., assignor to Moore Fabric Company, Pawtucket, R. I., a corporation of Rhode Island
Application July 20, 1936, Serial No. 91,522
2 Claims. (Cl. 2—256)



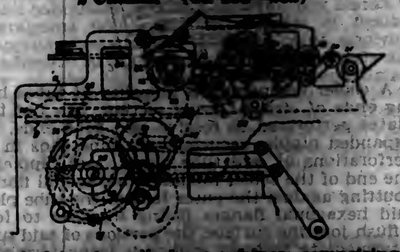
1. A garment stiffening rib formed of an elongated body of solid rubber vulcanized to a firm but pliable condition and having a strip of non-elastic fabric incorporated therein and extending lengthwise thereof.

2,105,258
METHOD OF AND APPARATUS FOR ROLLING ROUNDS
Joseph M. O'Malley, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts
Application November 27, 1933, Serial No. 699,823
12 Claims. (Cl. 80—36)



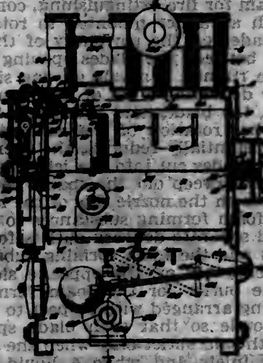
1. Apparatus for the rolling of precision rounds, from stock which is presented in substantially oval cross-sectional shape to the final rolling operation, said apparatus comprising horizontal reducing rolls providing a pass which is slightly "full" horizontally, a restraining guide in advance of said horizontal rolls to maintain the oval section upright in its presentation to said pass, and vertical rolls providing another pass immediately adjacent said first pass, to which other pass the stock is delivered by said first pass with no restraint other than that provided by said guide which presents it to the first pass.

2,105,259
ACCESSORY AIR PUMP FOR MOTOR VEHICLES
Charles H. Oakes, Detroit, Mich.
Application April 24, 1935, Serial No. 18,034
12 Claims. (Cl. 60—56)



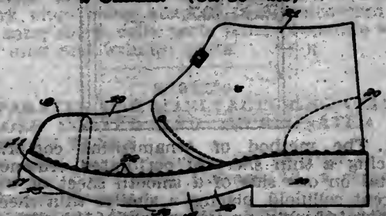
1. A motor vehicle having an air operated accessory and a power plant, the latter including intermeshing power transmitting gears enclosed in a casing containing a bath of lubricant in which one of the gears operates, an air pump adapter chamber disposed in the case and enclosing portions of the gears about their point of mesh in lubricant sealed contact with the enclosed gear teeth to convert the power transmitting gears into an air pump, said chamber having an air port located adjacent the point of mesh, and means connecting the air port to the air operated accessory.

2,105,260
RAILWAY SIGNALING
George R. Pfleterer, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 15, 1936, Serial No. 100,852
13 Claims. (Cl. 246—39)



1. In combination, a section of railway track, a pair of conductors for said section, means governed in accordance with traffic conditions in advance of said section for supplying said conductors with unidirectional current or with alternating current, a signal for said section including a pair of lamps, and means controlled by said pair of conductors for governing said pair of lamps whereby one of said lamps is constantly energized if unidirectional current is supplied to said conductors or said pair of lamps is energized alternately if alternating current is supplied to said pair of conductors.

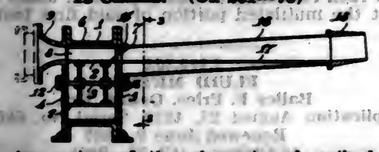
2,105,261
CYLINDER MACHINE
Bruno Pöhler, Kassel, in Hesse, Germany
Application July 14, 1934, Serial No. 735,183
In Germany July 15, 1933
2 Claims. (Cl. 101—232)



1. A drive in cylinder machines, comprising a carriage, a rack for said carriage, an impression cylinder, a multilated toothed rim on the circumference of said cylinder, said rim being engaged by said rack to bring about a revolution of the impression cylinder, a second toothed rim on said impression cylinder, a movably disposed toothed segment, means comprising eccentrics and a roller lever for lifting and lowering said toothed segment and additional eccentrics and a lever for imparting to said toothed segment a slowly starting and stopping oscillatory motion and bringing it into engagement with the second toothed rim on the impression cylinder to alternately rotate the cylinder with said carriage, whereupon said toothed segment by said means initiates slow rotation of the impression cylinder and the rack engages the other toothed rim on the impression cylinder and said toothed segment by said means is lifted out of the second rim and the carriage alone completes the first rotation of the impression cylinder and before completion of the first revolution of the impression cylinder the toothed segment by said means engages again the second toothed rim and causes the second revolution of the impression cylinder, said means retarding the motion of the toothed segment to gradually stop the impression cylinder after the second revolution, said carriage and rack returning to initial position under and past the mutilated portion of said first toothed rim.

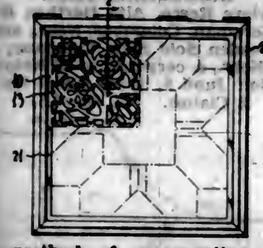
2,105,262
FLUID METER
Bailey E. Price, Dallas, Tex.
Application August 21, 1933, Serial No. 686,156
Renewed June 9, 1937
16 Claims. (Cl. 73—209)

1. In a meter of the type described, in combination, an unbalanced dump bucket, a float adapted to float in the liquid therein, means holding the bucket in position and released by the float on reaching a predetermined height in the bucket, and means resisting movement of the float with a force substantially proportional to the elevation thereof.



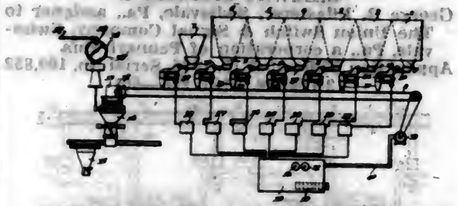
2,105,263
INDUSTRIAL SHOE
Mae Genevieve Reece, Alta Berthea Reece, and Gus E. Bergman, Columbus, Nebr., assignors to Reece Wooden Sole Shoe Company, Inc., Columbus, Nebr., a corporation of Nebraska
Application June 8, 1936, Serial No. 84,200
2 Claims. (Cl. 36—3.5)

1. A shoe comprising a wooden sole, an upper, a non-flexible metal toe beneath said upper, said



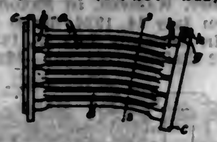
sole having a rabbet extending around its upper edge, said upper being attached to the lower face of said rabbet, the front wall of said metal top being substantially perpendicular to the top toe-surface of said sole, said front wall having its lower edge inclined inwardly and formed to a relatively sharp lower edge, said lower edge engaging the vertical wall of said rabbet.

2,105,264
APPARATUS FOR THE GENERATION OF FOAM FOR FIRE EXTINCTION
Herbert Vernon Reed, London, England
Application July 26, 1935, Serial No. 33,372
In Great Britain August 1, 1934
12 Claims. (Cl. 261—76)



1. Apparatus of the character described for making foam for fire extinguishing, comprising a casing with a runner mounted to rotate freely therein, blades on the periphery of the runner, the spaces between the blades opening on either side of the runner, a nozzle on one side of the runner for delivering a jet of liquid to the runner blades, the blades and the nozzle being disposed so that rotation of the runner is caused without substantially reducing the energy of the jet and the blades cut into the jet to form liquid pistons which sweep out the spaces between the blades, inlets on the nozzle side of the runner for admitting foam forming substances to the blade spaces, and separate delivery outlets for the liquid pistons and the foam forming substances to a mixing chamber on the opposite side of the runner, the outlet for the foam forming substances being arranged with respect to the inlets and the nozzle so that each blade space is in register with said outlet only when the space has passed the inlets and while a liquid piston is travelling along the particular space.

2,105,265
ORNAMENTATION
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts
Application September 9, 1937, Serial No. 163,120
12 Claims. (Cl. 41—35)



1. The method of ornamenting comprising placing a thin sheet of perforated ornamental metal on one side of a smooth sheet of transparent celluloid, placing a similar thin sheet of perforated metal on the surface of the other side of the celluloid with the perforations of the metal sheets in register, and pressing the assembly between heated polished smooth dies till the metal sheets enter the celluloid and become level with its surfaces respectively.

2,105,266
METHOD OF AND APPARATUS FOR PROPORTIONING AND BLENDING GLASS BATCH MATERIALS AND THE LIKE
William Stanley Rendall, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application October 21, 1936, Serial No. 106,648
12 Claims. (Cl. 49—62)

4. Apparatus for proportioning, mixing and blending the ingredients of glass batch material, comprising storage compartments for each ingredient, separate independently adjustable feeding means for each compartment adapted to feed material therefrom at an adjustable, predetermined, constant rate, adjustable automatic control means to initiate, continue and terminate the operation of each feeder simultaneously, means for continuously collecting the several materials delivered by said feeders, means for continuously mixing the collected materials, said control means serving to initiate, continue and terminate the operation of the collecting and mixing means simultaneously with the operation of each feeder.

2,105,267
CHARGE COOLER
John Hegg Robertson, London, England
Application February 26, 1936, Serial No. 65,899
In Great Britain March 13, 1935
1 Claim. (Cl. 257—248)

A cooler comprising a plurality of tubes having ends of circular cross section, two flat tube plates perforated to receive said tube ends, and expanded nipples securing said tube ends in the perforations of said tube plates, said nipples at one end of the cooler including hexagonal flanges abutting against the outer face of the tube plate, said hexagonal flanges fitting together to form a flush jointing surface, the portions of said tubes intermediate between said ends being formed to stream line section, and all of said tubes having the axes of said stream-line intermediate portions parallel to each other.

2,105,268
LAMINATED PRODUCT
Adrian A. Robinson, Chicago, Ill., assignor to Wilson & Co., Inc., a corporation of Delaware
Application October 17, 1935, Serial No. 45,501
1 Claim. (Cl. 154—45.9)

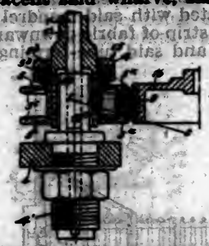
A laminated product comprising a plurality of layers of porous fabric impregnated substantially

uniformly throughout with a binder comprising soluble blood and a synthetic resin, the binder when dry being thirty to eighty per cent by weight of the fabric and the blood being from

fifty to ninety per cent of the binder, the layers being consolidated under heat and pressure to produce a tough flexible highly waterproof laminated product.

2,105,270
MOLDING POWDER AND PRODUCT
Adrian A. Robinson, Chicago, Ill., assignor to Wilson & Co., Inc., a corporation of Delaware
No Drawing. Application October 17, 1935, Serial No. 45,502
1 Claim. (Cl. 106—22)

A molded article consisting essentially of approximately 50 parts of wood flour, 25 parts of soluble animal blood, and 25 parts of a water dispersible phenol formaldehyde resin, molded under heat and pressure, and having an absorption for water of not more than fifteen percent on exposure for twenty hours at room temperature.



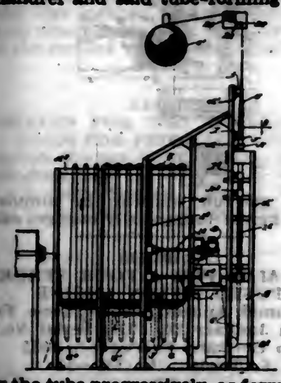
2,105,272
METHOD OF MAKING BOXES
George B. Scheffey, Riverside, N. J., assignor, by mesne assignments, to Beat Blank Corporation, New York, N. Y., a corporation of Delaware
Application June 12, 1936, Serial No. 84,830
12 Claims. (Cl. 93—36)

1. The method of carrying out a box wrapping operation by means of automatic machinery which comprises feeding a series of box blanks to a wrapping point, feeding a series of flexible wrapping sheets to said wrapping point, applying an adhesive so that the sheets will adhesively adhere to the blanks respectively, immediately thereafter registering the sheets with the blanks respectively, and immediately thereafter folding portions of each blank, and the applied sheet adhering thereto through an angle approaching 180° relatively to other portions of the blank.

2,105,271
WHARVE FOR SPINDLES FOR SPINNING, TWISTING, WINDING, AND SIMILAR MACHINES
Carlo Schleifer, Novara, Italy
Application August 14, 1936, Serial No. 96,095
In Italy May 13, 1936
4 Claims. (Cl. 118—47)

1. In a belt driven device, the combination of a rotatable spindle, a wharve supported on said spindle, means for preventing rotation of said wharve with respect to said spindle, said means permitting axial movement of said wharve with respect to said spindle, a rounded convex annular protuberance carried by the periphery of said wharve, a belt, means for guiding said belt to a position adjacent said wharve, said wharve being axially movable whereby the annular protuberance thereof tangentially engages said belt.

2,105,273
SLEEVE VALVE FOR A FOUR STROKE OPPOSED PISTON ENGINE
Ernst Schmid, Annecy, Haute-Savoie, France
Application January 22, 1936, Serial No. 60,288
In Germany February 5, 1935
6 Claims. (Cl. 123—51)



6. In an internal combustion engine of the four-stroke opposed piston type, the combination comprising a common cylinder having the same inner cross section throughout and having axially spaced inlet and exhaust ports, a sleeve valve having a series of ports in a single plane adapted to cooperate with said inlet and exhaust ports, said sleeve valve being slidable axially within said cylinder, said ports in said valve alternately permitting communication between said inlet and exhaust ports to the interior of said sleeve valve, pistons reciprocating in opposed directions within said sleeve valve, piston rings on said pistons, said ports in said valve being so positioned that they remain between said piston rings and are not wiped thereby, and spark plugs located in said cylinder wall intermediate said exhaust and inlet ports and said spark plugs being adapted to be uncovered by the same sleeve valve ports which cooperate with the inlet and exhaust ports.

2,105,273
APPARATUS FOR MANUFACTURING CELLULOSE COATED AND IMPREGNATED FIBROUS TUBES
John Paul Smith, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application June 8, 1935, Serial No. 25,935
24 Claims. (Cl. 92—52)

1. Apparatus for forming coated tubes com-

prising: a precipitating bath tank; a tubular mandrel depending into said tank; tube-forming means associated with said mandrel; and means for drawing a strip of fabric downwardly between said mandrel and said tube-forming means and

passing the tube progressively, as formed, through a precipitating bath in said tank, the tube having thereon a cellulose-derivative-coating which is subjected to precipitating action in passing through said bath.

2,165,274

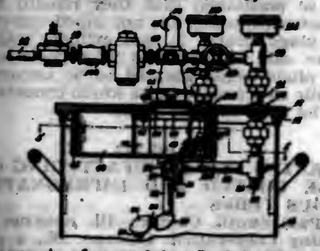
PROCESS OF PREVENTING YELLOW STAIN IN PHOTOGRAPHIC PREPARATIONS AND REGULATION OF THE HALOGEN CONTENT THEREOF

Albert Steigmann, Luxemburg-Ville, Luxemburg, assignor to Felix Sager & Dr. Gessler Gesellschaft mit beschränkter Haftung, Heidelberg, Germany, a firm of Germany

No Drawing. Application November 7, 1936, Serial No. 109,792. In Germany December 13, 1935

14 Claims. (Cl. 95—88)

1. The method of preventing yellow stain and regulating the halogen ions in light sensitive silver halide emulsions, which consists in treating said emulsions with a solution containing a soluble iodonium compound.



2,165,275

FLOCK APPLYING APPARATUS

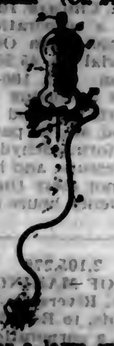
Wayne B. Thompson, Winchester, Mass., assignor to Spray Engineering Company, Somerville, Mass., a corporation of Massachusetts

Application February 21, 1934, Serial No. 712,286

1 Claim. (Cl. 91—6)

An apparatus for applying flock having, in combination, a nozzle, a container for the flock, an outlet from the container in communication with the nozzle, means for introducing air under pressure into the container and discharging the air against the flock to impart movement thereto, means for varying the air pressure, and separate means for varying the velocity of the air flow through the outlet.

2,165,276



SUPPORT FOR LAWN SPRINKLERS

Harry P. Treesdly, New York, N. Y., assignor, by mesne assignments, to Samuel Scrivener, Jr., Washington, D. C.

Application April 19, 1933, Serial No. 666,967

Renewed May 16, 1936

4 Claims. (Cl. 242—37)

4. A support for a lawn sprinkler comprising a plate-like member, an integral marginal flange on said member having openings therein, a pipe extending through certain of said openings, metallic straps extending across said pipe and welded to said plate-like member, and a bracket member disposed in another of said openings.

2,165,277

PROCESS OF WATER PURIFICATION

Oliver M. Urbain, Columbus, Ohio, assignor to Charles H. Lewis, Harpster, Ohio

No Drawing. Application November 25, 1936, Serial No. 112,227

7 Claims. (Cl. 210—2)

1. A process for purifying organically polluted water comprising initially treating the water with a heavy metal salt and a high valent anion having the property of increasing the cataphoretic velocity of the suspensoids, then separately adding an alkaline buffer to yield a solution having a pH within the range from 6.5 to 7.5, passing the solution to a sedimentation zone, taking off the effluent, and passing the same through a filter charged with an alkaline earth zeolite.

2,165,278

WAVE-STILLING OIL

Johan Leonard van der Minne, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application December 4, 1934, Serial No. 755,952. In the Netherlands December 5, 1933

7 Claims. (Cl. 87—9)

1. A wave-stilling oil composition comprising an extract obtained from treating mineral oil with a selective naphthenic solvent and at least 50% of which is soluble in 98% sulfuric acid, and a carboxylic acid having the property of lowering the surface tension of water.

2,165,279

MULTIPLE DUPLICATING APPARATUS FOR TYPEWRITERS

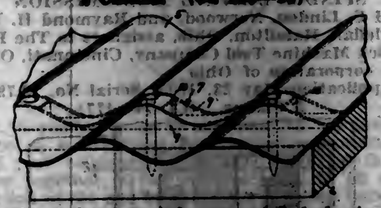
Joseph J. Weber, Chicago, Ill.

Application February 27, 1933, Serial No. 658,792

Renewed October 27, 1937

15 Claims. (Cl. 197—153)

1. A multiple duplicating apparatus, of the character described, arranged in co-operative relation to a typewriting machine having the usual frame, type bars and operating mechanism therefor, and a reciprocable platen carriage together with its platen and mechanism for operating the same, comprising an inclinable, longitudinally movable, revolubly mounted ribbon-takeup-operating mechanism-carrying carriage having a suitable arrangement of spool operating spindles mounted therein, a plurality of pairs of inclinable ribbon guide arms hinged to said carriage, ribbon spools detachably and loosely mounted for rotation on said spindles, an inclinable or folding carrying-carriage mounting frame adapted to be detachably secured to the frame of a typewriting machine, and an auxiliary tension means adapted to simultaneously operate the said carrying-carriage and the ribbon-takeup operating mechanism in co-operative relation with the usual mechanism for operating the platen of said machine longitudinally thereof.



2,165,280

REINFORCEMENT

John M. Bast, Lubbock, Tex.

Refiled for abandoned application Serial No. 669,227, May 3, 1933. This application June 26, 1937, Serial No. 150,636

2 Claims. (Cl. 189—18)

1. A reinforcement for corrugated sheet walls comprising an elongated strip having an outstanding flange thereon cut on curves to conform with the curvatures of the corrugated wall, said strip being struck to provide upstanding tongues which form abutments for the said flanges.

2,165,281

POWDER DISPENSER

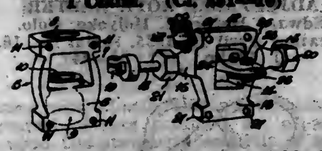
David P. Bower, Montreal, Quebec, Canada

Application April 20, 1937, Serial No. 138,060

14 Claims. (Cl. 221—66)

1. A powder dispenser comprising a casing having in its upper end a powder hopper and having a discharge slot in its lower end; a rotatable dispensing element closely fitting within the walls of the casing between the hopper and slot, said element having powder propelling blades thereon, the plane of the blades being disposed at an acute angle to the axis of rotation of the element,

and said element having a portion adapted in one position to form a closure for said slot; means for normally yieldably retaining the element in position to close the slot; and means for oscillating the element to uncover the slot.



2,165,282

VALVE

Charles M. Dolby, Lawrenceville, Ill.

Application October 4, 1937, Serial No. 167,288

1 Claim. (Cl. 251—10)

A valve comprising an elongated block having its ends shaped for engagement with a wrench, said block having a flat longitudinal side, a recess opening through said flat side, and alined threaded pipe-receiving openings in the block ends communicating with the ends of said recess, one end wall of said recess being relatively distant from the corresponding end of the block and being provided with a valve seat around one of said openings; a second elongated and plate-like block having a flat longitudinal side, a relatively small recess opening through said flat side, and integral outwardly projecting alined tubular bearing necks at opposite sides of said recess, a cap threaded on the outer end of one of said necks, a stuffing box threaded on the outer end of the other of said necks; a rock shaft permanently mounted in said tubular necks and projecting beyond said stuffing box, an arm having one end secured to said rock shaft within said recess of said second block, said arm projecting permanently from this recess beyond said flat side of said second block and having a valve on its projecting end; and means detachably securing said second block to the first mentioned block with the flat sides of the two blocks in abutting relation; said arm extending into said recess of said first mentioned block and having its valve disposed in this recess in operative relation with said valve seat.

2,165,283

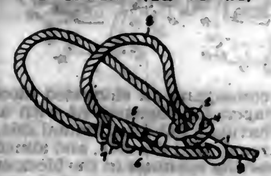
HEAT RESISTANT ALLOYS

Willi Gödecke, Witten-Ruhr, and William Guertler, Berlin-Dahlem, Germany, assignors to Degea Aktiengesellschaft (Auergesellschaft), Berlin, Germany, a corporation of Germany

No Drawing. Application August 4, 1936, Serial No 94,236. In Germany August 9, 1935

2 Claims. (Cl. 75—124)

1. A heat resistant alloy which consists of about 1–10% of aluminum, about 20–35% of chromium, about .001–5% of thorium and the remainder substantially of iron.

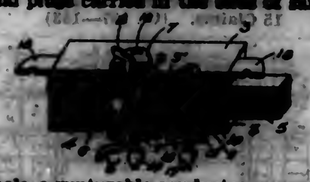


2,105,224
STABILIZATION OF UNSATURATED CARBOCYLIC COMPOUNDS
Herbert P. A. Groll and George Hearne, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 24, 1936, Serial No. 65,412
4 Claims. (Cl. 23—250)

1. A composition of matter comprising a compound of the formula

$$CH_2{=}C{-}CO{-}X$$
$$|$$
$$R$$

wherein R is a substituent of the class consisting of the methyl, ethyl, butyl, phenyl, carbinol and chloromethyl groups and X is a substituent of the group consisting of H and OH, stabilized by the presence of from about 0.002% to about 2% of a phenolic compound of the group consisting of hydroquinone and pyrogallol.



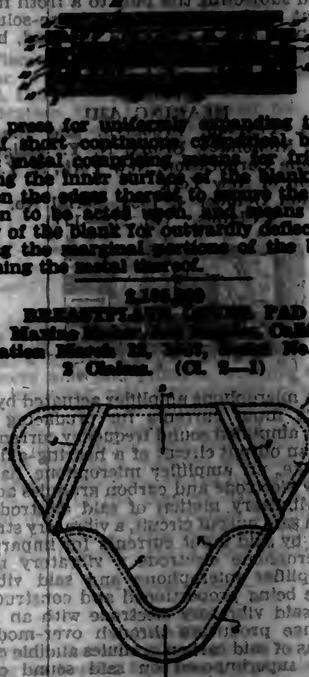
2,105,225
ADJUSTABLE ROPE HALTER
Edward Hathcote, Holyoke, Colo.
Application April 16, 1935, Serial No. 16,682
1 Claim. (Cl. 54—24)

A halter of the class described comprising a single length of flexible material looped to form a headpiece, one free end of the flexible material being bent upon itself to form a loop at the terminal of the headpiece, said free end having loops formed thereon to adjustably secure the same to a portion of the headpiece to form a nose piece, and means for retaining the flexible material in halter-forming position, said means comprising a substantially vertically arranged intermediate shank part, a closed loop-forming part extending upwardly and outwardly from the shank part, said loop-forming part having the loop in the flexible material pass therethrough with the loop partly passing around the shank part, and a substantially oval-shaped loop-forming part connected to the lower end of the shank part, said second-mentioned loop-forming part being arranged at a less inclination from the vertical shank part than is the first-mentioned loop-forming part, whereby the second-mentioned loop-forming part is adapted to receive the said other free end of the flexible material to automatically adjust the length of the headpiece and the nose piece of the halter.

2,105,226
CIRCUIT BREAKER
Burton F. Jennings, Belleville, Ontario, Canada
Application February 21, 1936, Serial No. 65,162
1 Claim. (Cl. 200—53)

An impact electric circuit breaker comprising a body portion formed with a longitudinal slot terminating in a wedge-shaped end within the body, a plunger slidable in said slot, the walls of said slot adjacent the wedge shaped end having a transverse hole therethru said hole passing thru the slotted portion, said plunger having its ends formed respectively with a wedge shaped termination designed to fit the wedge shaped end of said slot and the other end extending beyond the body portion to receive an impact, removable terminal plugs carried in the ends of said transverse hole, a rupturable conductor connecting the ends of said terminal plugs and extending across the slot in the path of the plunger, a shearing pin passing thru the body portion and plunger to determine the force necessary to operate the circuit breaker and means for sealing said apparatus against unauthorized tampering.

2,105,227
COLLAR STUD TO BE SEWN
Hermann Levy, Berlin-Charlottenburg, Germany
Application May 4, 1937, Serial No. 140,715
In Germany June 19, 1935
1 Claim. (Cl. 24—97)



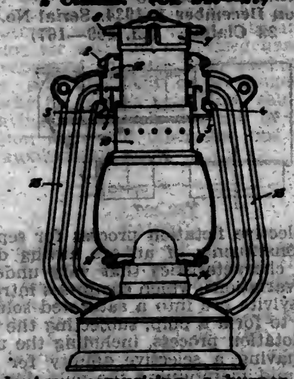
A collar stud comprising in combination a base with upwardly bent rim, a stem hingedly mounted eccentrically on said base, and a head hingedly mounted on the outer end of said stem, said stem when in folded positions lying below the plane of the rim, and said base having holes therein when same can be sewed upon the neck band of a shirt.

2,105,228
SPINDLE DRIVING TRANSMISSION
Carl E. Linden, Norwood, and Raymond H. McClellan, Hamilton, Ohio, assignors to The Fosdick Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio
Application May 22, 1935, Serial No. 22,794
5 Claims. (Cl. 74—477)

1. In a shifting device including a controller shaft to be rotated and a gear carrying yoke to be slidably moved, a lever pivotally mounted, said lever having one end operatively engaging the gear carrying yoke and having its other end bifurcated, a disc mounted on the shaft, said disc carrying a crank pin element adapted to enter said bifurcated end of the lever for shifting the lever, a second disc mounted on the shaft, a locking arm as a part of the lever having separate surfaces engageable with the periphery of the last-named disc, said last-named disc including a flattened portion on the same side of the shaft as the crank pin adapted to allow the contact of the last-named disc and the locking arm when the lever is being shifted.

2,105,229
BREASTPLATE PAD
Maxine [illegible], [illegible], Calif.
Application March 18, 1937, Serial No. 130,596
2 Claims. (Cl. 2—1)

1. A combined shield pad for the breastplate of a seamless garment comprising a pad part composed of several layers of fabric sewn together, a fabric piece sewn to an edge portion of the pad and forming a pocket between itself and the pad for receiving a portion of the breast plate and straps of fabric sewn to other edge portions of the pad and extending over portions of the pad for covering other parts of the breast plate.



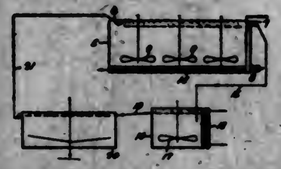
2,105,231
RECORD CARD CONTROLLED MACHINE
Michael Mack, Berlin-Niederschönhausen, Germany
Application March 20, 1933, Serial No. 661,961
In Germany April 14, 1932
8 Claims. (Cl. 235—61)

1. In a machine controlled by perforated record cards having a plurality of superposed record decks, each deck comprising a plurality of adjacent related columns, said perforations in each column representing a single distinct value, entry-receiving means having a plurality of units under the supervision of said record columns and controlled in a subsequent machine cycle in accordance with the result of the analysis in the preceding machine cycle, a common set of analyzing means for said record decks for analyzing all columns in any deck simultaneously and for successively analyzing said record decks deck by deck, a first storing mechanism having a storing unit for each record column in each deck for retaining the result of the analysis wherein the storing units for each record deck constitute one set of storing units, a set of actuating units for said sets of storing units, said actuating units being also common to said plurality of record decks, said actuating units being controlled by the analyzing means for one record column, and means for successively placing different sets

of storing units of said storing mechanism under the control of said common set of actuating units upon the successive analysis of said plurality of record decks, a second storing mechanism also adapted to retain the result of the analysis and having means for controlling said entry-receiving units in accordance therewith, means for causing said first storing mechanism to govern after analysis in said preceding machine cycle and before the entering operation in the subsequent machine cycle said second storing mechanism, means for clearing said second storing mechanism before said governing operation, and means for clearing said first storing mechanism after said governing operation and before control of the first storing mechanism by the analyzing means upon analysis of the subsequent card.

2,105,232
HURRICANE LANTERN
Bruno Nier, Butterfeld, Germany
Application December 9, 1936, Serial No. 114,873
In Germany December 22, 1935
2 Claims. (Cl. 240—49)

1. A lantern comprising, a burner chamber,

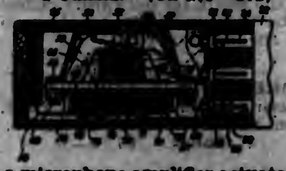


a chimney head, means for supporting said chimney head above said burner chamber comprising tubes extending from the burner to the head to provide passages therebetween, a perforated plate carried by the lower portion of said chimney head, the lower end of said head having openings positioned above said plate whereby air normally passes said perforated plate to the burner chamber through said tubes and sudden gusts of air escape through said openings.

2,105,293
CONVERTIBLE BODY FOR VEHICLES, AND PARTICULARLY FOR MOTOR VEHICLES
Georges Auguste Paulin, Maisons, France
Application January 11, 1934, Serial No. 706,279
In France January 18, 1933
3 Claims. (Cl. 296—107)

1. In a vehicle having a movable rigid roof capable of being withdrawn within a receptacle or spider formed in the fixed part of the car body and provided with a cover closing the said spider when the vehicle is hooded or unhooded, in combination, two first links arranged on each side of the said roof, a second link arranged in the transverse axis of the said roof, these links being pivoted on the one hand to the said roof and on the other hand to the fixed part of the car body, the four pivots of the two first links and of the second link constituting the spices of a four-bar motion, a nut articulated to the said second link, a screw axially moving and engaging in the said nut, first means for rotating the said screw and second means for operating the said cover when it is desired to insert the roof in the said spider or when it is desired to remove it therefrom, the said means being controlled from the same source of power.

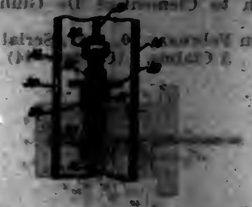
2,105,294
TEMPERATURE CONTROL IN A FLOTATION PROCESS
Arthur J. Wesnig, Golden, Colo., assignor to Potash Company of America, Denver, Colo., a corporation of Colorado
Application December 1, 1934, Serial No. 755,576
23 Claims. (Cl. 209—167)



2. A selective flotation process for separating soluble constituents of an ore having different solubility characteristics that vary under temperature variations, which comprises introducing a halite-sylvite ore into a saturated solution of the same to form a pulp, subjecting the pulp to a froth flotation process, including the use of a reagent having a selective affinity for sodium chloride, and maintaining the pulp during said treatment at a substantially uniform temperature at which the soluble halite particles will not go into solution in the pulp.

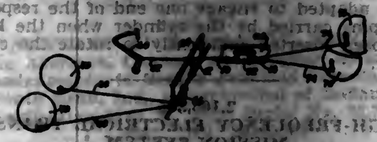
2,105,295
FLOTATION PROCESS
Arthur J. Wesnig, Golden, Colo., assignor to Potash Company of America, Denver, Colo., a corporation of Colorado
No Drawing. Application March 14, 1935, Serial No. 11,000
22 Claims. (Cl. 209—166)

1. A process for the recovery of potassium chloride from halite-sylvite ores by selective flotation, which comprises entering a halite-sylvite ore into a saturated solution of such ore to form a pulp, and subjecting the pulp to a froth flotation treatment in the presence of a brine-soluble alkali resinate and a cation of the lead, bismuth class.



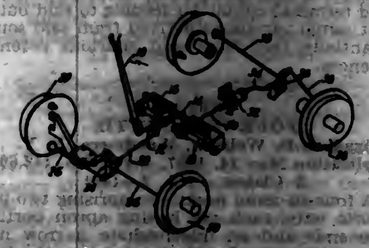
2,105,296
HEARING AID
Harry A. Pearson, Brooklyn, and Emmanuel Christ Niebuhr, Bronx, N. Y., assignors to Sonotone Corporation, New York, N. Y., a corporation of New York
Application October 4, 1934, Serial No. 746,794
4 Claims. (Cl. 179—171)

1. In a microphone amplifier actuated by sound frequency input currents for producing corresponding amplified sound frequency currents supplied to an output circuit of a hearing-aid device or the like, an amplifier microphone having a vibratory electrode and carbon granules actuated by the vibratory motion of said electrode connected in said output circuit, a vibratory structure actuated by said input currents for imparting to said microphone electrode a vibratory motion, said amplifier microphone and said vibratory structure being proportioned and constructed to operate said vibratory electrode with an amplitude range producing through over-modulated vibrations of said carbon granules audible current impulses superimposed on said sound current oscillations, and a condenser unit connected parallel to said amplifier microphone having an impedance of the order of the output impedance at a frequency between 1,000 and 4,000 cycles and an impedance two or more times greater than the output impedance at a frequency between 600 and 1,200 cycles for suppressing said superimposed current impulses without materially impairing the intensity of the sound frequency oscillations supplied to the output circuit incident to said over-modulated vibration.



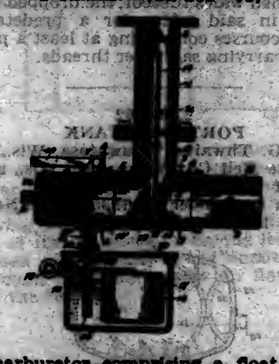
2,105,297
BRAKE
Carl Press, South Bend, Ind.
Application December 7, 1936, Serial No. 114,626
2 Claims. (Cl. 188—79.5)

1. A brake adjuster comprising a socket and a stem extending into the socket, said socket having at least the portion adjacent its open end substantially greater in diameter than said stem, and an adjusting member having a sleeve threaded onto said stem and having a smooth cylindrical exterior rotatably mounted in said portion of the



socket and having a part seated against the end of the socket.

2,105,298
BRAKE
Glyn Pierce Roberts, Birmingham, England, assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application May 1, 1936, Serial No. 76,367
In Great Britain May 1, 1935
10 Claims. (Cl. 188—10)

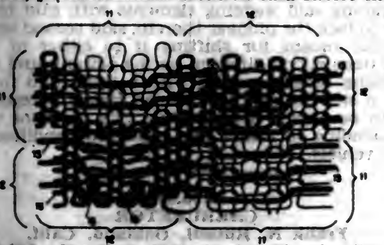


1. A load limiting device comprising a plunger formed with a cone-shaped portion, a sleeve, a housing, a spring effectively interposed between said sleeve and said plunger, wedging elements, means including said cone-shaped portion and operated by relative movement between said plunger and said sleeve for forcing said wedging elements into contact with said housing to lock the sleeve thereto a member mounted crosswise of the sleeve beyond the end of the plunger, a cap over the end of the housing having a seat for the end of a conduit, a conduit having its end in said seat, and a cable extending through the conduit and through said cap and secured to said member.

2,105,299
BRAKE
Glyn Pierce Roberts, Birmingham, England, assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application October 16, 1936, Serial No. 106,025
In Great Britain October 16, 1935
1 Claim. (Cl. 188—195)

A load limiting device for a vehicle brake comprising a plunger, a sleeve, a housing, a second sleeve adjustably threaded in the first sleeve, a spring effectively interposed between the plunger and the second sleeve, wedging elements, said plunger having means operated by relative movement between said plunger and said sleeves for engaging said wedging elements with said housing to lock the plunger thereto, said second sleeve having means for shifting it to either of two positions giving different spring actions, and said housing being provided with a projection forming a stop for said last named means permitting it to be moved between said two positions corresponding to loaded and unloaded condition of the vehicle.

2,105,300
CARBURETOR
Frank N. Russell, Oakland, Calif.
Application March 12, 1937, Serial No. 130,636
4 Claims. (Cl. 261—78)

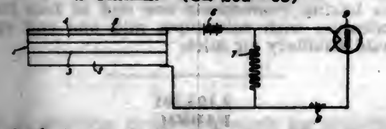


1. A carburetor comprising a float chamber, means for directing gasoline into said chamber, a valve for controlling the action of said means, a float for controlling the action of said valve, a plurality of outlet tubes extending from near the bottom of said chamber to a point exteriorly of said chamber, the ends of said tubes exteriorly of said chamber being arranged in different planes, means for directing air under pressure across the tops of said ends for drawing gasoline from said tubes and vaporizing the gasoline at the same time, means forming a mixing chamber for said gasoline and air, an outlet tubular member adapted to lead to the intake manifold of an internal combustion engine, means forming an auxiliary air inlet leading into said outlet tubular member, a baffle between said vaporizing chamber and said air inlet means, and a plurality of pipes of different lengths extending from said abutment into said outlet tubular member for mixing air with the vaporized gasoline and any unvaporized gasoline from said vaporizing chamber, said abutment being formed with a passageway for each of said pipes, said passageways having respectively one end in free communication with said pipes and one end open to said auxiliary air inlet.

2,105,301
FABRIC
Samuel Saftlas, New York, N. Y., assignor to Julius Kaplan and Selig Kaplan, co-partners doing business as Pearmont Knitting Mills, Brooklyn, N. Y.
Application October 10, 1936, Serial No. 104,981
2 Claims. (Cl. 66—190)

1. A fabric comprising a basic knit portion formed of thread of a predetermined size, filler

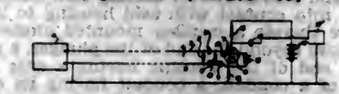
threads of a different predetermined size undulating between courses and incorporated into said basic knit portion in predetermined courses thereof, predetermined areas in said fabric having tight-stitch held dropped stitches therein in predetermined wales thereof, the dropped stitches extending in said wales for a predetermined number of courses comprising at least a plurality of courses carrying said filler threads.



2,105,202
PORTABLE TANK
Frederick G. Thwaits, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 11, 1935, Serial No. 40,053
10 Claims. (Cl. 220—71)

1. A portable tank comprising, an elongated shell having substantially elliptical transverse cross-section, a bracing member secured to and extending transversely of the interior of said shell, a substantially circular brace disposed centrally within and attached directly to the upper and lower portions of said member, and other braces interposed between the opposite sides of said circular brace and the corresponding sides of said member.

2,105,203
PHOTOELECTRIC DEVICE
Willem Christiaan van Geel, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application October 6, 1934, Serial No. 747,253
In Germany September 25, 1933
2 Claims. (Cl. 201—63)



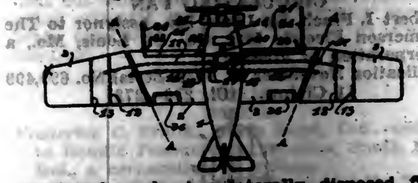
1. A photo-conductive cell comprising a metallic conductive base, a light-responsive semi-conductive layer thereon, a transparent second conductive layer, and a barrier layer of artificial resin separating the light-responsive layer and the second conductive layer, the said barrier layer having a thickness of not over 10 microns and a resistance of at least 100,000 ohms.

2,105,204
ELECTRIC LOCK
William Wagner, Brooklyn, N. Y., assignor of one-fifth to Clementine De Giuli, Brooklyn, N. Y.
Application February 20, 1937, Serial No. 126,739
5 Claims. (Cl. 200—44)

1. A lock of the character described including a casing, cylinder and tumblers, a pair of spaced pins carried by the cylinder but insulated therefrom, said pins extending into the keyway of the cylinder and to a position beyond the periphery of the cylinder, an insulated contact continually engaging one of said pins, an insulated contact positioned in the path of movement of the other of said pins, and a key of insulating material formed with a pair of electrically connected contacts adapted to engage one end of the respective pins carried by the cylinder when the key has been inserted sufficiently to rotate the cylinder.

2,105,205
HIGH-FREQUENCY ELECTRICAL TRANSMISSION SYSTEM
Eric Lawrence Casling White, Hillingdon, England, assignor to Electric & Musical Industries Limited, Middlesex, England, a company of Great Britain
Application August 30, 1935, Serial No. 38,529
In Great Britain August 31, 1934
7 Claims. (Cl. 178—69)

1. A high frequency electrical transmission system comprising a transmission line having two conductors, a source of electrical signal variations connected between said conductors, said system being of the kind that spurious potential differences can be imposed between said conductors and ground by uncontrolled outside agencies, a thermionic valve terminal circuit having two input terminals arranged at a point remote from said source, non-inductive coupling means arranged between said conductors and said input terminals, an output circuit having a point therein connected to ground, and means forming part of said terminal circuit for feeding to said output circuit signal variations derived from said source substantially free from said spurious potential differences.

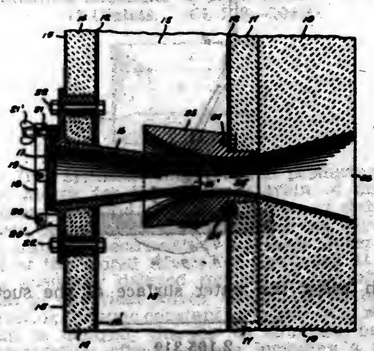


2,105,206
FOUR-IN-HAND TIE
Isadore D. Wolfson, Woodmere, N. Y.
Application May 14, 1937, Serial No. 142,605
3 Claims. (Cl. 2—146)

1. A four-in-hand necktie comprising two plies of fabric only, each ply having apron portions at the ends and an intermediate narrow neck band portion, one of said plies forming the front of the tie and the other the lining and facing at the back of the tie, the said plies being of substantially the same shape and of approximately

equal length, and said plies united at and adjacent the apron ends by stitching, and the intermediate portions folded to overlap and united by slip-stitching.

2,105,207
AIRPLANE WITH FLOATING WINGS
John Akerman, Chicago, Ill., assignor, by mesne assignments, to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application May 27, 1935, Serial No. 23,702
1 Claim. (Cl. 244—46)



An airplane having laterally disposed fixed wings, ailerons at the tips of said fixed wings for lateral control, movable wings hinged to the outer extremities of said fixed wings, to swing about axes that converge aft of the airplane, whereby a downward swing increases the angle of incidence, and an upward swing decreases it, a release mechanism operable by the pilot for simultaneous release of said movable wings, leaf springs tending to hold said movable wings at a certain angle of incidence, dampers interposed between said fixed wings and said movable wings, and means to manually vary the angle of incidence of said movable wings.

2,105,208
MOMENTUM ACTUATED SLED BRAKE
Robert N. Brickner, New York, N. Y.
Application December 9, 1935, Serial No. 53,526
15 Claims. (Cl. 188—3)

1. A gravity actuated sled having base runners and a braking skid mounted between the runners and having a bearing surface exceeding that of the runners, said skid being pivotally supported on the sled to normally be out of engagement with the road when the runners are engaged therewith and to be forced rearwardly when released from the normal position to engage the road commencing at one end thereof to disengage the runners from the road.

2,105,209
FURNACE
Hugh E. Carleton, Carteret, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application July 7, 1936, Serial No. 89,287
18 Claims. (Cl. 126—190)

2. In a furnace having an air duct outside at least one wall thereof, means for observing combustion and internal furnace conditions comprising a nozzle in a wall of the furnace, and a sight tube having a tapered portion extending through the wall of the air duct and having its inner end so disposed with respect to the nozzle that fluid flow through the latter causes air flow inwardly through the tube.

2,105,210
AGGLUTINANT
Isidor Chesler, New York, N. Y., assignor to Eagle Pencil Company, a corporation of Delaware
No Drawing. Application April 14, 1934, Serial No. 720,378
22 Claims. (Cl. 106—10)

1. A physically and chemically heterogeneous agglutinating material substantially composed of diversely and partially etherized cellulose of the character, presenting in aqueous admixture, small stringly structures of less soluble character distributed in a more soluble homogeneous carrier.

2,105,211
SPEED INDICATOR FOR WATERCRAFT
Jan Carl Clason, Stockholm, Sweden, assignor to Aktiebolaget Axmega Agenturer, Stockholm, Sweden
Application April 4, 1934, Serial No. 719,053
In Sweden April 7, 1933
4 Claims. (Cl. 73—123)

1. Speed indicator for water craft having a suction head adapted for being placed on the outside of a vessel below the water line, a vacuum meter and a conduit connecting the suction head with the vacuum meter, said suction head being provided with a passage communicating with the conduit and ending in a port in the outside of the head, said head being streamlined and said port being located on the top of the streamlined head, which lets the water pass past the port at forward as well as at backward motion of the vessel, there being an opening for admission of air in the conduit and means for adjusting the size of the air opening, a constriction in the conduit at a point between the opening and the vacuum meter, said vacuum

meter having means for compensating for differences in pressure due to the differences in

depth below the water surface of the suction head.

2,105,212
PALLADIUM NICKEL RUTHENIUM ALLOY
Sidney Cohn, New York, N. Y., assignor to Sigmund Cohn, New York, N. Y.
No Drawing. Application October 20, 1937, Serial No. 171,642
2 Claims. (Cl. 75—172)

1. An alloy comprising palladium, nickel and ruthenium in substantially the proportion of ninety per cent (90%) to ninety-eight per cent (98%) palladium, one per cent (1%) to nine per cent (9%) nickel, and nine per cent (9%) to one per cent (1%) ruthenium.

2,105,213
CONTAINER
Marion M. Cunningham, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application May 11, 1936, Serial No. 79,860
4 Claims. (Cl. 206—65)

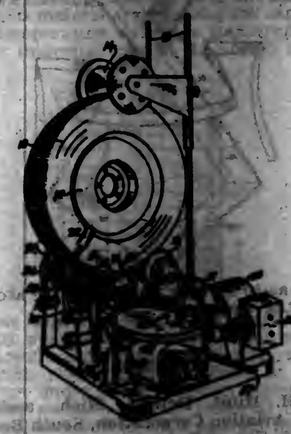
1. A securing member for brake shoes or the like comprising a flexible metallic plate adapted to be fitted to the convex surfaces of a stack of shoes and having securing ears adapted to be bent into securing relation to the shoes to maintain them in alined relation.

2,105,214
BALLCOCK
James F. Duncan and Edward H. Barlow, Waterbury, Conn.
Application May 2, 1934, Serial No. 723,460
7 Claims. (Cl. 137—164)

1. A device of the character described, including in combination a valve casing having an inlet connection and also having a discharge connection and a valve for controlling the inlet connection to control the passage of water through the valve casing to the discharge connection, means for actuating the valve including a bracket supported upon the casing, a valve operating lever pivotally connected to the bracket, one arm of the lever having an operative connection with the valve and the other arm of the lever being elongated, an actuating member pivotally connected to said bracket and adapted to be connected to a float for operation thereby, said actu-

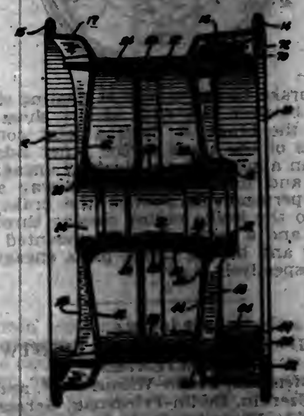
ating member having an arm extending upwardly therefrom provided with an aperture therethrough to receive the longer arm of the first mentioned lever and adapted to engage the upper and lower edges of the same when the float rises or falls so as to cause said first mentioned lever to operate the valve.

2,105,215
CIRCULATING FAN
Herbert L. Finch, St. Louis, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a corporation of Missouri
Application November 24, 1933, Serial No. 699,499
11 Claims. (Cl. 230—273)



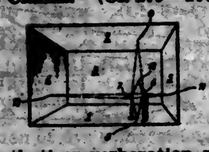
1. In a circulating fan including a motor and an impeller secured to the shaft of the motor, a base, a support having a plurality of loop members at least one of which is directly clamped thereto, a plurality of transverse members joining said loop members, such of said loop members as are clamped to the base, and said transverse members being resilient and of relatively small cross section to absorb vibration from the motor and impeller, and being fabricated to form a guard for the impeller, and a plurality of flexible members secured to one of said loop members and to the motor for supporting the motor therefrom.

2,105,216
TIRE CUTTING MACHINE
Herbert J. Fleming, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application June 25, 1935, Serial No. 28,230
14 Claims. (Cl. 90—15.1)



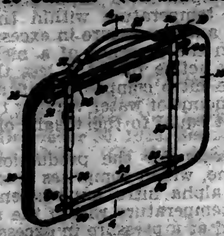
1. In a tire slotting machine, a tire having a

road engaging surface, a single source of power, a cutting element, yielding means urging the cutting element into engagement with the tire, means to prevent the cutting element from cutting beyond a predetermined depth, means to move the cutting element transversely across the



road engaging surface of the tire, a flywheel indexing means operated by said power means to rotate the tire a proper amount to receive the next cut when the cutting element approaches either extreme position, a manually operable brake associated with the flywheel to stop the machine.

2,105,217
WHEEL
Frederick C. Frank, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application November 19, 1934, Serial No. 753,593
4 Claims. (Cl. 301—6)

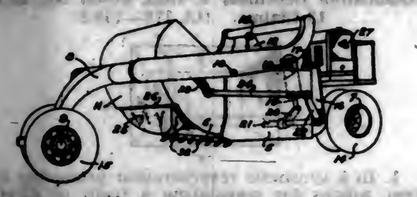


1. A drop-center airplane wheel comprising two main cast sections, a hub portion carried by each section, screw threads formed in a portion of one of said hub sections, locking means including a threaded sleeve having an abutment slidable through a portion of the other of said hub sections and engaging the threads in said hub section, and means including a pin to lock the sleeve against rotation, relative to said other hub section.

2,105,218
SYNTHETIC REVERBERATION SYSTEM
Alfred N. Goldsmith, New York, N. Y.
Application December 6, 1935, Serial No. 53,159
13 Claims. (Cl. 179—100.2)

1. In a synthetic reverberation producing system, means for translating a train of directly propagated sound waves into a train of electrical waves, electrical means for storing the effects of the train of electrical waves, means under control of the stored effects for producing at least two unequally delayed replicas of the original train of electrical waves, means for accurately adjusting the time constant by which each replica train is delayed, thereby to simulate natural reverberation effects, means including a mixer circuit for obtaining a composite wave train the components of which include the original train and the replica trains, and means for so controlling the amplitudes of the respective replica trains that they are caused to simulate successive echo effects in an auditorium.

2,105,219
BAG
Charles L. Hedden, Newark, N. J., and Nicholas Cherkasoff, New York, N. Y.
Application November 18, 1932, Serial No. 643,568
10 Claims. (Cl. 224—46)



6. A bag suitable for carrying as a knapsack and provided with a slide fastener closure at one end and a slide fastener closure across the back of the same, said bag having loops at the upper edge and at the lower portion of the same and carrying straps engaged at opposite ends with said upper and said lower loops and thereby adapted to be passed over the shoulders and beneath the arms for carrying purposes, leaving both the end slide fastening and the back slide fastening accessible for use without removing the bag from said supported position on the shoulders.

2,105,220
SCRAPER
Julius P. Heil, Milwaukee, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 25, 1935, Serial No. 41,972
1 Claim. (Cl. 37—141)

In a scraper, a bowl provided with an inclined bottom having a front substantially vertical end

surface movable along the ground, a plate of uniform transverse cross-section secured to said bottom and having a continuous rectilinear scraping edge provided with a more abruptly inclined elevating surface projecting forwardly beyond said bowl end, a plurality of laterally spaced teeth each having a recess snugly fitting the adjacent

forwardly projecting plate edge portion, and common fastening means for securing said plate and said teeth to said bowl, each of said teeth having an elevating surface inclined less than the elevating surface of said scraping edge and also having a rear portion abutting directly against said bowl end to relieve said attaching means of shearing stress.

2,105,231
HYDROGENATION OF ALPHA-NITRONAPHTHALENE

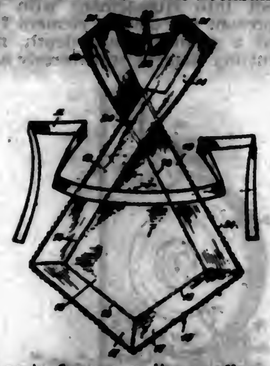
Clyde O. Henke, Wilmington, Del., and Roland George Benner, Carneys Point, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 19, 1935, Serial No. 45,826

11 Claims. (Cl. 260—130.5)

3. The process for the production of alpha naphthylamine, which comprises reacting in the liquid phase alpha nitro naphthalene with hydrogen at a temperature within the range of 75 to 110° C. and a pressure in excess of 350 lbs. per sq. in., in the presence of a nickel catalyst in which the active nickel is less than 2% by weight of the nitro compound and in the presence of an amount of water varying from a trace to an amount equal to the weight of the nitronaphthalene.

8. The process for the production of alpha naphthylamine, which comprises reacting in the liquid phase alpha nitro naphthalene with hydrogen at a temperature within the range of 75 to 110° C. and at a pressure in excess of 350 lbs. per sq. in., in the presence of a nickel catalyst in which the active nickel is less than 2% by weight of the nitro compound and in the presence of an amount of water varying from a trace to an amount equal to the weight of the nitronaphthalene and an alkaline substance in an amount less than 3% by weight of the nitro compound.



2,105,233
APRON

Florence F. Hert, New York, N. Y.

Application December 18, 1936, Serial No. 116,460

2 Claims. (Cl. 2—48)

1. In an apron, a bib portion and a pair of neck-encircling members extending upwardly from adjacent the top of the bib portion so as to cross over each other and extend upwardly at diverging angles, said members being free from connection at the points of crossing and being connected together for only a portion of the distance of their width at their ends so as to be adjustable to various sizes, and said members being formed with downwardly depending flaps adapted to be inserted in the neckband of a gar-

ment so as to form a unitary collar around the neck of the wearer.

2,105,282
BRAKE

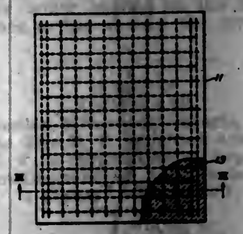
George H. Hunt, Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Original application September 16, 1933, Serial No. 689,782, now Patent No. 2,074,727, dated March 23, 1937. Divided and this application February 20, 1936, Serial No. 66,831

2 Claims. (Cl. 188—78)

1. A brake having a pair of floating shoes, an anchor between the ends of the shoes at one side of the brake, a floating joint connecting the ends of the shoes at the other side of the brake, an applying lever pivotally engaging said anchor and formed with a slideway approximately perpendicular (when the brake is applied) to the brake radius passing through the anchor, and a device movably mounted in said slideway and having thrust parts engaging said shoes respectively.

2,105,324
METHOD OF PRODUCING LIGHTWEIGHT MATERIAL



Erik Hüttemann, Berlin-Wilmersdorf, and Wolfgang Czernin, Berlin-Friedenau, Germany, assignors to Frederick O. Anderegg, Forest Hills Boro, Pa.

Application April 28, 1934, Serial No. 722,324

In Germany August 16, 1933

3 Claims. (Cl. 18—48)

1. The method of producing light weight artificial material, which comprises intimately intermixing with water pulverized calcium oxide or hydroxide and siliceous materials in proportion varying from about equal parts by weight of the calcareous and siliceous materials to about one part of calcareous material to about three parts of siliceous material, the proportion of water by weight exceeding the weight of the calcareous and siliceous materials, subjecting the same to an elevated temperature to form a thixotropic mass, thereafter intermixing with the stated resulting

thixotropic mass light weight aggregate in a proportion by weight less than the stated weight of the calcareous and siliceous materials, and subjecting such resulting intermixture to elevated temperature under steam pressure, thereby deriving a light weight artificial material of three-dimensional skeleton of solid calcium hydro-silicate reinforced by the stated aggregate, the stated derived artificial material having substantially uniformly distributed pores.

2,105,325
GRAIN SCOURING MACHINE

John A. McBrady, Valley City, N. Dak.

Application January 12, 1936, Serial No. 58,805

7 Claims. (Cl. 53—23)

6. A grain scouring machine including a vertically extending shaft, a plurality of spaced reticulate discs attached to said shaft, one above the other, means operated by the shaft for throwing the grain deposited upon the discs outwardly therefrom by centrifugal force, enclosing means extending about said discs and against which the grain is projected, hoppers for collecting the grain discharged from each of said discs and depositing it upon the discs immediately below the same, funnels disposed below said reticulate discs for collecting the screenings passing through said discs, and means for collecting the screenings from all of said funnels.

2,105,326
DYE SOLUTION

Eugene A. Markish, Jersey City, and Julius Miller, Newark, N. J., assignors to Pharma Chemical Corporation, New York, N. Y., a corporation of New York.

No Drawing. Application December 19, 1933, Serial No. 703,070

18 Claims. (Cl. 8—6)

1. A process for producing a stabilized clear solution of dye compositions which comprises adding an amino acid to a solution of a dye composition consisting of a stabilized diazo compound and a coupling component.

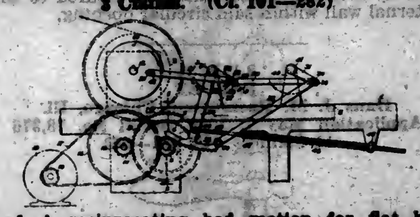
9. A process for producing a stabilized clear aqueous solution of dye compositions which comprises adding urea and diethylene-glycol-monoethyl-ether to a solution of a dye composition consisting of a stabilized diazo compound and a coupling component.

2,105,327
WALL AND CEILING PARTITION TIE

Denis McNamara, New York, N. Y.

Application April 2, 1937, Serial No. 134,501

2 Claims. (Cl. 72—106)



2. In combination a tie strip, a partition, means for securing said tie strip to a wall, and a filling of mortar interlocking with said partition and embedding said strip.

2,105,328
RECIPROCATING BED MOTION FOR FLAT BED PRESSES

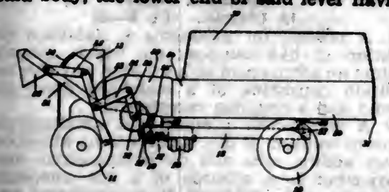
Frederick R. Meltzer, New York, N. Y.

Application December 30, 1936, Serial No. 118,287

3 Claims. (Cl. 101—232)

1. A reciprocating bed motion for flat bed presses including a rack secured to the bed of the press, a gear wheel continually meshing with said rack, means for driving said gear wheel, means actuated by the impression cylinder of the press for actuating said means, and a spring member cushioning the motion of said means.

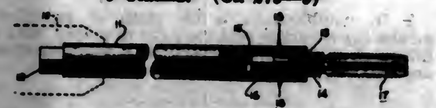
2,105,329
MECHANICAL LOADER AND UNLOADER



Wasyl Orlowsky, New York, N. Y.

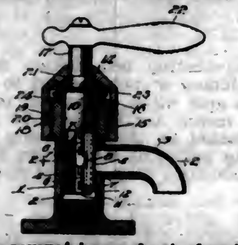
Application March 5, 1937, Serial No. 129,239

2 Claims. (Cl. 214—75)



1. In a device of the class described having a tiltable body pivotally mounted on the rear end of the chassis of the device, a crank rotatably

mounted on the chassis, means for rotating said crank, a link pivotally connected on the end of said crank, the end of said crank being rotatable from a position below a horizontal line through the axis of rotation of said crank to a position above said line, a lever removably and pivotally secured at its upper end to the forward portion of said body, the lower end of said lever having



a longitudinal slot therein, a pin having a head at one end and a screw thread at the other end passing through the adjacent ends of said crank and link, said head having a diametrical key on its outer side, said lever being connected to said crank by registering said key in said slot, said lever when so connected being raised upon upward rotation of the said end of said crank to lift said forward end of said body.

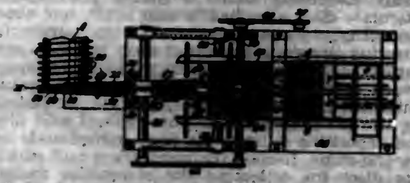
2,105,220
TOOL HOLDER
Walter H. Pagenkopf, La Grange, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application January 10, 1935, Serial No. 1,165
9 Claims. (Cl. 279—9)

1. A tool holder comprising a body section having a circular opening endwise thereof, a spring coil having intermediate convolutions normally disposed in a contracted condition, and terminal convolutions distended to an enlarged diameter and in their distended condition secured to the internal wall within said circular opening.

2,105,231
FAUCET
Hans J. M. Rasmussen, Chicago, Ill.
Application May 7, 1936, Serial No. 78,376
11 Claims. (Cl. 251—96)

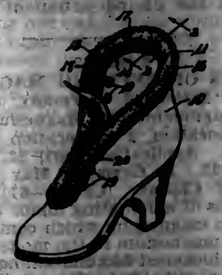
1. A valve comprising a sheet of resilient metal bent into the form of a cylindrical sleeve, the said sheet having at the meeting edges ears that extend inwardly and cross each other, the ears preventing said edges from shifting relatively to each other lengthwise of the sleeve but permitting the sleeve to expand and contract freely.

2,105,232
BUMPER FOR HEDGE SHEARS
Frederic H. Rauh, South Orange, N. J., assignor to J. Wiss & Sons Co., Newark, N. J., a corporation of New Jersey
Application August 14, 1937, Serial No. 159,055
3 Claims. (Cl. 30—271)



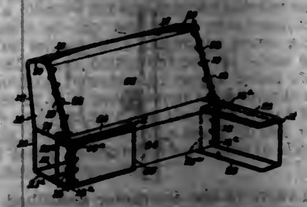
1. The combination, between the shanks of a pair of shears of a pair of yieldable rubber cushions, inclosed within metal shields, said shields being slidably and swingably mounted upon the shanks.

2,105,233
DUPLEX SEPARABLE FASTENER
Leo Reseman, Newark, N. J.
Application February 22, 1936, Serial No. 66,190
3 Claims. (Cl. 24—203)



1. In a fastener the combination with two parts of flexible material to be connected, of complemental sets of head and socket fastener elements, each set including a head element and a socket element complemental to fastener elements of the other set and secured on one of said parts in closely spaced relation to each other with the axes of their heads and sockets perpendicular to the planes of said parts, so that when tension is applied to said parts in their own planes while the fastener is in use, the flexibility of the material of said parts between the respective fastener elements permits relative movement of the fastener elements of each set to cause said elements mutually to restrain tilting of each other.

2,105,234
BRUSH FORMING APPARATUS
Rees T. Scully and Walter S. Lang, Pittsburgh, Pa.
Application December 14, 1935, Serial No. 54,467
12 Claims. (Cl. 300—3)



1. In brush making apparatus, means for supporting and rotating a brush core, a screw conveyor including a pair of screw threaded members leading directly to the core for conveying and depositing bristles onto the core, a bristle bending disk disposed intermediate the ends of the conveyor between the screws and cooperating therewith for bending and looping bristles prior to deposit on the core, said screw members being closely spaced to engage opposite sides of the loop portions of the bristles, and means for feeding a wire under tension to the bristles, said bending disk acting against the tension on the wire.

2,105,235
FOOTWEAR
Pearl Y. Smiley, Kitchener, Ontario, Canada, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 10, 1936, Serial No. 115,200
4 Claims. (Cl. 36—7.3)

1. An article of footwear comprising an upper, a fur strip having a binding strip at an edge thereof, the fur strip being secured in substantially edge-on relation of its bound edge to the edge of the upper by stitches passing through the fur strip, the binding strip and upper, and the fur strip being stitched at its other margin to the outer face of the upper so that the fur-strip is held bent over from the edge of the upper and to the outer face thereof, and, whereas the edge of the upper is concealed by the fur, substantially no ridge of fur is presented to rub against the stocking of the wearer.

2,105,236
BACK REST
Dorothy S. Smith, New York, N. Y.
Application April 4, 1936, Serial No. 72,677
3 Claims. (Cl. 5—337)

1. A device of the class described comprising a wire frame back rest, a plurality of independent, spaced apart back engaging members tautly positioned across the front of said back rest, and arm rests hingedly connected to opposite sides of the wire frame back rest, said arm rests having arm-engaging pads and being adapted to be folded substantially within the confines of the back rest, with the arm-engaging pads passing between the back engaging members.

2,105,237
PERMUTATION PADLOCK
Harry E. Soref and James Keith Marshall, Milwaukee, Wis., assignors to Master Lock Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 4, 1937, Serial No. 123,998
9 Claims. (Cl. 70—25)

1. In a permutation padlock, the combination of a shackle, shackle-locking means including a rotatable tumbler movable to release said shackle, and a shiftably mounted member directly engageable with said tumbler and shackle and disposed in the path of movement of a portion of said shackle to rotate said tumbler out of unlocking position upon the locking movement of said shackle.

2,105,238
ROPE MAKING MACHINE
Charles C. Sunderland, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a corporation of New Jersey
Application August 3, 1927, Serial No. 210,233
46 Claims. (Cl. 117—16.5)

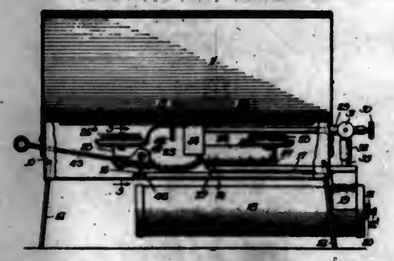
1. In a wire strand or rope making machine, a tension mandrel about which the wires or strands are wrapped helically, in combination with adjustable means for varying the angle of the wires or strands on the mandrel, means for drawing the wires or strands along the mandrel, and strand or rope closing means.

2,105,239
PORTABLE DISPENSER FOR BEVERAGES
Charles W. Sweitzer, Shawnee, Okla.
Application February 1, 1937, Serial No. 123,469
1 Claim. (Cl. 225—1)

A portable dispenser comprising a container having an opening in its top wall and provided in the bottom wall thereof with an offset directly

under said opening to form a sump, a pump extending into the container by way of said opening and terminating within the sump for dispensing beverages from the container in desired amounts, a perforated receptacle for holding a cooling and carbonating substance, anchoring means carried

by the wall of the container and detachably engaging said receptacle, said receptacle being of such size as to be readily passed through said opening to permit insertion and removal of the receptacle into or from its normal position, and means for supporting the container on a person.



2,105,240

PORTABLE STOVE

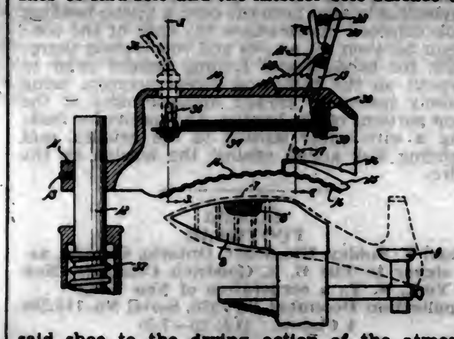
Anton J. Yeager, Wisconsin Rapids, Wis., assignor to Prentice-Wabers Products Co., Wisconsin Rapids, Wis., a corporation of Wisconsin

Application June 8, 1936, Serial No. 84,662

7 Claims. (Cl. 126—38)

3. In combination with a housing having an opening in the end wall thereof, a track in the lower part of said housing extending longitudinally thereof and terminating adjacent the opening in the end wall, a cooperating track member, a fuel burner assembly on said track member, a fuel tank connected to said track member at one end thereof, a stop on the inner end of said track, and a co-acting stop member adapted to engage said stop on the valve assembly.

2,105,241



METHOD OF ATTACHING SOLES TO SHOES

Joseph Amico, Detroit, Mich., assignor to Motor City Tool Co., Inc., a corporation of Michigan

Original application July 15, 1931, Serial No. 550,859. Divided and this application June 22, 1934, Serial No. 731,966

4 Claims. (Cl. 12—142)

1. The method of attaching porous leather to shoes comprising the steps of placing a cement-treated sole on the bottom of a shoe, applying sole-attaching pressure to said sole and simultaneous with the application of such pressure exposing an appreciable area of the outer surface of said sole and the interior sole surface of

said shoe to the drying action of the atmosphere.

2,105,242

PROCESS OF REFINING MAGNESIUM

Adolf Beck, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware

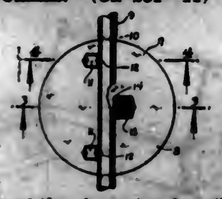
No Drawing. Application April 23, 1936, Serial No. 76,005. In Germany May 10, 1935

2 Claims. (Cl. 75—67)

1. A process of eliminating minor quantities of calcium from magnesium which comprises treating the said magnesium in the molten state with a molten unthickened flux containing magnesium chloride in a quantity substantially exceeding the quantity required to convert all the calcium present in the magnesium into calcium chloride, according to the equation

$$Ca+MgCl_2=Mg+CaCl_2$$

while vigorously stirring the mixture, and after the calcium content of the magnesium has been substantially converted into calcium chloride, incorporating an inspissating agent in the residual flux so as to promote separation of said flux from said magnesium.



2,105,243

BUTTERFLY VALVE

Stephen F. Briggs, Detroit, Mich., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application September 16, 1936, Serial No. 101,122

3 Claims. (Cl. 251—11)

1. In a valve of the character described, a stem having a transverse slot, a disk disposed in the slot, and means for holding the disk in the slot comprising opposed sets of abutments on the stem and disk, one of the stem carried abutments being inclined and the cooperating disc carried abutment being resilient and the direction of inclination of said inclined abutment being such that the resiliency of its cooperating disc carried abutment holds the parts securely against shifting.

2,105,244

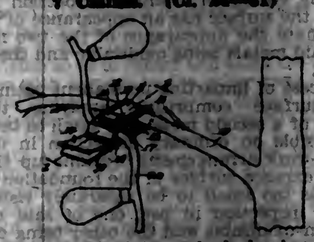
GASEOUS FUEL BURNER

Donald A. Campbell, Rockford, Ill., assignor to Garnet W. McKee, Rockford, Ill.

Application October 12, 1936, Serial No. 105,367

7 Claims. (Cl. 158—115)

1. In combination with a tube-like burner member having one end thereof adapted for connection to a tuyère in a furnace wall and its other end adapted to receive gaseous fuel under pressure, and embodying a longitudinal fuel passage therethrough with an inwardly tapered mouth adjacent to said other end, an igniting device for the burner member comprising means forming an expansion chamber in communication with the passage, means for conducting a portion of the fuel from the mouth to the chamber, and means for igniting the fuel in the chamber.



2,105,245

CLAMP

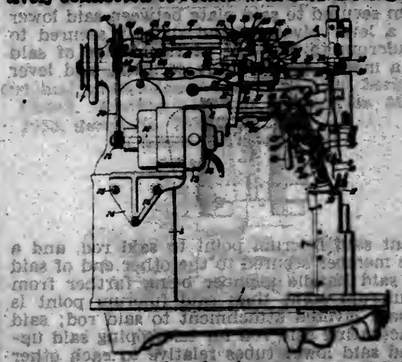
Charles W. Card, Aurora, Ill.

Application October 29, 1936, Serial No. 108,205

7 Claims. (Cl. 24—81)

1. A clamp embodying a body bent upon itself to form opposed spaced walls, one of which walls terminates considerably short of the end of the other, a tongue pivoted on the shorter wall and forming a closure for the space therebetween and on one side of the pivot, an extension on said tongue for swinging it about the pivot, a portion of said extension being shaped to form an open article holding recess, said recess being closed by the longer of said walls when said tongue is in an operative position to close the said space between said walls, and ears at the ends of the tongues, said ears being deflected at an angle to the tongue to reinforce the tongue.

2,105,246



SEWING AND TRIMMING MACHINE

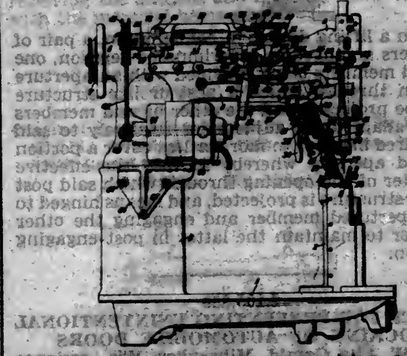
Frederic M. Card, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application May 12, 1936, Serial No. 79,231

4 Claims. (Cl. 112—237)

1. The combination with a sewing machine having a rotary actuating shaft, and stitch-forming mechanism deriving actuation from said shaft, of a trimmer mechanism comprising a reciprocatory trimmer-knife actuating bar, a driving shaft rotatable independently of said sewing machine actuating shaft, a counter-shaft operatively connected to rotate with said driving shaft,

a two-armed rocker having one arm operatively connected to said trimmer-knife actuating bar, an actuating member pivotally connected to the other arm of said rocker, and means carried by said counter-shaft for actuating said member.



2,105,247

TRIMMING MACHINE

Frederic M. Card, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Original application May 12, 1936, Serial No. 79,231. Divided and this application January 19, 1937, Serial No. 121,280

9 Claims. (Cl. 164—47)

1. A trimmer mechanism comprising, a reciprocatory trimmer-knife actuating bar, a rocker shiftable lengthwise of its pivotal axis into and out of operative engagement with said bar, manually operable means for axially shifting said rocker, a rotary shaft, a crank-member carried by said shaft, a pitman embracing and restrained against movement axially of said crank-member, and an axially shiftable pivotal connection between said pitman and said rocker.

2,105,248

RAPID FOCUSING BINOCULAR

Guy E. Chesnut, Jr., St. Joseph, Mo.

Application June 2, 1936, Serial No. 83,290

2 Claims. (Cl. 88—24)

2. In a binocular having upper telescoping lens tubes connected parallel to each other by a

hinged bar and lower telescoping lens tubes connected parallel to each other by a hinged plate, a rapid focusing adjustment comprising, a rod slidably secured parallel to said lower tubes and having its upper end secured to said bar, a lever fulcrum secured to said plate between said lower tubes, a lever pivotally and slidably secured to said fulcrum to one side of the center of said lever, a means for pivotally securing said lever

adjacent said fulcrum point to said rod, and a handle member secured to the other end of said lever; said handle member being farther from said fulcrum point than said fulcrum point is from said pivoted attachment to said rod; said lever actuating said rod for telescoping said upper and said lower tubes relative to each other when said handle member is actuated in approximate direction of the telescoping action of said tubes.

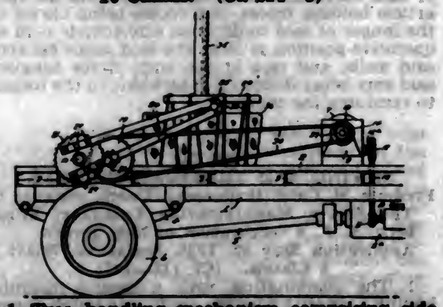
2,105,249
BATTERY CARRIER
Vernon B. Dawson, Wilmington, Del.
Application March 28, 1936, Serial No. 71,622
3 Claims. (Cl. 294—92)

1. In a lifting device, in combination, a pair of members arranged in superimposed relation, one of said members being provided with an aperture therein through which a post or like structure may be projected and the other of said members being adapted for adjustment relatively to said apertured member to more or less cover a portion of said aperture whereby to vary the effective diameter of the opening through which said post or like structure is projected, and means hinged to said apertured member and engaging the other member to maintain the latter in post-engaging position.

2,105,250
DEVICE FOR PREVENTING UNINTENTIONAL LOCKING OF AUTOMOBILE DOORS
John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application June 7, 1935, Serial No. 25,447
19 Claims. (Cl. 70—441)

1. In combination with an automobile door and a key controlled ignition lock for the automobile, means adapted to be rendered operative to prevent locking the door, and a control for said means regulated by the presence or absence of a key in the ignition lock.

2,105,251
SAFETY RAZOR
George Greenstein, Long Island, N. Y.
Application November 4, 1935, Serial No. 48,067
7 Claims. (Cl. 30—51)



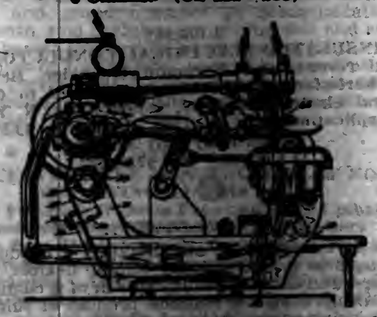
1. A razor comprising a head portion consisting of pivotally engaged members, and a handle for the razor, pivotally connected to one of said members, said razor handle being provided with cam means for positively rocking the other of said members toward and away from blade clamping relation when the handle is rocked.

2,105,252
METAL SURFACE
Henry H. Harris, Boston, Mass.
No Drawing. Application July 31, 1934, Serial No. 737,760
10 Claims. (Cl. 91—68.1)

3. An article of manufacture having a foundation surface of one metal and an open-work plating of another metal applied thereon, the particles of applied metal and the visible areas of foundation metal each being too small to be separately visible on ordinary inspection in use whereby the surface has an appearance of a tone intermediate the appearance of the two metals, one of said metals being oxidizable and the other stainless.

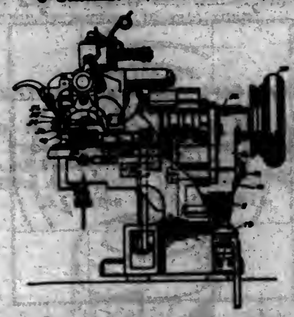
6. Process of imparting permanent patina to a metal surface comprising applying thereto particles of a second metal, too small to be separately visible on ordinary inspection in use, in an open-work arrangement breaking up the remaining exposed surface of the foundation metal into areas too small to be separately visible on ordinary inspection in use, one of said metals being non-oxidizable and the other being oxidizable.

2,105,253
TREE LOADING AND UNLOADING MECHANISM
Charles F. Irish, Bratenahl, Ohio
Application November 30, 1936, Serial No. 113,273
10 Claims. (Cl. 214—3)



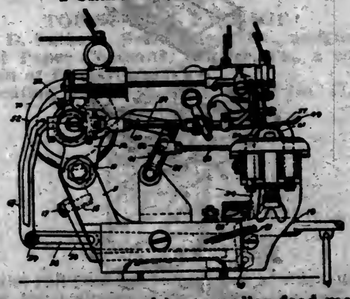
1. Tree handling mechanism comprising side members, a cross member uniting corresponding ends of said side members and a yoke pivotally mounted on said cross member and comprising a framework having a slotted opening for the reception of the trunks of trees, said yoke constituting means for securing the root mass of a tree thereto, and means for imparting rotary movement to the said arms thereby to bring the yoke into operative relation to a tree and its root mass and to enable it to deposit the tree and its root mass upon a suitable support.

2,105,254
BALL BEARING SKATE WHEEL
William F. Meerle, Torrington, Conn., assignor to Union Hardware Company, Torrington, Conn., a corporation of Connecticut
Application December 2, 1933, Serial No. 700,697
2 Claims. (Cl. 308—191)



1. A roller skate wheel comprising a rotating member with a tread surface, two separated cup-like members arranged with bearing faces facing outwardly away from each other and toward the axis of the wheel; two cone members arranged coaxially with respect to the cup-like members but spaced therefrom and having bearing faces facing inwardly; ball bearings disposed between the respective cone members and the corresponding cup-like members; each of said cone members having a thin flange on its inner end, said flanges being disposed in overlapping relationship so as to center and align the one cone member with respect to the other cone member, said overlapped flanges being spaced from the rotating member and cup-like members and being adapted to melt under passage of a current of electricity so as to cause autogenous welding of one with the other, the bearing portions of said cone members being of harder material than the inner flanged portions and also being spaced a sufficient distance from said inner portions so as not to be affected by the heat of the welding.

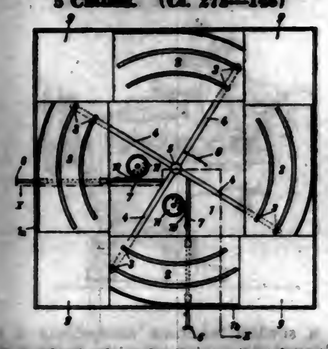
2,105,255
SEWING MACHINE FRAME STRUCTURE
Paul P. Kessler, Chicago, Ill.
Application February 19, 1936, Serial No. 64,046
6 Claims. (Cl. 112—256)



1. In a sewing machine frame structure, a body member having a lower portion and a separate upper portion, and adjustable means movably attaching said lower and upper portions, said means permitting lateral adjustment of the upper portion for desired off center stitching.

2,105,256
SEWING MACHINE
Paul P. Kessler, Chicago, Ill.
Original application February 19, 1936, Serial No. 64,046. Divided and this application May 5, 1936, Serial No. 78,850
3 Claims. (Cl. 112—176)

1. In a sewing machine comprising a needle and a looper, an upper pressure plate having a slot, a vertically disposed elongated guide member projecting centrally within said slot, a removable member inserted within said slot, said member having a channelled portion disposed above said guide and cooperating therewith for receiving and guiding adjacent edges of material being sewed, and a tapered point on said member for receiving the stitches and delaying their contact with the material being sewed.

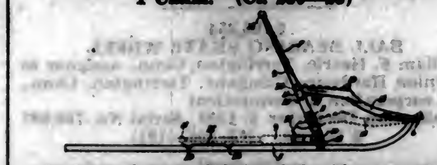


2,105,257
SEWING MACHINE
Paul P. Kessler, Chicago, Ill.
Original application February 19, 1936, Serial No. 64,046. Divided and this application May 5, 1936, Serial No. 78,851
4 Claims. (Cl. 112—214)

4. In a sewing machine, a roller feed member, a ratchet wheel and roller clutch operatively connected with the roller feed member, a drive shaft, a pawl for actuating said ratchet wheel, adjustable means driven by said drive shaft and operatively connected with said pawl, drive connections between said drive shaft and said roller clutch, means for throwing said pawl into and out of driving engagement with said ratchet wheel and means for throwing said drive connections into and out of driving connections with

said roller clutch, said roller feed member advancing the fabric for predetermined length of stitches when operated by said ratchet wheel and pawl mechanism and advancing the fabric for lengths of stitches intermediate said predetermined lengths when operated by said roller clutch.

2,105,258
CARD PLAYING APPARATUS
Elmer Wilhelm Larsson-Lotzén, Malmo, Sweden
Application October 6, 1936, Serial No. 104,218
5 Claims. (Cl. 272—146)



1. A card playing device comprising in combination a number of card supporting means, a number of card collecting means, card displacing means for moving the cards from said card supporting means to said card collecting means, and actuating means for said card displacing means.

2,105,259
COMPOSITE BOX AND MANUFACTURE THEREOF
Frank Rodgers Neely, Allentown, Pa., assignor to A. H. Balliet Corporation, Allentown, Pa., a corporation of Pennsylvania
Application August 15, 1931, Serial No. 557,240
4 Claims. (Cl. 92—43)

1. The method of forming a composite drop lid end box comprising inner and outer shells and a wrap about the outer shell which consists in registering the blank for the outer shell upon the wrap, in registering the preformed inner shell upon the blank for the outer shell, in turning up the ends of the blank for the outer shell into glued engagement with the inner shell, in turning up the long sides of the outer shell into engagement with the inner shell, in subsequently turning up the ends of the wraps into engagement with the ends of the shell and continuing the operation as in normal wrapping.

2,105,260
ICE PUSHMOBILE
Henry Nedland, Starbuck, Minn.
Application May 19, 1937, Serial No. 143,475
1 Claim. (Cl. 280—33)

An ice and snow glider and the like comprising a front cross member, a pair of runners extending backwardly from said cross member, said runners comprising laterally flexible metal strips, a steering device pivotally connected to said runners rearwardly of said cross member, said steering device comprising a pair of uprights, a connecting bar extending between said uprights intermediate of their ends and having a T shaped bolt extending upwardly therethrough, and a seat device, the rear portion of which has an upwardly extending slot therethrough, said slot being so shaped that said T shaped bolt will pass therethrough when said slot and bolt are aligned, and said slot further being shaped to prevent passage of said bolt therethrough when the bolt and slot are not aligned.

2,105,261
COMPOUNDS OF POLYMERIZED ACRYLIC ACID OR ITS ESTERS WITH SULPHUR OR SELENIUM AND METHOD OF MAKING THE SAME
Paul Nowak, Berlin-Charlottenburg, Germany, assignor to General Electric Company, Schenectady, N. Y.
No Drawing. Application October 22, 1934, Serial No. 749,476. In Germany October 24, 1933
6 Claims. (Cl. 260—2)

1. The method of producing an artificial rubber resistant to the action of mineral oils and the like which comprises reacting a member of the class consisting of polymerized acrylic acid and polymerized esters of acrylic acid with an element of the group consisting of sulphur and selenium in the presence of a member of the class consisting of active gas soot and active magnesium silicate.

2,105,262
INSULATED ELECTRICAL CONDUCTOR
Paul Nowak and Hermann Hofmeier, Berlin-Charlottenburg, Germany, assignors to General Electric Company, Schenectady, N. Y.
Application July 26, 1935, Serial No. 33,896
In Germany July 30, 1934
4 Claims. (Cl. 173—264)

1. As an article of manufacture, a conductor enclosed in a mechanically strong, flexible, oil-, water-, and ozone-resistant sheath of a composition comprising the reaction product of sulphur with polymerized ester of acrylic acid in the presence of carbon.

2,105,263
SYNTHETIC COMPOUND AND METHOD FOR ITS PRODUCTION
Paul Nowak and Hermann Hofmeier, Berlin-Charlottenburg, Germany, assignors to General Electric Company, a corporation of New York
No Drawing. Application October 8, 1935, Serial No. 44,351. In Germany October 31, 1934
3 Claims. (Cl. 106—22)

1. A composition of matter for use in the construction of insulated electrical conductors and cables which comprises the following mixed components within the approximate range of proportions shown:

	Parts by weight
Acetone-insoluble polymer of acrylic acid ethyl ester	26.0–33.0
Diamyl phthalate	3.0– 8.0
Active gas soot	15.0–25.0
Inert, inorganic filling material	40.0–60.0
Beta-naphthol	0.5– 1.5
Sulphur	0.5– 1.5,

said composition of matter, in the vulcanized state, having the characteristic properties of being resistant to oil, water, ozone, corrosion and aging, being non-flowing at temperatures up to at least 60° C., and still flexible when in thin strip form at a temperature of minus 25° C.

2,105,264
RESINOUS THERMOPLASTIC MATERIALS
Paul Nowak, Charlottenburg, Germany, assignor to General Electric Company, a corporation of New York
No Drawing. Application April 27, 1936, Serial No. 76,700. In Germany May 2, 1935
3 Claims. (Cl. 106—22)

2. A composition of matter adapted to be extruded on a core, said composition consisting of a minor proportion of polymerized ethyl ester of acrylic acid and polyvinyl acetate, a major proportion of carbon and talcum, and less than one per cent by weight of the whole of beeswax.

2,105,265
ACCORDION
Roberto Pancotti, Nutley, N. J., assignor to Excelsior Accordion Manufacturing Co. Inc., New York, N. Y.
Application May 13, 1936, Serial No. 79,424
4 Claims. (Cl. 84—376)

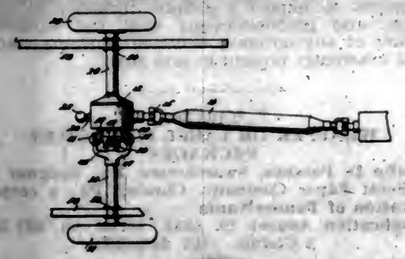
1. An accordion comprising a bellows and a valve and sound chamber in communication therewith, said chamber comprising side and end walls having their adjacent portions at both ends and sides of the chamber merged into each other along curved lines forming curved wall portions or rounded corners at the ends and sides of said chamber.

2,105,266
PROCESS FOR THE MANUFACTURE OF NON-DEPOSITING LIQUID SOAPS
Louis Friedrich Wilhelm Pape and Hans Umbach, Duesseldorf-Benrath, Germany, assignors to the firm Henkel & Cie. Gesellschaft mit beschränkter Haftung, Duesseldorf, Germany
No Drawing. Application February 22, 1934, Serial No. 712,454. In Germany March 8, 1933
5 Claims. (Cl. 87—5)

1. In the manufacture of potash liquid soaps which normally involve a filtering or other purifying process, the step of incorporating with said soaps, which contain an inherently present material which imparts a turbidity to said soaps and tends to settle out of said soaps, a substantial quantity of a superfatting substance comprising a member selected from the group consisting of stearic acid, Montan wax, paraffin wax, wool fat, higher fatty alcohols, and higher alkyl ethers of glycol, glycerol, polyglycol and polyglycerol, said superfatting substance being present in sufficient quantity to impart a definite turbidity to said soap, and preponderating over the turbidity power of any normally sediment-forming material inherently present in said soap.

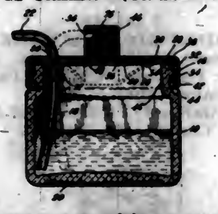
2,105,267
WRAPPER OR LABEL FOR TOILET PACKAGES
Philip D. Parsons, Swarthmore, Pa., assignor to Scott Paper Company, Chester, Pa., a corporation of Pennsylvania
Application August 29, 1933, Serial No. 687,355
2 Claims. (Cl. 229—87)

1. A wrapper or label to be applied to a roll-like package and having two opposite edges overlapping and sealed to each other to bind the wrapper or label on the package, said wrapper or label being made of paper having its grain extending substantially parallel to the axis of said package, said grain being sufficiently pronounced to induce a tear in a direction substantially parallel to the axis of said package when one of the unsealed edges of said wrapper is ruptured and pulled, and said unsealed edge being provided with a tab-like grasping and pulling means.



2,105,268
TOILET ROLL PACKAGE
Philip D. Parsons, Swarthmore, Pa., assignor to Scott Paper Company, Chester, Pa., a corporation of Pennsylvania
Application March 19, 1935, Serial No. 11,878
1 Claim. (Cl. 206—59)

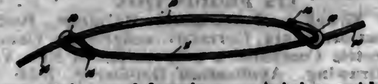
A toilet roll package comprising a wrapper embracing the cylindrical surface of the roll, said wrapper extending beyond an end of the roll, and said extending portion of the wrapper being folded flat against the end surface, said folded portion of the wrapper being neatly fitted to said end surface by a uniformly spaced series of substantially symmetrical narrow and widely spaced radial box plaits, and a label overlying the inner ends at least of said plaits and being adhesively secured to the exposed surfaces of the plaits and to the portions of said wrapper between the plaits,



said label thereby securely retaining the said plaits in position and effectively sealing the package.

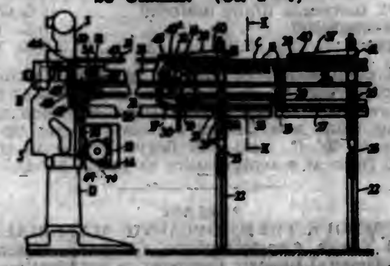
2,105,269
MOTOR VEHICLE
Clyde R. Paton, Birmingham, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 27, 1934, Serial No. 755,953
10 Claims. (Cl. 180—73)

1. In a motor vehicle, the combination with a vehicle frame, of road wheels disposed at opposite sides of said frame, axle units supporting the respective road wheels, means for pivotally supporting one of said axle units on said frame about an axis extending generally longitudinally of said frame and spaced laterally of the center line of the frame, means for pivotally supporting the other of said axle units on said first axle unit about an axis extending generally longitudinally of the frame and spaced laterally of the center line of the frame on the opposite side thereof from said first named axis, said axes being substantially equidistant from said center line, whereby each wheel will move through an arc of substantially the same radius in rising and falling, and yielding means acting between said frame and said units for resisting relative upward displacement of the latter.



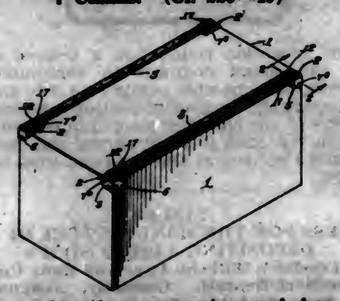
2,105,270
DISPENSER
Lawrence A. Paul, Los Angeles, Calif.
Application July 21, 1937, Serial No. 154,895
11 Claims. (Cl. 221—76)

1. A dispenser comprising a container having an opening, a closure detachably connected with the container for closing the opening, a diaphragm pinched between the closure and the container, a dispensing tube extending through the diaphragm in sealed relation therewith and through the closure, and an actuating element associated with the diaphragm and extending through an opening in the closure.



2,105,271
HAIR CURLER AND WAVER
Mary I. Peddle, Pawtucket, R. I.
Application May 7, 1936, Serial No. 78,503
1 Claim. (Cl. 132—38)

In a hair curler and waver, a pair of flexible elements, each element having a return bent portion at one end with the terminal end anchored to its element to form a closed loop, each end



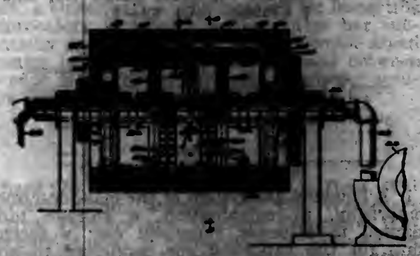
loop receiving and forming a retaining guide for the unlooped end of the other flexible element.

2,105,272
WIRE STITCHING MACHINE
William Andrew Pratt, Watford, England, assignor to The F. P. Rosback Company, Benton Harbor, Mich., a corporation
Application June 15, 1936, Serial No. 85,420
In Great Britain June 21, 1935
23 Claims. (Cl. 1—7)

1. A discontinuous wire-stitching machine which includes at least one stitcher head, a stitching saddle associated with said stitcher head, and means for feeding the work to said stitching saddle, said work-feed means comprising a travelling work carrier device which for purposes of adjustment is longitudinally displaceable relatively to said stitching saddle so that a gap of varying width is created between the adjacent extremities of said stitching saddle and said work carrier device, and an extensible bridging device adapted to bridge said gap.

2,105,273
COMBINATION CORNER PIECE AND SHOE CLAMP FOR BOXES
Ellwood Ritter, Norristown, Pa., assignor to The Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Application October 27, 1936, Serial No. 107,361
7 Claims. (Cl. 229—49)

1. A combination corner piece and shoe clamp for boxes and the like, comprising a corner piece adapted to be secured permanently to a corner of the box and to have a shoe member associated therewith, a shoe clamp adapted to fit over an end of said shoe member and serving with said corner



piece to hold the shoe member in place, means on said corner piece for fixing said clamp in position, and means for securing said clamp to the box.

2,105,274
TAIL DEVICE FOR AIRPLANES
Raymond Saulnier, Paris, France
Application November 7, 1936, Serial No. 109,779
In France November 9, 1935
4 Claims. (Cl. 244—109)

1. In an airplane having a body, a tail supporting device which comprises, in combination, a part adapted to run on the ground, a cylindrical member supporting said part, housed in said body and projecting downwardly therefrom, two annular supports for said cylindrical member adapted to cooperate with respective upper and lower portions thereof, said supports being arranged to permit rotation but to prevent axial sliding displacements of said member in said annular supports, two arms, both pivoted at one end to said supports respectively about parallel horizontal axes, said arms being pivoted at their other respective ends to said airplane body about axes parallel to the first mentioned ones and located on opposite sides of said cylindrical member, and a shock absorber interposed between a fixed point of said airplane body and a point of one of these arms so as to transmit the weight of said airplane tail to said part adapted to run on the ground.

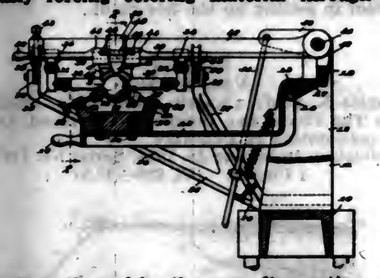
2,105,275
BOX MAKING MACHINE
George R. Schoffey, Riverside, N. J., assignor to John D. Tennant, Philadelphia, Pa.
Application September 12, 1935, Serial No. 40,488
18 Claims. (Cl. 93—36.6)

1. In a machine for making covered box blanks, means for applying cover paper to shell material and pneumatic means for forming a temporary longitudinal groove or grooves in said cover paper substantially during application thereof to the shell material permitting transverse yielding thereof in setting up the box blank.

2,105,276
VALVE BAG
Douglas E. Scott, Chagrin Falls, Ohio, assignor to The Chase Bag Company, Cleveland, Ohio, a corporation of Delaware
Application December 12, 1936, Serial No. 116,668
4 Claims. (Cl. 229—62.5)

1. A bag ready for filling and having a bag opening, a paper valve sealing tube open at both ends and having its inner end affixed in the valve opening and having its outer end extending outward from said opening and designed to form a sealing closure at said outer end, said sealing tube having a flexible, pliable crinkled sleeve of less weight than said tube affixed therein.

2,105,277
FASTENING-INVERTING MECHANISM
Thomas H. Seely, Melrose, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 12, 1936, Serial No. 85,883
26 Claims. (Cl. 1—39)



1. A fastening-inverting mechanism comprising a fastening-delivering conduit, a rotatable member having a surface in constant fastening-receiving relation to the conduit, a conduit receiving fastenings from said surface, and means for rotating the member continuously in one direction to deposit the fastenings inverted in the receiving conduit.

2,105,278
METHOD OF AND APPARATUS FOR DECORATING SPHERICAL AND OTHER ARTICLES HAVING CURVED SURFACES BY A STENCILING PROCESS
John C. Smith, Beaver, Pa., assignor to Solar Laboratories, a corporation of Pennsylvania
Application September 9, 1936, Serial No. 99,922
10 Claims. (Cl. 101—126)

1. The method of decorating a spherical article which consists in supporting said article for rotation about an axis, placing a semi-cylindrical stencil screen, the radius of curvature of which is equal to the radius of curvature of the article, in tangential line contact with said article,

and moving said screen axially while simultaneously forcing coloring material through the

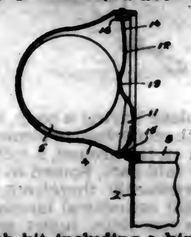
interstices thereof by the spreading action of a squeegee.

2,105,379
AMUSEMENT DEVICE
Luther H. Smith, Murrells Inlet, S. C.
Application February 26, 1937, Serial No. 128,003
2 Claims. (Cl. 273—96)

1. An amusement device comprising a frame having a handle and a main opening, said frame being provided with a ball receiving recess having an open side which leads into the main opening, an elastic band secured to the frame at opposed points, said points being spaced substantially equal distances from the ball receiving recess, a ball secured to the elastic band with portions of the elastic band upon opposite sides of the ball being of substantially the same length, the arrangement being such that the ball may be inserted within the ball receiving recess and the portions of the elastic band upon opposite sides of the ball will be held substantially taut.

2,105,380
MANUFACTURE OF ARTIFICIAL SPONGES
Joseph Speijer, Amsterdam, Netherlands
No Drawing. Application January 18, 1936, Serial No. 59,792. In Great Britain April 24, 1935
2 Claims. (Cl. 18—48)

1. A process of manufacturing artificial sponges from viscose which comprises adding extra carbon disulphide and pore-forming material solids to unripened viscose, the extra carbon disulphide being in addition to that used in the xanthation of the cellulose, said extra carbon disulphide being in amount capable of preventing premature coagulation of the viscose by the pore-forming solids, and regenerating the cellulose of the viscose, while the pore-forming solid remains chemically undecomposed.

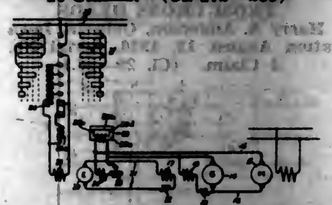


2,105,381
INSOLE ARCH SUPPORT
Eugen Steiner, Oradea, Rumania
Application October 19, 1935, Serial No. 45,736
In Austria June 18, 1935
1 Claim. (Cl. 36—71)

An insole arch support, comprising in combination a plurality of thin wood veneer layers interconnected by means of an adhesive insoluble in water and covered on both sides with an outer covering of leather, and intermediate layers of fibrous material impregnated with a water-

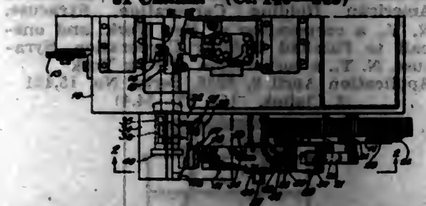
proofing substance interposed between the outer wood veneer layers and the said outer covering of leather and stuck on the outer veneer layers, the support being tapered towards its edges.

2,105,382
LUNCH KIT
Frank Van Horn, Pittsburgh, Pa.
Application April 4, 1936, Serial No. 72,801
3 Claims. (Cl. 206—4)



3. In a lunch kit including a hinged cover and a vacuum bottle housed therein, a holder removable from the kit and adapted for securing the bottle within the cover, said holder comprising a shank, a bowl shaped portion at one end of the shank, a plurality of tines at the opposite end thereof, said shank cooperating with the tines and bowl shaped portion to provide a combined fork and spoon, a keeper secured to the free edge portion of the cover to receive the tines, and the bowl shaped portion being received in the recess for detachably mounting the holder across the cover with the shank in engagement with the bottle.

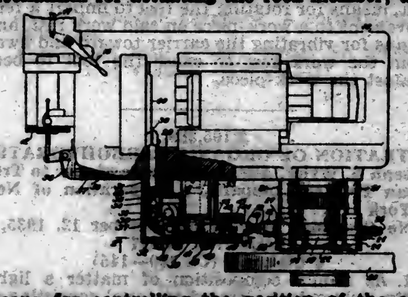
2,105,383
REVAPORIZER
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, a corporation of Texas
Application August 26, 1936, Serial No. 98,047
7 Claims. (Cl. 62—1)



1. A liquefied gas system of the class described comprising, in combination, a storage tank adapted to dispense vaporized gas; a service main for the vaporized gas connected to and leading from the tank; and heat exchanging means connected to the lowest point of the service main and extending into the ground to vaporize any condensate in the service main by utilizing the heat from the earth.

2,105,384
CONTROL SYSTEM
Max A. Whiting, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 1, 1936, Serial No. 113,654
10 Claims. (Cl. 172—239)

10. A control system comprising in combination, an electric motor, means for supplying substantially constant current to said motor over a wide range of voltages comprising a generator provided with main and series differential field windings and an exciter for said main winding provided with a separately excited field winding and with a cumulative auxiliary field winding excited by the voltage of said generator, a permanent resistor in the circuit of said auxiliary winding and a permanent resistor in the circuit of said main field winding for decreasing the time constants of said field windings, a variable resistance in said separately excited field circuit, and a reversing type master switch for controlling said resistances and the direction of current in said separately excited winding thereby to control the speed and direction of rotation of said motor.

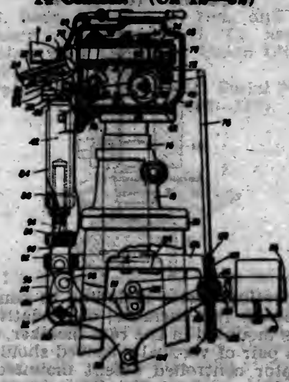


2,105,385
CUT-OFF MECHANISM
Richard Lester Wilcox, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a corporation of Connecticut
Application April 24, 1936, Serial No. 76,197
31 Claims. (Cl. 164—145)

1. In mechanism of the character described; a shaft; a cutter bar; a rock member for imparting reciprocatory movement to the cutter bar substantially parallel with the shaft, movable about a center located upon one side of and between the ends of the cutter bar; and means for actuating said rock member from said shaft.

2,105,386
CUT-OFF MECHANISM
Richard Lester Wilcox and Herbert L. Hoyt, Waterbury, Conn., assignors to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a corporation of Connecticut
Application April 24, 1936, Serial No. 76,198
42 Claims. (Cl. 164—145)

1. In mechanism of the character described; a cutter bar; means for imparting movement thereto, comprising in part a rock member; a link connection between the rock member and cutter bar; means, comprising in part toggle mechanism for actuating the rock member; and



means for controlling the position of the elements of the toggle mechanism on and off the center thereof.

2,105,387
CUT-OFF AND TRANSFER MECHANISM
Richard Lester Wilcox, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a corporation of Connecticut
Application January 6, 1937, Serial No. 119,240
23 Claims. (Cl. 10—25)

1. In mechanism of the character described, wherein a rod is advanced through a cut-off die; a carrier or the like; and plural knives mounted on the carrier to sever a portion of the rod, one knife fixedly and the other movably.

2,105,388
FINISHING MACHINE
Reginald Boyd Woodcock and Hubert Boothroyd, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 12, 1935, Serial No. 54,123
In Great Britain January 2, 1935
14 Claims. (Cl. 12—33)

1. In an indenting machine, a work rest, an

indenting tool, a drive shaft, a carrier for said tool, said carrier being mounted on said drive shaft to swing toward and away from said work rest, means for rotating the tool to impart a feed movement to a work-piece on said work rest, and means for vibrating the carrier toward and away from the work rest to cause the tool to beat against the work-piece.

2,105,289

NITRATION OF ORGANIC CARBOHYDRATES

Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, a corporation of New York

No Drawing. Application October 12, 1935, Serial No. 44,687

6 Claims. (Cl. 260—145)

1. As a new composition of matter a light, fluffy, pulverulent nitrated material consisting of a solid solution of nitrostarch in a predominating amount of nitrated sucrose, and containing not less than 8.4% of nitrostarch.

2,105,290

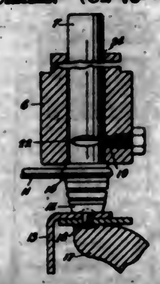
PURIFICATION OF SUCROSE OCTANITRATE

Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa.

No Drawing. Application June 27, 1936, Serial No. 87,762

4 Claims. (Cl. 260—148)

1. The process of purifying sucrose octanitrate which comprises crystallising sucrose octanitrate from a solvent comprising predominantly one or more members of the group consisting of: propyl alcohol, butyl alcohol, amyl alcohol, hexyl alcohol, carbon tetrachloride, ethylene dichloride, propylene dichloride, methyl alcohol, ethyl alcohol, such crystallisation taking place from a solution of a concentration not to exceed saturation at 30° C., and being the direct result of a slow lowering of the temperature of the solution at a rate faster than the ordinary rate of cooling of a body of equal mass from normal radiation.



2,105,291

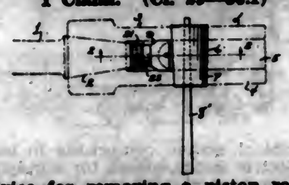
ADJUSTABLE RAM NOSE FOR COLD RIVETING FIXTURES

Elmer Almdale, Detroit, Mich., assignor to The Midland Steel Products Company, Cleveland, Ohio, a corporation of Ohio

Application November 14, 1933, Serial No. 697,955

4 Claims. (Cl. 78—46)

1. A riveting device including in combination a reciprocable ram member; of a relatively movable nose mounted in the ram member, said nose having a pair of vertically spaced shoulders, and an operator controlled detent mounted in said ram member and frictionally engageable with either of said shoulders at the will of the operator for releasably holding the nose at various positions of adjustment.



2,105,292

DEVICE FOR REMOVING PISTON RODS FROM CROSS HEADS

Harry A. Andersen, Ocilwein, Iowa

Application August 12, 1936, Serial No. 95,673

1 Claim. (Cl. 29—96.1)

A device for removing a piston rod from a cross head having wrist pin openings therein and said device comprising a cylindrical block to be inserted in said openings and having a slot extending longitudinally therethrough, a punch member including a head having a semi-circular socket therein, a shank extending from the head and having an outer driving end to be positioned against the piston rod, a compensating block including a semi-circular portion pivotally mounted within and fitting the socket for swinging movement therein, said compensating block having a flat outer face and received in the slot of the cylindrical block, a wedge shaped key to be driven in the slot for engagement with the flat outer face, a plurality of shims to be positioned between the driving end of the shank and the rod, a retaining cap for the shims and fitting the driving end and means for securing the retaining cap to the driving end.

2,105,293

KNIFE LUBRICATING DEVICE

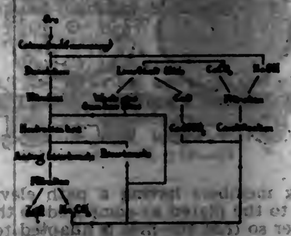
Alfred H. Avery, Malden, Mass., assignor, by mesne assignments, of one-half to North American Holding Corporation, Syracuse, N. Y., a corporation of New York, and one-half to Parshad Holding Corporation, Syracuse, N. Y., a corporation of New York

Application April 9, 1935, Serial No. 15,431

2 Claims. (Cl. 91—54.4)

1. In a knife lubricating device having a receptacle for holding a fluid and means for wetting the surface of a filler-applying tool, means for firmly holding said receptacle in place while wetting the surface of said applying tool, said means including a central depending part integrally joined to the bottom of said receptacle, a support having a recess for receiving said depending part, and interengaging means providing a detachable connection capable of being disconnected by a rotary movement of the receptacle relative to the support.

2,105,294



MANUFACTURE OF ZINC OXIDE

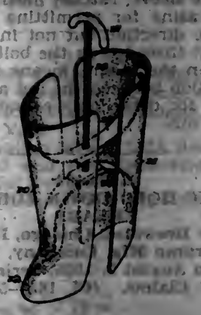
Riccardo Allavena, Milan, Italy, assignor to Societa Italiana Pirelli, Milan, Italy, a company of Italy

Application November 20, 1935, Serial No. 53,438

In Italy December 1, 1934

4 Claims. (Cl. 23—167)

1. A process for the direct manufacture of substantially pure zinc oxide by precipitation from a solution, which consists in forming an aqueous solution of an alkali zincate neutralising the zincate solution to the point of precipitation of zinc oxide, treating the neutralised zincate solution with a bicarbonate of a metal of which the normal carbonate is soluble in water, the bicarbonate being employed, with respect to the zincate solution, in substantially stoichiometric proportions for the formation of zinc oxide, whereby a precipitate of substantially pure zinc oxide is obtained, filtering the said precipitate and drying it at a temperature not exceeding 100° C.



2,105,295

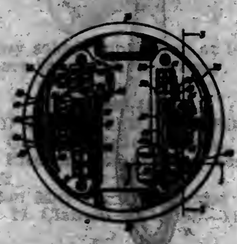
BOOT TREE

Edmund J. Bass, Rochester, N. Y.

Application May 22, 1937, Serial No. 144,267

7 Claims. (Cl. 12—139.2)

1. A boot tree comprising a pair of elongated form plates transversely curved to fit the contour of a boot top or upper, a pair of oppositely disposed curved spring members having their ends extending toward and securely fastened to the end portions of the form plates, with their central portions opposed, and an adjusting screw rod extending lengthwise of and between the form plates, having operative connection through the said central opposed portions of the spring members, including threaded connection with at least one of said spring members whereby upon rotation of the adjusting rod the opposed portions of the springs will be more or less spaced to thus adjust the form plates toward and away from each other.



2,105,296

ELECTRIC METER MOUNTING

Hans A. Bakke, Swampscott, Mass., assignor to General Electric Company, a corporation of New York

Application May 9, 1935, Serial No. 20,502

15 Claims. (Cl. 247—2)

1. A detachable electrical instrument comprising in combination, an instrument mechanism mounted on a base plate with four flat contact prongs mounted thereon at the four corners of a square and extending through said base plate, and a receptacle for said instrument mechanism, said receptacle comprising in combination, a base, four cross-slotted split terminal clips mounted thereon at the four corners of a square, each clip having parallel contact surfaces between which a longitudinal slot is formed, each clip having its contact surfaces perpendicular to those of the clips on adjacent corners of the square but parallel to those of the clip on the diagonally opposite corner of the square, each clip having a cross-slot forming cooperating contact edges and being in line with the longitudinal slot in one of the adjacent clips, one of the clips being mounted to be slidable from the position normally occupied by the corresponding contact prong when the instrument mechanism and the receptacle are united, and a circuit-closing jumper, attached at one end to one of the terminal clips, having a free end extending towards one of the adjacent terminal clips and resiliently engaging it when said instrument mechanism is separated from its receptacle, but being depressed by the base plate of said instrument mechanism to disengage the terminal clip when the instrument mechanism and its receptacle are united.

2,105,297

FENDER WELT

Glen G. Barr, Union City, Ind., and Albert H. Kirchner, Washington, D. C., assignors to Backstay Welt Company, Union City, Ind., a corporation of Indiana

Application August 26, 1936, Serial No. 98,936

7 Claims. (Cl. 280—152)

1. A fender welt adapted to be interposed between adjacent flat metallic surfaces in an automobile body or the like to prevent squeaks, rattles and the like, said welt comprising an edge bead and a web extending laterally therefrom, said web being built up of plural plies of creped paper impregnated with and bonded together by a water-resistant substance.

2,105,398
REENFORCED PORCELAIN TOOTH CROWN
Adolph Barrett and Lee Hirschhorn, New York, N. Y.
Application November 30, 1935, Serial No. 52,316
5 Claims. (Cl. 32—12)

1. A tooth crown having an inner foil of a platinum-like metal and an outer layer of a porcelain-like material, said inner foil having perforated side walls, and said outer layer having portions fused into said perforations, said outer layer completely surrounding said inner foil.

2,105,399
PRINTING APPARATUS
George W. Booth, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application August 28, 1935, Serial No. 38,307
18 Claims. (Cl. 101—37)

1. Apparatus of the class described comprising a horizontal track, a magazine disposed above said track and containing a stack of closures, means for ejecting the closures one by one from the bottom of the stack, and a suction line including an orifice beneath the ejected closure for drawing the same onto the track.

8. Apparatus for printing closure discs of the type having high and low portions, said apparatus comprising rotary means, a pair of printing members carried by said rotary means, a rectilinearly extending platen for supporting the discs to be printed, one of said printing members having a path elevated with respect to the platen as compared to the path of the other so that the first is adapted to print on the high portions of the discs and the other is adapted to print on the low portions of the discs, and means for propelling the discs in equally spaced relation along said platen at a speed equal to the peripheral speed of said rotary means.

2,105,400
PRINTING APPARATUS
George W. Booth, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Original application August 28, 1935, Serial No. 38,307. Divided and this application May 9, 1936, Serial No. 78,925
14 Claims. (Cl. 101—35)

1. Apparatus for printing closure discs of the type having high and low substantially flat portions, said apparatus comprising rotary means, a pair of printing members carried by said rotary means, and a rectilinearly extending platen for supporting the discs to be printed, one of said

printing members having a path elevated with respect to the path of the other so that the first is adapted to print on the high portions of the discs and the other is adapted to print on the low portions of the discs.

2,105,401
NUT LOCK
Earl William Beyer, Pottsville, Pa.
Application May 1, 1935, Serial No. 19,291
3 Claims. (Cl. 151—10)

2. In a structure of the class described, in combination, a bolt, a sleeve slidably but non-rotatably mounted on the bolt, a casing rotatably supported on the sleeve, ratchet means between the sleeve and casing for permitting the casing to rotate in one direction but not in the other direction, a nut threaded on the bolt and having a part fitting in the casing, means for preventing relative rotation between the nut and casing and latch means for detachably connecting the casing with the nut.

2,105,402
HYDRAULIC HOLD-DOWN FOR SQUARING SHEARS
Robert Leslie Brownlee, Chicago, Ill., assignor to Dreis & Krump Mfg. Company, Chicago, Ill.
Application August 2, 1935, Serial No. 34,479
7 Claims. (Cl. 164—51)

1. A hold-down mechanism for shears comprising a series of identical units, each unit being in the nature of a block perforated with longitudinally communicating bores of different diameters, a plunger in the smaller bore, a second plunger in the larger bore and forming a hold-down element by hydraulic action when a liquid is interposed between the plungers, a single bar extending longitudinally over the external ends of all of the smaller plungers, and means to actuate the bar with the effect of advancing all of such smaller plungers simultaneously.

2,105,403
POULTRY FEEDER AND WATERER
Francis W. Bushie, Glandford Township, Ontario, Canada
Application November 20, 1936, Serial No. 112,494
3 Claims. (Cl. 119—73)

2. A device of the character described comprising a sectional rim forming a support having a center opening, a frame beneath the rim, vertical legs secured to the frame in spaced relation to each other, radial arms having flattened outer ends disposed at the open center of said rim, the flattened ends being in underlying relation to the rim, certain of the flat ends being turned to provide depending ears secured to the legs, means uniting the arms together at the open center of the rim in their radially disposed relation to each other, a hoop fixed to the legs near their lower ends, a pan removably resting upon the arms and held within the rim, and means connected with the arms to form abutments for the pan and holding the same centered with respect to the open center of said rim.

2,105,404
INCANDESCENT LAMP AND SIMILAR DEVICE
Paul O. Cartun, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Original application May 2, 1933, Serial No. 669,189. Divided and this application December 18, 1936, Serial No. 116,333
5 Claims. (Cl. 176—32)

1. An electric device comprising a glass bulb; and a metal disc sealed to the end of said bulb as an end wall therefor, and provided with a bottom pivot and contact spur and with securing blades engageable and disengageable by turning the lamp.

2,105,405
SOLDERED JOINT
Frederic L. Chase, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application February 26, 1932, Serial No. 595,401
3 Claims. (Cl. 285—508)

1. A soldered joint on a cooling unit of a refrigerating system comprising a copper pipe and a copper containing fin soldered thereto with a

tin-antimony solder containing at least 90% tin and not more than 10% antimony.

2,105,406
LIQUID INSULATING COMPOSITION
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 25, 1935, Serial No. 22,403
11 Claims. (Cl. 252—1)

1. A composition of matter comprising as a substantial ingredient a halogenated aromatic hydrocarbon which is liquid at ordinary temperatures, and as a second ingredient a minor proportion of a nitrile fixative material miscible therewith which is capable of forming, by combination with decomposition products of said hydrocarbon, products which are soluble in said hydrocarbon.

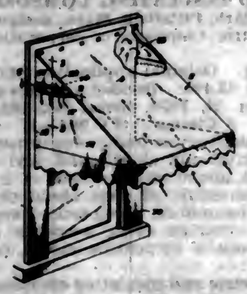
8. An electrical insulating and cooling liquid composition for use in transformers and the like consisting preponderantly of substantial proportions of chlorinated diphenyl and chlorinated bensene and containing chlorinated benzyl cyanide as a minor ingredient.

2,105,407
LIQUID INSULATING COMPOSITION
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Original application May 25, 1935, Serial No. 22,403. Divided and this application September 24, 1936, Serial No. 102,265
5 Claims. (Cl. 252—1)

2. A composition of matter comprising as substantial ingredients chlorinated aryl compound and at least about one per cent of material in the class consisting of open chain olefinic terpenes and camphors; monocyclic terpenes and camphors; complex cyclic terpenes and camphors; and oils of turpentine, citron, orange and thyme.

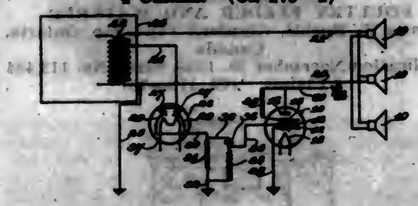
3. A dielectric and insulating composition made up of a preponderant proportion of chlorinated aryl constituent and about one to ten percent of turpentine oil.

2,105,408
CONVERTIBLE ARTICLE OF FURNITURE
Louis I. Cohn and Albin J. Brinkman, Philadelphia, Pa., assignors to Spiers Bedding Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 29, 1936, Serial No. 116,161
1 Claim. (Cl. 5—20)



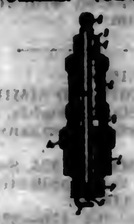
In an article of furniture, a frame-like structure having the upper end of its front formed

with a support, its top open throughout, the upper portion of its back open throughout to provide a passage and a pair of vertical spaced parallel side cheeks constituting supports therefor, a pair of spaced parallel normally inverted carriers of like form and each of angled contour in cross section to provide a vertical and a horizontal leg, said carrier opposing the upper end portion of the inner faces of said cheeks, means for pivotally connecting said vertical legs to said cheeks, bed forming means fixed to said horizontal legs, said carriers when in inverted position suspending said bed forming means within said structure below the upper ends of said cheeks and when turned to righted position through said passage seating on said support and disposing said bed



forming means horizontally above said cheeks, and a shiftable unit forming a foldable and extendible head rest extending across the top of said bed forming means and a foldable and extendible supporting leg for, arranged below and positioned intermediate the ends of said bed forming means, said unit including connections between the head rest and leg to provide for their shifting in unison, said unit being pivotally connected to the bottom of said bed forming means at spaced points of said bottom and when shifted in one direction simultaneously extending said head rest and leg and in the opposite direction simultaneously folding said head rest and leg, said leg when extended to supporting position being disposed below the back of said structure.

2,165,409
AWNING
Wilbur F. Crawford, Waco, Tex.
Application May 26, 1936, Serial No. 81,930
8 Claims. (Cl. 156—15)

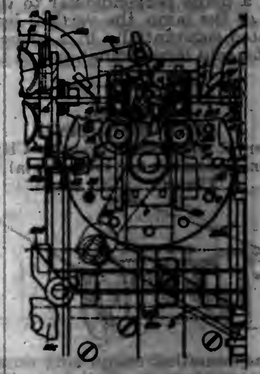


3. An awning having a side wall, said side wall being defined by an outer upper section and an inner lower section having their adjacent edge and corner portions arranged in overlapping relation, spaced securing means for uniting the adjacent corner portions of said upper and lower sections, the lower portion of said upper section being of greater length than the upper end portion of said lower section, whereby the upper section is spaced outwardly to define a downwardly opening passage between said sections, and stiffening means in the lower edge portion of said upper section to aid in holding the same in spaced relation to the adjacent portion of said lower section thereby providing a ventilating opening extending substantially throughout the length of said overlapping edge portions.

2,165,410
OVERLOAD INDICATOR
Virgil L. Daniels, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a corporation of Wisconsin
Application July 3, 1936, Serial No. 88,846
4 Claims. (Cl. 179—1)

1. In an amplifier circuit, the combination of an amplifier with a remote speaker energized by said amplifier, and an indicator for indicating the overload point of said amplifier, comprising an electron ray tube of the indicator type, said electron ray tube having its grid controlled by voltages derived from an output circuit of said amplifier, the voltage on said grid being so arranged that the indicator tube indicates the limit of desired volume at the speaker.

2,165,411
SPARK PLUG
Kenneth C. De Walt, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 1, 1936, Serial No. 93,855
4 Claims. (Cl. 123—169)

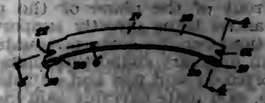


1. A spark plug for internal combustion apparatus comprising the combination of a hollow casing the wall of which consists of metal and glass having approximately the same thermal coefficient of expansion, said metal and glass members being fusion-sealed to one another at adjacent edges and a cooperating conductor located within said casing and being connected at one end only with said casing.

2,165,412
MANUFACTURE OF CIGARETTES
William Frederick Maitland Edwards, London, England, assignor to Filter Tips Limited, London, England, a British company
Application December 20, 1934, Serial No. 758,503
In Great Britain, December 23, 1933
13 Claims. (Cl. 22—1)

1. A method for producing filter tips from strip material, which comprises feeding a length of strip material endwise into a receiving chamber until the strip engages a wall of the chamber,

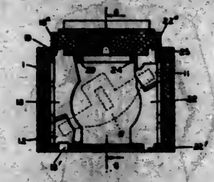
and continuing to feed the material in the same direction into the chamber to cause the strip to



buckle and fold upon itself in substantially zigzag formation.

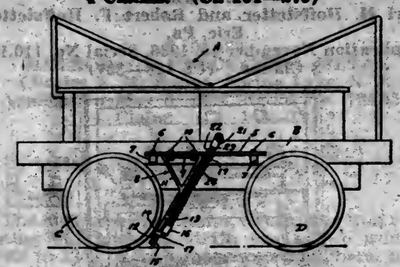
2,165,413
TREATMENT OF IMPROVED MATERIALS CONTAINING COLLAGEN
Wilfred Graham Dowbury and Arnold Davies, London, England
No Drawing. Application August 24, 1934, Serial No. 741,334. In Great Britain September 6, 1933
2 Claims. (Cl. 134—56)

1. Process for the manufacture of improved materials containing collagen derived material comprising heating to a temperature of about 130° C. a hydrocarbon oil having a boiling point of not lower than 130° C. with a substance selected from the group consisting of glue and gelatin until a fibrous product is formed from said collagen containing material, and separating the oil from the fibrous product.



2,165,414
ANTIRATTLER DEVICE FOR WINDOWS AND THE LIKE
Elio V. Francesconi, Boston, Mass.
Application March 17, 1937, Serial No. 131,426
3 Claims. (Cl. 292—76)

2. An anti-rattler device for windows and the like comprising a bowed sheet spring with opposite side edges turned to project normally to said bowed sheet to provide spurs.



2,165,415
ELECTRIC SWITCH CONSTRUCTION
Monroe Gucft and Robert E. Bentley, Hartford, Conn., assignors to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application August 4, 1934, Serial No. 738,533
13 Claims. (Cl. 200—168)

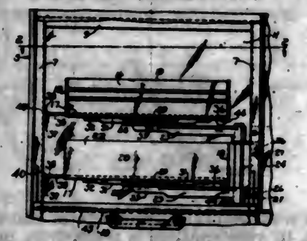
1. In an electric switch, an insulating casing open at the rear for insertion of switch mechanism and apertured in the front for switch operating means, a combined contact and wire terminal device at an end of the casing, the wire terminal portion of said device being accessible through a recess in the end of the casing, said device being unrestrained against movement lengthwise of the casing by the side walls of the casing but engaging at its top with the inside

of the top wall of the casing and having an extension reaching beyond the plane of the back of the casing for holding said device in place, a back plate for the casing engaged by said extension, and means holding said plate to said casing.

2,165,416
ICE SCRAPER FOR TRACK MOTOR CARS
Jack A. Hansen, Matanuska, Territory of Alaska
Application April 14, 1937, Serial No. 136,911
4 Claims. (Cl. 104—279)

1. In a structural assemblage of the class described, in combination, a track-type motor car comprising a platform having front and rear track engaging wheels, ice scraping devices on opposite sides of the platform adapted to contact the track within the vicinity of the front wheels, said devices each including spring pressed scraping blades, and shielding guards in advance of the scraping blades, and guides for the blades on said guards for positioning the scraping blades in inclined contact with the rails adjacent the perimeters of the front wheels.

2,165,417
WAIST BAND FASTENER FOR UNDERGARMENTS
Henry Herrle, New Orleans, La.
Application May 15, 1935, Serial No. 21,625
1 Claim. (Cl. 2—237)

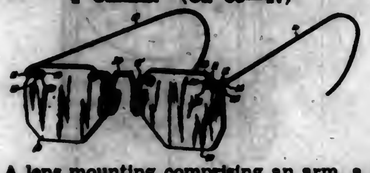


In combination with a nether garment having a waistband and inner and outer fore flaps to close the fly opening thereof, an elastic strap lying against the face of the band with its longer dimension disposed in the direction of the periphery of the band, the strap being carried by the band on the inner flap of the garment but being secured to the band only at the extremities of the strap, and a fastener secured to the outer face of the strap at an intermediate point in the length thereof, the outer flap of the garment having the waistband portion thereof formed with means to

engage said fastener, whereby yielding of the waistband to body distension applies a stress to

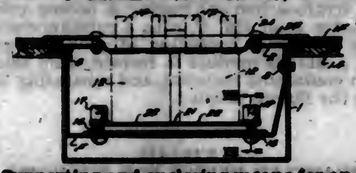
the strap first to but one section thereof and later to both sections of the same.

2,105,418
BROILER DRAWER FOR GAS RANGES AND THE LIKE
Carl H. Hoffstetter and Robert F. Hoffstetter, Erie, Pa.
Application November 10, 1936, Serial No. 110,166
8 Claims. (Cl. 126—337)



2. In a device of the character described, an oven having a door opening, supporting means pivotally mounted in said oven, a drawer pivotally supported on said means for movement through said opening substantially outside said oven and into a lengthwise position substantially parallel with the front of the oven, a bracket on the rear end of said drawer, a bracket mounted in said oven, and a rod pivotally connected at its opposite ends to said brackets for steering the rear end of the drawer during said movement.

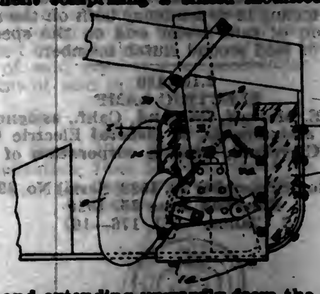
2,105,419
VEHICLE HEAD LAMP
Wilhelm Hessing, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application November 20, 1934, Serial No. 753,876
In Germany December 22, 1933
4 Claims. (Cl. 176—36)



2. An electric incandescent lamp for vehicle headlamps comprising a bulb containing a pair of filaments with separate circuit connections, said filaments being straight linear filaments and being arranged substantially in the form of a T located in a plane perpendicular to the longitudinal axis of the lamp, the vertical leg of said T being located substantially in a plane extending through the said longitudinal axis of the lamp.

2,105,420
LENS MOUNTING
Walter F. Hembeler, Kansas City, Mo.
Application December 31, 1936, Serial No. 118,533
4 Claims. (Cl. 88—47)

1. A lens mounting comprising an arm, a lens edge-engaging element carried by said arm outside the plane of the lens and having terminal portions extending transversely across the edge of the lens at opposite sides of said arm, and means for securing said arm to the lens independently of said edge-engaging element.



2,105,421
MOUNTING MEANS FOR ENCLOSED ELECTRIC DEVICES
John G. Jackson and Ralph H. Kingdon, Detroit, Mich., assignors to Square D Company, Detroit, Mich., a corporation of Michigan
Application April 7, 1937, Serial No. 135,267
6 Claims. (Cl. 247—19)

1. Supporting and enclosing means for an electric circuit controlling instrumentality adapted for both flush and surface mounting comprising an enclosing box and a supporting pan within the box having portions projecting a short distance in front of the plane of the pan, said instrumentalities being directly supported upon said projections for the surface mounted enclosure, and an auxiliary supporting plate adapted to be supported on said pan and adjustable relative thereto, said plate carrying said instrumentalities for flush type mounting, said plate having portions interfitting with said projections on the pan so that in the back position of the plate the instrumentalities will be supported in the same position as when directly supported on said projections.

2,105,422
ATTACHMENT FOR ELEVATING GRADERS
Endre O. Johnson, McVille, N. Dak., assignor of one-third to Henry T. Quanbeck, McVille, N. Dak.
Application May 14, 1937, Serial No. 142,706
7 Claims. (Cl. 37—110)

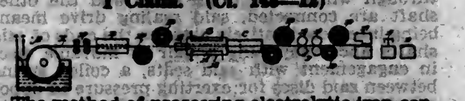
1. An attachment for a road elevating grader of the type embodying a laterally disposed conveyor element having front and rear side walls, a shoe extending between said front and rear side walls at the lower end of the elevator and a disk positioned in operative position relative to said shoe intermediate the front and rear walls of the elevator and arranged to throw dirt onto the shoe and lower end of the elevator; said attachment comprising a shield mounted on said

shoe and extending upwardly from the shoe and also from the rear side of the disk to the rear side wall of the elevator and serving to prevent the passage of dirt from the shoe through the space normally presented between the disk and the rear side of the elevator.

2,105,423
DETONATOR
Helmut Junghans, Schramberg-Sulgen, Germany
Application December 4, 1936, Serial No. 114,251
In Germany January 18, 1935
8 Claims. (Cl. 102—39)

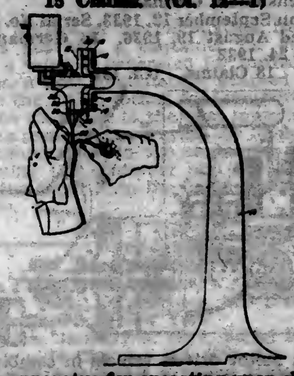
1. In a detonator for a projectile, a firing pin, centrifugal jaws for securing the firing pin and adapted to swing out successively for the purpose of releasing the pin, an abutment on the first of the said jaws, and a rotatable locking portion disposed centrally in the detonator and furnished with a slot through which the said abutment is adapted to pass for the purpose of release.

2,105,424
PENCIL HEAD CONTAINER
David Kahn, Woodcliff, N. J., assignor to David Kahn, Inc., North Bergen, N. J., a corporation of New Jersey
Application October 29, 1936, Serial No. 108,269
10 Claims. (Cl. 206—56)



5. A pencil lead container constructed and arranged to hold a plurality of pencil leads disposed in parallel and having a bottom sloping into a narrow depending part of a width to accommodate and segregate a single lead, said narrow dependent part having a longitudinal section thereof cut away to form a lead feeding opening so as to permit tilting of the lead relative to the container when fed.

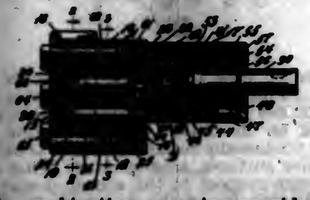
2,105,425
MATCH BOOK CASE
Gerhard M. Lee, Aurora, Ill.
Application November 11, 1936, Serial No. 110,277
4 Claims. (Cl. 206—38)



1. A match case comprising two cover parts hingedly connected together, said cover parts being provided with openings, and socket means positioned on the inner surfaces of said cover parts for frictionally retaining match books having abrasive surfaces, said openings being so positioned with respect to the socket means as to expose the abrasive on the match books.

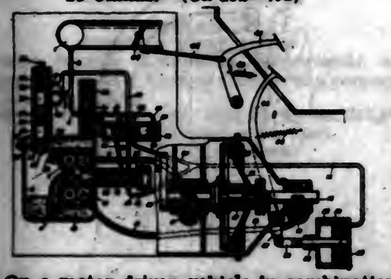
2,105,426
METHOD OF PROCESSING METAL
Charles E. McManus, Spring Lake, N. J.
Application May 8, 1934, Serial No. 724,551
1 Claim. (Cl. 148—12)

The method of processing electrolytic iron consisting of annealing virgin electrolytic iron to 1700° to 2285° F. in a reducing atmosphere, cooling it in a reducing atmosphere and then cold rolling it.



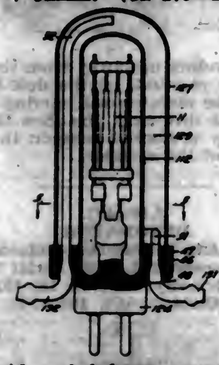
2,105,427
METHOD AND APPARATUS FOR OPERATING ON SHOES
Clifford K. MacDonald, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application November 2, 1936, Serial No. 108,740
15 Claims. (Cl. 12—1)

1. An apparatus for operating upon shoes having, in combination, a non-movable member



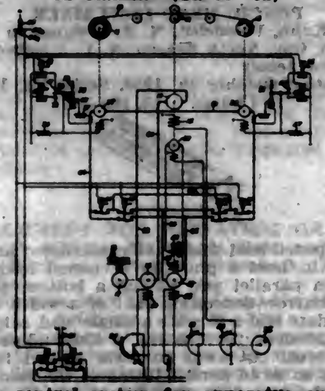
adapted to be inserted between a shoe and a sole cement attached thereto for separating the sole from the shoe, said member having relatively blunt means thereon for penerating the cement which secures the sole to the shoe bottom, and means for heating said member to cause said blunt means to break the cement bond during penetrating movement of said member in one direction only.

2,105,423
GEAR PUMP SEAL
George F. Magiott, Cranston, R. I., assignor to Brown & Sharpe Manufacturing Company, a corporation of Rhode Island
Application June 2, 1934, Serial No. 728,798
4 Claims. (Cl. 286—7)



1. In combination, a casing provided with a bore and a pair of opposed end seats, a shaft rotatably mounted in said casing, a drive shaft rotatably mounted in said casing and extending along said bore in a direction towards the first shaft but terminating short of said shaft to leave a space therebetween, and sealing drive means through which said drive shaft and the other shaft are connected, said sealing drive means being interposed entirely between the ends of said shafts and comprising a pair of movable discs in engagement with said seats, a coiled spring between said discs for exerting pressure in opposite directions against said discs to force them into sealing engagement with said seats, tongues on said discs, and a coupling member having slots to receive said tongues on the discs and located within and axially of said spring for connecting said discs for the transmission of rotation from one to the other.

2,105,429
CLUTCH OPERATING MEANS ON MOTOR VEHICLES
Karl Maybach, Friedrichshafen, Germany, assignor to Maybach-Motorenbau G. m. b. H., Friedrichshafen, Germany
Application September 12, 1933, Serial No. 689,662. Renewed August 19, 1936. In Germany September 24, 1932
18 Claims. (Cl. 192—.01)



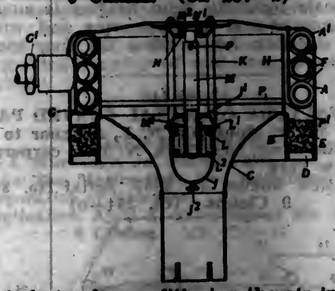
1. On a motor driven vehicle in combination: a first clutch member in driving connection with the motor and a second clutch member in driving connection with the wheels of said vehicle; pressure means adapted to cause engagement and disengagement of said clutch members; a first valve for controlling said pressure means in direct dependency on the speed of rotation of said motor; and a second valve for controlling said pressure means in dependency both on the speed of rotation of said motor and on the speed of rotation of said second clutch member.

2,105,430
ELECTRIC LAMP
Herbert E. Metcalf, Oakland, Calif., assignor, by mesne assignments, to General Electric Company, Cleveland, Ohio, a corporation of New York
Application September 18, 1929, Serial No. 393,421
Renewed June 25, 1936
7 Claims. (Cl. 176—16)

1. A liquid cooled lamp comprising a light source, a pair of concentric cylindrical transparent envelopes disposed around said source and spaced to form a chamber therebetween, an inlet conduit opening tangentially into one end of said chamber, and a transparent outlet conduit entering the same end of said chamber and extending through said chamber to open at the other end thereof.

2,105,431
CONTROL SYSTEM
Francis Mehler and Leonid A. Umansky, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application October 11, 1933, Serial No. 693,141
11 Claims. (Cl. 90—32)

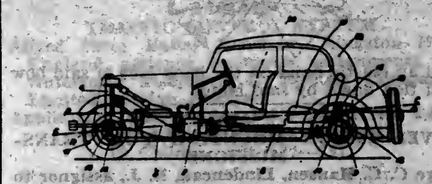
1. A control system for apparatus operating



on a strip of material comprising a pair of dynamo-electric machines mechanically connected to the strip, an element for reducing the thickness of said strip, a source of supply for said dynamo-electric machines, a generator having its armature connected in circuit between said source and one of said machines means responsive to the reduction in the thickness of said material effected by said element for varying the excitation of said generator in accordance with the amount of said reduction.

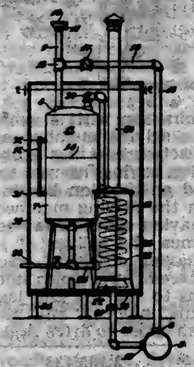
2,105,432
STORM LANTERN
Bruno Nier, Beierfeld, Germany
Application June 5, 1936, Serial No. 83,749
In Germany June 6, 1935
5 Claims. (Cl. 67—53)

1. A storm lantern burner comprising in combination a burner cap, a wick sheath disposed within the burner cap, a flame plate mounted so as to surround the wick sheath at a point substantially flush with the upper edge thereof and means for heat-insulating the flame plate from the wick sheath.



2,105,433
DEVICE FOR CONDITIONING THE INTAKE AIR TO CARBURETORS
Percy Warren Noble, Unadilla, N. Y.
Application February 16, 1937, Serial No. 126,505
In Great Britain February 13, 1936
6 Claims. (Cl. 257—2)

5. A device for conditioning the air intake to a carburetor, comprising an air filter, a heat exchanger comprising a plurality of corrugated pipes, an outlet adapted to lead to the carburetor and comprising a flared passageway through which air flows from the larger to the smaller end, means for causing a portion of the air from the filter to flow to the outlet past the heat exchanger whilst the remainder flows direct to the outlet and thermostatic means responsive to the temperature of the air mixture adjacent the outlet and serving to increase the proportion of air which flows past the heat exchanger as the temperature falls and vice versa.



2,105,434
MOTOR VEHICLE
Rudolf Slaby, Berlin-Charlottenburg, Germany, assignor to Auto Union A. G., Chemnitz, Germany, a joint-stock company of Germany
Application September 25, 1933, Serial No. 690,897
In Germany September 30, 1932
6 Claims. (Cl. 280—112)

1. In a motor vehicle consisting of sprung and unsprung portions, the combination with spring suspension means adjacent the forward and rearward ends of the vehicle, of connections between said means and the unsprung and sprung portions of the vehicle, said connections being so constructed and disposed as to support the sprung

portions of the vehicle for lateral swinging movement about a longitudinal axis passing substantially through the center of gravity of the whole of said sprung portion when the vehicle is normally loaded, whereby lateral swinging movement of said sprung portion as the vehicle rounds a curve is minimized.

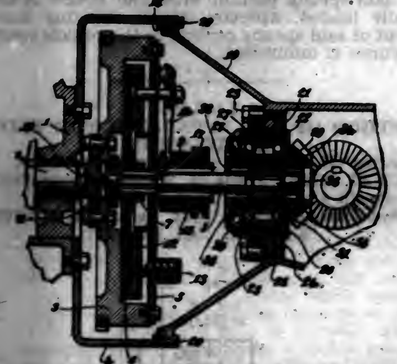
2,105,435
METHOD OF AND APPARATUS FOR FROST ELIMINATION
Charles H. Tanner and Ernest Watkins, St. Cloud, Minn.; Jessie M. Tanner administrator of said Charles H. Tanner, deceased
Application June 2, 1934, Serial No. 728,783
9 Claims. (Cl. 183—32)

1. In apparatus for eliminating frost in gas lines, a gas line, a container for liquid from which a vapor is generated for inclusion in the gas line, a heat interchanger adapted to impart heat to the liquid, means for transporting liquid from the container to the heat interchange, and separate means for conveying the liquid from the heat interchanger to the container, and means connecting the container and the gas line for conveying vapor from the liquid container to the gas line.

2,105,436
BOW
George Flatto, New York, N. Y., assignor to The Ribbon Mills Corporation, New York, N. Y., a corporation of New York
Application January 6, 1937, Serial No. 119,268
10 Claims. (Cl. 132—47)

1. A bow comprising a ribbon folded into bow formation, a band tied over the central area of

said bow formation to maintain the bow shape,



and an elastic band on the back face of said bow and tied down by said band.

2,105,427

BEVEL PINION MOUNTING FOR TRANSMISSIONS

Aage C. C. Hansen, Lindencrona, N. J., assignor to Mack Manufacturing Corporation, a corporation of Delaware

Application October 14, 1936, Serial No. 105,459
2 Claims. (Cl. 74—396)

1. In combination with a power transmitting mechanism, a driving member, a hollow driving pinion, antifriction bearings supporting said pinion, said pinion having internal splines within the plane of said antifriction bearings, a shaft extending from the driving member to within said pinion and having splines adapted to engage said internal splines, the splines of said pinion and said shaft having sufficient freedom to permit angular displacement between said shaft and said pinion, means to support and journal said shaft in said driving member, and means carried by said driving member to drive said shaft.

2,105,428

PROCESS AND APPARATUS FOR PRODUCING PERCOMPOUNDS

Hermanus Hartman, Roermond, Netherlands, assignor to Naamlooze Vennootschap Industrieele Maatschappij Voorheen Noury & Van Der Lande, Deventer, Netherlands, a company of the Netherlands

Application July 2, 1935, Serial No. 29,582
In the Netherlands July 6, 1934
7 Claims. (Cl. 204—9)

1. Process for preparing a persalt by electrolysis of an aqueous solution which yields a persalt on electrolysis, which process comprises introducing a flowing stream of the said solution into a chamber having inlet means and outlet means for said solution but which is otherwise closed and which has electrode means in the path of said solution as it flows from the said inlet means to the said outlet means, said solution in its flow from the said inlet means to the said outlet means entirely filling the said chamber and carrying with it substantially all the products of the electrolysis, and applying a difference of electrical potential to said electrodes for producing the said electrolysis as the solution flows through the said chamber.

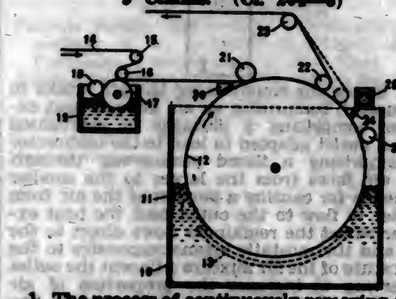
3. Apparatus for electrolysing a solution comprising in combination a tubular chamber, the walls of said chamber being formed of a soft elastic rubber-like non-conductor of electricity, electrodes extending into said chamber through the walls of said chamber and held by said walls in fluid tight connection, means for introducing the solution to be electrolysed into one end of said tubular chamber, and means for conducting electrolysed solution away from the other end of said tubular chamber.

2,105,439

METHOD OF CLEANING THE SURFACE OF SOLID METALS

Clarence H. Lorig, Columbus, Ohio, assignor to The Battelle Memorial Institute, Columbus, Ohio, a corporation of Ohio

No Drawing. Application May 23, 1935, Serial No. 23,071
4 Claims. (Cl. 148—4)



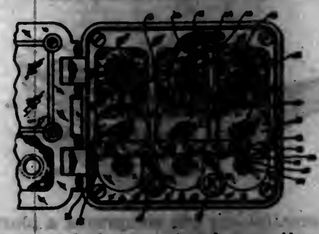
4. A method for treating a steel object which comprises heating such objects to a temperature approximating that required for hot-working such as rolling or forging, cleaning the surface of the object by immersing such surface in a continuous body of molten ferrous alloy until the oxide scale resulting from heating is substantially removed and then removing and, without further heating, hot-working the thus cleaned object.

2,105,440

MANUFACTURE OF METAL COATED PAPER

Bert C. Miller, Montclair, N. J., assignor to Bert C. Miller, Inc., New York, N. Y., a corporation of New York

Application August 30, 1935, Serial No. 38,552
9 Claims. (Cl. 204—6)



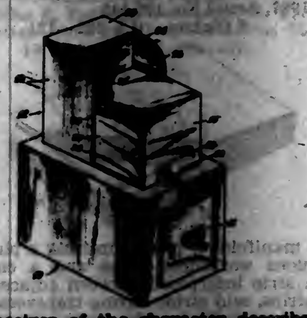
1. The process of continuously removing a layer of electrodeposited metal from a moving cathode when the metal is so thin that it does not possess of itself enough strength to withstand the tension necessary to pull it off the cathode, which comprises pressure contacting the layer of metal on the cathode with a tensioned flexible fibrous foundation which is stronger than the metal layer and with an adhesive which is permanently flexible, uniform, and reasonably hard when set, moving the cathode with the adhering metal layer and foundation while maintaining tension on the fibrous foundation until the adhesive sets enough to permit the foundation and metal layer being pulled off together and then stripping by tension applied in major portion through the foundation to strip the metal layer from the cathode without the aid of any stripping knife or chemical film being applied between the cathode and metal layer to facilitate its removal.

2,105,441

TIMELOCK

Charles A. Miller, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application July 13, 1935, Serial No. 31,165
17 Claims. (Cl. 70—369)



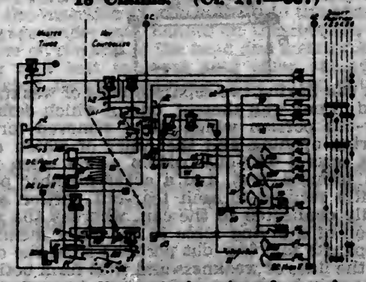
1. In a time lock for a structure, a time movement, means controlled by the running of said movement for a period of time whereby to permit access to the structure, controlling means requiring a predetermined operation as a prerequisite to the running of said movement for said period of time, a second time movement, and means operated through the running of said second time movement for a period of time adapted to operate the said controlling means whereby the running of said first movement is initiated.

2,105,442

CASH RECEIVER

John J. Murtaugh, Jr., Floral Park, N. Y., assignor to The Mosler Safe Co., Hamilton, Ohio, a corporation of New York

Application April 2, 1932, Serial No. 72,211
9 Claims. (Cl. 232—1)



1. A receiver of the character described, including, a structure having a storage compartment, a front compartment above the storage compartment, and adapted to house receipt issuing mechanism, and a chute compartment behind said front compartment, means including a member at the upper part of the chute compartment, and movable above said front compartment, for introducing articles into the chute compartment to pass therethrough into the storage compartment, and means for locking said member against movement operable in response to operation of said receipt-issuing mechanism.

2,105,443

TRAFFIC CONTROL SYSTEM

Alfred Percy Bailey Renshaw, Kingston Hill, England, assignor, by mesne assignments, to Automatic Telephone & Electric Company, Limited, London, England

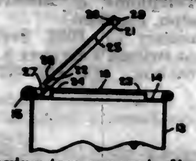
Application January 19, 1935, Serial No. 2,480
In Great Britain February 5, 1934
18 Claims. (Cl. 177—337)

1. In a traffic control system for a plurality of intersections of interfering traffic lanes, the combination of means for according right of way through a cycle to the several lanes at one intersection, a second means at another intersection and adapted to be actuated by traffic for according right of way through a cycle to the several lanes at the latter intersection variable in accordance with traffic actuations in said several lanes, means for increasing the cycle of the first means, means for decreasing the cycle of the first means, and selective means responsive to the order of completion of the cycles of the first and second means for selecting between said means for increasing or decreasing the cycle of said first cycle increasing and cycle decreasing means.

2,105,444

ACTUATING MEANS FOR KNITTING MECHANISM

Paul Schmidt, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania

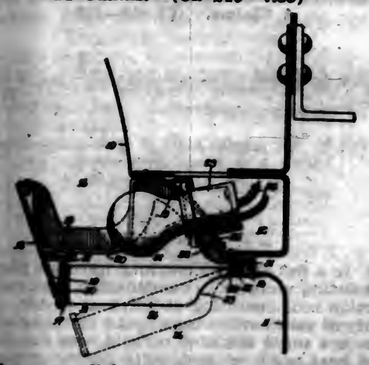


Application November 4, 1936, Serial No. 109,686
8 Claims. (Cl. 66—129)

8. In a flat knitting machine having a plurality of knitting sections, in combination, a plurality of friction rods operating at different speeds, a plurality of yarn carrier bars, and a plurality of friction box units mounted on said rods for driving said bars, each of said units having means for selectively establishing driving connection between either of said friction rods and any of said

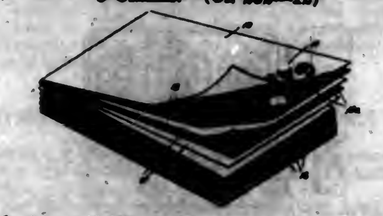
yarn carrier bars so that the latter may be operated at different speeds relative to each other in one or more sections of the machine.

2,105,445
CAN
Harry Sebell, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass.
Application May 6, 1937, Serial No. 141,064
8 Claims. (Cl. 220—27)



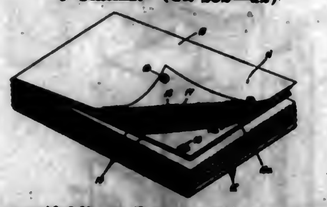
1. A can having two separate lines of weakness formed in one wall thereof, one of which defines a tear-out portion which when removed forms a pouring opening and the other of which defines a second tear-out portion which when removed forms a vent, and a cover member permanently secured to each tear-out portion and hingedly connected to the can, whereby the application of a prying force to the cover member will separate said tear-out portions from the can along the lines of weakness and thus form both a pouring opening and a separate vent opening.

2,105,446
TREATMENT OF LEATHER
John Arthur Wilson, Milwaukee, Wis., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application April 1, 1935, Serial No. 14,125
5 Claims. (Cl. 149—6)



1. The improvement in treating leather comprising subjecting hides after tanning but before fatliquoring to the action of a solution of an alkali-metal polyphosphate formed by the reaction of an alkali metal metaphosphate and an alkali metal pyrophosphate.

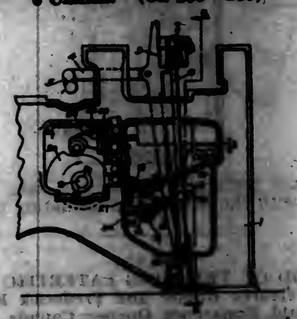
2,105,447
LIGHTING FIXTURE
Albert L. Arenberg, Highland Park, Ill., assignor to Patent Licensc Corporation, Chicago, Ill., a corporation of Illinois
Application July 20, 1936, Serial No. 91,493
11 Claims. (Cl. 240—7.35)



1. In a car lighting fixture, a longitudinally extending trough characterized by a transversely curved downwardly directed reflector and a vertically disposed face plate in the form of a translucent panel along one side of the reflector, lamp bulbs in the trough, and closely spaced louver strips which extend across the open face of the trough from the face plate in planes at right angles to the axis of the trough.

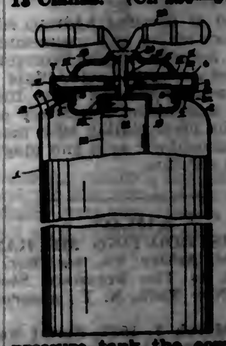
2,105,448
MANIFOLDING PILE
Carl W. Brenn, Montclair, N. J., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Original application March 22, 1930, Serial No. 438,063. Divided and this application March 12, 1937, Serial No. 130,439
5 Claims. (Cl. 282—12)

1. A manifolding pile comprising a plurality of continuous worksheet strips and a continuous carbon strip interposed between two adjacent worksheet strips, the carbon strip having apertures arranged at intervals therealong inwardly removed from its lateral edges to provide zones of face-to-face direct contact of adjacent worksheet strips with each other extending longitudinally of the pile; and means located along said pile and in said zones of direct contact for securing the adjacent worksheet strips together and holding the carbon sheet strip captive in the pile.



2,105,449
MANIFOLDING PILE
Carl W. Brenn, Montclair, N. J., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Original application March 22, 1930, Serial No. 438,063. Divided and this application March 12, 1937, Serial No. 130,440
6 Claims. (Cl. 282—12)

1. A manifolding pile comprising a plurality of continuous worksheet strips and a continuous carbon strip interposed between adjacent worksheet strips, said strips having transverse lines of severance at form-lengths along which the pile may be severed, thereby producing a set of worksheets and interleaved carbon sheet or sheets, the carbon strips being of substantially the same width as the worksheet strips and having cutouts at both lateral margins and located at sheet-length intervals along the pile to provide zones of face-to-face direct contact of the adjacent worksheet strips with each other; and means

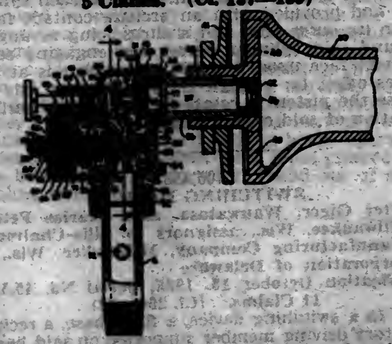


located in said zones of direct contact for securing the worksheet strips together at both lateral margins, said cut-outs and means located therein being both wholly located between the lines of severance to hold the worksheets of a severed set in registration and to hold the carbon sheets captive between the worksheets.

2,105,450
LOOM
Carl D. Brown, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application December 9, 1936, Serial No. 114,869
6 Claims. (Cl. 139—146)

2. A fly shuttle loom having a lay reciprocating on a horizontal rocker shaft, a substantially vertical picker stick carried by the lay, a lug strap support on said picker stick intermediate the ends thereof, a bell crank lever mounted for oscillation about an approximately vertical axis located inwardly and rearwardly from said picker stick, said lever having angularly related arms one of which extends forwardly from said axis and terminates at a point below the level of said lug strap support, a lug strap connecting the forward end of said arm with said lug strap support, and cam operated means, engaging the other arm of said bell crank lever, for oscillating said bell crank lever and thereby actuating said picker stick.

2,105,451
PRESSURE TANK
Giles E. Bullock, Rochester, N. Y.
Application April 20, 1936, Serial No. 75,232
13 Claims. (Cl. 220—57)



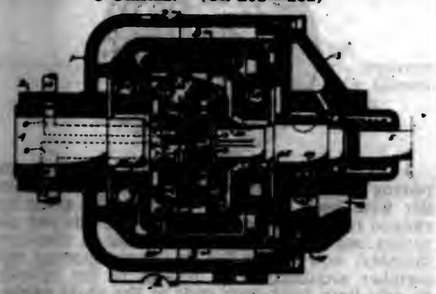
1. In a pressure tank the combination of a cylindrical tank open at one end, an open head for said open end, said head comprising a substantially cylindrical flange formed inwardly at both ends to provide a larger opening at one end and a smaller opening at the other end of the flange, the open end of said tank being attached to said flange at the smaller opening thereof to provide a seat surrounding the open end of said tank, a cover for said opening in said head adapted to move into the larger opening of said head and be seated on said seat surrounding the smaller opening thereof and the opening of said tank, inclined and spaced locking flanges formed by the overhanging flange surrounding the larger opening of said head, a locking bolt extending diagonally over said cover and mounted to rock thereon, a cam carried at the ends of said bolts and projecting radially from said cover so as to move thru the spaces between said locking flanges on the insertion of said cover into the head, and engage under said flanges on the rotation of the cover on the seat of the head and means for rocking said bolt to move said cams against said locking flanges and force said cover onto said seat.

2,105,452
PLATE CLAMP
Anthony S. Bank, Paterson, N. J., assignor to New Era Manufacturing Company, Paterson, N. J., a corporation of New Jersey
Application December 13, 1935, Serial No. 54,927
20 Claims. (Cl. 101—415.1)

1. In a printing cylinder having a gap and having a flexible plate wrapped about the cylinder with both bent-over ends of the plate arranged in mutual parallelism within the gap adjacent one of the edges of the gap, a clamping member, and means for yieldingly moving said member angularly with respect to the cylinder to grip both bent-over ends of the plate against said edge.

2,105,453
VALVE FOR HEATING APPARATUS
Lewis W. Eggleston, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application April 27, 1933, Serial No. 668,177
5 Claims. (Cl. 137—139)

1. In an apparatus of the character described, a hollow casing having a partition dividing said



casing internally into a longitudinal chamber having relatively transversely directed inlet and outlet ports and a substantially cylindrical chamber positioned intermediate said inlet and outlet ports and with its longitudinal axis substantially parallel to the axis of said outlet, a valve member in said longitudinal chamber and cooperable with said outlet to control flow through said longitudinal chamber, a lever operatively connected to said valve member and extending longitudinally of said longitudinal chamber and into proximity to said outlet port, said partition having an aperture therethrough coaxial with said outlet and in overlying relation to the end of said lever, a plate member closing and sealing said other chamber and having pressure responsive means sealed thereto, a plunger extending through said aperture and operable to transmit movement from said responsive means to said lever, and a coil spring surrounding said plunger, said spring abutting said partition and resisting movement of said responsive means whereby to regulate the operation of said valve member.

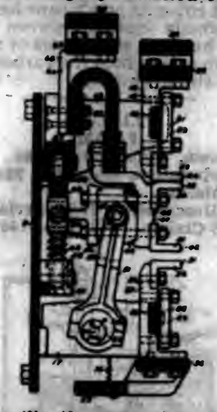
2,105,454

PUMP OR MOTOR

Walter Ferris, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin

Application December 13, 1935, Serial No. 54,189
8 Claims. (Cl. 103—161)

1. A pump, comprising a casing, a pintle fixed in said casing and having ports and passages formed therein, a cylinder barrel journaled upon and carried by said pintle and provided with cylinders which communicate with said pintle ports alternately as said cylinder barrel rotates, said cylinders being inclined to the radii of said cylinder barrel, means for rotating said cylinder barrel, a cylindrical piston fitted in each cylinder and provided with an arcuate contact face upon its outer end, and a thrust ring arranged around said cylinder barrel and engaging said contact face upon a single spot which is at all times offset far enough from the piston axis to cause the piston to rotate in its cylinder during rotation of said cylinder barrel.



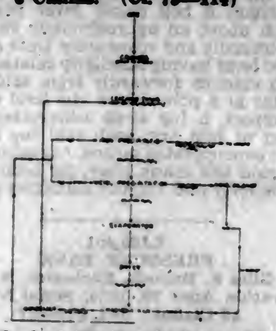
2,105,455

SWITCHING DEVICE

Walter Giger, Wauwatosa, and Charles Peter, Milwaukee, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application October 18, 1935, Serial No. 45,552
11 Claims. (Cl. 200—82)

1. In a switching device, a fixed base, a reciprocatory driving member supported on said base, an insulating member pivotally mounted on said driving member, a contact member rigidly mounted on said insulating member, another insulating member rigidly mounted on said base,



and means resiliently connecting said contact member with the second said insulating member.

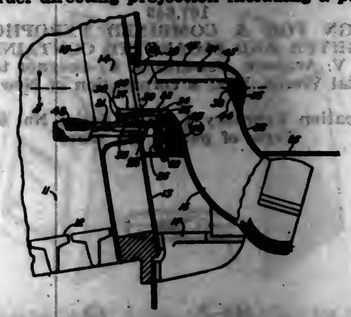
2,105,456

METHOD OF TREATING LATERITIC ORES

William George Hubler and Frederick Ratcliffe Archibald, Duparquet, Quebec, Canada, assignors to Ventures Limited, Toronto, Ontario, Canada

Application April 24, 1937, Serial No. 138,690
6 Claims. (Cl. 75—114)

1. A method of treating hydrous silicate ores, containing iron, nickel and magnesium, such as garnierite or noumeite which comprises leaching the crushed ore with a cold, dilute solution of hydrochloric acid, removing from the resulting solution iron and nickel selectively and in the order named by precipitation with magnesia and recovering hydrochloric acid and magnesia from the remaining solution.



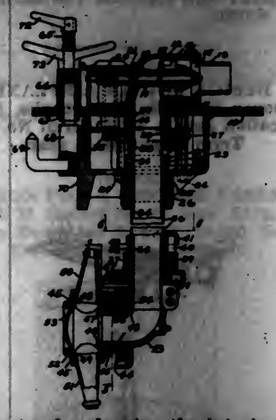
2,105,457

FUEL DISTRIBUTING MECHANISM

John H. Ichter, Ashley, Pa., assignor, by mesne assignments, to The Standard Stoker Company, Inc., New York, N. Y., a corporation of Delaware

Application March 2, 1933, Serial No. 656,224
Renewed October 3, 1936
6 Claims. (Cl. 110—101)

1. As a new article of manufacture, an integral cast metal fuel distributor nozzle having a fluid admission end and a fluid emission end, jet openings in the last named end of said nozzle, said nozzle having a top surface above the plane of said jet openings forming a support for the fuel passing thereover, and a fuel directing projection on said top surface extending from the fluid admission to the fluid emission end of said nozzle, said fuel directing projection including a pair of



inclined faces intersecting in a plane vertically bisecting the nozzle in the direction of flow and extending laterally a greater distance at the fluid emission end of said nozzle than at the fluid admission end thereof, that portion of said top surface which extends laterally of said fuel directing projection being flat and uninterrupted.

2,105,458

APPARATUS FOR CLEANING CONTAINERS

Le Baron R. Johnson, Bronxville, N. Y., assignor to Oakite Products, Inc., a corporation of New York

Application December 20, 1934, Serial No. 758,511
12 Claims. (Cl. 220—57)

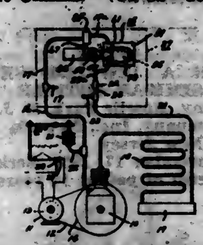
1. Apparatus for cleaning the interior surfaces of tanks and the like comprising, a plurality of nozzles radially extending from a central point and disposed in a common plane, a passageway connected to said nozzles for delivering fluid under pressure thereto, means for slowly rotating said nozzles about an axis spaced from but parallel to their common plane, and means for rotating said nozzles more slowly about an axis disposed substantially at right angles to said first mentioned axis, the relationship between the two rotary movements being such that said nozzles define a substantially spiral path.

2,105,459

HYDRATED TITANIUM-IRON ARSENATES AND METHOD OF MAKING SAME

Charles J. Kinzie and Eugene Wainer, Niagara Falls, N. Y., assignors to The Titanium Alloy Manufacturing Company, New York, N. Y., a corporation of Maine

No Drawing. Application February 28, 1936, Serial No. 66,312
18 Claims. (Cl. 23—53)



1. A method of making a hydrated titanium-iron arsenate which comprises bringing together an oxidized titanium-iron sulphate solution and an arsenite-free sodium arsenate solution, allowing the reaction to proceed to formation of a precipitate, separating the latter from the solution, washing the precipitate to remove impurities, and finally drying the resulting hydrated titanium-iron arsenate.

2,105,460

REFRIGERATING APPARATUS

Richard S. Gaugler, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application March 28, 1934, Serial No. 717,703
Renewed August 29, 1936
10 Claims. (Cl. 62—105)

1. A continuous freezing apparatus for producing ice blocks including, a container for holding a body of water, a plurality of cooling elements disposed in said body of water, means for refrigerating said plurality of cooling elements to a temperature to cause ice to form thereon, and means for stopping the refrigerating effect of one of said plurality of cooling elements independently of and while the refrigerating effect of other of said plurality of cooling elements continues, said last named means being operable automatically in response to a force created by the buoyancy of ice formed on said one of said cooling elements.

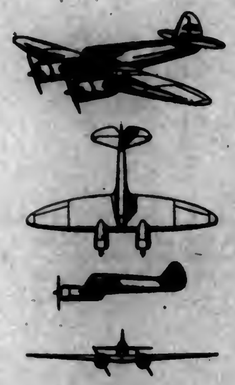
DESIGNS

JANUARY 11, 1938

107,847
DESIGN FOR A COFFEE BREWER
Charles Abrams, Chicago, Ill., assignor to Universal Coffee Co., Chicago, Ill., a corporation of Illinois
Application November 12, 1937, Serial No. 72,817
Term of patent 7 years

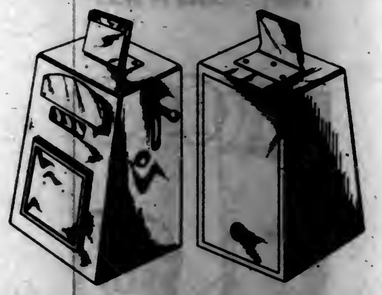
The ornamental design for a coffee brewer, substantially as shown.

107,848
DESIGN FOR A JEWELRY SETTING OR SIMILAR ARTICLE
Percy J. Armeny, Roselle Park, N. J., assignor to Baker & Company, Inc., Newark, N. J., a corporation of New Jersey
Application November 17, 1937, Serial No. 72,955
Term of patent 14 years



The ornamental design for a jewelry setting or similar article, as shown.

107,849
DESIGN FOR A COMBINED PYROPHORIC LIGHTER AND CIGARETTE CONTAINER
Louis V. Aronson, Newark, N. J., assignor to Art Metal Works, Inc., a corporation of New Jersey
Application February 1, 1937, Serial No. 67,375
Term of patent 3½ years



The ornamental design for a combined pyrophoric lighter and cigarette container substantially as shown.

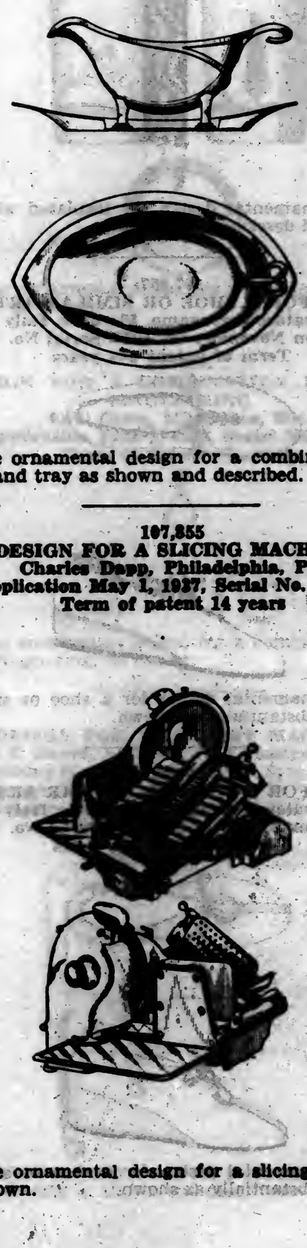
107,850
DESIGN FOR AN AIRPLANE
Donovan R. Berlin, Eggertsville, N. Y.
Application July 8, 1937, Serial No. 70,305
Term of patent 14 years

The ornamental design for an airplane substantially as shown.

107,851
DESIGN FOR A CABINET FOR CHECK CONTROLLED APPARATUS
Sol Brown, Newark, N. J.
Application November 22, 1937, Serial No. 73,106
Term of patent 7 years

The ornamental design for a cabinet for check controlled apparatus, as shown.

107,852
DESIGN FOR A CHAIR SEAT
John Willie Burks, Madison, Ala.
Application November 16, 1937, Serial No. 72,935
Term of patent 7 years

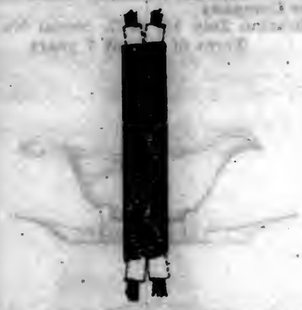


The ornamental design for a chair seat as shown.

107,853
DESIGN FOR A TEXTILE FABRIC
Frederick M. Robert Burns, New York, N. Y.
Application December 9, 1937, Serial No. 73,509
Term of patent 3½ years

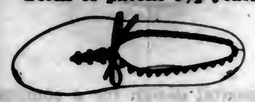
The ornamental design for a textile fabric, substantially as shown.

107,854
DESIGN FOR A COMBINED GRAVY BOAT AND TRAY
Minn S. Cornell, Jr., Middletown, Conn., assignor, by mesne assignments, to The Middletown Silver Company
Application July 13, 1937, Serial No. 70,387
Term of patent 7 years



The ornamental design for a combined gravy boat and tray as shown and described.

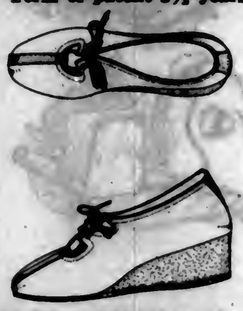
107,855
DESIGN FOR A SLICING MACHINE
Charles Depp, Philadelphia, Pa.
Application May 1, 1937, Serial No. 69,102
Term of patent 14 years



The ornamental design for a slicing machine as shown.

167,856
DESIGN FOR INSULATED WIRE
Clarence A. Farrar, Whitman, Mass.
Application September 11, 1936, Serial No. 64,993
Term of patent 14 years

The ornamental design for insulated wire as shown and described.



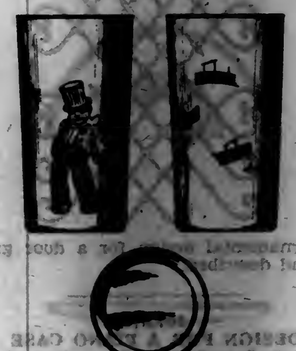
167,857
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Salvatore Ferragamo, Florence, Italy
Application November 26, 1937, Serial No. 73,060
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

167,858
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Salvatore Ferragamo, Florence, Italy
Application November 26, 1937, Serial No. 73,061
Term of patent 3½ years

The ornamental design for a shoe or similar article, substantially as shown.

167,859
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Salvatore Ferragamo, Florence, Italy
Application November 26, 1937, Serial No. 73,062
Term of patent 3½ years

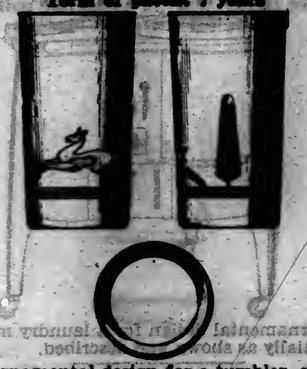


The ornamental design for a shoe or similar article, substantially as shown.

167,860
DESIGN FOR A MILK STOOL
Robert G. Ferris, Harvard, Ill., assignor to Starline Inc., Harvard, Ill., a corporation of Illinois
Application June 12, 1937, Serial No. 69,812
Term of patent 14 years

The ornamental design for a milk stool, as shown and described.

167,861
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 26, 1937, Serial No. 73,184
Term of patent 7 years



The ornamental design for a tumbler substantially as shown.

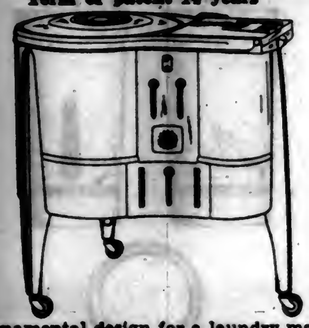
167,862
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 26, 1937, Serial No. 73,185
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

167,863
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 26, 1937, Serial No. 73,187
Term of patent 7 years

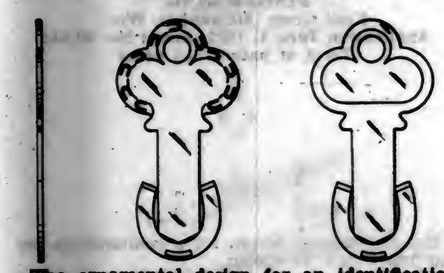
The ornamental design for a tumbler, substantially as shown.

167,864
DESIGN FOR A COMBINATION KEY AND FINGER RING
Emil Gross, Milwaukee, Wis.
Application June 1, 1937, Serial No. 69,642
Term of patent 3½ years



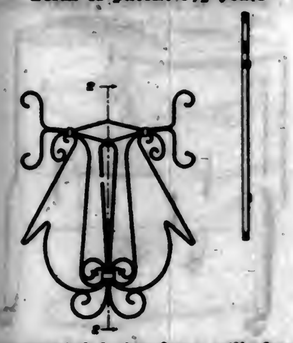
The ornamental design for a combination key and finger ring, as shown.

167,865
DESIGN FOR A LAUNDRY MACHINE
Kent C. Haven, Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application November 1, 1937, Serial No. 72,559
Term of patent 14 years



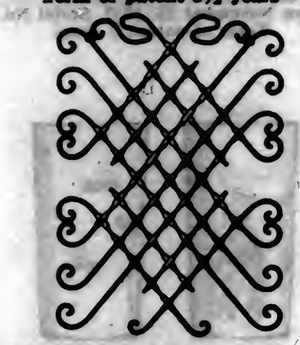
The ornamental design for a laundry machine, substantially as shown and described.

107,866
DESIGN FOR A LAUNDRY MACHINE
Kent C. Haven, Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application November 1, 1937, Serial No. 72,560
Term of patent 14 years



The ornamental design for a laundry machine, substantially as shown and described.

107,867
DESIGN FOR AN IDENTIFICATION TAG
William E. Hicks, St. Louis, Mo.
Application August 12, 1937, Serial No. 71,046
Term of patent 14 years



The ornamental design for an identification tag, substantially as shown.

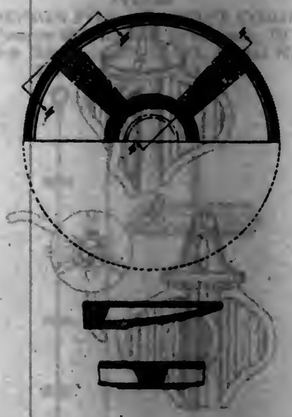
107,868
DESIGN FOR A GRILLE FOR WINDOWS AND THE LIKE
Robert H. Hutchinson, Dallas, Tex.
Application June 19, 1937, Serial No. 69,946
Term of patent 3½ years

The ornamental design for a grille for windows and the like, as shown.

107,869
DESIGN FOR A DOOR GRILLE
Robert H. Hutchinson, Dallas, Tex.
Application September 25, 1937, Serial No. 71,792
Term of patent 3½ years

The ornamental design for a door grille, as shown and described.

107,870
DESIGN FOR A PIANO CASE
Leo Jiranek, Scarsdale, N. Y., assignor to Hardman, Peck and Company, New York, N. Y., a corporation of New York
Application October 19, 1937, Serial No. 72,314
Term of patent 7 years



The ornamental design for a piano case, as shown and described.

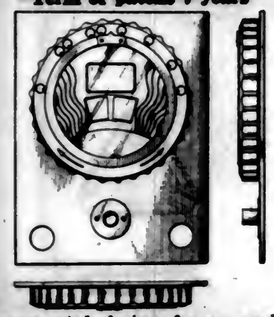
107,871
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,775
Term of patent 3½ years

The ornamental design for a plate or similar article, substantially as shown and described.

107,872
DESIGN FOR A TORTE PLATE OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,777
Term of patent 3½ years

The ornamental design for a torte plate or similar article, substantially as shown and described.

107,873
DESIGN FOR AN ASHTRAY OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,785
Term of patent 3½ years

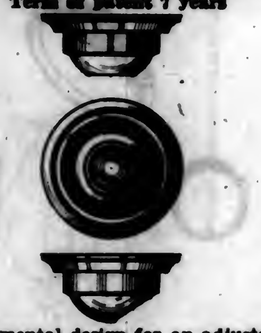


The ornamental design for an ashtray or similar article, substantially as shown.

107,874
DESIGN FOR A FINGER RING
John J. Klecka, Brooklyn, N. Y., assignor to J. R. Wood & Sons, Inc., Brooklyn, N. Y., a corporation of New York
Application October 29, 1937, Serial No. 72,503
Term of patent 14 years

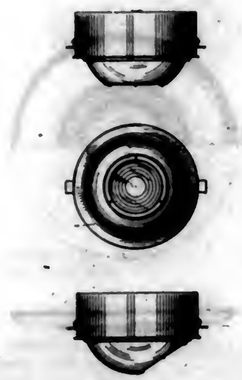
The ornamental design for a finger ring, as shown.

107,275
DESIGN FOR A COMBINED DIAL AND PANEL FOR BATTERY TESTERS
John Harold Keiseth, Newark, N. J., assignor to Atlas Supply Company, Newark, N. J., a corporation of Delaware
Application September 9, 1937, Serial No. 71,529
Term of patent 7 years



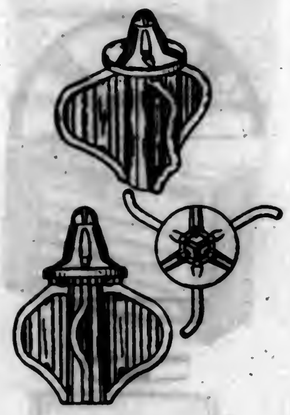
The ornamental design for a combined dial and panel for battery testers, as shown.

107,276
DESIGN FOR A SHOE
David Levin, New York, N. Y.
Application November 30, 1937, Serial No. 73,272
Term of patent 3½ years



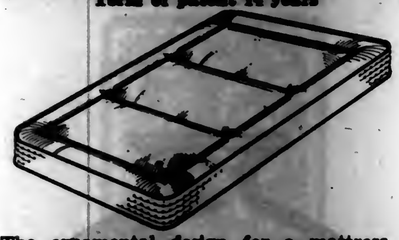
The ornamental design for a shoe, substantially as shown.

107,277
DESIGN FOR AN ADJUSTABLE CEILING LIGHTING FIXTURE OR SIMILAR ARTICLE
Joseph Levy, New York, N. Y., assignor to Century Lighting, Inc., a corporation of New York
Application November 11, 1937, Serial No. 72,810
Term of patent 7 years



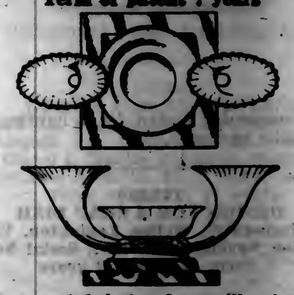
The ornamental design for an adjustable ceiling lighting fixture or similar article, as shown and described.

107,278
DESIGN FOR AN ADJUSTABLE CEILING LIGHTING FIXTURE OR SIMILAR ARTICLE
Joseph Levy, New York, N. Y., assignor to Century Lighting, Inc., a corporation of New York
Application November 11, 1937, Serial No. 72,811
Term of patent 7 years



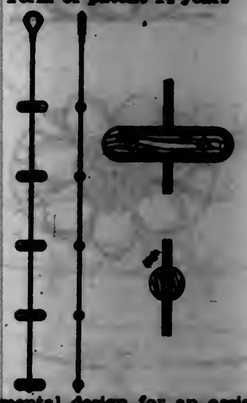
The ornamental design for an adjustable ceiling lighting fixture or similar article, as shown and described.

107,279
DESIGN FOR AN AGITATOR
Thomas J. Litle, Jr., Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application November 1, 1937, Serial No. 72,561
Term of patent 14 years



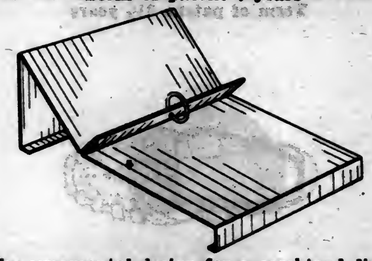
The ornamental design for an agitator substantially as shown.

107,280
DESIGN FOR A MATTRESS
Max Marmack, Milwaukee, Wis., assignor to Li-On Bedding Company, Milwaukee, Wis., a corporation of Wisconsin
Application August 14, 1937, Serial No. 71,663
Term of patent 14 years



The ornamental design for a mattress, as shown.

107,281
DESIGN FOR AN ILLUMINATED CENTERPIECE
Josephine C. Minahin, Beverly Hills, Calif.
Application July 24, 1937, Serial No. 70,603
Term of patent 7 years



The ornamental design for an illuminated centerpiece, as shown.

107,282
DESIGN FOR AN ASSIST CORD
George W. Nesbitt, Sycamore, Ill.
Application November 23, 1937, Serial No. 73,130
Term of patent 14 years

The ornamental design for an assist cord, as shown.

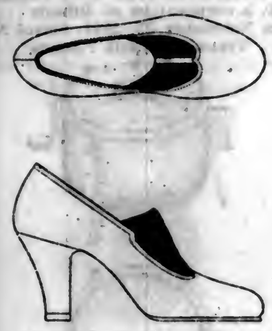
107,283
DESIGN FOR A COMBINED DISPLAY AND RETAINER SUPPORT
Guy E. Neel, Muncie, Ind.
Application May 17, 1937, Serial No. 69,891
Term of patent 7 years

The ornamental design for a combined display and retainer support as shown.

107,284
DESIGN FOR A CASING FOR A SUCTION CLEANER OR SIMILAR ARTICLE
Frank L. Pierce, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application June 13, 1936, Serial No. 63,287
Term of patent 14 years

The ornamental design for a casing for a suction cleaner or similar article, as shown and described.

107,285
DESIGN FOR A CORN POPPER
Edward S. Preston, Hinsdale, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application November 29, 1937, Serial No. 73,242
Term of patent 7 years

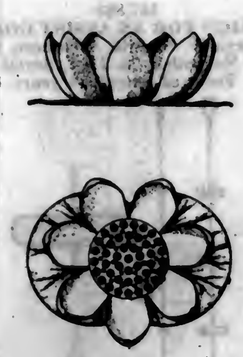


The ornamental design for a corn popper substantially as shown.

107,886
DESIGN FOR A SHOE
Clarence B. Snyder, Athol, Mass., assignor to Ansin Shoe Mfg. Co., Athol, Mass., a corporation of Massachusetts
Application November 22, 1937, Serial No. 73,098
Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.

107,887
DESIGN FOR A SHOE
Alfred Vamos, New York, N. Y., assignor to Bancroft Walker Company, Waltham, Mass., a corporation of Massachusetts
Application June 19, 1937, Serial No. 69,927
Term of patent 3½ years

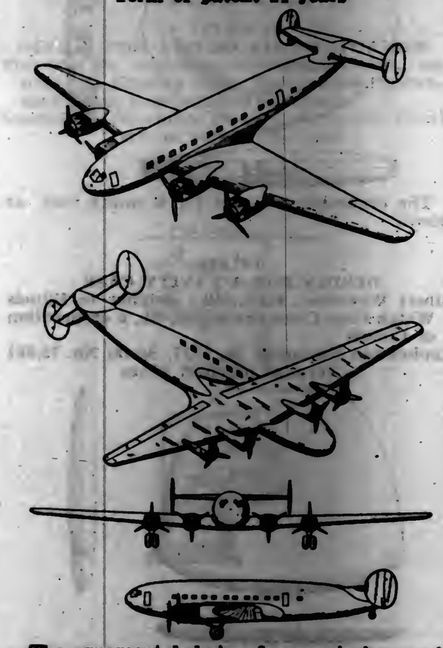


The ornamental design for a shoe substantially as shown and described.

107,888
DESIGN FOR A LIGHTING FIXTURE
John H. Waterbury, Chicago, Ill., assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill., a corporation of Illinois
Application October 25, 1937, Serial No. 72,405
Term of patent 7 years

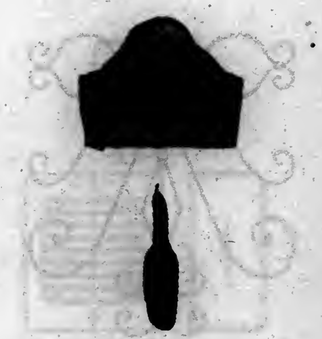
The ornamental design for a lighting fixture substantially as shown.

107,889
DESIGN FOR A SOAP DISH
Elizabeth G. Welles, Lexington, Va.
Application November 24, 1937, Serial No. 73,176
Term of patent 7 years



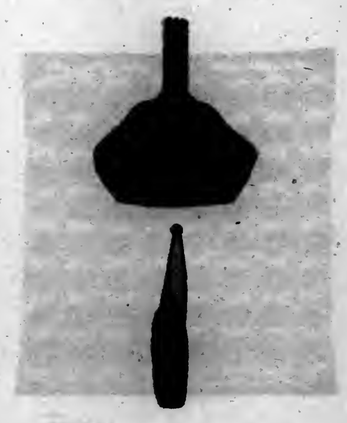
The ornamental design for a soap dish, as shown.

107,890
DESIGN FOR A RUG
Richard F. Bemperad, New York, N. Y., assignor to Atlantic Rug Co., Inc., New York, N. Y., a corporation of New York
Application November 11, 1937, Serial No. 72,797
Term of patent 7 years



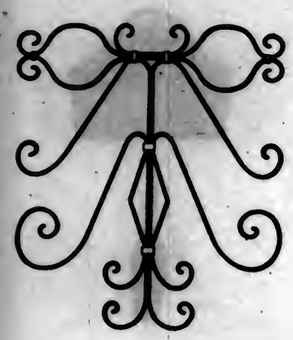
The ornamental design for a rug, as shown.

107,891
DESIGN FOR AN AIRPLANE
Berthoud C. Boulton, Towson, and James S. McDonnell, Jr., Baltimore, Md., assignors to The Glenn L. Martin Company, Baltimore, Md.
Application April 15, 1937, Serial No. 68,792
Term of patent 14 years



The ornamental design for an airplane, substantially as shown and described.

107,892
DESIGN FOR A HANDBAG
Henri Felmann, Chicago, Ill.
Application December 8, 1937, Serial No. 73,476
Term of patent 3½ years



The ornamental design for a handbag, substantially as shown and described.

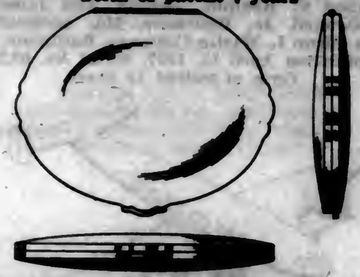
107,893
DESIGN FOR A HANDBAG
Henri Felmann, Chicago, Ill.
Application December 8, 1937, Serial No. 73,478
Term of patent 3½ years

The ornamental design for a handbag, substantially as shown and described.

107,294
DESIGN FOR A GRILLE
Robert H. Hutchinson, Dallas, Tex.
Application September 28, 1937, Serial No. 71,793
Term of patent 3½ years

The ornamental design for a grille, as shown and described.

107,295
DESIGN FOR A COMFORTABLE
Janet May, New York, N. Y.
Application November 10, 1937, Serial No. 72,741
Term of patent 3½ years



The ornamental design for a comfortable, substantially as shown.

107,296
DESIGN FOR A CUFF LINK
Edwin S. Iltz, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application October 11, 1937, Serial No. 72,121
Term of patent 7 years

The ornamental design for a cuff link, as shown.

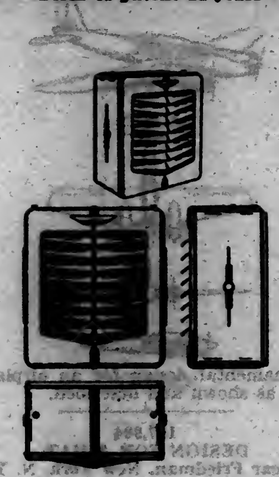
107,297
DESIGN FOR A VANITY CASE
Albert Wewetzer, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application November 20, 1937, Serial No. 73,080
Term of patent 7 years

The ornamental design for a vanity case, as shown.

107,298
DESIGN FOR A VANITY CASE
Albert Wewetzer, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application November 20, 1937, Serial No. 73,081
Term of patent 7 years

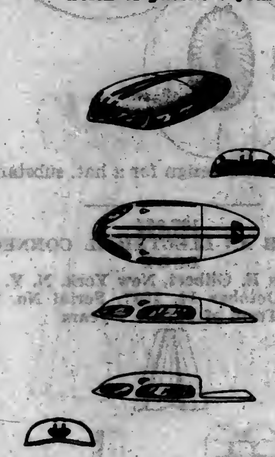
The ornamental design for a vanity case, as shown.

107,299
DESIGN FOR A TEXTILE FABRIC
Hans W. Weber, North Bergen, N. J.
Application October 5, 1937, Serial No. 71,977
Term of patent 3½ years



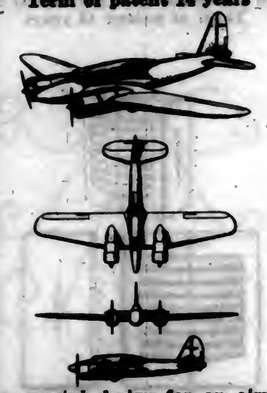
The ornamental design for a textile fabric, substantially as shown.

107,300
DESIGN FOR A MEDICATED VAPORIZER
Theodore A. Anderson, Indianapolis, Ind., assignor to Electric Vapor Corporation, Indianapolis, Ind., a corporation of Indiana
Application November 17, 1937, Serial No. 72,947
Term of patent 3½ years



The ornamental design for a medicated vaporizer, as shown.

107,301
DESIGN FOR AN AIR CONDITIONING CASING
Charles A. Arnold, Cranston, and Eric P. Hanson, Providence, R. I., assignors to General Fire Extinguisher Company, Providence, R. I., a corporation of Delaware
Application November 26, 1937, Serial No. 73,194
Term of patent 14 years

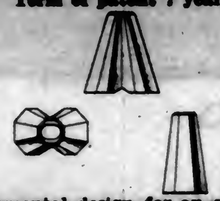


The ornamental design for an air conditioning casing as shown.

107,302
DESIGN FOR A TOP FOR AUTOMOTIVE VEHICLES
Lynn Brodien, Collingswood, N. J.
Application August 7, 1935, Serial No. 58,003
Term of patent 7 years

The ornamental design for a top for automotive vehicles as shown and described.

167,903
DESIGN FOR AN AIRPLANE
Fredric E. Flader, Kenmore, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation, a corporation of New York
Application May 26, 1936, Serial No. 82,837
Term of patent 14 years



The ornamental design for an airplane substantially as shown and described.

167,904
DESIGN FOR A HAT
Oscar Friedman, New York, N. Y.
Application November 23, 1937, Serial No. 73,122
Term of patent 3½ years

The ornamental design for a hat, substantially as shown.

167,905
DESIGN FOR AN ELECTRICAL CONNECTER BODY
Charles E. Gilbert, New York, N. Y.
Application October 14, 1937, Serial No. 72,171
Term of patent 7 years

The ornamental design for an electrical connecter body substantially as shown.

167,906
DESIGN FOR AN EMBROIDERED FABRIC
Leo L. Kahn, New York, N. Y.
Application December 8, 1937, Serial No. 73,458
Term of patent 3½ years

The ornamental design for an embroidered fabric, substantially as shown.

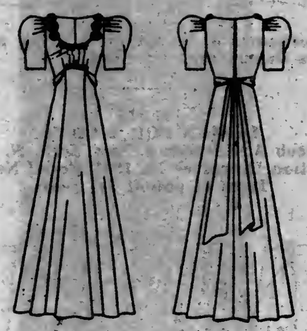
167,907
DESIGN FOR AN EMBROIDERED FABRIC
Leo L. Kahn, New York, N. Y.
Application December 8, 1937, Serial No. 73,459
Term of patent 3½ years

The ornamental design for an embroidered fabric, substantially as shown.

167,908
DESIGN FOR A DRESS ENSEMBLE
Ida Lampel, New York, N. Y.
Application December 8, 1937, Serial No. 73,452
Term of patent 3½ years

The ornamental design for a dress ensemble, substantially as shown.

167,909
DESIGN FOR A BLOUSE
Arthur M. Lowenthal, Rochester, N. Y., assignor to Max Lowenthal & Sons, Rochester, N. Y., a co-partnership consisting of Arthur M. Lowenthal and Eugene M. Lowenthal
Application October 1, 1937, Serial No. 71,920
Term of patent 14 years

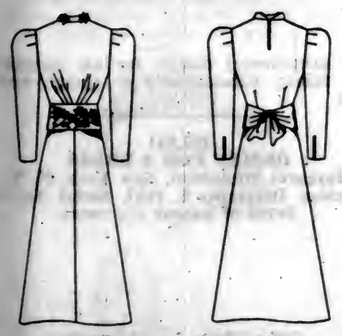


The ornamental design for a blouse as shown.

167,910
DESIGN FOR AN EMBROIDERED TEXTILE FABRIC
William G. Meier, Mamaroneck, N. Y.
Application November 4, 1937, Serial No. 72,606
Term of patent 3½ years

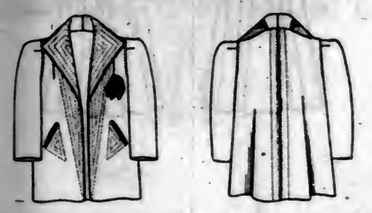
The ornamental design for an embroidered textile fabric, substantially as shown and described.

167,911
DESIGN FOR A DRESS
Margaret Michelsen, New York, N. Y.
Application December 8, 1937, Serial No. 73,457
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

107,912
DESIGN FOR A NEGLIGEE
Robert Rosenfeld, New York, N. Y.
Application December 9, 1937, Serial No. 73,496
Term of patent 3½ years



The ornamental design for a negligee, substantially as shown.

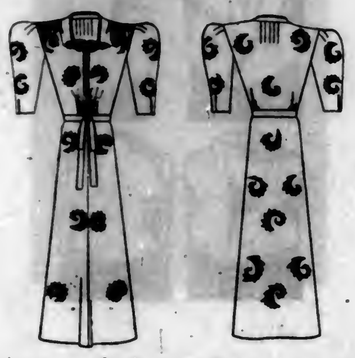
107,913
DESIGN FOR A DRESS
Marie Eileen Smith, New York, N. Y.
Application November 10, 1937, Serial No. 72,743
Term of patent 3½ years

The ornamental design for a dress, substantially as shown, and described.

107,914
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 13, 1937, Serial No. 73,577
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

107,915
DESIGN FOR A DRESS
Philip Wenett, New York, N. Y.
Application December 8, 1937, Serial No. 73,449
Term of patent 3½ years

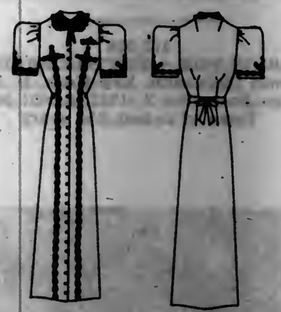


The ornamental design for a dress, substantially as shown.

107,916
DESIGN FOR A LACE INSERT OR SIMILAR ARTICLE
Gustav Zellweger, Palisades, N. J.
Application December 17, 1937, Serial No. 73,675
Term of patent 3½ years

The ornamental design for a lace insert or similar article as shown and described.

107,917
DESIGN FOR A DRESS
Jacob Abbate, New York, N. Y.
Application December 9, 1937, Serial No. 73,481
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

107,918
DESIGN FOR A DRESS
Jacob Abbate, New York, N. Y.
Application December 9, 1937, Serial No. 73,485
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

107,919
DESIGN FOR A DRESS
Jean Bensi, New York, N. Y.
Application November 30, 1937, Serial No. 73,271
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

107,920
DESIGN FOR A SCARF BLOUSE
Joseph F. Berlinger, New York, N. Y.
Application November 17, 1937, Serial No. 72,943
Term of patent 3½ years

The ornamental design for a scarf blouse, substantially as shown.

107,921
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christen, New York, N. Y., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 18, 1937, Serial No. 73,714
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

107,922
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christen, New York, N. Y., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 18, 1937, Serial No. 73,715
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

107,923
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christen, New York, N. Y., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 18, 1937, Serial No. 73,717
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

107,924
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christen, New York, N. Y., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 18, 1937, Serial No. 73,718
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

107,925
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christen, New York, N. Y., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 18, 1937, Serial No. 73,719
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

107,926
DESIGN FOR A TEXTILE FABRIC
Louis Eichmann, New York, N. Y.
Application December 8, 1937, Serial No. 73,444
Term of patent 3½ years

The ornamental design for a textile fabric, substantially as shown, and described.

107,927
DESIGN FOR A TEXTILE FABRIC
Louis Eichmann, New York, N. Y.
Application December 8, 1937, Serial No. 73,445
Term of patent 3½ years

The ornamental design for a textile fabric, substantially as shown and described.

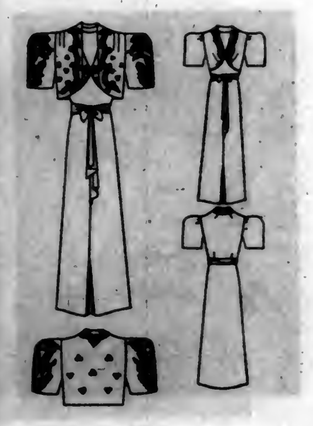
107,928
DESIGN FOR A DRESS
Pauline Franchia, New York, N. Y.
Application December 8, 1937, Serial No. 73,434
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

107,929
DESIGN FOR A CUSHION
Ruth Green, New York, N. Y.
Application May 28, 1937, Serial No. 69,613
Term of patent 7 years

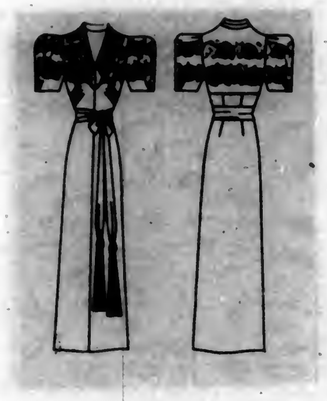
The ornamental design for a cushion, as shown.

107,930
DESIGN FOR A TEXTILE FABRIC
Stanley S. S. McNiel, New York, N. Y.
Application December 1, 1937, Serial No. 73,291
Term of patent 3½ years



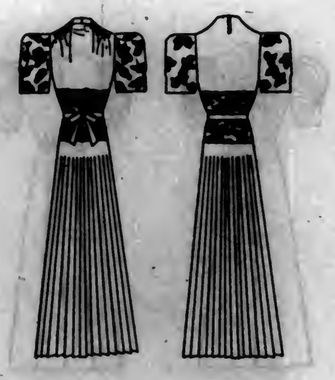
The ornamental design for a textile fabric substantially as shown.

167,931
DESIGN FOR A DRESS
Margaret Michelsen, New York, N. Y.
Application November 30, 1937, Serial No. 73,265
Term of patent 3½ years



The ornamental design for a dress, substantially as shown and described.

167,932
DESIGN FOR A DRESS ENSEMBLE
Marie Fusa, New York, N. Y.
Application December 2, 1937, Serial No. 73,330
Term of patent 3½ years

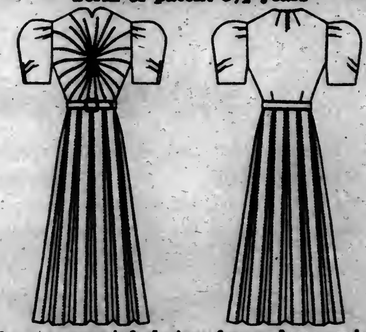


The ornamental design for a dress ensemble, substantially as shown and described.

167,933
DESIGN FOR A DRESS
Sallie S. Schwartz, New York, N. Y.
Application December 4, 1937, Serial No. 73,365
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

167,934
DESIGN FOR A DRESS
Fannie Sussman, New York, N. Y.
Application November 30, 1937, Serial No. 73,272
Term of patent 3½ years



The ornamental design for a dress substantially as shown and described.

167,935
DESIGN FOR A DRESS
Samuel Zahn, New York, N. Y.
Application November 30, 1937, Serial No. 73,266
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

167,936
DESIGN FOR A DRESS
Samuel Zahn, New York, N. Y.
Application December 4, 1937, Serial No. 73,347
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

Patents Nos. 2,105,461 to 2,106,158

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 486—No. 3 TUESDAY, JANUARY 18, 1938 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $14.00 per annum, including annual index, $12.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(C. C. A. N. J.) Meikle patent, No. 1,266,517, for rectifier, *Held* invalid. *General Electric Co.* v. *Frucht*, 92 F.(2d) 447.

(C. C. A. N. J.) Friederich patent, No. 1,393,520, for inclosed arc device and the method of starting the same, claims 1, 6, 8, and 14 *Held* invalid. *Id.*

(C. C. A. Md.) Cimoresi patent, No. 1,467,7bu, for toy torpedo, *Held* valid and infringed. *Commercial Novelty Co.* v. *Victory Fireworks & Specialty Co.*, 92 F.(2d) 299. (Correcting notice 485 O. G. 764.)

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,897,741, H. Ulrich and K. Saurwein, Sulphuric ester of glycol ethers, decided December 30, 1937, claims 1 and 3.

Pat. 1,986,503, G. M. Cross, Brake controlling mechanism and the like, decided November 6, 1937, claims 1 and 2.

Pat. 2,054,059, W. J. Longtin, Hosiery, decided December 28, 1937, claims 1, 2, 3, 4, 5, 6, 7, 18, and 19.

Pat. 2,063,342, A. L. Samuel, Electron discharge device, decided December 6, 1937, claims 1, 2, 3, 4, 5, 6, and 14.

Disclaimers

1,699,491.—*Christian Miller*, New York, N. Y. PUSH BUTTON-SWITCH CONSTRUCTION. Patent dated January 15, 1929. Disclaimer filed December 15, 1937, by the patentee; the assignee, *Edwards and Company, Inc.*, assenting and consenting.

Hereby enters this disclaimer to claim 17 of said Letters Patent.

2,080,984.—*Constant A. Miseres*, Montreal, Quebec, Canada. APPARATUS FOR ATTACHING FASTENERS. Patent dated May 18, 1937. Disclaimer filed December 22, 1937, by the assignee, *Talon, Inc.*

Hereby disclaims claims 17 and 18 from the scope of said Letters Patent.

NOTICE

Board of Appeals—Decisions—Time for Response

U. S. PATENT OFFICE, *Washington, January 28, 1935.*

There appears to be some confusion among attorneys and applicants as to the time within which action must be taken in applications following a decision of the Board of Appeals.

The decision of the Board of Appeals is "an action" in the application, and, in order to save the application from abandonment, amendment must be filed within six months from the date of that decision unless an appeal has been taken to the Court of Customs and Patent Appeals or review of the decision sought by a bill in equity under section 4915.

The Examiner will not notify the applicant of the decision of the Board of Appeals.

CONWAY P. COE,
Commissioner.

Applicant's Address

The requirement of Rule 33, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Condition of Applications Under Examination at Close of Business December 31, 1937

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 43,331; Trade-Mark Division, 1,620. Oldest new case, June 10, 1937; oldest amended, June 12, 1937.) DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Circuit Court of Appeals—Second Circuit

WETTLAUFER AND THE N. S. TYLER COMPANY
v.
ROBINS AND ROBINS CONVEYING BELT COMPANY

Decided November 8, 1937

[— F.(2d) —]

INTERFERENCE—APPLICATION AND PATENT—BILL IN EQUITY BY APPLICANT.

Where in an applicant-patentee interference priority was awarded to applicant by the Board of Appeals and its decision was reversed by the Court of Customs and Patent Appeals on appeal by patentee, *Held* the applicant may thereafter bring a bill in equity under sec. 4915 R. S.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity under R. S. section 4915 as amended (35 U. S. C. A. sec. 63) by Wettlaufer and his assignee against Robins and his assignee, for a decree canceling Patent No. 1,993,940 issued to Robins, and directing the issuance of a patent on Wettlaufer's application. From a decree dismissing their bill of complaint, the plaintiffs have appealed. From an order refusing an interlocutory decree for injunction and accounting on the defendant's counterclaim charging patent infringement by the plaintiffs, the defendants have appealed. Decree reversed; order affirmed.

Mr. Horace B. Fay, Mr. John S. Powers, and *Messrs. Cooper, Kerr and Dunham*, solicitors for plaintiffs-appellants.

Mr. Stephen H. Philbin, solicitor for defendants-appellants.

Before: MANTON, SWAN, and CHASE, Circuit Judges.

SWAN, *Cir. J.*:

In an interference proceeding in the Patent Office between Wettlaufer, one of the plaintiffs, and Robins, one of the defendants, priority of invention was awarded by the Examiner of Interferences to Robins, to whom Patent No. 1,993,940 had been issued on December 4, 1928. On appeal by Wettlaufer the Board of Appeals reversed the decision of the Examiner. Robins then appealed to the Court of Customs and Patent Appeals which reversed the decision of the Board and reinstated Robins' priority. *Robins v. Wettlaufer*, 81 F.(2d) 882. Immediately thereafter, the plaintiffs filed their bill under R. S. sec. 4915 as amended (35 U. S. C. A. sec. 63) to obtain a decree canceling the patent issued to Robins and directing the Commissioner to issue a patent on Wettlaufer's application. The defendants filed their answer and counterclaim charging infringement by the plaintiffs of the Robins patent. On the defendants' motion, the complaint was dismissed on the ground that it did not state a cause of action under section 63 of title 35; and from such decree of dismissal the plaintiffs have appealed. The defendants moved for an interlocutory decree upon their counterclaim, infringement being admitted, and they have appealed from an order denying their motion on the ground that all proceedings on the counterclaim should be suspended pending determination of the plaintiffs' appeal. The two appeals are here together.

The plaintiffs' appeal raises an interesting and novel question as to the meaning of section 63 and its applicability to the facts alleged in the bill of complaint. The specific question is whether in an applicant-patentee interference an applicant who was successful before the Board of Appeals but unsuccessful before the Court of Customs and Patent Appeals, to which the patentee-interferant appealed, may bring suit under R. S. sec. 4915 as amended to litigate again the question of priority.

It is conceded that prior to its amendment in 1927, section 4915 would have given the plaintiffs their remedy by suit in equity, despite the adverse decision on appeal from the Board of Appeals; but the defendants contend that the amendment precludes suit after the question of priority was decided by the Court of Customs and Patent Appeals. The district court so held. The material portion of the section as amended (35 U. S. C. A. sec. 63) reads as follows:

"Sec. 63. Bill in equity to obtain patent. Whenever a patent on application is refused by the Commissioner of Patents, the applicant, unless appeal has been taken from the decision of the Board appeals to the United States Court of Customs and Patent Appeals,* and such appeal is pending or has been decided, in which case no action may be brought under this section, may have remedy by bill in equity * * *"

Literally the words of the "unless" clause would seem to include a decision on appeal regardless of which party took an appeal, but the plaintiffs persuasively argue that they should be construed to refer only to an appeal by an applicant unsuccessful before the Board of Appeals, and not to an appeal by a patentee-interferant defeated before the Board. In view of the long history of the remedy under section 4915 and the purpose of the 1927 amendments to this and other cognate sections of the statutes, we are of opinion that the construction for which the plaintiffs contend must be adopted.

The origin of section 4915 goes back to section 16, act of July 4, 1836 (5 Stat. 123). This gave a remedy by bill in equity

"whenever a patent on application shall have been refused on an adverse decision of a Board of Examiners, on the ground that the patent applied for would interfere with an unexpired patent previously granted."

By section 52 of the act of July 8, 1870 (16 Stat. 205), the remedy was made available

"whenever a patent on application is refused, for any reason whatever, either by the Commissioner or by the Supreme Court of the District of Columbia upon appeal from the Commissioner."

*As originally enacted the appeal from the Board of Appeals was to the Court of Appeals of the District of Columbia. 44 Stat. 1336. By the act of March 2, 1929, the jurisdiction vested in the Court of Appeals of the District of Columbia in respect of appeals from the Patent Office in patent and trade-mark cases was transferred to the United States Court of Customs and Patent Appeals (45 Stat. 1476).

But an appeal to the Supreme Court of the District was allowed only in ex parte cases; interference cases were excluded. R. S. sec. 4911. Section 9 of the act of February 9, 1893 (27 Stat. 436) transferred from the Supreme Court of the District of Columbia to the Court of Appeals of the District jurisdiction of appeals from decisions of the Commissioner of Patents, and granted such an appeal in interference cases. However, that court's decision of such an appeal was held not to preclude a suit under section 4915. *Dover* v. *Greenwood*, 143 F. 136 (C. C. R. I.); *Bernardin* v. *Northall*, 77 F. 849, 851 (C. C. Ind.). Thus, for many years, it had been the policy of Congress to permit an applicant who was refused a patent by the departmental tribunals of the Patent Office—and even after review by the Court of Appeals of the District of Columbia—to have his asserted property right to the invention determined de novo by a court of original jurisdiction. Similar protection is extended by R. S. sec. 4918 (35 U. S. C. A. sec. 66) whenever there are interfering patents. As this court said in *Syracuse Washing Mach. Corp.* v. *View*, 72 F.(2d) 410, 411, the amendments of 1927 must be construed in the light of this historical background.

The purpose of the amendments was to reduce the number of appeals in the Patent Office (35 U. S. C. A. sec. 7), to require a defeated applicant to elect between appealing to the Court of Appeals of the District of Columbia and suing under section 4915 (35 U. S. C. A. sec. 63), and when an applicant in an interference appealed from the Board of Appeals, to permit his adversary to have the appeal dismissed and further proceedings conducted by bill in equity (35 U. S. C. A. sec. 59a).* Thus, no refused applicant was to be deprived of his right to sue in equity after an adverse decision by the Board of Appeals, except by his own election to appeal to the Court of Appeals of the District of Columbia, or, if such appeal was dismissed at the instance of his adversary, by his own failure to file his bill within 30 days thereafter. In *Bakelite Corp.* v. *National Aniline & Chemical Co.*, 83 F.(2d) 176, we said that the statute, as it now reads, means to give alternative remedies to an applicant to whom a patent has been refused. Such was the intent of the legislation as explained in the report of the legislative committee of the House (H. R. Report No. 1889, 69th Cong., 2nd Sess.), where it was stated that "under the proposed procedure the defeated party has all the rights and remedies that he had under the old procedure, * * *"

See also, the report of the Senate Committee. (Sen. Report No. 1813, 69th Cong., 2nd Sess.). In the case of an applicant-patentee interference, if the applicant is successful before the Board of Appeals he cannot appeal to the Court of Patent Appeals; nor, if the patentee-interferant appeals, can the applicant elect to have the appeal dismissed and require the appellant to proceed by bill in equity. *Farmer* v. *Schweyer*, 58 F.(2d) 1056 (Cust. & Pat. App.); *Bloodhart* v. *Levernier*, 64 F.(2d) 367 (Cust. & Pat. App.). This is necessarily so because the remedy provided by section 63, namely, judgment that the plaintiff is entitled to receive a patent, is not appropriate or available to an interferant to whom a patent has already been issued. *MacGregor* v. *Chesterfield*, 81 F.(2d) 791 (D. C. Mich.); *Heidbrink* v. *McKesson*, 53 F.(2d) 321, 322 (C. C. A. 6). Furthermore, there could be no refusal by the Commissioner of a patent on Wettlaufer's application until the decision of the Court of Customs and Patent Appeals in favor of Robins. Had that decision been in favor of Wettlaufer a patent would have been issued to him and the question of priority between the two patentees could have been litigated de novo under section 66. Since the decision was in favor of Robins, the Commissioner's action on Wettlaufer's application was thereafter controlled by it (section 62). It was then that a patent on application was refused and Wettlaufer's right to a remedy by bill in equity arose. We can find nothing in section 59 (a) or section 63, when construed in the light of their purpose, which destroys that remedy. We conclude, therefore, that the appeal referred to in section 63 is an appeal by a defeated applicant, not an appeal by a patentee-interferant. Accordingly, the decree dismissing the complaint must be reversed.

It is unnecessary to consider the defendants' appeal from the order refusing an interlocutory decree on the counterclaim, for they concede that their appeal cannot succeed if the question of priority of invention is still open in the plaintiffs' suit under section 63. We have held that it is.

On the plaintiffs' appeal, decree reversed; on the defendants' appeal, order affirmed.

*Section 59a reads as follows:
"If any applicant is dissatisfied with the decision of the Board of Appeals, he may appeal to the United States Court of Customs and Patent Appeals, in which case he waives his right to proceed under section 63 of this title. If any party to an interference is dissatisfied with the decision of the Board of Appeals, he may appeal to the United States Court of Customs and Patent Appeals, provided that such appeal shall be dismissed if any adverse party to such interference shall, within twenty days after the appellant shall have filed notice of appeal according to section 60 of this title, file notice with the Commissioner of Patents that he elects to have all further proceedings conducted as provided in section 63. Thereupon the appellant shall have thirty days thereafter within which to file a bill in equity under said section 63, in default of which the decisions appealed from shall govern the further proceedings in the case. If the appellant shall file such bill within said thirty days and shall file due proof thereof with the Commissioner of Patents, the issue of a patent to the party awarded priority by said Board of Appeals shall be withheld pending the final determination of said proceeding under said section 63."

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,255,513. (See 1,305,065.)

1,262,980 (a), S. B. Smith, Incubator, D. C. Oreg. (Portland), Doc. E 9463, *S. B. Smith* v. *J. L. Russell*. Dismissed with prejudice Nov. 1, 1937. Same, D. C., N. D. Calif. (San Francisco), Doc. E 3642-S, *S. B. Smith* v. *H. Hempel*. Dismissed without prejudice for want of prosecution Nov. 1, 1937.

1,262,980 (b), S. B. Smith, Incubator, Re. 18,984 (of 1,728,980), J. L. Robbins, same, D. C. Colo. (Denver), Doc. 10674, *S. B. Smith* v. *Robbins Incubator Co. et al.* Dismissed without prejudice Oct. 20, 1937.

1,305,065, 1,255,513, S. G. Conkling, Shock absorber, filed Nov. 4, 1937, D. C., N. D. Ill., E. Div., Doc. 15846, *S. G. Conkling* v. *The Cleveland Pneumatic Tool Co.*

1,320,634, J. A. Moller, Typewriting ribbon, D. C., S. D. N. Y., Doc. E 79/207, *Standard Products Corp.* v. *Wellington Sears Co.* Consent order of discontinuance without prejudice (notice Nov. 12, 1937). Doc. E 79/379, *Standard Products Corp.* v. *Freydberg Bros., Inc.* Decree as above.

1,325,665, 1,325,667, A. G. Crawford, Refrigerant and process of making same; 1,439,728, same, Refrigerating process, filed Nov. 6, 1937, D. C. Ill., S. Div., Doc. E 2285, *Trojan Development Co.* v. *Standard Oil Co.*

1,325,667. (See 1,325,665.)

1,327,358, J. S. Brennan, Wick; 1,403,229, same, Fabric for oil wick, appeal filed Nov. 9, 1937, C. C. A., 2d Cir., Doc. —, *National Enameling & Stamping Co.* v. *G. White.*

1,374,454, P. Kucera, Apparatus for assembling cellular forms, D. C., S. D. N. Y., Doc. E 84/93, *Partition Machinery Co.* v. *Dubl-Cushion Egg Carton, Inc.* Consent order of discontinuance without prejudice (notice Nov. 9, 1937).

1,386,418, C. D. Miller, Auxiliary wind shield, D. C., S. D. Calif. (Los Angeles), Doc. E 1005-Y, *C. D. Miller* v. *J. E. Wrightsman* (*Hartford Auto Glass Co.*). Claims 1, 2, and 3 held valid and infringed Nov. 5, 1937.

1,403,229. (See 1,327,358.)

1,437,122, G. F. Wells, Electrical cooking utensil; 1,470,899, 1,534,431, same, Electrical waffle iron, D. C., N. D. Calif. (San Francisco), Doc. E 4041-R, *Wells Mfg. Co.* v. *Sears, Roebuck & Co.* Dismissed without prejudice for want of prosecution Nov. 1, 1937.

1,439,728. (See 1,325,665.) 1,470,899. (See 1,437,122.)

Des. 106,400, D. W. Price, Dress, filed Nov. 3, 1934, D. C., S. D. N. Y., Doc. E 86/32, *Price-Schlesinger, Inc.*, v. *Gershire Frocks, Inc.* Same, filed Nov. 12, 1937, D. C., S. D. N. Y., Doc. E 86/44, *Price-Schlesinger, Inc.*, v. *Harry Keldin, Inc.*

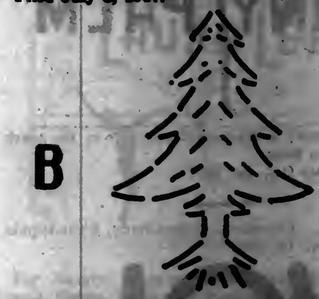
Des. 106,625, E. Feintuck, Dress, filed Nov. 9, 1937, D. C., S. D. N. Y., Doc. E 86/42, *Nits Club Frocks, Inc.*, v. *Formal Dresses, Inc.*

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 18, 1938

[VOL. 486. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.



Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly Prepared Materials

Ser. No. 394,971. BROOS BROTHERS, INC., New York, N. Y. Filed July 8, 1937.

FICHTENHARZ

The expression "Fichtenharz" is disclaimed apart from the mark.

For Especially Prepared and Compounded Preparation Containing Pitch and Used for Flavoring Lager Beer. Claims use since 1919.

Ser. No. 398,657. BECK, KOLLER & CO., INC., Detroit, and Ferndale Station, Detroit, Mich. Filed Oct. 19, 1937.

BECKAMINE

For Synthetic Resin for Use in the Industrial Arts. Claims use since Oct. 1, 1937.

Ser. No. 398,776. J. LASKIN SONS CORPORATION, New York, N. Y. Filed Oct. 21, 1937.

For Fur Skins for Use in Fur Coats and Fur Scarves. Claims use since Oct. 18, 1937.

Ser. No. 399,614. LYLE & SONS LIMITED, Luton, England. Filed Nov. 11, 1937.

MYO

For Partly Prepared Straw and Chip. Claims use since August, 1912.

Ser. No. 399,797. GOTTESMAN AND COMPANY, INCORPORATED, New York, N. Y. Filed Nov. 16, 1937.

SEAL

For Wood Pulp. Claims use since Apr. 5, 1933.

Ser. No. 399,883. GOTTESMAN AND COMPANY, INCORPORATED, New York, N. Y. Filed Nov. 18, 1937.

STREAM

For Wood Pulp. Claims use since May 12, 1933.

Ser. No. 400,097. FUNK BROS. SEED CO., INCORPORATED, Bloomington, Ill. Filed Nov. 24, 1937.

FUNKS HYBRID CORN

No claim is made to the words "Hybrid" and "Corn" apart from the mark.
For Seed Corn.
Claims use since Nov. 11, 1937.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 398,507. THE M. WERK COMPANY, St. Bernard, Ohio. Filed Oct. 14, 1937.

dirko

For Cleaning Compound for General Household Use.
Claims use since Oct. 7, 1937.

Ser. No. 398,889. ALBERT J. BURMAN, Kansas City, Mo. Filed Oct. 28, 1937.

BURMANITE

For All Purpose Cleansing Powder.
Claims use since Oct. 10, 1937.

Ser. No. 399,847. CHARLES M. MISSLER, doing business as Lightning Chemical Company, Raynor Heights, Md. Filed Nov. 17, 1937.

URICIDE

For Cleaner for Toilet Bowls and Urinals.
Claims use since Feb. 15, 1935.

Ser. No. 399,848. THE H. A. MONTGOMERY COMPANY, INC., Detroit, Mich. Filed Nov. 17, 1937.

MONCO

FLUSH-IT

For Cleaning Fluids, Particularly for Removing Oils and Grease from Any Surface.
Claims use since Oct. 27, 1937.

Ser. No. 399,849. THE H. A. MONTGOMERY COMPANY, INC., Detroit, Mich. Filed Nov. 17, 1937.

MONCO

For Cleaning Compounds Particularly Suited for Removing Grease and Dirt from Machinery and Other Metal Parts.
Claims use since Oct. 9, 1937.

Ser. No. 399,926. FEDERATED FOODS, INC., Chicago, Ill. Filed Nov. 19, 1937.

SUNNY PALM

The word "Palm" is disclaimed apart from the mark.
For Complexion Soap.
Claims use since Oct. 22, 1937.

Ser. No. 399,946. VOLCOCITE CORPORATION, Philadelphia, Pa. Filed Nov. 19, 1937.

VOL

For Dry Powdered Material Containing Volcanic Ash and Having Cleansing and Deodorant Properties and Particularly Adapted for Cleaning Enamel Ware, Porcelain, Silverware, Glass, Paints, Varnishes, Lacquers, and Metallic Surfaces.
Claims use since April, 1937.

CLASS 5

Adhesives

Ser. No. 396,878. KANTOROWICZ & CO., Breslau, Germany. Filed Aug. 28, 1937.

Senegalin

For Glue.
Claims use since Sept. 9, 1912.

Ser. No. 398,635. PLASKON COMPANY, INCORPORATED, Toledo, Ohio. Filed Oct. 18, 1937.

KAURIT

For Resin Glue Adhesives.
Claims use since Mar. 17, 1937.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 385,874. TONY BARONE, doing business as Laboratory Products Company, Detroit, Mich. Filed Nov. 23, 1936.

STOMATONE

For Medicinal Tablets for Use in the Treatment of Hyper-Acidity, Acid Indigestion, Heartburn, Colitis, and Constipation.
Claims use since Sept. 1, 1936.

Ser. No. 393,171. LAURA LEE HALL, doing business as Laura Lee, San Francisco, Calif. Filed May 24, 1937.

LAURA LEE

For Beauty Preparations—Namely, Preparations in Liquid, Cream, Solid, and Powdered Form for the Care of the Face, Hands, Skin, and Nails.
Claims use since July, 1936.

Ser. No. 395,076. NASSOUR BROS. INC. LTD., Los Angeles, Calif. Filed July 10, 1937.

Windsor House

The word "Windsor" is disclaimed apart from the mark.
For After Shave Powder, After Shave Lotion, Shampoos, and Colognes.
Claims use since Sept. 21, 1936.

353,872. STEEL STORAGE TANKS. WESTERN PIPE AND STEEL COMPANY OF CALIFORNIA, San Francisco, Calif.
Filed September 21, 1937. Serial No. 397,634. PUBLISHED NOVEMBER 9, 1937. Class 2.

353,873. NONALCOHOLIC, NONCEREAL, MALTLESS, BEVERAGES SOLD AS SOFT DRINKS, AND SYRUPS, EXTRACTS, AND FLAVORS USED IN MAKING THE SAME. WORLD BOTTLING COMPANY, LTD., New Orleans, La.
Filed September 23, 1937. Serial No. 397,731. PUBLISHED NOVEMBER 9, 1937. Class 45.

353,874. GALVANIZED IRON AND STEEL SHEETS. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio.
Filed September 24, 1937. Serial No. 397,743. PUBLISHED NOVEMBER 9, 1937. Class 14.

353,875. TOOL-STEELS. LUDLUM STEEL CO., Watervliet, N. Y.
Filed September 24, 1937. Serial No. 397,762. PUBLISHED NOVEMBER 9, 1937. Class 14.

353,876. ICE DELIVERY BAGS. L. B. BARBER, doing business as Vivian Manufacturing Company, St. Louis, Mo.
Filed September 25, 1937. Serial No. 397,788. PUBLISHED NOVEMBER 9, 1937. Class 2.

353,877. BOARD GAME PLAYED WITH NUMBERED PIECES. T. M. ELLIS, JR., doing business as Skelcia Advertising Company, Beloit, Wis.
Filed September 25, 1937. Serial No. 397,801. PUBLISHED NOVEMBER 9, 1937. Class 22.

353,878. PAPER BAGS AND SACKS. GAYLORD CONTAINER CORPORATION, St. Louis, Mo.
Filed September 27, 1937. Serial No. 397,844. PUBLISHED NOVEMBER 9, 1937. Class 2.

353,879. SHRINKABLE CAPS AND BANDS USED AS CONTAINER CLOSURES. SYLVANIA INDUSTRIAL CORPORATION, Fredericksburg, Va., and New York, N. Y.
Filed September 27, 1937. Serial No. 397,863. PUBLISHED NOVEMBER 9, 1937. Class 50.

353,880. COATED FABRICS—NAMELY, ARTIFICIAL LEATHER AND LEATHER CLOTH. ATLAS POWDER COMPANY, Wilmington, Del.
Filed September 28, 1937. Serial No. 397,895. PUBLISHED NOVEMBER 9, 1937. Class 50.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

353,881. (CLASS 12. CONSTRUCTION MATERIALS.) EASTERN FORM PRODUCTS CO., Newark, N. J., assignor to Universal Form Clamp Company, Chicago, Ill., a corporation of Illinois. Filed July 12, 1935. Serial No. 367,191.

TWISTYE

For Beam Hangers and Wire Clamps, and Ties for Building Forms Particularly Those Used in Forms for Concrete and Tie Rods.
Claims use since Sept. 8, 1933.

353,882. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MIDWEST RADIO CORPORATION, Cincinnati, Ohio. Filed July 27, 1936. Serial No. 381,490.

"AIR TESTED"

For Radio Receiving Apparatus, Kits for Radio Receiving Apparatus, Television Receiving Apparatus, Kits for Television Apparatus, Combined Sound and Picture Receiving Apparatus, Kits for Combined Sound and Picture Receiving Apparatus, Combined Radio Phonographs, and Parts and Appurtenances Thereof Consisting of Panels, Jacks, Plugs, Sockets, Thermionic Tubes, Loud Speakers, Diaphragms for Loud Speakers, Wire, Cable, and Baffles.
Claims use since July 1, 1936.

353,883. (CLASS 2. RECEPTACLES.) KRAFT-MONARCH COMPANY, St. Louis, Mo. Filed Sept. 8, 1936. Serial No. 383,025.

MODERNE

For Thermic Jugs.
Claims use since Mar. 2, 1936.

353,884. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) C. AND G. TRAILER HITCH COMPANY, Winterset, Iowa. Filed Oct. 9, 1936. Serial No. 384,153.

JRK-LES

For Trailer Hitches.
Claims use since Sept. 25, 1936.

353,885. (CLASS 32. FURNITURE AND UPHOLSTERY.) BARKER BROS., INCORPORATED, Los Angeles, Calif. Filed Oct. 10, 1936. Serial No. 384,167.

BORDEAUX

For Living-Room Furniture—Namely, Couches, Chairs, Bookcases, Cabinets, Tea-Wagons, Benches, Book-Racks, Partitioning Screens, Stands, Tabourettes, Pedestals, Davenports; Dining-Room Furniture—Namely, Tables, Chairs, Side-Boards, Buffets, Servers, Picture-Frames, Mirrors; Bedroom Furniture—Namely, Beds, Dressers, Chiffoniers, Chests, Night-Stands, Dressing Tables, Vanities, Costumers, Bureaus, Sewing-Stands; Office Furniture—Namely, Desks, Chairs, Bookcases, Book-Racks; Garden Furniture—Namely, Chairs, Tables, Benches, Porch Seats, Sun Shades.
Claims use since Sept. 21, 1936.

353,886. (CLASS 39. CLOTHING.) CANADIAN CHAMOIS & LEATHER CORP., New York, N. Y. Filed Nov. 17, 1936. Serial No. 385,623.

Warmbak

For Women's Vestees, and Prefabricated Garment-like Linings for Women's Outer Garments.
Claims use since Aug. 17, 1936.

353,887. (CLASS 39. CLOTHING.) NAN SHERWIN, INC., Hollydale and South Gate, Calif. Filed Dec. 24, 1936. Serial No. 387,145.

Nan Sherwin

For Hats for Women, and Outerwear for Women—Namely, Sport Dresses and Knitted Suits, and Play Clothes—Namely, Skirts, Slacks, Culottes, and Shorts Adaptable for Outside Wear or Inside Wear Under Sport Dresses.
Claims use since Oct. 30, 1936.

353,888. (CLASS 39. CLOTHING.) BETTERMADE GARMENT CO., Los Angeles, Calif. Filed Jan. 11, 1937. Serial No. 387,654.

Ann Gray

For Women's and Misses' Dresses, Skirts, Suits, Cloaks, Culottes, Jackets, Blouses, Pajamas, Bath Robes, Lounging Robes, and Play Suits.
Claims use since Dec. 2, 1936.

353,889. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) DISTILLED LIQUORS IMPORT CO., INC., New York, N. Y. Filed Jan. 21, 1937. Serial No. 387,969.

PENNSVILLE

For Rye Whiskey.
Claims use since Dec. 1, 1936.

353,890. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) GIMBEL BROTHERS, INC., New York, N. Y. Filed June 10, 1937. Serial No. 393,907.

JEAN LECHAT

For Cognac.
Claims use since Dec. 12, 1936.

353,891. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) FRIDEN CALCULATING MACHINE CO., INC., San Leandro, Calif. Filed June 12, 1937. Serial No. 393,980.

FRIDEN

For Adding and Calculating Machines.
Claims use since May 19, 1934.

353,892. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) AUTOMATIC FOOD EQUIPMENT INC., Boston and Somerville, Mass. Filed July 17, 1937. Serial No. 396,329.

SHAL-O-FRYER

For Temperature Controlled Frying Kettles and Pans of the Type Used in So-Called "Deep Fat" Frying.
Claims use since Dec. 4, 1936.

353,893. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Aug. 23, 1937. Serial No. 396,671.

READY-MIX

For Insecticides, Fungicides, and Germicides.
Claims use since June 18, 1934.

353,894. (CLASS 12. CONSTRUCTION MATERIALS.) PREPLAN, INC., Cleveland, Ohio. Filed Sept. 15, 1937. Serial No. 397,454.

EVERS

For Plaster, Concrete, and Reinforced Concrete Products, Particularly Headers, Stretchers, Facers, Counterforts, Studdings, Coping Units, and Water Table Units, Used in Retaining Walls, Crib Walls, and Dam Construction.
Claims use since February, 1934.

353,895. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) REO MOTOR CAR COMPANY, Lansing, Mich. Filed Sept. 2, 1937. Serial No. 397,602.

SPEED WAGON

For Automobiles and Structural Parts Thereof.
Claims use since May 3, 1919.

353,896. (CLASS 39. CLOTHING.) HARRY COTLER, New York, N. Y. Filed Oct. 8, 1937. Serial No. 398,276.

HARRY COTLER

For Men's Furnishings—Namely, Collars, Dress and Work Shirts, Hose, Suspenders, Garters, Arm Bands, Leather and Fabric Gloves, Belts for Outer Wear, Neckties, Underwear, Pajamas, Nightshirts, Bathing Suits, Mufflers, Bathrobes, Beach Robes, and Lounging Robes, Slippers, Spats; Men's Outer Wear—Namely, Knickers, Vests, Sweaters, Trousers, Overcoats, Hats and Caps.
Claims use since June, 1921.

353,897. (CLASS 39. CLOTHING.) SARA DE SAIX, Kansas City, Mo. Filed Oct. 14, 1937. Serial No. 398,463.

Sara De Saix

For Misses', Ladies', and Children's Dresses, Playsuits, Skirts, Blouses, and Smocks.
Claims use since January, 1928.

353,898. (CLASS 32. FURNITURE AND UPHOLSTERY.) SALMANSON & CO. INC., New York, N. Y. Filed Oct. 14, 1937. Serial No. 398,498.

KLOSAFE

For Wardrobes, Storage Closets, and Storage Chests.
Claims use since Oct. 5, 1936.

353,899. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE SUITT BROTHERS MANUFACTURING CO. CAMPBELL INDUSTRIES DIVISION, Cambridge, Ohio. Filed Oct. 18, 1937. Serial No. 398,646.

TIPPERARY

For Furniture, Particularly Upholstered and Overstuffed Chairs of the Reclining Type.
Claims use since Aug. 1, 1936.

353,900. (CLASS 39. CLOTHING.) SIEGEL & ALENIKOFF, New York, N. Y. Filed Oct. 29, 1937. Serial No. 399,110.

BOMBAY LAMM

For Ladies' and Misses' Coats and Suits.
Claims use since Oct. 1, 1936.

353,901. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GEORGE GORTON MACHINE CO., Racine, Wis. Filed Nov. 11, 1937. Serial No. 399,607.

TRADE MARK
GORTON
RACINE, WIS., U. S. A.

For Pantograph Machine Tools; Engraving Machines; Duplicator Machine Tools; Milling Machines; Pen Gravers; Fuse Routing Machines; Cutting-Off Machines; Cutter Grinders; Tire Mold Machine Tools; Various Machine Tools for Die Cutting, Tool Making, Mold Cutting, Profiling, Matrix and Letter Cutting, Routing and Milling; Graduating Machines; Tables; Vises; Holders; Fixtures; Cutters; Collets; and Attachments, Parts, and Accessories.
Claims use since 1904.

353,902. (CLASS 40. DISTILLED ALCOHOLIC LIQUORS.) BARDSTOWN DISTILLERY, INC., Bardstown, Ky. Filed Nov. 15, 1937. Serial No. 399,745.

KENTUCKY STANDARD

For Whiskey.
Claims use since June, 1936.

TRADE-MARK REGISTRATIONS RENEWED

118,206. RIPE OLIVES, PRESSED FIGS, HONEY, AND MAYONNAISE DRESSING. Registered August 28, 1917. CALIFORNIA RIPE OLIVE CO., Oroville and San Francisco, Calif. Renewed August 28, 1937, to Hearst Sunical Land and Packing Corporation, San Francisco, Calif., a corporation of California, successor.

LABELS

REGISTERED JANUARY 18, 1938

50,592.—*Title:* U-STICK-ON SOLES. For Soles, Cement-Applied, for Shoes. AUBURN RUBBER CORPORATION, Wilmington, Del., and Auburn, Ind. Published September 9, 1937.

50,593.—*Title:* AUTOADE. For Auto Supplies. AUTOADE CORPORATION, INC., Chicago, Ill. Published November 8, 1937.

50,594.—*Title:* RESPIRINE. For a Medicinal Preparation for the Treatment of Asthma, Bronchitis, Hay Fever, and Sinusitis. ALBERT H. BINASH, doing business as Albert Laboratories, Chicago, Ill. Published December 9, 1937.

50,595.—*Title:* LU + STERI + CIDE CLEELAND CHLORINATED CLEANSER AND BACTERICIDE. For Chlorinated Cleanser and Bactericide. ROY A. CLEELAND, Butler, Pa. Published July 1, 1937.

50,596.—*Title:* HOME SCIENCE. For Bread. GENEST BROS. INC., Manchester, N. H. Published December 1, 1937.

50,597.—*Title:* ONE-ONE OIL. For an Oil for Colds and Aches Due to Colds. C. S. JONES, doing business as North Side Drug Store, Memphis, Tenn. Published October 30, 1937.

50,598.—*Title:* MAMMY'S. For Barbecued Peanuts. MAMMY'S BARBECUED PEANUT CO., Fort Worth, Tex. Published November 9, 1937.

PRINTS

REGISTERED JANUARY 18, 1938

16,663.—*Title:* THE GENUINE ELGIN BUTTER CUTTER. For Butter Cutters. THE CHICAGO HARDWARE FOUNDRY COMPANY, North Chicago, Ill. Published December 15, 1937.

16,664.—*Title:* GREAT BIG BEAUTIFUL WORLD. For Wheat Breakfast Food. THE CREAM OF WHEAT CORPORATION, Minneapolis, Minn. Published December 10, 1937.

16,665.—*Title:* EVELYN CHANDLER AMERICA'S QUEEN OF THE ICE "A BREAKFAST OF CHAMPIONS IS MY IDEA OF THE TOPS". For Cereal Food. GENERAL MILLS, INC., Minneapolis, Minn. Published December 21, 1937.

16,666.—*Title:* A COLLEGE PROFESSOR TURNED SANTA CLAUS BY INVENTING THE WORLD'S GRANDEST CHRISTMAS GIFT. For Fountain Pens, Mechanical Pencils, and Desk Sets. THE PARKER PEN COMPANY, Janesville, Wis. Published December 18, 1937.

REISSUES

JANUARY 18, 1938

20,625

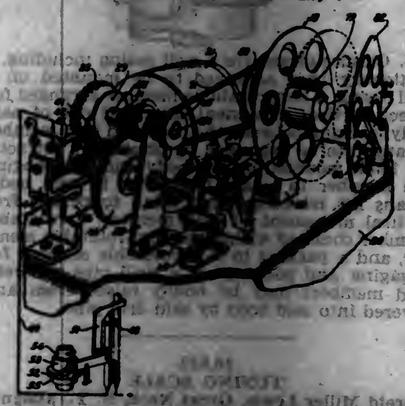
TONE ARM FOR ELECTRIC PHONOGRAPHS

Martin Bek, Friedenau, Berlin, Germany, assignor to General Electric Company, a corporation of New York

Original No. 1,978,470, dated October 9, 1934, Serial No. 692,698, February 17, 1933. Application for reissue October 8, 1936, Serial No. 104,244. In Germany February 27, 1931

4 Claims. (Cl. 179—100.4)

1. In electric phonograph apparatus comprising a sound-box, an amplifier and a microphone device, a hollow tone-arm structure, a supporting head for said tone-arm structure, switch means to connect said apparatus for sound recording or for sound reproduction, and circuit coupling means associated with said sound-box and microphone device, said switch means being mounted within said tone-arm structure and said coupling means including elements mounted within said tone-arm supporting head, whereby space otherwise wasted within said hollow tone-arm structure is utilized for housing a portion of said phonograph apparatus.



20,626

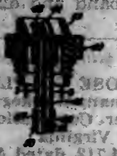
TAPE ACTUATING DEVICE

Walter J. Zenner, Des Plaines, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware

Original No. 1,973,280, dated September 18, 1934, Serial No. 656,606, February 10, 1932. Application for reissue March 20, 1935, Serial No. 12,163

24 Claims. (Cl. 178—43)

1. In a tape actuator, a retarded-stop device comprising a normally moving element, an extensible member, means for operating said member to effect the engagement thereof with said element, and means carried by said member to establish a limited movement of said element after said engagement.



20,627

BATTERY FILLING DEVICE

Asa H. Mosher, Westfield, N. J.

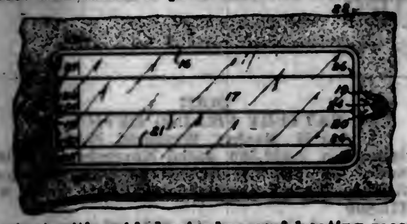
Original No. 2,032,230, dated November 26, 1935, Serial No. 555,729, August 7, 1931. Application for reissue November 22, 1937, Serial No. 175,990

8 Claims. (Cl. 137—68)

3. For installation and use with a conventional storage battery cell and an individual otherwise sealed higher level liquid reservoir therefor: automatic but motionless electrolyte level maintaining apparatus comprising, in combination, two small diameter pipes, one small diameter pipe being adapted to be connected at its upper end to the lower portion of said reservoir and having means at its lower end forming a small area opening into said cell electrolyte on top of the separators and plates, the other of said small diameter pipes being adapted to be connected at its upper end to said reservoir, an upright quick dumping chamber extending from adjacent the top of said cell down into its electrolyte having its upper portion connected to the lower end of said second small diameter pipe and having in its lower side portion relatively large area opening means for the ready admission of air and quick discharge of liquid into the cell electrolyte at a level adjacent the maximum or standard electrolyte level, said dumping chamber having a sufficiently large lateral cross-sectional area so that on exposure of said large area opening means by a lowering of the electrolyte level air bubbles can readily rise through the liquid therein only to the top of said chamber to quickly release all its liquid whereby there is provided a static unbalance between the liquid in the legs of the siphon system (formed by the above elements) sufficient to start siphon flow down said first pipe and of the liquid in said second pipe followed by air up said second pipe into said reservoir until this air reaches the reservoir when siphon action stops and this air reduces the reservoir's partial vacuum permitting liquid to continue to flow down said first pipe until stopped by the closing of the dumping chamber opening means.

20,628

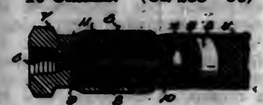
FROST SHIELD



Joel R. Thorp, West Allis, Wis., assignor to The Fulton Company, West Allis, Wis., a corporation of Wisconsin

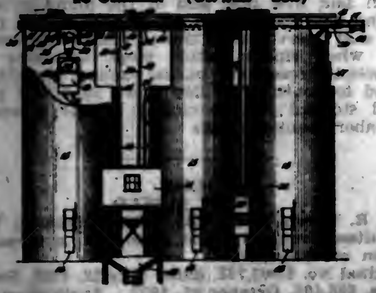
Original No. 2,002,722, dated May 28, 1935, Serial No. 695,405, October 27, 1933. Application for reissue September 24, 1935, Serial No. 41,956

19 Claims. (Cl. 219—19)



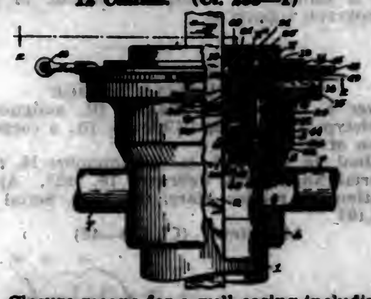
1. In combination, a frame comprising a metal band embedded within a rubber seal, a transparent sheet coacting along its entire peripheral edge with said seal within said band, said band

being spaced from the peripheral edge of said sheet and biased to press said seal into intimate



contact with said sheet edge, and heating means carried by said band and disposed within said frame.

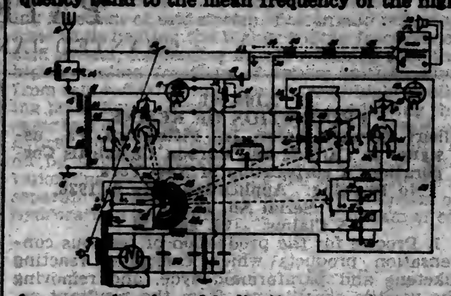
20,629
HOSE COUPLING
Arthur A. Eisenman, Waukegan, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Original No. 1,924,712, dated August 29, 1933, Serial No. 616,944 June 9, 1932. Application for reissue April 22, 1935, Serial No. 17,504
10 Claims. (Cl. 285—94)



1. In combination with a non-metallic, flexible, reinforced hose having the end of its cover cut away to expose a portion of the reinforcement, a coupling shell extending over the exposed reinforcement and a portion of the hose cover, and a ductile ring positioned in said shell over the exposed reinforcement, said shell being compressed upon the hose to clamp the cover and force said ductile ring into the interstices of said reinforcement.

20,630
ELECTRICAL CONTROL MECHANISM FOR TROLLEY BUCKET PLANTS
Harold E. Hallenbeck, Clinton, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a corporation of New York
Original No. 2,063,392, dated June 1, 1937, Serial No. 491,534, October 27, 1930. Application for reissue July 22, 1937, Serial No. 155,149
48 Claims. (Cl. 212—132)

1. An electrical control system for traversing hoists having a material carrier comprising, in combination, a hoist motor; a slowly driven hoist limit switch actuator; a traverse motor; a slowly driven traverse limit switch actuator; primary circuits for the hoist and traverse motors; a switch for controlling automatic operation; a set of six limit switches operated by the traverse limit switch actuator, two of which control the limits of the traverse motion, two of which control a slowing down of the traverse motor before the limits of the traverse motion in either direction are reached, and the remaining two of which control the selecting of the direction of traverse; a set of four limit switches operated by the hoist limit switch actuator, two of which control the limits of hoisting and lowering, one of which controls the period of rest while the material carrier is loaded, and one of which interlocks electrically the traverse and hoisting motions, so that traversing cannot begin until the hoisting limit has been reached; electromagnetic contactors and control circuits controlled by and connected with said sets of limit switches also connected to said motors, so that the hoisting, lowering, stopping and traversing are controlled entirely automatically, once said automatic control switch has been closed.



20,631
BLOW-OUT PREVENTER
John W. MacClatchie, Los Angeles, Calif., assignor to MacClatchie Manufacturing Company of California, Compton, Calif., a corporation of California
Original No. 2,051,961, dated August 18, 1936, Serial No. 591,549, February 8, 1932. Application for reissue November 15, 1937, Serial No. 174,728
12 Claims. (Cl. 255—1)

5. Closure means for a well casing including, a stationary body arranged to be mounted on a well casing, a non-rotatable member arranged for direct vertical movement into and out of said body, packing between the body and said member arranged to be expanded by pressure, a retractible latch mounted on the body and overhanging the member to retain the latter in said body, means for retracting said latch to permit free vertical movement of said member, a rotatable member confined within the non-rotatable member, and a packing in said rotatable member for engaging and packing off a drill pipe, whereby said members may be bodily raised from and lowered into said body by said drill pipe.

20,632
TUNING SCALE
Harold Miller Lewis, Great Neck, N. Y., assignor to Hazeltine Corporation
Original No. 1,967,857, dated January 15, 1935, Serial No. 565,067, September 25, 1931. Application for reissue October 2, 1936, Serial No. 103,727
14 Claims. (Cl. 250—40)

14. In a multi-band radio receiver adapted to receive signals in a broad frequency range including a high-frequency band and a low-frequency band, resistance means adjustable selectively to tune said receiver to either of said bands, means including a variable reactance element for tuning throughout each of said bands, said means effecting greater frequency adjustment for a given adjustment of said variable reactance element in the band of higher frequencies, a first scale bearing indicia of frequencies in said low-frequency band, a second scale bearing indicia of the frequencies included in said high-frequency band, the portions of said second scale corresponding to a given adjustment of said variable reactance element being substantially longer than that of said first scale, the relation between said scales and the reactances of said tuning means being such that given frequency separations on said second scale are in a ratio to like frequency separations on said first scale which is greater than the ratio of the mean frequency of the low-frequency band to the mean frequency of the high-

frequency band, and indicating means cooperating with said scales.

PLANT PATENTS

GRANTED JANUARY 18, 1938

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

289
ROSE
Frederick Huber Howard, Montebello, Calif.
Application January 5, 1937, Serial No. 119,146
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant as herein described and shown, characterised particularly by its constant production of bloom, its glossy foliage, its apparent immunity to mildew, and its semi-double blossoms of excellent lasting qualities and distinct clear pink color as described and shown.

PATENTS

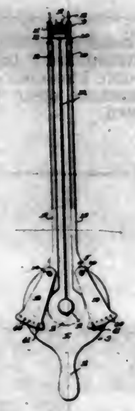
GRANTED JANUARY 18, 1938

2,105,461
PRODUCTION OF RESINS

Albert Bernard Boese, Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York

No Drawing. Application May 8, 1936, Serial No. 78,641

5 Claims. (Cl. 260—3)



1. Process for the production of resinous condensation products which comprises reacting diketene and paraformaldehyde, and removing the volatile constituents from the resultant reaction mixture.

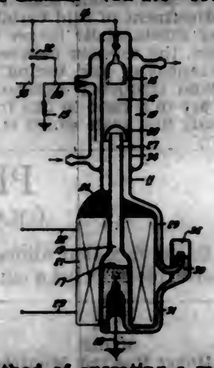
2,105,462
BALL SWINGING TOY

Adolph Brinkman, Milwaukee, Wis.

Application March 29, 1937, Serial No. 133,530

7 Claims. (Cl. 272—97)

1. The combination with a set of spaced bars having a handle member at one end provided with a gateway in communication with the space between the bars, a shaft connecting the bars at a substantial distance from the handle, a rotatable spool mounted on said shaft, a ball having a flexible connection with said spool at a sufficient radial distance from the shaft to allow the ball to swing through said gateway, and means for varying the dimensions of the gateway.



7. In a device of the described class, the combination of a support, a rotary member mounted on one end portion of the support, a weight having a flexible connection secured to and partially coiled upon the rotary member, and an anchor block resiliently supported from the rotary member and having an aperture through which said flexible connection passes, said block being movable into and out of contact with the rotary member and adapted, when in contact therewith, to hold the flexible connection in various positions of extended adjustment by abrupt flexion of the connection across the wall of the aperture in the block when the latter is in proximity to said rotary member.

2,105,463
VACUUM TUBE

Henry G. Cordes, Palo Alto, Calif.; Bertha L. Cordes, owner by decree of court

Application October 24, 1927, Serial No. 228,333

30 Claims. (Cl. 175—354)

1. The method of operating a mercury vapor tube having anode and cathode chambers comprising: establishing a high resistance in the anode chamber by cooling the chamber to the extent that said resistance cannot be broken down by a potential of ten thousand volts in the presence of a heated cathode chamber, and breaking down said resistance by piloting a discharge thru said chambers.

2,105,464
MANUFACTURE OF MOTOR FUEL

Waldo C. Ault and Carroll A. Hochwalt, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application June 29, 1936, Serial No. 87,916

6 Claims. (Cl. 196—28)

1. In the treatment of a cracked distillate of motor fuel boiling range, rich in sulfur and gum forming constituents, to form a distillate of motor fuel quality, the steps which include subjecting the distillate while in vapor phase to a metal oxide which has been rendered distinctly alkaline, whereby sulfur impurities are rendered removable by phosphoric acid treatment and subsequently scrubbing the distillate with phosphoric acid under conditions whereby polymerizable and sulfur containing impurities are removed without substantially reducing the octane number of the motor fuel.

2,105,465
CORD CONNECTER BODY

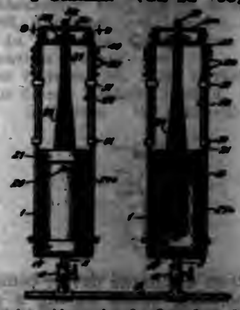
Edward F. Bannon, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a corporation of Connecticut

Application April 22, 1936, Serial No. 75,729

7 Claims. (Cl. 173—332)

1. A connector comprising an insulating body having a recess therein opening through its inner end and having an entrance slot in its outer end

for the insertion of a blade type contact, said recess being enlarged in its portion immediately at the inner end of said entrance slot with a narrower portion inwardly of said enlargement, a contact in said recess and comprising a pair of separable resilient members and a screw con-



necting said members, and said members having their portions in the larged portion of the recess bent away from one another providing flanged portions of greater width than the narrowed portion of the recess to retain the contacts in the recess.

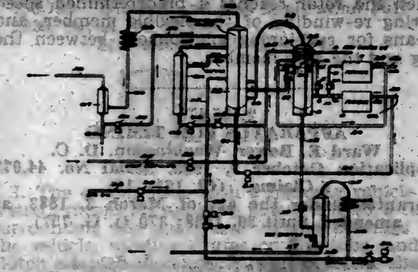
2,105,466
APPARATUS FOR TREATING BASEBALL BATS

Charles R. Beck and Garnett L. Beck, Anderson, Ind., assignors to Hillerich & Bradsby Co., Louisville, Ky., a corporation of Kentucky

Application November 11, 1933, Serial No. 697,678

4 Claims. (Cl. 21—68)

4. In a treating tank for baseball bats the combination of a chamber open at one end for the insertion of a bat to be treated, resilient means supported by said chamber and adapted to yieldingly engage the surface of the bat to prevent the escape of fluid from said chamber, means mounted on said tank and vertically adjustable relative thereto for removably locking a bat in position against movement within said tank, said adjustable locking means extending over and engaging the exposed end of said bat, and means for admitting fluid under pressure into said tank to permeate the pores of said bat.



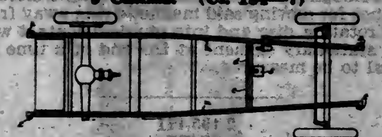
2,105,467
TREATMENT OF HYDROCARBONS

Pascal MacDonald Middleton, Dallas, Tex., and Max R. Ryan and Claude E. Reeves, Tulsa, Okla., assignors to Danciger Oil & Refineries, Inc., Tulsa, Okla.

Application February 20, 1935, Serial No. 7,438

1 Claim. (Cl. 196—52)

A process of treating hydrocarbon oils which consists in passing a stream of oil through a refluxing zone in direct contact with a stream of previously heated hydrocarbon gases and vapors from a vaporizing zone, vaporizing the lower boiling fractions of said stream of oil in said refluxing zone while heating the higher boiling fractions of said stream, condensing in said refluxing zone the higher boiling fractions of vapors, withdrawing from said refluxing zone a mixture of higher boiling point liquid hydrocarbons and conducting the same to a cracking zone admixed with a stream of hydrocarbon gas, preheating a second stream of oil by indirect contact with hot vapors in said vaporizing zone, and passing the same through a separate cracking zone admixed with a stream of hydrocarbon gas, preheating a third stream of oil



by indirect contact with hot vapors in said vaporizing zone and commingling the same with the streams flowing from said cracking zones, the temperature of said third stream of oil being substantially lower than that of the streams from said cracking zones, conducting the commingled mixture to said vaporizing zone where substantial vaporization takes place, conducting the evolved vapors and gases from said vaporizing zone to said refluxing zone, continuously removing the vapors and gases from the refluxing zone, and subjecting the same to condensation and separation to form the desired product, and withdrawing the liquid residuum from said separating zone.

2,105,468
LUBRICATION

Joseph Bijur, deceased, late of New York, N. Y., by George Bijur, executor, New York, N. Y.; said Joseph Bijur, assignor by mesne assignments, to Auto Research Corporation, a corporation of Delaware

Original application August 9, 1922, Serial No. 580,602. Divided and this application October 9, 1924, Serial No. 747,626

9 Claims. (Cl. 184—7)

1. A lubricant flow metering fitting comprising a plurality of separated cylinders of felt arranged in series and adjustable threaded means, accessible from the exterior of the fitting, to compress said felt cylinders at their periphery.

2,105,469
RETRIEVING MECHANISM

Henry Bosch, Jr., San Francisco, Calif.

Application June 19, 1935, Serial No. 27,255

15 Claims. (Cl. 242—107)

1. A retrieving mechanism for elongated flexible members comprising a roller to which one

end of said member is secured and about which it is wound and from which said flexible member can be unwound by exerting a pull on the free end thereof, means for re-winding the flexible member when it has been unwound, a stop member cooperating with the rotor, a dog carried

by the rotor and adapted to be centrifugally projected into engagement with the stop member when the rotor reaches a predetermined speed during re-winding of the flexible member, and means for cushioning engagement between the dog and the stop member.

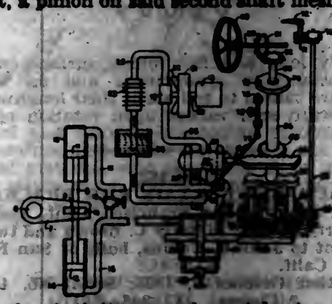
2,105,470
APPARATUS FOR TIMING
Ward E. Bower, Washington, D. C.
Application October 8, 1935, Serial No. 44,672
5 Claims. (Cl. 161—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device for measuring time to a small fraction of a second, a continuously rotating disc rotating at a predetermined definite speed, a relatively light magnetic ring coaxially mounted in juxtaposition to said rotating disc, said magnetic ring being provided with indicia thereon, a first electromagnet for moving said magnetic ring into close physical contact with said rotating disc so that said magnetic ring turns with said rotating disc, a stationary element, a second electromagnet associated with said stationary element for moving said magnetic ring away from said rotating disc into close physical contact with said stationary element, a stationary member bearing a fiducial line of reference located adjacent to said magnetic ring, means for energizing the first electromagnet for moving said magnetic ring into contact with said rotating disc at the beginning of a time interval to be measured, and means for deenergizing the first electromagnet and energizing the second electromagnet for moving said magnetic ring away from said rotating disc and into physical contact with said stationary element at the end of a time interval to be measured.

2,105,471
CUFF
Fred O. C. Brown, Grand Rapids, Mich.
Application July 23, 1935, Serial No. 32,783
1 Claim. (Cl. 2—124)

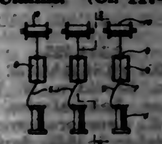
A coat sleeve comprising a body having an integral, inturned, circumferentially-continuous end portion, buttons, stitchings connecting the buttons to the inturned end portion, the stitchings being free from the body, and the body hiding the stitchings from a view-point without the sleeve, the inturned end portion forming a firm base to which the buttons may be stitched; and a narrow cuff mounted within the inturned end portion, for end-for-end reversal, the cuff being provided intermediate its upper and lower edges with button holes through which the buttons may be inserted, the mounting of the buttons on the inturned end portion serving to dispose the buttons close to the extremity of the sleeve, whereby, without unsing either the sleeve or

the cuff, the cuff may be mounted in place and reversed end for end, whilst the sleeve is on the arm of a wearer, and whereby the cuff may be narrow, as aforesaid, and still project visibly beyond the extremity of the sleeve.



2,105,472
HIGH POWER DISCHARGE DEVICE
James R. Clark, Long Island City, Sture O. Ekstrand, Bergenfield, and Victor L. Rossi, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 3, 1936, Serial No. 88,756
20 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an elongated enclosing vessel having a cylindrical metallic portion serving as an anode, vitreous portions sealed to opposite ends of said metallic portion, each of said vitreous portions having a reentrant stem, a cathode assembly extending throughout the length of said vitreous portions and said metallic portion and supported on each end by a stem, and a cylindrical grid coaxially arranged between said anode and said cathode assembly, said grid being supported at each end by said vitreous portions intermediate each end of the anode and the adjacent stem of each vitreous portion.



2,105,473
HYDRAULIC STEERING GEAR
Walter C. Dean, Chevy Chase, Md.
Application August 10, 1936, Serial No. 739,965
6 Claims. (Cl. 60—53)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination with a double acting hydraulic ram, of means to supply fluid under pressure constantly in one direction, a valve operatively connected to said means, said valve having an element selectively movable to cause the fluid merely to circulate in said means or to act upon said ram to move it in either direction, a toothed rack connected to said element, a hollow shaft, a pinion on said shaft meshed with said rack, planet pinions carried by said hollow shaft, a second shaft extending through said hollow shaft, a pinion on said second shaft meshed with

said planet pinions, an element having internal gear teeth meshed with said planet pinions and external gear teeth, a rack meshed with said external gear teeth, pipes connecting said valve to said ram, a piston operatively disposed to be acted upon by fluid pressure in one of said pipes and connected to the last mentioned rack, and manual means to actuate said second shaft.

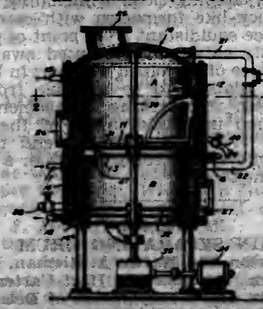
2,105,474
TEXTILE APPARATUS
William Alexander Dickie and Robert Wighton Mencrieff, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application October 20, 1936, Serial No. 106,594
In Great Britain June 4, 1931
5 Claims. (Cl. 117—2)

1. Apparatus for twisting textile threads, comprising a twisting device and means for steaming the threads, the construction and arrangement being such that the twisting device inserts twist in that part of the thread which is actually under the influence of the steam.

2,105,475
CAMERA SHUTTER
Rupert H. Draeger, United States Navy
Application June 3, 1935, Serial No. 24,659
3 Claims. (Cl. 95—62)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. In a photographic camera, a lens barrel, a shutter lying in a single plane and an electromagnetic operating means mounted in said barrel, said means including an armature operatively connected with said shutter, and a support for said armature in said barrel outside of the plane of said shutter.

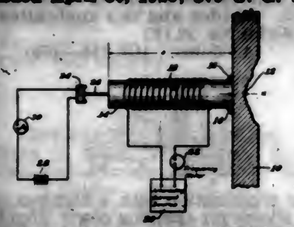
2,105,476
TRANSPORTABLE CABLE-WINDING MECHANISM
Benjamin F. Fitch, Greenwich, Conn., assignor to Meter Terminals Company, New York, N. Y., a corporation of Delaware
Original application December 3, 1934, Serial No. 755,752. Divided and this application July 18, 1935, Serial No. 32,132
14 Claims. (Cl. 254—166)



1. The combination with a highway vehicle of a shaft, means for applying power thereto, a tube surrounding the shaft and having bearings in the vehicle, winding drums on the tube, and a clutch adapted to connect the tube to the shaft.

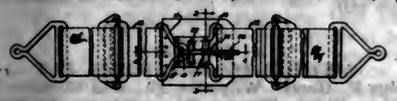
2,105,477
TONIC FOOD PRODUCT AND PROCESS OF MAKING SAME
Fanny Matlack Godfrey, Tarrytown, N. Y., and Robert Wentworth Floyd, Bloomfield, N. J.; said Floyd assignor to said Godfrey
No Drawing. Application March 4, 1936, Serial No. 67,176
5 Claims. (Cl. 99—110)

1. A solution of concentrate of meat extract combined with mono-sodium glutamate, readily soluble albumen and a substantial amount of ethyl alcohol, for retaining the albumen in a soluble condition, substantially free from common salt.



2,105,478
METHOD OF RENDERING FAT
John P. Harris, Wilmette, Ill., and William Arthur Welch, Tyrone, Pa., assignors, by mesne assignments, to West Virginia Pulp & Paper Company, New York, N. Y., a corporation of Delaware
Application August 28, 1934, Serial No. 741,783
11 Claims. (Cl. 87—13)

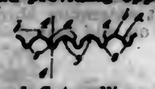
8. In the treatment of rendered fat containing free fatty acid in solution, the steps of neutralizing same to reduce said free fatty acids to not substantially greater than .05%, which consists in



mixing the fat with activated carbon and a neutralizing agent in the presence of sufficient water to cause ionization of said agent, then, when neutralization is completed, separating the purified fat from the activated carbon and the soap that is formed.

2,105,479
APPARATUS FOR MEASURING THICKNESS
Harvey C. Hayes, Washington, D. C.
Application July 10, 1935, Serial No. 30,756
2 Claims. (Cl. 73—51)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device for measuring the thickness of a metal wall, a member of magnetostrictive material secured substantially perpendicularly to a section of said wall the thickness of which is to be measured, means for setting up in said wall section and said member longitudinal waves in a direction perpendicular to the surface of said wall section, and means for varying the frequency of said waves so as to obtain the natural resonant frequency of the waves in said wall section and said member.

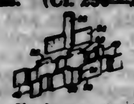


2,105,480
SAFETY BELT
Edward L. Hoffman, Montgomery, Ala.
Application February 6, 1937, Serial No. 124,463
9 Claims. (Cl. 297—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a safety belt, the combination of a two part flexible web, a catch loop attached to the end of one web part, and a pivotally mounted latching element attached to the end and rotatable in a plane normal to the plane of the other web part, said latching element including an end portion of hook-like formation with catch loop bearing surface equidistant from point of pivotation and cavity outwardly presented away from the external face of its joined web part in latched position and adapted to be movable from unlatched position into locking engagement with said catch loop upon movement of the latter into registry with said hook-like end portion, said locking movement being less than a ninety degree movement.

2,105,481
GRAIN SEPARATING DRUM
Leonard Johnson and Martin A. Rieman, Minneapolis, Minn., assignors to Hart-Carter Company, Peoria, Ill., a corporation of Delaware
Application February 11, 1936, Serial No. 63,949
2 Claims. (Cl. 209—95)

1. A grain separating drum having longitudinally extended, relatively narrow but flaring substantially symmetrical valleys adapted to receive grains transversely of their length and relatively wide and shallow intervening ridge-like portions adjoining the upper edges of the valley walls at angles thereto and providing oppositely inclined



relatively long and flat rolling surfaces which are substantially symmetrical and on which grains are caused to roll about their longitudinal axes toward said valleys upon rotation of the drum.

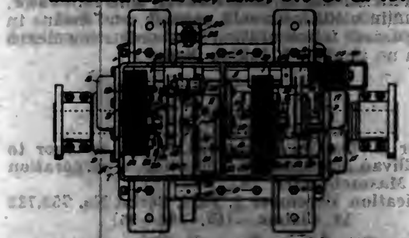
2,105,482
DETACHABLE CURTAIN ROD BRACKET
Paul W. Johnson, San Francisco, Calif., assignor of thirty percent to Betsy C. Brown and twenty percent to John J. Collins, both of San Francisco, Calif.
Application October 8, 1935, Serial No. 44,117
2 Claims. (Cl. 248—261)

1. A curtain rod bracket comprising a body provided with parallel sides, these sides being slotted to receive a shade roller bracket, said body extending at right angles to the shade roller bracket, and a spring pressed catch for holding the shade roller bracket in the slots, said spring catch also urging the shade roller against one side of the slots for rigidly holding the two brackets together.

2,105,483
ELECTRON DISCHARGE DEVICE
Joseph P. Laico, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 7, 1936, Serial No. 104,339
6 Claims. (Cl. 250—27.5)

1. In an electron discharge device, an enclosing vessel, an electrode assembly within said vessel, a leading-in conductor extending from one wall of said vessel, a pair of flexible metallic members affixed to said assembly, and a metallic contact member carried by said conductor and grasped by said flexible members.

2,105,484
FLOOR COVERING
Louis Leonard Larsen and George Lewis Schwartz, Wilmington, Del., assignors to Krafelt Corporation of America, Wilmington, Del., a corporation of Delaware
Application March 30, 1935, Serial No. 12,110
7 Claims. (Cl. 91—68)



1. In a process for making floor coverings and the like the application to forwardly moving sheet material the successive steps which comprise partially saturating absorbent paper felt sheet material by applying saturant containing solvent in

amount not more than about 35% by volume to the face only of said sheet material, then while the saturant is still liquid printing without intermediate curing the sheet material from the face with print paint which penetrates substantially through the sheet, and subjecting the

printed and saturant-containing material to a temperature sufficiently elevated for the curing of said material, said absorbent sheet material being saturated by said saturant and print paint at the curing stage in such amount that a substantially filled sheet is produced.

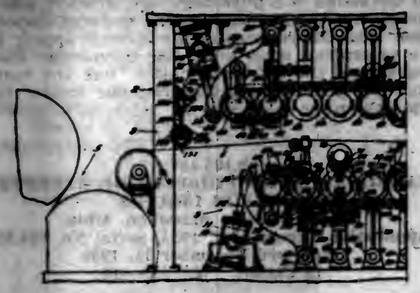
2,105,485
TRANSMISSION MECHANISM
Otto Larsen, St. Louis, Mo.
Application April 22, 1933, Serial No. 17,665
2 Claims. (Cl. 74—377)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a transmission the combination with a driving and a driven shaft and means to establish driving connections in direct and in reverse between said shafts, said means including slidable clutch members normally disposed in a neutral position, but shiftable to positions adapted to establish said driving connections in direct and in reverse; of a clutch control assembly coacting with said clutch members, said assembly including means which when moved in one direction act to simultaneously shift both of said clutch members from their neutral positions and to place one of said members in a position to establish its driving connection in direct, said means when moved in the opposite direction functioning to shift one of said clutch members in a corresponding direction, and additional means acting independently to move said remaining clutch member in the same direction, said additional means permitting the driving connection of said remaining clutch member to be retarded until that of the other of said clutch members has been completed.

2,105,486
WHOOPING COUGH VACCINE AND METHOD OF MAKING THE SAME
Hans Langer, Berlin-Wilmersdorf, and Erich Putter, Berlin-Charlottenburg, Germany, assignors to Schering-Kahlbaum A. G., Berlin, Germany, a corporation of Germany
No Drawing. Application September 10, 1934, Serial No. 743,410. In Germany September 14, 1933
13 Claims. (Cl. 167—78)

1. The method of preparing a whooping cough vaccine which comprises subjecting a mixture of stocks of the bacillus Bordet-Gengou, each having constant cultural properties after long cultivation, to the action of a physiologic salt solution, alternately freezing and thawing the bacterial suspension until the remains of the bacteria appear as an amorphous mass under the microscope, then separating the insoluble matter from the toxin solution and utilizing the insoluble matter for making up the vaccine.

2,105,487
CARBONATING AND DISPENSING RECEPTACLE FOR LIQUIDS
Carl F. Lasen, Massillon, Ohio
Application December 7, 1934, Serial No. 756,552
Renewed December 11, 1936
18 Claims. (Cl. 225—18)



8. In a receptacle for carbonating and dispensing beverages, a container having a relatively wide open mouth bordered by an inwardly flaring flange, a closure for said container having an enlarged depending skirt portion to telescopically fit the upper portion of the container, said skirt having bayonet slots extruded thereon, projections extruded on the container wall to cooperate with said bayonet slots to removably attach the cover to the container, a gasket of substantially U-shape having one arm engaging said flange and its other arm engaging the shoulder of the skirt portion with its base contacting the wall of said skirt portion, said gasket being compressed in said position between said flange and shoulder when the cover is applied and the projections are engaged in the bayonet slots, means for introducing gas into the container, and means for dispensing carbonated liquid therefrom.

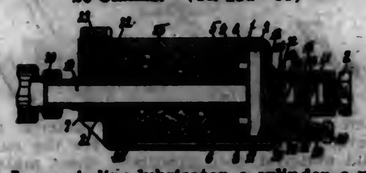
2,105,488
APPARATUS FOR APPLYING MOBILE FILMS
Peter J. Massey, River Forest, Ill., and William F. Thiele and Bert F. Ragrager, Wisconsin Rapids, Wis., assignors, by mesne assignments, of nine-tenths to Consolidated Water Power & Paper Company, Wisconsin Rapids, Wis., a corporation of Wisconsin and one-tenth to Peter J. Massey, Chicago, Ill.
Application September 11, 1935, Serial No. 40,151
10 Claims. (Cl. 91—50)

1. In a device of the class described, a plurality of pivotally mounted standards, a roll carried by each of said standards, means connecting adjacent standards, adjustable to control the degree of contiguity of the rolls carried by said adjacent standards, single means for urging said adjacent

standards together to maintain said rolls at the adjusted degree of contiguity, said urging means

being operable to rock said standards about their pivotal mounts away from each other to separate said rolls.

2,105,489
PROTECTIVE COVERING
William Henry Moss, London, England, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 10, 1934, Serial No. 739,238. In Great Britain August 24, 1933
12 Claims. (Cl. 91—68)



1. Protective coating materials comprising a tape, ribbon, film, fabric or the like coated with a composition containing a lacquer base and a proportion of the order of at least 60% of the weight thereof of plasticizer of high solvent power and having an outer layer of a composition containing a lacquer base and a proportion of the order of at least 85% of the weight thereof of plasticizer of high compatibility but limited solvent power.

2,105,490
LUBRICATOR
Warren Noble, Michigan City, Ind., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application July 14, 1934, Serial No. 735,162
23 Claims. (Cl. 184—55)

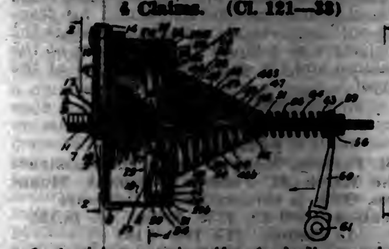
2. In an air line lubricator, a casing having a streamway extending longitudinally therethrough through which the fluid in the air line may flow selectively in opposite directions and end connections adapted for attachment to an air line, said streamway extending longitudinally between and connecting said connections to provide air flow therebetween, a collapsible reservoir in said casing in adjacency to said streamway and including a collapsible element for varying the volume of the reservoir, means providing communication between the streamway and the streamway side of the collapsible element, and means operative in either direction of flow in said streamway for setting up reduced pressure on the reservoir side of said collapsible element to set up discharge from the reservoir to the streamway.

2,105,491
LUBRICATING APPARATUS
Marvin Chester Huffman, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application December 3, 1934, Serial No. 755,732
26 Claims. (Cl. 184—55)

3. In an air line lubricator, a cylinder, a piston therein, said piston having a hollow piston rod extending through an end of the cylinder, said cylinder having a passage constituting a connection for the admission of air thereto at its other end and said piston rod having provision for the delivery of air at its outer end, whereby an air stream may flow from end to end through the lubricator, the space in the cylinder surrounding the piston rod constituting a lubricant reservoir, means for conducting lubricant from said space to an air stream flowing through said lubricator, communicating with said passage, and means in said passage for obturating said conducting means when no air flow is taking place.

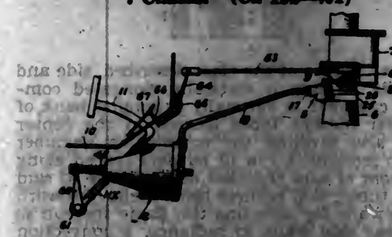
2,105,492
LUBRICATING DEVICE
Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Corporation, a corporation of Massachusetts
Application December 3, 1934, Serial No. 755,732
19 Claims. (Cl. 184—55)

19. In a lubricator, a cylinder having heads, one formed with a motive fluid supply connection and the other with a bore for receiving a piston rod, a piston reciprocable in said casing and having a piston rod extending through said bore, said piston and piston rod having a bore therethrough extending from the side of the piston nearer said first mentioned head through the opposite end of said piston rod, said casing providing a lubricant reservoir between the side of the piston nearer the second mentioned head and said second mentioned head, means for delivering lubricant from said reservoir to motive fluid passing through said lubricator at a point between the opposite ends of the latter, and valve means for controlling motive fluid admission through said motive fluid supply connection or, alternatively, emptying the lubricator of motive fluid at will.



2,105,493
LUBRICATING APPARATUS
Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application December 3, 1934, Serial No. 755,733
21 Claims. (Cl. 184—55)

21. In a lubricator for a pressure fluid supply line, a casing having at one end a passage constituting a fluid supply connection, a piston within said casing and having a hollow piston rod, means forming a conduit through which pressure fluid flowing from said fluid supply connection is conducted through said casing, said hollow piston rod surrounding a portion of said conduit means and movable longitudinally relative to the latter, means at the other end of said casing



providing a bore into which the piston rod passes upon movement of said piston toward the last mentioned end of said casing, said casing providing between the piston and the last mentioned casing end a lubricant reservoir, means for conducting lubricant from a point near the last mentioned end of the casing to said passage, and valve means for supplying pressure fluid to either end of said casing at will.

2,105,494
PISTON AND CYLINDER CONSTRUCTION
McKinley Palmer, Beverly Hills, Calif.
Application October 7, 1936, Serial No. 104,499
6 Claims. (Cl. 121—38)

1. A piston construction including a piston rod having a head at one end, a piston head furnished with hollow hub construction having an aperture leading thereinto smaller than said rod head and containing the headed portion of said rod, a compression spring within said hollow hub and engaging the headed portion of said rod to move it outwardly, additional springs cooperating to move said rod in the same direction as the first recited spring, and a piston cylinder construction with which the piston cooperates and upon which said additional springs abut.

2,105,495
VALVE CONSTRUCTION
McKinley Palmer, Beverly Hills, Calif.
Application October 7, 1936, Serial No. 104,500
7 Claims. (Cl. 192—.01)

1. A valve device comprising a body portion having a chamber therein and an aperture opening into said chamber, said body comprising a seat portion surrounding said aperture at an end of said chamber, said body having a passageway therein communicating with said chamber thru the medium of said aperture, said passageway communicating with a hole or holes extending thru said body portion, said body having a second aperture and a third aperture therein opening into said chamber, a cap member overlying said second aperture and a nut member in said third aperture, said cap member and said nut member each having through them an aperture opening into said chamber, a valve, said valve comprising a head portion and a shank portion, said valve head being positioned in said chamber and said shank being positioned in said cap aperture, said shank at different points along its length being of less cross sectional area than said cap aperture at such points said valve head comprising a seat portion, the inner end of said cap member having a coacting seat portion, and a coiled spring surrounding said shank and engaging said valve head and said cap.

2,105,496
VACUUM OPERATED DEVICE
McKinley Palmer, Los Angeles, Calif.
Application January 21, 1935, Serial No. 2,662
10 Claims. (Cl. 192—.01)

1. In a power actuator, a cylinder, a piston movable in said cylinder, a rod, means to universally connect said rod to said piston, a head member, means to adjustably connect the rod to the head member, an arm, means to universally mount the arm on the head member, said head member having a cam surface thereon and means adapted to coact with said cam surface to move the head member and piston.

2,105,497
COMBINED VENTILATOR AND AIR CLEANER FOR MOTOR VEHICLES
McKinley Palmer, Beverly Hills, Calif.
Application November 27, 1935, Serial No. 51,837
3 Claims. (Cl. 98—2)

1. In an automobile, an engine, a closed body compartment, a partition between the engine and compartment, said partition having an aperture therethrough, a tubular member positioned in said aperture, a gasket arranged about the tubular member and engaging the partition, said tubular member having a curved flange thereon engaging said gasket, the end of said tubular member in the driver's compartment being threaded, an elbow threadedly engaging said threaded portion of the tubular member, the end of said elbow engaging said partition about said aperture, a set screw passing through said elbow and engaging said tubular member, an air cleaner mounted on said elbow, said elbow constituting an air inlet, said tubular member having a

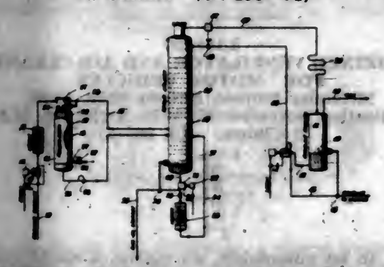
bead thereon adjacent the end thereof which is disposed nearest to said engine, a flexible conduit having its end disposed over said bead on said tubular member, a clamp collar on said tubular member engaging said flexible conduit to effect a seal, a valve member, means to connect the valve member to the carburetor, said valve member including an inlet portion, said flexible hose engaging said inlet portion, said valve member having an aperture in one wall leading to the atmosphere, a valve in said valve member, said valve in one position affording communication between the conduit and the carburetor and in another position affording communication between the carburetor and the atmosphere and means to move said valve.

2,105,498

ACETYLATION OF WOOD PULP

Arthur N. Parrett and Judson H. Holloway, Shelton, Wash., assignors to Rainier Pulp & Paper Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 27, 1936, Serial No. 87,761
8 Claims. (Cl. 260—101)



1. The process of acetylating refined wood pulp, comprising providing high alpha cellulose pulp in the sheet form with a predetermined moisture content in the range of 12 to 30%; substantially exposing the individual pulp fibers by mechanically comminuting said sheet with said predetermined moisture content to permit wetting of the fibers by acetylating agents; drying such comminuted pulp to a relatively low moisture content with air at a temperature below 35° C.; and subjecting such dried pulp to acetylating agents.

2,105,499

METHOD AND APPARATUS FOR TREATING CRACKED HYDROCARBON OILS

Ralph M. Parsons, Mount Vernon, Ohio, assignor to The Ralph M. Parsons Company, Mount Vernon, Ohio, a corporation of Delaware

Application March 2, 1935, Serial No. 8,992
2 Claims. (Cl. 196—94)

1. The method of treating cracked gasoline for the removal of unstable, unsaturated hydrocarbons, which comprises converting the cracked gasoline into vapor and liquid fractions under conditions of temperature and pressure such that the unstable, unsaturated hydrocarbons are concentrated in the liquid fraction, separating the vapor fraction from the liquid fraction and introducing the vapor fraction directly into a fractionating zone, passing the separated liquid fraction through a polymerizing and degumming material to polymerize the unstable constituents therein, reducing the pressure of the treated liquid to a value such that a substantial portion thereof vaporizes at the temperature received from the treating zone and introducing the liquids and released vapors to said fractionating zone, for fractionation with said vapor fraction, to separate the heavy polymers as a liquid and the gasoline containing constituent as a vapor, and removing and condensing said vapor to separate the gasoline therefrom.

2. A system for the treatment of cracked gasoline for the removal of unstable, unsaturated hydrocarbons, comprising a treating column and a rerun column, said treating column having a compartment containing a polymerizing and degumming substance, a compartment located above said first compartment and separated therefrom by perforated walls to permit passage of liquid therethrough, means converting the cracked gasoline into vapor and liquid fractions under conditions of temperature and pressure such that the unstable, unsaturated hydrocarbons are concentrated in the liquid fraction, means introducing said vapor and liquid fractions into said last compartment at a rate such that a layer of liquid is maintained therein, means withdrawing the vapor fraction from said last compartment without passage through said first compartment, means introducing said vapor fraction into said rerun column for the separation of the heavy constituents therefrom, means withdrawing said liquid fraction from the bottom of said treating column after passage through said first compartment and means introducing the treated liquid fraction into said rerun column for fractionation with said vapor fraction to separate the heavy polymers as a liquid at the bottom of the rerun column and the gasoline as a vapor at the top thereof.

2,105,500

FURNACE

Ralph M. Parsons, Mount Vernon, Ohio, assignor to The Ralph M. Parsons Company, Mount Vernon, Ohio, a corporation of Delaware

Application April 25, 1935, Serial No. 18,125
11 Claims. (Cl. 196—110)

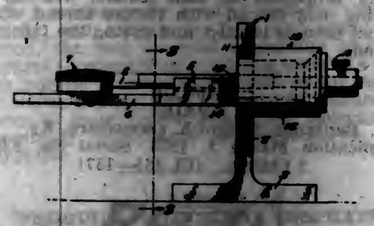
6. In a furnace of the class described, side and end walls forming a vertically elongated combustion chamber, a vertically extending bank of horizontal radiant tubes located in the center thereof and dividing the combustion chamber into two sections, a row of burners spaced along the bottom of said chamber on each side of said bank of tubes, said burners being inclined toward the side walls for directing the flame thereon so as to heat said walls to radiance, a convection chamber containing a bank of convection tubes carrying hydrocarbon oil above said combustion chamber and in alignment therewith, said convection chamber being of smaller cross-section than said combustion chamber and being joined thereto by sloping walls forming a passage for gases and a stream lined guide member extending longitudinally above said bank of radiant tubes to direct the gases into said convection chamber with a minimum of turbulence.

2,105,501

BUBBLE COLUMN

Ralph M. Parsons, Chicago, Ill., assignor to The Ralph M. Parsons Company, Chicago, Ill., a corporation of Delaware

Application June 26, 1936, Serial No. 87,392
4 Claims. (Cl. 261—114)



1. A bubble column comprising a tower having a plurality of spaced bubble trays therein, each tray having a central manhole opening and a plurality of bubble openings disposed thereabout, a raised circular flange around said manhole opening to confine the liquid to the circular path around said bubble openings, and a manhole cover closing the manhole opening of each tray, said manhole covers normally seating on said raised flanges and having guide members cooperating with said flanges to guide the covers into seating position when the covers are raised vertically therefrom, and spring means releasably securing said manhole covers in place and permitting the same to be unseated in response to a predetermined pressure below said trays whereby said manhole covers serve as pressure relief valves for said column, and means accessible from below the tray for releasing said spring means.

2,105,502

VALVE STEM CLEARANCE JIG

Delbert Feimler, Farmer City, Ill.

Application October 8, 1936, Serial No. 104,737
2 Claims. (Cl. 33—147)

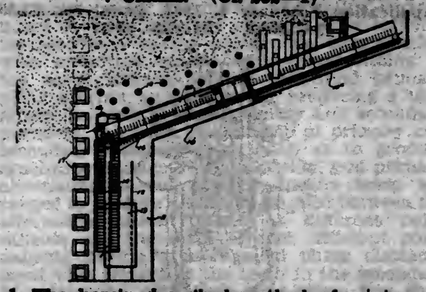
1. A valve stem clearance jig comprising a vertically arranged post having an opening, a horizontally disposed valve stem rest carried by said post, means for supporting the gage on said rest, and a jig head slidably supported on the post including a body having a bore and a seat to be engaged by a valve head with the stem supported by the rest and in engagement with the gage.

2,105,503

PIGMENT MANUFACTURE

Harold Robert Raften, Andover, Mass., assignor to Raffold Process Corporation, a corporation of Massachusetts

No Drawing. Application January 26, 1932, Serial No. 589,046
4 Claims. (Cl. 134—58)



1. In the method of manufacturing pigment wherein an alkali metal carbonate is causticised with a lime containing magnesia in the presence of water, the improvement for producing pigment in excess of the amount producible in said causticizing reaction with a given amount of alkali metal carbonate which comprises mixing lime containing magnesia in the presence of water with an amount of alkali metal carbonate insufficient under the conditions of the reaction completely to carbonate the calcium content of said lime, substantially separating the solution of the causticized alkali metal salt from the solid reaction product, and then subjecting said product in the presence of water to the action of carbon dioxide at a temperature approximately between 60° C. and that of boiling, thereby maintaining substantially all the magnesium content of said product in substantially water insoluble form while continuing the addition of said carbon dioxide, until calcium carbonate magnesium basic carbonate is produced from said product.

2,105,504

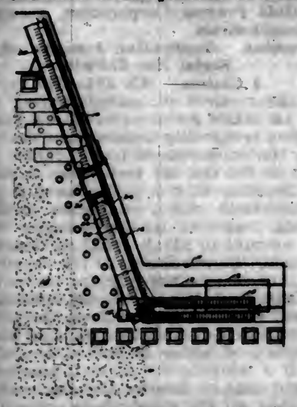
METHOD OF MINING COAL

Erskine Ramsay, Birmingham, Ala.

Application September 9, 1935, Serial No. 39,707
7 Claims. (Cl. 262—1)

1. The herein described method of mining a mineral body, which consists in simultaneously sawing a series of relatively thin slices at different levels from its working face by a working force applied parallel with said face and breaking away the slices from each other and the face by a working force which is a component of the wedging action and which exerts an outward wedging pressure applied by the advance of the slicing saws along the face thereby to continuously slice and break off the whole face.

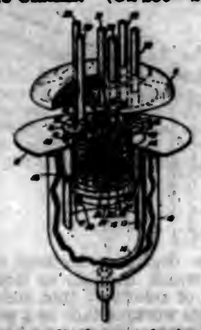
2,105,505



MINING MACHINE

Erskine Ramsay, Birmingham, Ala.

Application May 11, 1936, Serial No. 79,695
18 Claims. (Cl. 262—9)



1. In a mining machine, a carriage movable back and forth along the face to be mined, a track for the carriage extending along and movable to follow the receding face being mined, a plurality of back-cutting saws mounted in said carriage to rotate at different levels in planes parallel with the face opposite them and close

thereto to sever therefrom readily breakable slices, a drive means for said saws, and cutting teeth on the saws which present to the mineral

slice cut free from the face an inclined edge disposed to exert a wedging action in a direction to break off the sliced mineral as the saws advance along the face.

2,105,506
ELECTRON DISCHARGE DEVICE
Victor L. Rensel, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 4, 1936, Serial No. 62,255
13 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an envelope having an opening therein, an electrode within said envelope and supported thereby, a metallic member positioned at said opening and having an open-ended guiding sleeve extending into said envelope, and an electrode assembly insertable into said sleeve through said opening and disposed within said envelope, said assembly including a member slidably fitted in said sleeve.

2,105,507
ELECTRON DISCHARGE DEVICE
Victor L. Rensel, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 16, 1936, Serial No. 90,823
3 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an enclosing vessel, an electrode structure including a cathode, a grid and an anode mounted in and from one end of said vessel, an insulating member at each end of the structure for spacing said electrodes, said cathode being resiliently supported from one of said insulating members, said

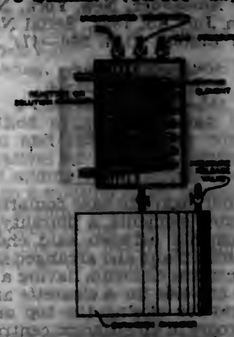
anode having sockets extending longitudinally of its surface, and means at the other end of said envelope cooperating with said sockets to support said structure laterally but allowing longitudinal expansion and contraction of said anode.

2,105,508
MANUFACTURE OF ISOPROPYL ETHER
Raphael Ream, Cranford, Hyym E. Bue, Roselle, and Robert B. Lobo, Elizabeth, N. J., assignors to Standard Alcohol Company
No Drawing. Application December 29, 1934, Serial No. 759,060
4 Claims. (Cl. 260—151)

2. Process of manufacturing isopropyl ether, which comprises converting propylene directly into ether by contacting it with a hydrating catalytic medium at a temperature between the approximate limits of 0° and 50° C. and under a pressure of approximately 50 to 500 pounds per square inch whereby a substantial amount of ether is formed which remains in solution in the hydrating catalytic medium, after which said hydrating catalytic medium is subjected to heat to remove the said ether from solution.

2,105,509
TREATMENT OF TEXTILE MATERIALS
Harvey A. Schwartz, Cleveland, Ohio, assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application March 8, 1934, Serial No. 714,620
11 Claims. (Cl. 8—5)

1. A method of securing cross-dyeing effects which comprises subjecting viscose thread to radiation containing actinic rays, meanwhile controlling the duration and intensity of said radiation so as to effect a modification in the dyeing properties of said thread, weaving or knitting said thread with viscose thread which has not been so treated, and dyeing the fabric so formed.

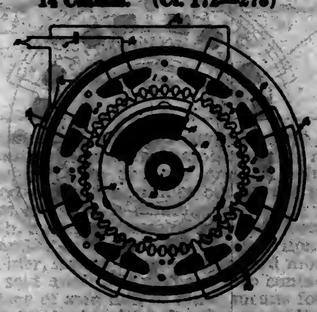


2,105,510
CHAIR
Benjamin R. Smith, Owensboro, Ky.
Application March 2, 1935, Serial No. 9,987
2 Claims. (Cl. 155—157)

1. In a chair, the combination of side bars for supporting a seat and having a cross-brace

therebetween, a bracket having sides pivoted at their forward ends to said side bars, said bracket having a transverse brace underlying the cross-brace, bolts extending through the cross-brace and transverse brace and having nuts on the lower ends thereof, springs interposed between said nuts and the transverse brace for resiliently maintaining said bracket in normal position relative to the side bars, a second bracket having a back and side arms, said side arms being pivoted intermediate their ends to the rear ends of the sides of the first-mentioned bracket, said side arms having slots in their forward ends thereof, a bolt extending through said slots and through the sides of the first-mentioned bracket for holding the second bracket in adjusted position relative to said first-mentioned bracket, the back of the second bracket having upwardly extending ribs thereon, each of said ribs having a longitudinal slot therein, a transversely extending back-supporting bar having upwardly extending grooves therein receiving the ribs of the back of the second bracket, and bolts extending through the slots and through the bar for adjustably securing said bar to the second bracket.

2,105,511
INSULATING AND SOUND PROOFING MATERIAL AND METHOD OF PRODUCING SAME
Robert Dewey Snow and Harold Joseph Hepp, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware
Application April 14, 1936, Serial No. 74,293
3 Claims. (Cl. 106—93)

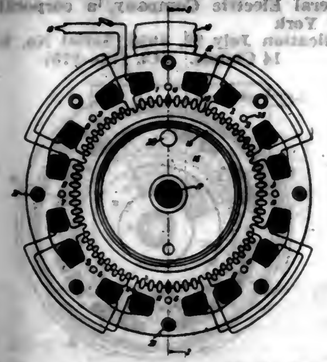


3. A substantially cellular material, light in weight, and suitable for heat and sound insulation, the said material containing small gas pockets surrounded by retaining walls of a resinous, polymeric compound formed by the reaction of sulfur dioxide with olefins predominantly of three or more carbon atoms per molecule and essentially non-plastic at atmospheric temperatures.

2,105,512
PRODUCTION OF ALKYL SULPHATES
Carlyle J. Stalmann, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 16, 1936, Serial No. 116,162
8 Claims. (Cl. 260—99.12)

1. The process which consists in stripping under subatmospheric pressure a dialkyl sulphate, in which the alkyl groups have less than 4 carbon atoms, from a mixture containing the dialkyl sulphate, the alkyl sulphuric acid and sulphuric acid, the stripping agent being a volatile organic liquid which is substantially non-reactive under the conditions of the process.

2,105,513
MOTOR
DIRECTIONAL SELF-STARTING INDUCTOR
Alfred F. Welch, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application July 22, 1936, Serial No. 91,941
14 Claims. (Cl. 172—278)



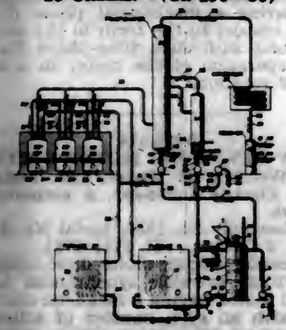
1. An alternating-current synchronous motor comprising co-operating, relatively rotatable, primary and secondary members, the primary member being provided with salient magnetic pole pieces, each having evenly spaced teeth therein, alternating-current winding means on the primary for producing alternating-current fluxes between different primary polar salients, the secondary having a magnetic core member with uniformly spaced teeth corresponding to the tooth spacing in the individual primary polar salients, and means for producing a unidirectional flux between primary and secondary members, the tooth relationship of primary and secondary members being such as to produce synchronous inductor motor action, said primary alternating-current winding means being arranged to produce a time-phase shift between the alternating-current fluxes at different polar salients and the teeth of such different polar salients having a mechanical phase displacement with respect to the teeth in the secondary to correspond with such time-phase flux shift to assure operation of the motor in a selected direction of rotation.

2,105,514
SELF-REVERSING MOTOR DRIVE
Alfred F. Welch, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application July 22, 1936, Serial No. 91,942
3 Claims. (Cl. 172—278)

1. A reversible electric motor drive comprising, a self-starting reversible synchronous inductor motor, said motor having a magnetic stator part provided with an even number of salient pole pieces energized by a single-phase winding to produce alternating fluxes of opposite polarity in adjacent pole pieces, a rotor of magnetic material connected to the load to be driven and having a plurality of evenly spaced teeth in its periphery, similarly spaced teeth in the stator pole piece faces, the teeth in the stator pole pieces of one polarity at a given instant being aligned with the rotor teeth when the stator teeth

in the pole pieces of the opposite polarity at the same instant are midway between the rotor teeth, permanent magnet means for producing a unidirectional homopolar flux between the stator and rotor of such value as to combine with the alternating-current fluxes of the stator pole pieces to produce a resultant field between the stator and rotor having half as many magnetic poles as there are stator poles, which resultant field may be visualized as rotating in either direc-

tion at the same speed as the single-phase field produced by the single-phase winding alone, said motor having a substantially uniform air gap reluctance to the unidirectional flux in all rotor positions and being self-starting and operable in either direction of rotation with equal facility, and means for reversing the direction of rotation of said motor while in normal operation in either direction comprising resilient stop means for stalling the motor at predetermined points in its range of rotation in either direction.



2,105,515

TREATMENT OF HYDROCARBONS

Joseph G. Alther, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application January 20, 1934, Serial No. 707,570

16 Claims. (Cl. 196—56)

14. A process for coking heavy hydrocarbon material which comprises depositing the material to be coked upon a substantially horizontal refractory plate in a coking zone, heating said plate from below by combustion of fuel and supplying a coking heat therethrough to the material to be coked, passing a hydrocarbon oil of lower boiling point than said heavy material in a restricted stream through a heating zone and heating the same therein to its cracking temperature, and discharging the thus heated light oil directly onto the material deposited on said plate to supply additional heat for the coking from above.

2,105,516

SLIDE LOOP

Carl E. Anderson, East Orange, N. J., assignor to Eastern Tool & Mfg. Co., Bloomfield, N. J.

Application June 15, 1936, Serial No. 85,796

2 Claims. (Cl. 24—162)

1. A frame for slide loops comprising a single piece of bent over wire having an open button loop and extending arms to form a bottom part then extending upwardly to form end bars and then extending inwardly to form a top bar with the ends of the wire abutting, one of said ends being tapered and the other recessed to receive the tapered end and thus form a joint, the inside upper part of the button loop being tapered on both sides at the top of the button loop at its juncture with the arms.

2,105,517

SECTIONAL CIGARETTE CASE

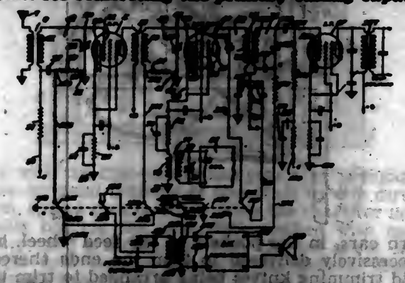
Henry Auslander, New York, N. Y.

Application July 15, 1936, Serial No. 90,691

7 Claims. (Cl. 206—41)

1. A sectional cigarette case comprising a pair of end elongated elements, a plurality of central elongated elements between said end elements and in a common plane and arranged side by side, each of said central elements having a longitudinal groove in one side for a cigarette and top and bottom flanges for closing the top and bottom ends of the groove in an adjacent central element, and flexible elastic members extending through top and bottom portions of said elements and at their ends connecting with said end elements for uniting said elements in a unit so that adjacent elements may be relatively bent and separated to exposed said grooves, said elements having longitudinal flanges extending along their sides and engaging complementary grooves in adjacent elements.

2,105,518



SELECTIVITY CONTROL SYSTEM

George L. Beers, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application July 31, 1935, Serial No. 34,004

3 Claims. (Cl. 250—20)

2. In an intermediate frequency amplifier, the combination with an inter-stage transformer having a primary winding and a secondary winding, of a tuning capacitor connected with a terminal of the primary winding, a second tuning capacitor connected with a terminal of the secondary winding, a conductive connection between the remaining terminals of the primary and secondary windings, a series coupling capacitor connected between said conductive connection and each of said tuning capacitors to provide primary and secondary circuits, selective switching means for connecting the primary tuning capaci-

tor with said conductive connection through the secondary series coupling capacitor to the exclusion of the series coupling capacitor for the primary circuit, and means in said last named connection for inserting resistance in the primary circuit, thereby to prevent the response characteristic of the transformer from becoming double-peaked.

2,105,519

COLORED ARTIFICIAL YARN AND LIKE MATERIALS AND METHOD OF MAKING SAME

Henry R. Bedell, Gushing, N. Y., assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application June 23, 1936, Serial No. 86,282

6 Claims. (Cl. 18—54)

1. A method of manufacturing colored filaments, yarn and like materials containing organic derivatives of cellulose, which comprises the steps of adding an anthraquinone vat coloring matter to a solution of an organic derivative of cellulose, shaping the materials, removing the solvent and topping the materials to the desired color with a dyestuff having an affinity for the organic derivative of cellulose.

2,105,520

CALCULATING MACHINE AND THE LIKE

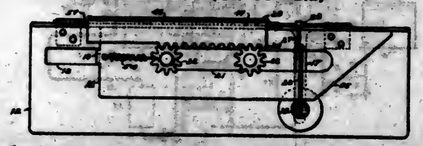
Bengt Carlström and Ray Shannon, Atvidaberg, Sweden, assignors to Aktiebolaget Facit, Atvidaberg, Sweden, a joint-stock company of Sweden

Application August 17, 1937, Serial No. 159,483

In Germany August 18, 1936

15 Claims. (Cl. 197—99)

1. In a tabulating device for a calculating machine and the like, in combination, a rectilinearly movable carriage, a disk, pins on said disks, means for rotating said disk step-by-step, and a toothed rack on said carriage meshing with at least one of said pins, said rack being movable at an angle to the rectilinear path of motion of said carriage, while still remaining in mesh with one of said pins.



2,105,521

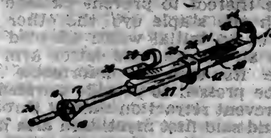
PHOTOGRAPH IDENTIFICATION

Neeels Champion, Orange, N. J.

Application May 18, 1937, Serial No. 143,397

5 Claims. (Cl. 95—1.1)

1. A camera attachment comprising, in combination with the camera chamber which receives the sensitized film or plate and its holder, an apertured element normally out of the path of said film or plate, a member projecting toward said path, means for moving said members along said chamber in response to the insertion of the plate holder, means responsive to said movement to shift said apertured element into contact with the surface of said film or plate, means for causing a pre-selected identifying character to register with an aperture in said element whereby, upon exposure, light will pass to said film or plate by way of said identifying character and aperture, to cause said identifying character to be photographically registered on said film or plate, a stencil composed of a series of said identifying characters, means operative upon withdrawal of the film or plate holder to remove said apertured element from the path of said holder, an indexing member, and means for connecting said indexing member to said stencil to provide for shifting of the latter in relation to said apertured element.



2,105,522

FIRE LIGHTER

Sherman Clevenger, Cleveland, Ohio

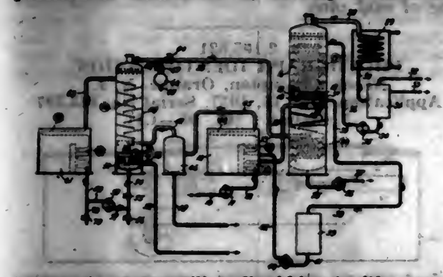
Application November 11, 1935, Serial No. 49,343

1 Claim. (Cl. 126—10)

A fire lighter comprising a tube having its central portion of rectangular cross section and transversely corrugated areas on its upper and lower sides, said tube having a turned-up end provided with a series of discharge orifices inclined to the axis of said turned-up end, the terminal portion of said turned-up end being tapered and projecting beyond the plane of said orifices, and the opposite end of said tube having means for supplying gas and air thereto.

2,105,523

OIL REFINING



Courtlandt Forrest Dunney, New York, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York

Application November 20, 1931, Serial No. 576,341

11 Claims. (Cl. 196—76)

7. The method of treating oil which comprises vaporizing the oil, passing the oil vapor through

zones of progressively lower temperature to condense high boiling point fractions of the oil vapor, partially vaporizing one of the condensed fractions, separating the vaporized and unvaporized portions of said fraction, heating to cracking

temperature an auxiliary liquid inert with respect to said oil, cracking the vaporized portion by passing it in contact with said auxiliary liquid and introducing oil vapor obtained by the cracking into said zones of progressively lower temperature.

2,105,524

HASP SEAL

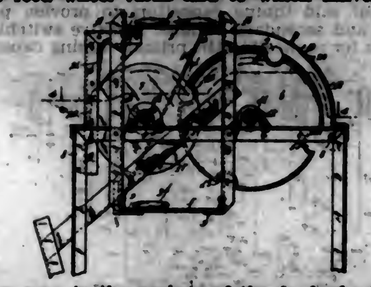
Emil Dicke, Richmond Hill, N. Y., assignor to American Casting & Manufacturing Corporation, Brooklyn, N. Y., a corporation of New York

Application May 7, 1937, Serial No. 141,261

2 Claims. (Cl. 292—315)

1. A seal for extension through a staple and exteriorly of a slotted hasp closed over said staple comprising, a body having arms extending in a common plane but in opposite directions from an intermediate portion thereof, one of said arms having an outwardly extending widened section in the plane thereof to prevent passage of said arm through the staple eye, the other of said arms being of an initial width adapted to pass through the staple eye, said latter arm having intermediate its ends a deformable portion adapted to be pressed to provide a widened stop portion to prevent retraction thereof through the staple eye, and said first mentioned arm having a guard flange extending along its inner margin and projecting angularly from the plane of said arm.

2,105,525



CORN EAR TRIMMER

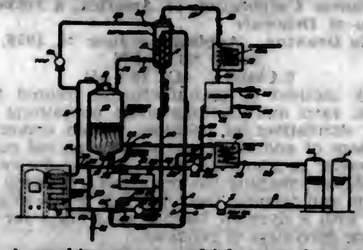
Frank W. Douthitt, Ortonville, Minn.

Application October 1, 1936, Serial No. 103,503

4 Claims. (Cl. 146—94)

1. In a machine of the kind described, an endless conveyor having upper and lower runs, the former for carrying untrimmed corn ears and the latter for carrying trimmed corn ears, a feed wheel having open circumferentially spaced transverse corn ear pockets and being mounted to turn transversely of the conveyor, with the downwardly moving surface thereof extending between the runs of the conveyor, whereby corn ears manually taken from the upper run of the conveyor and deposited in the pockets of the feed wheel, will drop by gravity from the pockets during turning of the feed wheel and be deposited on the lower run of the conveyor, and a pair of axially spaced trimming knives between which the feed wheel turns and to which knives the

corn ears, in the pockets of the feed wheel, are successively delivered to trim the ends thereof, said trimming knives being arranged to trim the corn ears while being moved by the feed wheel between the runs of the conveyor.



2,105,526

PROCESS OF HYDROCARBON OIL CONVERSION

Carbon P. Dubbs, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Original application March 23, 1925, Serial No. 17,516. Divided and this application December 3, 1932, Serial No. 645,522. Renewed September 17, 1936

5 Claims. (Cl. 196—48)

1. A cracking process which comprises passing hydrocarbon oil in a restricted stream through a heating zone and heating the same therein to cracking temperature under pressure, discharging the hot oil stream into an enlarged reaction zone maintained under cracking conditions of temperature and pressure, removing vapors from the reaction zone and dephlegmating the same to condense insufficiently cracked fractions thereof, returning resultant reflux condensate to the heating zone, combining a gasoline-containing portion of the dephlegmated vapors with the hot oil stream discharging from the heating zone to the reaction zone, finally condensing the remaining portion of the dephlegmated vapors and introducing a portion of the resultant distillate into the reaction zone at a point remote from the point of discharge of the hot oil stream thereinto.

2,105,527

RADIO PROGRAM ANNOUNCER

Harry O. N. Evans, Jr., Pittsburgh, Pa.

Application March 5, 1936, Serial No. 67,968

1 Claim. (Cl. 40—32)

A device of the character described comprising a casing having a lensed window at its front,

a driving unit, supporting means interiorly of said casing at one said thereof, a driven gear associated with said supporting means and operated by the power unit, a driving shaft journaled interiorly of the casing and shiftable axially, a drum fixed to said shaft and having a gear meshing with the first-mentioned gear and disengageable on axial shifting of the shaft in one direction, spring means active upon the shaft for normally holding the gears intermeshed with each other, and a strip removably clipped about said drum and having broadcasting indicia visible through the lensed window.

2,105,528

DISINTEGRATING BULLET

George A. Foley, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland

Application April 2, 1932, Serial No. 603,962

13 Claims. (Cl. 102—36)

1. A disintegrating bullet comprising a mixture of particles of lead and a harder metal, the interior of which comprises particles of the harder metal interspaced in a core of lead and the surface of which comprises a more densely compressed, continuous mixture of said metal particles capable of being worked.

2,105,529

SPEED CONTROL SYSTEM

Erwin Geisler, Berlin-Siemensstadt, Germany, assignor to Kinematic G. m. b. H., Berlin, Germany, a corporation of Germany

Application August 6, 1934, Serial No. 739,929

In Germany September 7, 1934

3 Claims. (Cl. 192—127)

1. The combination of a driven shaft, a pair of members rotatable with and slidable along said shaft, a brake including a brake shoe arranged to cooperate with one of said members, a roller interposed between said members and connected to said brake for controlling the pressure of said brake on said member, and means connecting said roller and said brake.

2,105,530

MOVING PICTURE FILM REEL

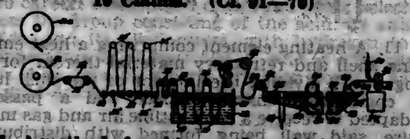
Jacob M. Goldberg, Denver, Colo.

Application December 4, 1936, Serial No. 114,171

2 Claims. (Cl. 242—72)

1. A moving picture film reel comprising two substantially identical circular side members, each having a central circular area, offset from the plane thereof a distance slightly less than one-half the width of a film, a metal plate positioned between the adjacent surfaces of the offset areas, the plate having a central opening surrounded, on one side of the plate, by a flange, means for interconnecting the sides and the plate to form

a unitary assembly, a tubular, elongated hub extending through the opening in the plate, with its outer surface in engagement with the inner surface of the flange, means holding the plate and hub from relative movement, and means connected with the side members embracing the ends of the hub for effecting a bracing action between the hub and the reel.



2,105,531

METHOD OF MAKING BITUMINIZED WEB MATERIALS

Harold W. Greider, Wyoming, and George Arthur Fasold, Cincinnati, Ohio, assignors to The Philip Carey Manufacturing Company, a corporation of Ohio

Application July 20, 1932, Serial No. 623,286

10 Claims. (Cl. 91—70)

1. A method of making roofing which comprises immersing a web of material impregnated with a saturant in a bath of melted coating material, expelling air from said felt by means of pressure applied by progressively squeezing said web while said web is submerged in melted coating material, thereby producing a foam of bubbles in said melted coating material, releasing the pressure on the said web while said web is submerged in said bath of coating material, and maintaining an inflow and outflow of melted coating material to and from said bath so that said foam of bubbles is withdrawn from said bath without being contacted in substantial amount with said web after release of pressure on said web.

2,105,532

SELF-PROPELLED POTATO DIGGER

Joseph C. Halcomek, Malin, Oreg.

Application December 23, 1936, Serial No. 117,288

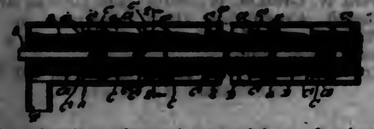
3 Claims. (Cl. 56—51)

1. In a potato digger, a main frame, wheels mounted on the main frame, a motor, gearing including a transmission between the wheels and the motor, a conveyor frame pivoted within the main frame, a digging blade extending from the forward end of the conveyor frame, an endless conveyor operating longitudinally of the conveyor frame, manually operable means for moving the conveyor frame on its pivotal support, and driving means extending longitudinally of the main

frame and connected at one end to and operated by the motor, with the opposite end of the driving means driving the conveyor, said last named driving means including a transmission and universal connections to provide for controlling the speed of the conveyor independently of the speed of the flapper as a whole and for permitting pivotal adjustment of the conveyor frame without interfering with the driving connection for the conveyor.

2. A construction as defined in claim 1, wherein the main frame is upwardly arched in vertical alignment with the blade to avoid choking the conveyor at its entrant end.

2,105,533



GAS BURNING APPARATUS

Fred. Hess, Philadelphia, Pa., assignor to The Selas Company, Philadelphia, Pa., a corporation of Pennsylvania

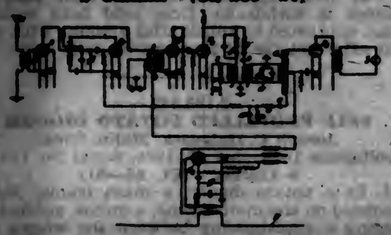
Application January 13, 1934, Serial No. 707,236

Renewed June 11, 1937

13 Claims. (Cl. 126—91)

11. A heating element comprising a heat emitting shell and refractory material therein forming a wall dividing the interior of the shell into a combustion chamber space and a passage adapted to receive a combustible air and gas mixture, said wall being formed with distributed burner channels leading to said space from said passage.

2,105,534



RADIO RECEIVING ARRANGEMENT

Helmut Johannsen, Berlin-Charlottenburg, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany, a company

Application May 24, 1935, Serial No. 22,169

In Germany August 14, 1934

2 Claims. (Cl. 250—20)

1. A radio receiving arrangement comprising a receiver of rectified signal modulated high frequency of one type, a receiver of rectified signal modulated high frequency of another type, separate detectors for the receivers, a common amplifying arrangement for the detected signals from the two receivers, frequency selecting means for separating the amplified signals into two different paths, two signal indicating devices, means for delivering to one device amplified detected signals from one receiver and to the other device amplified detected signals from the other receiver, a rectifier, means for feeding amplified detected signal energy from one receiver to said rectifier, and means for utilizing the direct current so derived by said rectifier to control the amplitude of the signal modulated high frequency in one of said receivers.

2,105,535

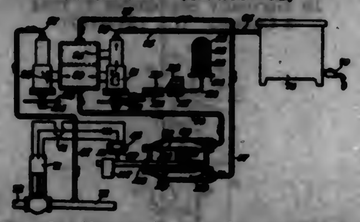
STROPPING RAZOR

Hugh J. Jones, Denver, Colo.

Application February 15, 1935, Serial No. 7,038

6 Claims. (Cl. 30—35)

4. In a razor, the combination of a head tiltably mounted to a handle; a blade to fit into the head having each end of the blade formed with stub shafts; a reversible guard for said blade having one edge smooth and the other edge notched said guard to be pivotally secured to said blade on the stub shafts at each end of the blade said blade and guard to be drawn from the head slightly to allow for stropping the blade on both sides thereof.



2,105,536

HEATING SYSTEM

Gudmund Ramstrand, Hasbrouck Hts., N. J., assignor to Warren Webster & Company, Camden, N. J., a corporation of New Jersey

Application February 17, 1933, Serial No. 656,230

17 Claims. (Cl. 236—21)

8. In a heating system, a steam main, a valve in said main for variably controlling the flow of steam therein, a restricting orifice through which a part of the steam is discharged from said main, an enclosed space for receiving the steam thus discharged, a variable restricting orifice for discharging steam from said space, thermostatic means for adjusting said variable orifice, and a device controlled by the difference in pressure at opposite sides of said variable orifice, said device acting to regulate said valve and thereby the flow of fluid in said main.

10. In a steam heating system, means for variably supplying steam to the system, a restricting orifice through which at least a part of said steam is discharged, an enclosed space for receiving steam thus discharged, a variable restricting orifice for discharging steam from said space, and a device controlled by the pressure drop across said variable orifice, said device acting to regulate said means for supplying steam to the system whereby steam is supplied at a rate to maintain said pressure drop at substantially a constant value.

2,105,537

SIGNALING METHOD AND ARRANGEMENT THEREFOR

Ernst Krasnay, Berlin-Tempelhof, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany, a company

Application April 16, 1935, Serial No. 17,042

In Germany April 16, 1934

6 Claims. (Cl. 250—11)

1. An arrangement for separating the first impulse in the case of double signals or the like, comprising a receiver, a condenser in the output thereof, a battery, means for charging the condenser from said battery, means for causing the condenser to be discharged by the first impulse received by said receiver, and means effective upon discharge of the condenser for recharging the condenser slowly with regard to the rate of discharge thereof, thereby to block the receiver against reception during such recharging of the condenser.

2,105,538

REDUCTION OF NOISE

Vernon D. Landon, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application April 29, 1933, Serial No. 668,969

9 Claims. (Cl. 179—90)

1. The noise reduction method which includes accentuating the high frequency components of the impulses to be transmitted, decreasing the level of said components in response to noise impulses exceeding a predetermined amplitude, and restoring a desired balance between said components.

2,105,539

TOBACCO PIPE

Edward H. Lange, Baltimore, Md.

Application November 26, 1935, Serial No. 111,939

11 Claims. (Cl. 131—18)

1. In a tobacco-pipe having a tobacco-bowl member and a smoke-transmission conduit opening into said member, a hole through the bottom of said member, a liquid-absorbing material in said hole in direct contact with the tobacco and extending across said conduit, provided with a multiplicity of predetermined indirect passages interconnecting the tobacco-bowl of said member and said conduit, said passages being independent of inherent openings in said liquid-absorbing material; a pivoted member pivotally attached to said tobacco-bowl member for normally sealing said hole, said pivoted member

having a plane surface upon which the pipe can be rested in an upright position and providing a permanently attached means for readily unsealing said hole, a gasket between said pivoted member and the tobacco-bowl member, and means for securely fastening said pivoted member in its normal position.

2,105,540

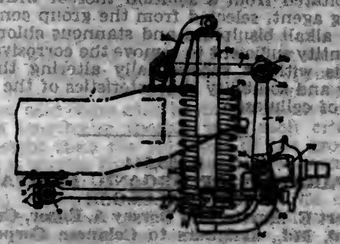
CATALYTIC HYDROGENATION PROCESS FOR THE PRODUCTION OF ALDEHYDES

Wilbur A. Lazier, Marshallton, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 9, 1935, Serial No. 961

57 Claims. (Cl. 260—128)

1. A process of producing aldehydes by the catalytic hydrogenation of a carboxyl group to an aldehyde group, which comprises heating the vapor of a compound containing the radical of an aliphatic monocarboxylic acid having at least two carbon atoms, said compound being selected from the group consisting of the acid, its anhydride, and its alkyl esters, with hydrogen to a temperature of at least 200° C. and at a pressure less than 10 atmospheres, while in contact with a mild-acting hydrogenation catalyst.

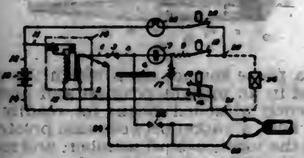


2,105,541

WHEEL SUSPENSION FOR MOTOR VEHICLES

John Wyllie Leighton, Fort Huron, Mich.

Application July 2, 1934, Serial No. 732,457



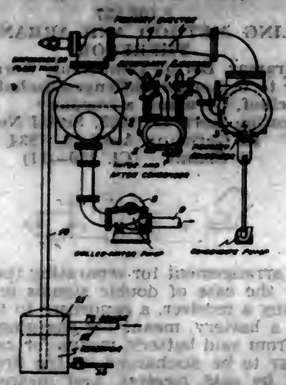
25 Claims. (Cl. 280—96.2)

1. An independent wheel suspension for motor vehicles comprising an upright floating member adapted to mount a king pin and wheel axle, means flexibly connecting said upright floating member at one end with the vehicle frame, a single bowed arm forming an inherently yieldable or flexible connection between the other end of said upright floating member and the vehicle frame, and an eccentric bushing threadedly interposed between the said upright member and said single bowed arm and threadedly adjust-

able to simultaneously tension said bowed arm and vary the angular position of said upright member.

2,105,542
TESTING APPARATUS
Erik Einar Mårtensson, Stockholm, Sweden
Application January 10, 1935, Serial No. 1,662
In Sweden September 15, 1934
4 Claims. (Cl. 175—183)

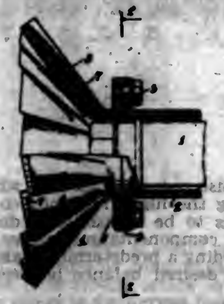
2. An arrangement for testing electrical insulation, comprising in combination a battery, an interrupter, an induction coil having a primary and secondary winding, said primary fed by said battery through said interrupter, a condenser, a spark gap having stationary electrodes, said condenser and said spark gap connected in series with said secondary, a leakage circuit, a test circuit comprising means for connecting the object to be tested, a gas filled electrical discharge vessel, means for connecting said discharge vessel either with said leakage circuit or with said test circuit, thereby connecting either of said circuits in parallel with said condenser, said vessel acting as voltage limiting element when included in said circuit and acting as current indicating means when included in said test circuit.



2,105,543
NONCORROSIVE ORGANIC DERIVATIVES OF CELLULOSE
Herbert E. Martin and Dorsey A. Exner, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 30, 1936, Serial No. 103,294
9 Claims. (Cl. 260—102)

1. Method of reducing the corrosive properties of a derivative of cellulose, which comprises treating the derivative of cellulose in the form precipitated from a solution thereof with a reducing agent, selected from the group consisting of an alkali bisulphite and stannous chloride, in a quantity sufficient to remove the corrosive compounds without substantially altering the viscosity and solubility characteristics of the derivative of cellulose.

2,105,544
PREPARATION OF ORGANIC DERIVATIVES OF CELLULOSE
Herbert E. Martin and Dorsey A. Exner, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 30, 1936, Serial No. 103,296
9 Claims. (Cl. 260—102)



1. Method of reducing the corrosive properties of a derivative of cellulose, which comprises treating the derivative of cellulose in a solid, finely divided condition with a reducing agent, selected from the group consisting of sodium sulphoxylate formaldehyde and zinc sulphoxylate formaldehyde, in a quantity sufficient to remove the corrosive compounds.

2,105,545
SAFETY APPLIANCE FOR STEAM JET REFRIGERATION APPARATUS
Hartley B. Hallett, Jr., Montclair, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a corporation of Virginia
Application June 19, 1934, Serial No. 731,289
6 Claims. (Cl. 62—152)

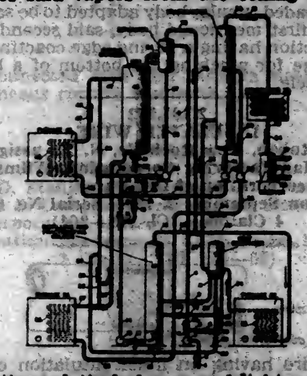
1. In a steam jet refrigeration system, the combination with a flash tank having a normal water level therein, of a safety bleed-off pipe connected to said tank above the normal water level in the tank, a reservoir, said pipe opening into said reservoir, said reservoir having a quantity of liquid therein to build up a back pressure in said pipe.

2,105,546
FLAME CONE OR DIFFUSER
James McDonald, Weehawken, N. J., assignor to Todd Combustion Equipment, Inc., New York, N. Y., a corporation of New York
Application January 21, 1937, Serial No. 121,469
1 Claim. (Cl. 158—1.5)

An air directing cone for liquid fuel burners whose wall comprises a succession of circumferentially equally angled vanes, the lateral boundaries thereof being defined by lines tangential to a cylinder coaxial with said cone, and webs connecting said vanes and arranged substantially at right angles to the surfaces of said vanes, each web having a slot which extends therethrough at an acute angle to the inner surface of an adjacent vane whereby air flowing through each slot is directed in scouring relation onto and across the inner surface of said adjacent vane.

2,105,547
CONTAINER-TOP
Rose H. Morgenthaler, Wilmette, Ill.
Application October 17, 1935, Serial No. 45,435
5 Claims. (Cl. 220—17)

1. An article of the class described which comprises in combination, a container having side walls, a bottom and a three-ply top, the plies comprising said top being provided with lines of perforation defining a tab swingable from the plane of the top, the plies comprising said top being further provided with lines of perforation defining tongues adjacent an end of said tab, the upper ply of said tab being offset to overhang a lower ply and to abut thereon, and a lower ply of said tongue being offset to project from beneath an upper ply thereof and being adapted to be withdrawn from under and to overlap the overhanging ply of said tab to hold it in pressed relation against the abutment formed by the lower plies thereof, and to maintain said tab in reclosed position upon said top.



2,105,548
RAKE
Adolf Mentan, Montclair, and Carl E. Andersen, East Orange, N. J., assignors to Eastern Tool & Mfg. Co., Bloomfield, N. J.
Application November 21, 1936, Serial No. 112,004
2 Claims. (Cl. 55—114)

1. A rake comprising a yoke having a handle receiving part on the end and having two divergent arms with extensions of substantially flat form, the ends of which form clips, a tine holding bracket comprising a forward brace and a rear brace, the forward brace having its ends bent back beyond the rear brace, the rear brace having its ends embracing the said bent back ends and the extensions, the clips embracing the said bent back ends near the forward brace.

2,105,549
CONVERSION OF HYDROCARBON OILS
Jacques C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application December 30, 1936, Serial No. 758,442
7 Claims. (Cl. 196—52)

1. A process which comprises topping crude petroleum, thereby forming topped crude and a distillate containing natural gasoline fractions of the crude, distilling the topped crude to coke in a coking zone, combining vapors from the coking zone with said distillate, heating the resultant mixture in a heating coil sufficiently to enhance the anti-knock value of said gasoline fractions, fractionating resultant cracked vapors independently of said vapors from the coking zone and

separating relatively heavy and light reflux condensates therefrom, supplying such heavier reflux condensate to the coking zone for reduction to coke together with the topped crude, subjecting the lighter reflux condensate to independently controlled cracking conditions of temperature and pressure in a second heating coil, and introducing resultant heated products into the coking zone to assist the coking of the topped crude and heavier reflux condensate therein.

2,105,550
DISPLAY CABINET
Thomas J. Pilled and Ferdinand C. H. Miller, Swanton, Ohio, assignors to The Pilled Cabinet Company, Swanton, Ohio, a corporation of Ohio
Application April 3, 1937, Serial No. 135,754
6 Claims. (Cl. 217—63)

1. A cabinet having cover guiding grooves in opposed walls, and a cover of resilient sheet material of cellulosic nature, having its opposed side edges mounted for sliding movements in said grooves, said edges each having successive crimps spaced lengthwise thereof with each crimp of less height than the thickness of the groove in which it travels, the sheet material between each succeeding pair of crimps being bowed to have central yielding bearing contact at its convex side with one wall of the groove and to cause the crimp portions at the ends of the bow to have yielding bearing contact with the opposite wall of the groove, the bowed portions being free to expand lengthwise of the cover when compressed.

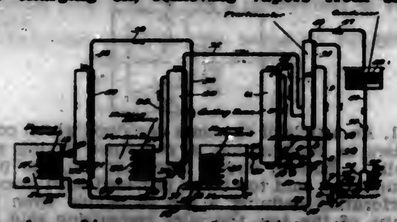
2,105,551
FUMIGATING DEVICE
William C. Purdy, Tallulah, La.
Application January 14, 1936, Serial No. 59,545
2 Claims. (Cl. 299—34)

1. A fumigating structure for a container, comprising a pair of interlocking sections, and means

for holding a fumigating material in place, one of said sections presenting a bottom member having an aperture, a radiating flange and a threaded tubular body, the other of said members presenting a threaded tubular body adapted to be screwed onto the first mentioned body, said second mentioned section having a flaring edge coacting with said flange for pinching the bottom of a bag or other article.

2,105,552
INSULATED WIRE
Samuel Ruben, New Rochelle, N. Y., assignor to Vega Manufacturing Corporation, Wilmington, Del., a corporation of Delaware
Application September 2, 1932, Serial No. 631,654
4 Claims. (Cl. 173—264)

1. A wire having an inner insulation coating including finely divided iron oxide and having an outer coating comprising finely divided aluminum held on said insulated wire by a water insoluble binder.

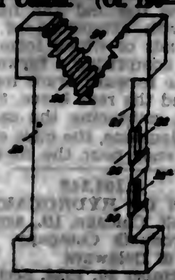


2,105,553
CHASSIS OF VEHICLES
Kurt Schröter and Hans O. Schröter, Weehmar, Gotha-Land, Germany
Application December 9, 1936, Serial No. 114,930
In Germany December 12, 1935
11 Claims. (Cl. 280—104)

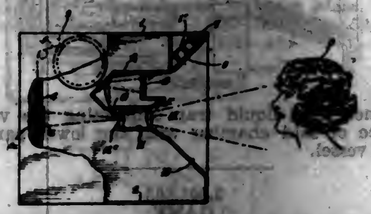
1. In a vehicle chassis, a body supporting frame comprising a central longitudinal rail, a front axle assembly and a rear axle assembly each rockably mounted on said rail, and means connecting said axle assemblies with each other and with said frame in such a way that relative rocking of said axle assemblies positively moves said frame to a position intermediate that of said axle assemblies.

2,105,554
TREATMENT OF HYDROCARBON OILS
Jean Salvator Egasy, Chicago, Ill., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 21, 1936, Serial No. 467,124
Renewed May 22, 1936
4 Claims. (Cl. 196—66)

4. A conversion process which comprises heating hydrocarbon oil to distillation temperature in a primary heating zone, separating resultant vapors from unvaporized oil and cracking the former in vapor phase in a cracking zone, independently cracking the unvaporized oil in a second cracking zone at lower temperature than said vapors and under sufficient pressure to maintain a substantial portion thereof in liquid phase, removing the vapor phase cracked vapors from the first-named cracking zone and promptly cooling the same by direct contact with fresh charging oil for the process thereby vaporizing portions of the charging oil, removing vapors from said second cracking zone and combining the same with the commingled charging oil vapors and cooled vapor phase cracked vapors, fractionating the resultant mixture to condense insufficiently cracked fractions thereof, supplying reflux condensate thus formed to the primary heating zone, and finally condensing the fractionated vapors.



2,105,555
MATRIX FOR PHOTO COMPOSING MACHINES
Samu-El Ish-Shalom and Otto I. Bloom, New York, N. Y.
Application June 30, 1936, Serial No. 88,680
7 Claims. (Cl. 95—85)

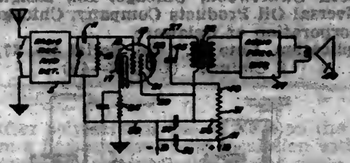


1. A matrix consisting of a metal plate bearing on its longitudinal edge a character and a supplemental character part, reproducible by direct photography as type-impressions for subsequent printing in multiple colors.

2,105,556
MATRIX FOR TYPE CASTING
Samu-El Ish-Shalom and Otto I. Bloom, New York, N. Y.
Application June 30, 1936, Serial No. 88,681
1 Claim. (Cl. 199—66)

A matrix for casting complementary type bars to be separately assembled for successive printing of a character and the character shade portion, said matrix being formed with a complete intaglio character in regular position and a complementary intaglio shade casting portion in variant position.

2,105,557
VISUALIZING CAMERA
John A. Sleek, Jamaica, N. Y.
Application March 19, 1935, Serial No. 11,796
4 Claims. (Cl. 88—1)



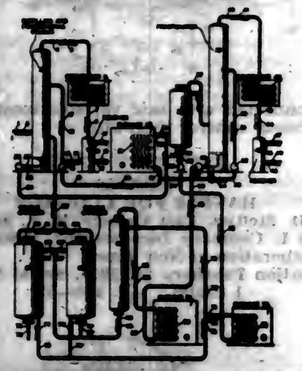
1. A camera visualizer comprising a casing having front and back walls and adapted to receive rays of an image through its front wall, a visualizing reception member supported by the casing at the front area thereof and in position to be viewed by a person facing said front wall, supporting means having a reception area for a sensitized sheet, a lens adapted to receive the image rays and to transmit the same rearwardly of the said front wall, a reflector disposed angularly of the lens and adapted to receive part of the rays of the image projected thereby and also adapted to pass the remaining rays to said sensitized sheet reception area of the supporting means, and an opposed reflector in angular relationship reverse to that of the first-named reflector and in operative register with the rear face of the visualizing reception member.

4. A camera visualizer comprising a casing, a lens carried by the front wall of the casing and adapted to receive rays of an image and to project the same inwardly, a visualizing reception member supported by the casing at the front wall thereof, a ray reflecting system within the casing adapted to receive image rays from said lens and to project them forwardly upon said visualizing, a second casing fixed to the first named casing disposed forwardly of said visualizing reception member, two mirrors within said second casing and at opposite sides of the visualizing reception member, and an adjustable reflector within said second casing forwardly of the visualizing reception member and mounted for movement into either one of two positions in optical register with either one of said mirrors and thereby being adapted to reflect an image from said member to either one of the said mirrors within the casing.

2,105,558
NOISE CONTROL SYSTEM
Rogers M. Smith, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 26, 1935, Serial No. 29,006
10 Claims. (Cl. 179—171)

4. In an audio frequency amplifier, the combination with an electric discharge amplifier device, of means providing a signal input circuit therefor, and means connected with the output circuit for varying the anode potential thereby to cause the device to operate on the knee of its power-output plate-voltage characteristic curve, and means for variably loading the output circuit connected with said variable means for simultaneous control therewith.

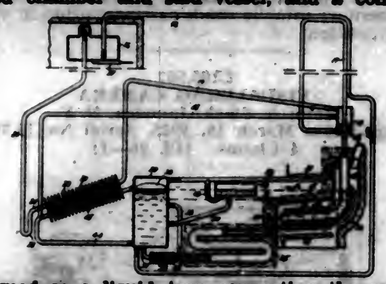
2,105,559
HANDLE FOR LUGGAGE
Fred D. Stellje, East Orange, N. J., assignor to T. & L. Company Incorporated, Newark, N. J., a corporation of New Jersey
Application February 24, 1936, Serial No. 65,297
1 Claim. (Cl. 190—58)



A handbag handle comprising in combination, two pairs of flexible straps, each pair secured in spaced relation on opposite sides of the bag, loops held in the proximate ends of each strap, a pair of rigid plates one end of each hingedly engaging the loops on one side of the bag, hooks on the opposed ends of said plates adapted to engage the loops on the opposite side of the bag, resilient means to turn the last named loops outwardly upon release from said hooks, and a handle having its ends pivoted to said plate.

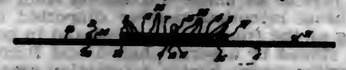
2,105,560
BRAKE MECHANISM
Edward Stift, St. Louis, Mo.
Application December 10, 1935, Serial No. 54,513
3 Claims. (Cl. 188—79.5)

1. In brake mechanism, a cam ring positioned and adapted when rotated to expand brake shoes, and means for automatically fixing a normal position of said ring including undercut teeth on the ring and a spring pressed pawl for engaging the teeth.



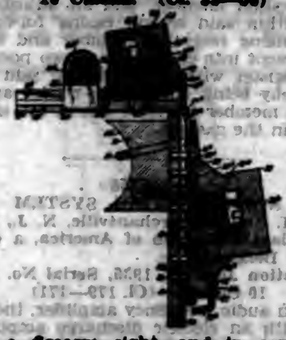
2,105,561
CONVERSION OF HYDROCARBON OILS
Kenneth Swartwood, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 29, 1936, Serial No. 87,943
6 Claims. (Cl. 196—49)

1. A process for the treatment of hydrocarbon oils which comprises, subjecting hydrocarbon oil charging stock for the process to fractional distillation whereby it is separated into selected relatively low boiling and high boiling fractions, subjecting selected low boiling fractions of the charging stock to conditions of pyrolytic conversion in a heating coil, discharging the resulting products from the heating coil into a separating chamber and commingling therewith selected high boiling fractions of the charging stock, subjecting vaporous products from the separating chamber to fractionation whereby their insufficiently converted components are condensed as reflux condensate, subjecting fractionated vapors of the desired end boiling point to condensation, collecting the resulting distillate, subjecting said reflux condensate to further conversion at cracking temperature and superatmospheric pressure in a separate heating coil and communicating reaction chamber, withdrawing non-vaporous residual liquid from said separating chamber, subjecting the same to additional heating under non-coking conditions in another separate heating coil, introducing the heated residual oil into said reaction chamber, withdrawing vaporous and liquid conversion products from the reaction chamber, introducing the same into a coking zone wherein their residual components are reduced to substantially dry coke, supplying vaporous products from the coking zone to the first mentioned fractionating step for fractionation together with the charging stock, and recovering from said first mentioned fractionating step any motor fuel fractions of the commingled charging stock and vaporous products from the coking zone which are of satisfactory antiknock value.



2,105,562
REFRIGERATION
Albert R. Thomas, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application May 23, 1936, Serial No. 81,379
9 Claims. (Cl. 62—118)

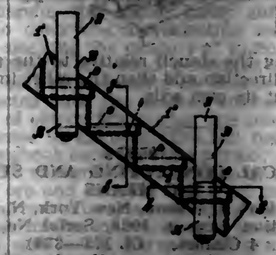
1. In an absorption refrigerating apparatus having alternate heating and refrigerating periods, a generator, a liquid storage chamber, a vapor conduit connecting the upper parts of said generator and said chamber, a vessel closed at the top, a conduit connecting the lower parts of said chamber and said vessel, and a conduit



formed as a liquid trap connecting the vapor space of said chamber with the lower part of said vessel.

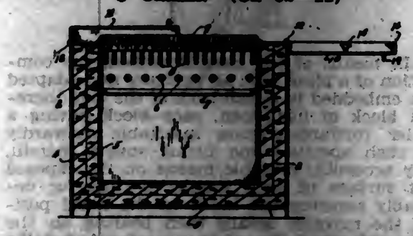
2,105,563
GAME
De Witt V. B. Thomas, East Orange, N. J.
Application March 19, 1935, Serial No. 11,752
3 Claims. (Cl. 272—141)

1. A "play" indicating device for games, comprising a board, a pivot post upstandingly mounted on said board, a spinner bar of magnetized metal having a hollow bearing hub intermediate its ends to rotatively engage over said pivot post for balancing said spinner bar upon the latter for revolution about the axis thereof, a metallic base ring affixed to said board concentric to said pivot post, said base ring having an annular row of fixed upstanding metallic projections spaced apart by intervening air gaps in concentric relation to the axis of said pivot post and adjacent to the path of revolving movement of said spinner bar extremities.



2,105,564
GUN SIGHT
Walter Vaver, Cicero, Ill., assignor of one-half to Benjamin A. Telnikoff, Riverside, Ill.; Harriet Vaver administratrix of Walter Vaver, deceased
Application June 21, 1933, Serial No. 676,863
10 Claims. (Cl. 33—46)

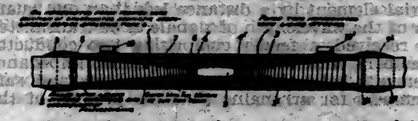
1. In a firearm sight, and in combination, sighting means, a frame, a carrier for said sighting means slidably mounted on said frame, a cam for raising said carrier and said sighting



means, a rotatable dial for operating said cam, resilient means exerting pressure against said carrier for lowering said carrier and said sighting means upon the actuation of said cam and dial to permit such lowering in degree proportionately to the degree of rotation of said cam and dial, and separate means for adjusting said sighting means horizontally as to windage independently of said cam-controlled vertical adjusting means.

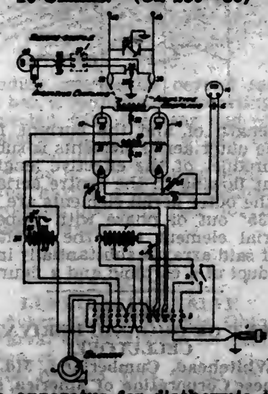
2,105,565
METAL STAIR CONSTRUCTION
Gustaf S. von Schmidt, Newton, Mass.
Application December 7, 1935, Serial No. 53,379
7 Claims. (Cl. 189—43)

1. Stair construction comprising a pair of inclined stringer members having their ends substantially vertical, a lower section of a newel post secured to the upper end of one of said stringers and terminating below its upper edge, an upper section of a newel post secured to the lower end of the other stringer extending above said stringer and terminating above its lower edge, and means holding said sections in axial alinement.



2,105,566
CUTTING BLOCK
Robert Waumsh, Salem, Oreg., assignor to Beauford B. Smith, Silverton, Oreg.
Application October 20, 1934, Serial No. 750,505
3 Claims. (Cl. 83—11)

1. In a device of the class described, the combination of a chest having side walls and a bottom wall, insulating material covering said side walls and bottom wall, a grid spanning the open top of the chest and spaced apart from the bottom wall and defining a chamber within the chest, refrigerating means disposed within the chamber, and a heat conducting cutting surface disposed above the grid.

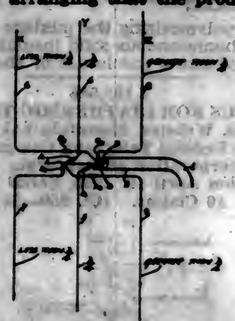


2,105,567
JOINT FOR HIGH TENSION ELECTRIC CABLES
John Krauss Webb, Aldwych, London, England, assignor to International Standard Electric Corporation, New York, N. Y.
Application September 28, 1934, Serial No. 745,931
In Great Britain December 4, 1933
7 Claims. (Cl. 173—268)

1. A method of jointing oil impregnated paper insulated high tension cables which comprises insulating the joint with a mixture of styrene and chlorinated aromatic hydrocarbon and

thereafter polymerizing the mixture on the joint to form a homogeneous solid insulation with the impregnated paper insulation of the cable.

2,105,568
APPARATUS FOR DIATHERMIC TREATMENT
Fullerton D. Webster, Mountain Lakes, N. J., assignor to Federal Telegraph Company, Newark, N. J., a corporation of California
Application April 13, 1935, Serial No. 16,183
10 Claims. (Cl. 250—36)



1. In an apparatus for diathermic treatment, two vacuum tube oscillators each having a filament, a grid and a plate electrode, a filament and a plate current transformer, a source of alternating current connected with the primary windings of said transformers, connections joining the secondary winding of the filament transformer and the filaments of said tubes to form a closed circuit, one point of said circuit being grounded, a secondary winding for the plate transformer grounded at a point intermediate its ends, a connection between the two grids including an induction coil connected at its midpoint to one end of the plate transformer secondary, a condenser bridged across said one end of the plate transformer secondary and the grounded point of the secondary winding, a connection between the two plates including an inductance coil connected at its midpoint to the other end of the plate transformer secondary, an output circuit including a coil coupled with the last mentioned induction coil, an inductance in said output circuit, a variable capacitance bridged across said coil and inductance, and a measuring circuit bridged across said inductance.

2,105,569
DIRECTIONAL WIRELESS AERIAL SYSTEM
Eric Lawrence Casling White, Hillingdon, and William Spencer Percival, Hanwell, England, assignors to Electric & Musical Industries Limited, Hayes, England
Application April 6, 1936, Serial No. 72,980
In Great Britain April 8, 1935
7 Claims. (Cl. 250—33)

1. An aerial array comprising a centre aerial element and two outer aerial elements arranged

side by side and substantially co-planar and parallel with one another, the two outer aerial elements being spaced apart from the centre aerial element by a distance less than one quarter of the wavelength of signals to be transmitted or received, a feeder comprising two conductor members, and connections including impedance elements between said aerial elements and said members for arranging that the product of the

effective length of and the current flowing in each of the outer aerial elements is substantially half the product of the effective length of and the current flowing in the centre aerial element and that the outer aerial elements are so phased at least 135° out of phase with respect to the centre aerial element that the resultant polar diagram of said array is substantially in the form of the product of a cardioid and a figure of eight.

2,105,570

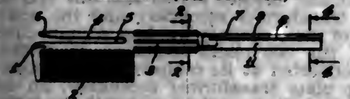
TREATMENT OF ORGANIC DERIVATIVES OF CELLULOSE

William Whitehead, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application September 30, 1936, Serial No. 103,207

10 Claims. (Cl. 260—102)

1. Method of reducing the corrosive properties of a derivative of cellulose, which comprises treating a stabilized derivative of cellulose with oxalic acid for a period of at least one hour.



2,105,571

HAIR DRESSING TOOL

Oscar C. Williams, San Diego, Calif.

Application May 12, 1936, Serial No. 79,239

7 Claims. (Cl. 132—31)

1. In a hair dressing tool, a comb member including teeth extending laterally from one side of the body, and a prong on the opposite side of the body from said teeth extending at a right angle from said laterally extending teeth and an extended handle for said body.

2,105,572

STENCILING APPARATUS

Wilbert S. Williams, Columbus, Ohio, assignor by mesne assignments, to Solar Laboratories, Beaver, Pa., a corporation of Pennsylvania

Application September 5, 1935, Serial No. 39,305

49 Claims. (Cl. 101—124)

1. Apparatus of the class described for stenciling on curved articles comprising a curved stencil of segmental form, means for supporting the stencil, means for supporting an article within the arc of curvature of the stencil, and means

for moving the stencil relative to the article in first one direction and then the other in a rotary path about its own axis.

2,105,573

ELECTRICAL CONNECTING AND SUPPORTING MEANS

Herbert J. Wilson, New York, N. Y.

Application June 4, 1935, Serial No. 24,796

4 Claims. (Cl. 173—329)

1. In means of the class described, the combination of a plate with an aperture and adapted to be embedded in a wall back of the face thereof, a block of insulation, such block having a smaller forward portion insertable outwardly into such aperture and fitting snugly therein, freely accessible movable means on the exposed front surface of such smaller portion for detachably securing the block in the fitted position, the movable means then bearing on the front surface of the plate, a pair of metallic sockets embedded in the block and connected with electric current supply conductors, the relative proportions of said block and aperture also being such that the block may be introduced from the front of the plate inwardly through the aperture to a position behind the plate and may then be adjusted, to insert the smaller portion outwardly into the aperture as before specified, a second block of insulation provided with a pair of projecting terminal elements rigid therewith for engagement in such sockets, and an electrically controlled device having a base on which the second block is located and fixedly mounted, with the projecting terminals projecting rearwardly therefrom, whereby the base of the device may be mounted against the face of such wall when the projecting terminals are pushed into the sockets for supporting the device from the block embodying the sockets.

2,105,574

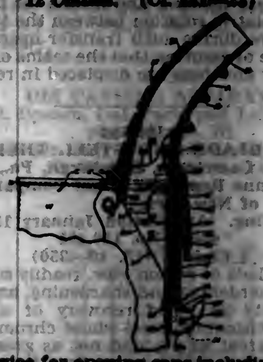
[illegible]

Patent [illegible], [illegible], Wash.

No Drawing. Application August 12, 1936, Serial No. [illegible]

9 Claims. (Cl. [illegible])

2. A process of smelting sulfide ore which comprises periodically introducing a charge consisting of small amounts of a mixture of sulfide ore and siliceous flux, the slag being sufficient in amount to slag the iron oxide formed in converting the sulfide ore until enough has been introduced for one blow for matte and slag production; the charge being introduced upon a nucleus of molten matte in a container provided with means for injecting air into the charge contained therein, the matte being sufficient in amount to cover the air injecting means; periodically smelting the mixture of sulfide ore and siliceous flux by the heat generated from the oxidation of iron and sulfur by means of an air blast injected into the matte, without further additions of ore or flux during the smelting period in order to maintain the full heat of the blow throughout each smelting period; repeating the periodic charging and smelting of a mixture of sulfide ore and siliceous flux until the desired quantity of matte is obtained; separating a portion of this matte, maintaining it in its molten condition; and using the same as a nucleus in repeating the above sequence of operations.



2,105,575

CAN OPENER AND BEADING DEVICE

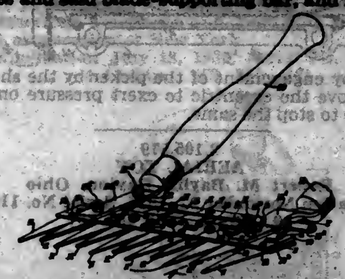
Otto N. Wiswell, Los Angeles, Calif., assignor to Swingaway Measure Company, Los Angeles, Calif., a corporation of California

Application July 14, 1934, Serial No. 735,260

12 Claims. (Cl. 221—33)

1. A device for opening cans including a cutter, a guide in connection with the cutter to engage the side wall of a can and guide the cutter to make an opening in an end wall of the can, and a pivoted cutter in connection with the guide for cutting an opening in said side wall, said pivoted cutter having a part cooperating with the said side wall to hold the pivoted cutter inoperative during inward movement of the first mentioned cutter and to render the pivoted cutter operative as the first mentioned cutter is removed from the can.

2,105,576



HINGE AND THE[illegible]

Joseph Wilck, Pasadena, Calif., assignor to Wilck Manufacturing Co., Chicago, Ill., a corporation of Illinois

Application April 20, 1936, Serial No. 77,151

9 Claims. (Cl. 16—211)

1. In a device of the kind described, and in combination, a blade-supporting bar, a plurality of relatively stationary spaced cutting blades fixed to said blade-supporting bar in a plane spaced below said blade-supporting bar, an oscillatable cutting blade pivotally mounted below said blade-supporting bar between each pair of said stationary blades, said oscillatable blades being disposed in a plane between said stationary blades and said blade-supporting bar, and having

ends extending rearwardly beyond said blade-supporting bar, a reciprocable operating bar pivotally connected with the rear end of each of said oscillatable blades, and a pair of handles connected to the upper face of said blade-supporting bar, one of said handles being pivotally mounted and having a pivotal connection with said reciprocable operating bar for oscillating said oscillatable blades.

2,105,577

LUBRICATING VALVE

George H. Acker, Shaker Heights, Ohio, assignor to The Farval Corporation, Cleveland, Ohio, a corporation of Ohio

Application June 25, 1934, Serial No. 732,893

10 Claims. (Cl. 184—7)

1. In a lubricating valve, the combination of a pair of ports adapted to receive and emit lubricant from a supply line in alternately opposite directions of flow, a measuring chamber connected to said ports, a piston in said chamber, a valve chamber connected to said ports and said measuring chamber, a discharge port connected to said valve chamber, and valve means in said valve chamber adapted to initially direct lubricant directly between said pair of ports and to finally direct lubricant from one of said ports to said measuring chamber and from the latter to said discharge port.

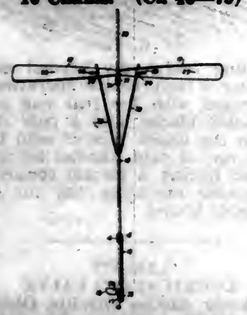
2,105,578

SHUTTLE BOX FOR LOOMS

William H. Eahns, Greenville, S. C.

Application September 26, 1935, Serial No. 42,914

4 Claims. (Cl. 139—196)



1. In a loom having a lay and a shuttle box and a picker to receive the impact of the incoming shuttle and also to propel the shuttle out of the shuttle box, said box having front and rear sidewalls, one of the side walls having a recess therein, an eccentric member mounted for rotation in said recess, a flexible member secured to

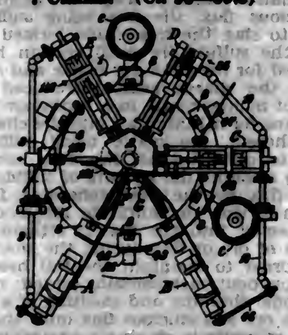
said eccentric and extending along the inner surface of one of the side walls and having one of its ends extending across the path of the picker

whereby engagement of the picker by the shuttle will move the eccentric to exert pressure on the shuttle to stop the same.

2,105,579
AERIAL TOY
Robert M. Baylis, Dayton, Ohio
Application November 27, 1936, Serial No. 112,900
10 Claims. (Cl. 46—75)

1. In an aerial toy, a body, and a plurality of blades secured to said body and foldable relatively thereto, said body having an aperture with an approximately straight edge, said edge being adapted to engage a fold in said blades.

2,105,580
HANDLE
Michael Bochik, St. Paul, Minn.
Application June 7, 1935, Serial No. 25,425
5 Claims. (Cl. 5—345)



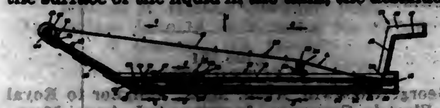
1. A flexible handle including, a flexible resilient reinforcing bar means, means for attaching said bar to the inside of a flexible wall, and a flexible handle cord means extending along the outside of the wall and having its ends passed through the walls and secured to the ends of said flexible bar, the resiliency of said bar holding said flexible handle means normally taut.

2,105,581
MANUFACTURE OF NITROMETHANE
Harry Bender, Antioch, Calif., assignor to Great Western Electro-Chemical Company, a corporation of California
No Drawing. Application October 23, 1935, Serial No. 46,270
12 Claims. (Cl. 260—144)

1. A process for the manufacture of nitromethane comprising reacting a methyl monohalide and a nitrite from the group consisting of alkali metal nitrite, alkaline earth metal nitrite and ammonium nitrite while maintaining a pH between 6 and 10.

2,105,582
MACHINE FOR THE MANUFACTURE OF CARTONS AND THE LIKE
William Joseph Butler, Bickley, England, assignor to Klecentainers (British & Overseas) Ltd., Bromley, England, a British company
Application December 1, 1936, Serial No. 113,717
In Great Britain June 24, 1936
7 Claims. (Cl. 93—39.3)

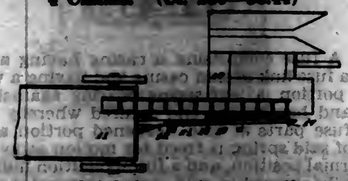
1. A machine for use in manufacturing cartons from sheet and/or strip material and which comprises a tubular member consisting of a double thickness of such material, including two separate mechanisms each adapted automatically to form tubular members from such material, means for automatically effecting the transfer of a tubular member formed by one of said mechanisms to a position at which it is adapted to be inserted into a tubular member formed by the other mechanism so as to produce a composite tubular member and means for imparting a partial relative rotation between the two tubular members during such transfer operation for the purpose of assuring that the seams or joins in the tubular members are displaced in relation to each other.



2,105,583
RAZOR BLADE AND STEEL THEREFOR
Elbridge J. Casselman, Pittsburgh, Pa., assignor to Magazine Repeating Razor Company, a corporation of New Jersey
No Drawing. Application January 13, 1937, Serial No. 120,404
1 Claim. (Cl. 30—350)

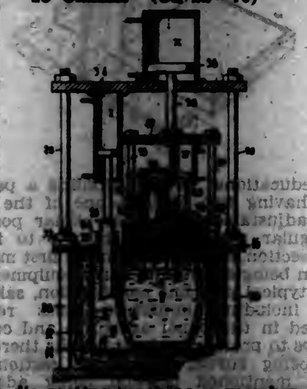
A razor blade of ribbon type, readily susceptible to rolling hardening and sharpening, and having the capacity of rapid recovery of sharpness, formed of chromium steel whose chromium content is as great as 6% and not as great as 8%, whose carbon content is not less than 1% nor greater than 2%, whose contents of manganese, silicon, sulphur, and phosphorus are such as are usual in non-alloyed steel, and whose composition is otherwise made up of iron.

2,105,584
SAND AND MUD SEPARATOR
Chris T. Christensen, Alhambra, Calif., assignee, by decree of court, to Mary Theresia Christensen
Application October 2, 1935, Serial No. 43,213
5 Claims. (Cl. 209—268)



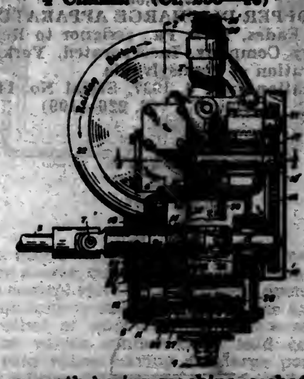
1. In a device as described, the combination of an elongated shallow tank, means to flow a liquid containing sand and mud into one end of the tank, a plurality of narrow skimming troughs spaced apart and the troughs extending longitudinally of the tank, a conduit connected to all

of the troughs, the troughs having sides adapted for the overflow of desanded mud from adjacent the surface of the liquid in the tank, the desanded



mud flowing from the troughs into the conduit, and means to discharge said settling on the bottom of the tank from the tank.

2,105,585
WAGON HITCH
Dugald Currie, Des Moines, Iowa
Application May 10, 1937, Serial No. 141,667
4 Claims. (Cl. 280—33.44)



2. A wagon hitch for use in connecting a wagon having a tongue, to an implement to be advanced, comprising a wagon tongue supporting arm having a tongue supporting member at its forward portion, means for pivoting its rear end portion to an implement so that its forward end may move laterally from position substantially parallel with the side of an implement, to position extended laterally from the implement, a draft member, means for pivotally connecting its forward end portion to an implement, and means for connecting its rear end portion to a wagon tongue having its forward end resting in said tongue supporting member.

2,105,586
DIE CASTING APPARATUS
John R. Deeson, Oak Park, and Leland E. Wemple, Chicago, Ill.
Application July 12, 1935, Serial No. 30,430
15 Claims. (Cl. 22—70)

1. In a die casting machine, a member having a space therein for receiving molten metal, a duct through which molten metal may pass to said space, means for momentarily contacting a portion of said duct with a source of molten metal and for forcing a quantity of said metal under hydrostatic pressure into said space during the momentary period of contact, a mold, a passage between said space and said mold, and means movable in said space to close said duct and to force molten metal in said space through said passage and into said mold under pressure.

2,105,587
EARTH BORING MACHINE
Eugene Darnell and Henry L. Enoch, Kansas City, and Joel N. Grubb, Chillicothe, Mo., and Albert E. Freeman, South Orange, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application July 18, 1936, Serial No. 91,434
4 Claims. (Cl. 255—46)

1. In an earth boring machine, a shaft carrying an auger, said shaft having a spiral thread on its external surface, a worm wheel engaging said spiral thread, means to impart rotation to said shaft whereby said worm wheel acts as a nut engaging the external thread of said shaft to feed the shaft longitudinally as it is rotated, means whereby power may be applied to said worm wheel when the shaft is not rotated to move said shaft longitudinally by a rack and pinion action, and a hand-wheel for rotating said worm wheel to supplement the action of the driving power applied to the worm wheel.

2,105,588
FLOATING PARTITION
Clarke F. Davis, Short Hills, N. J., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
Application April 29, 1933, Serial No. 668,490
Renewed August 3, 1937
4 Claims. (Cl. 72—46)

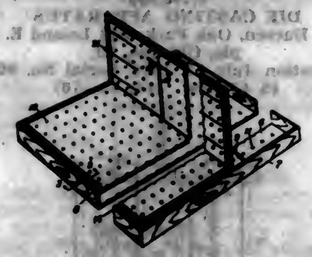
1. In combination, a floating wall extending between two side walls, a ceiling and a floor,

said wall being removably held by retaining means rigidly connected to said floor, retaining means rigidly secured to the side walls and the ceiling, the retaining means slidingly engaging the floating wall, said floating wall consisting of individual building units, some of which are of less height than the height of the floating wall and interlocked together along their vertical edges by means of tongues and grooves, the horizontal joints between adjacent units being out of register.

2,105,589
HOPPER DISCHARGE APPARATUS
John A. Reder, York, Pa., assignor to Read Machinery Company, Incorporated, York, Pa., a corporation of Pennsylvania
Application June 8, 1937, Serial No. 147,126
7 Claims. (Cl. 226—109)

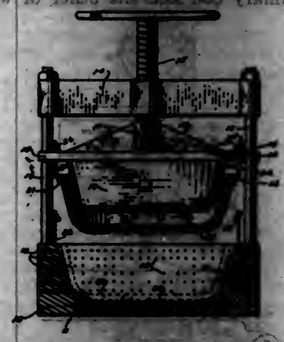
1. The combination with a hopper having a vertically slidable spout composed of a pair of spaced inner and outer walls defining material-discharge and dust-return passageways, of a discharge apparatus comprising a material-discharge conduit, a dust-collable conduit surrounding the material-discharge conduit and located in spaced relation thereto, said conduits being designed to communicate with the material-discharge and dust-return passageways of the hopper when the spout is in lowered position and means stationarily supporting said conduits in elevated position.

2,105,590
LOCK
Morris H. Histon, Fitchburg, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application March 19, 1936, Serial No. 69,656
2 Claims. (Cl. 70—57)



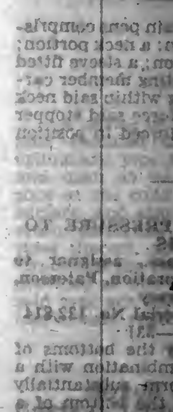
1. The combination of two bolts in axial alignment, and each having a transverse head at the inner end in axial alignment with the bolts, the bolts being movable to place the heads in position for enabling the bolts to be locked together, and a lock having means for locking said heads in contact with each other.

2,105,591
ELECTRIC FUSE
George Goodwin, Avon, Mass., assignor to Royal Electric Company, Incorporated, Avon, Mass., a corporation of Massachusetts
Application June 19, 1936, Serial No. 85,313
14 Claims. (Cl. 200—121)



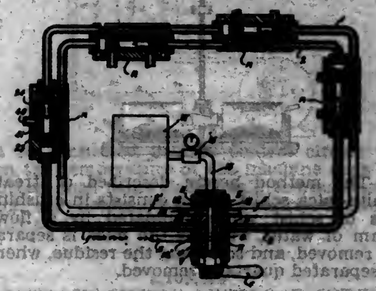
14. A fuse comprising a casing having a window, a fuse link in said casing and having a weakened portion, a leaf spring bearing against said link and having one end secured whereby when said fuse parts at said weakened portion a portion of said spring is freed for motion away from its normal position, and a fuse-condition indicator pivotally secured in said casing to present either of two faces to view through said window in position to be turned about its pivot by said spring motion and present the face indicating that the fuse has blown.

2,105,592
EDUCATIONAL DEVICE
Lloyd Albro Hathaway, Scotch Plains, and Harry H. Fay, Oakhurst, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application March 27, 1937, Serial No. 133,440
1 Claim. (Cl. 35—1)



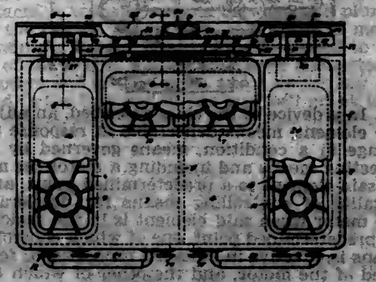
An educational device including a perforated panel having two sections, one of the sections being adjustable from a co-planar position to an angular position with respect to its associated section, said sections in the first mentioned position being adapted to carry equipment simulating typical pole line construction, said equipment including miniature poles removably mounted in the panel apertures and connected by wires to provide horizontal pulls thereon, said poles being guyed, the hinged section in the second mentioned position being adapted to carry equipment simulating the effect on poles when subjected to stresses under typical line conditions, said equipment including a pole mounted on the horizontally disposed section and having its top connected to tension means carried on the associated vertical section, said vertically disposed section having calibrations thereon to indicate the amount of bend of the pole.

2,105,593
APPARATUS FOR MOLDING PULP BODIES
William McMahon, Chatham, Illinois
Application June 15, 1936, Serial No. 85,209
3 Claims. (Cl. 92—37)



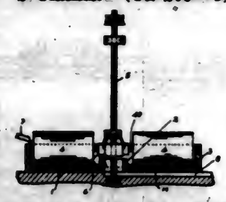
1. Apparatus for forming molded pulp articles comprising a water-pervious die, a complementary die adapted to coact with the female die to form the plastic material to desired structure conforming to the article to be formed set between the dies, means to move the dies into and out of cooperative relation, and means on the basket and movable die constructed to engage at initial open position of the dies whereby terminal relative movement of one die will move the basket and article from the other die.

2,105,594
CARD AND [illegible]
Frank R. Mauritz, Lemmon, S. Dak.
Application March 5, 1937, Serial No. 129,572
5 Claims. (Cl. 211—90)



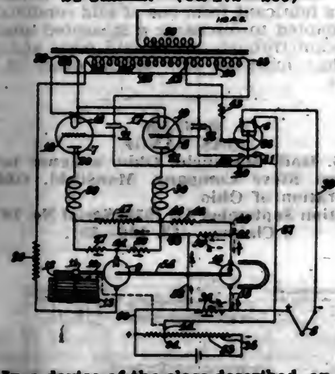
1. In a display frame, a backing, side walls extending from said backing, the side walls having their forward portions cut to provide a stepped formation and define a plurality of pockets [illegible] with the upper end of each pocket [illegible] beyond the lower end of the next higher pocket, supports for said pockets [illegible] from said backing, and front walls of transparent material disposed between the side walls and resting upon the bottoms for the pockets.

2,105,595
LUBRICATING SYSTEM
David R. Hills, Detroit, Mich., assignor to The Farval Corporation, Cleveland, Ohio, a corporation of Ohio
Application October 15, 1934, Serial No. 748,269
10 Claims. (Cl. 184—7)



1. In a lubricating system, the combination of a pressure source, dual conduits connected to said source, a central valve for alternately opening one of said conduits to said pressure source and closing the other of said conduits, and a series of measuring valves connected to said conduits, each of said valves having discharge ports and receiving lubricant from one of said conduits and being adapted to discharge a measured quantity of lubricant through one of said ports and then to conduct lubricant flow to the other of said conduits.

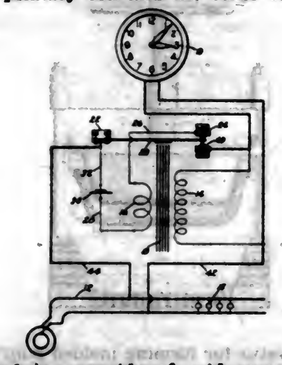
2,105,596
GAS RANGE
John G. Hoff, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a corporation of Ohio
Application September 17, 1936, Serial No. 101,277
9 Claims. (Cl. 126—39)



1. A range having a flat cooking top and one or more cooking compartments disposed therebelow, a plurality of top burners arranged within openings provided in said cooking top, a flue arranged at the back of said range and connected with said cooking compartment or compartments, a plurality of lids adapted to be moved from a position to cover said top burners to a position to render said burners accessible respectively, means disposed rearwardly of said flue for receiving one of said lids when in the open position, and means disposed forwardly of said flue for receiving another of said lids when in the open position.

2,105,597
TREATMENT OF CYANITE ORE
Phillip S. Hoyt, Clarkesville, Ga., assignor to Southern Mining and Milling Company, a corporation of Delaware
Application January 26, 1937, Serial No. 122,393
2 Claims. (Cl. 209—6)

1. The method herein described of treating cyanite-mica schist which consists in crushing a mass of schist while inundated by a flowing stream of water, whereby the mica is separated and removed, and screening the residue, whereby the separated quartz is removed.



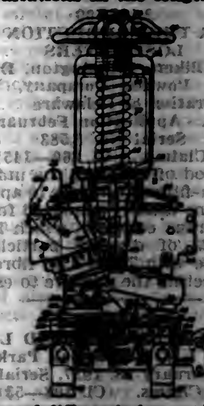
2,105,598
CONTROL SYSTEM
Karl H. Hubbard, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application January 4, 1933, Serial No. 650,101
24 Claims. (Cl. 172—239)

5. In a device of the class described, an adjustable element, means deflectable in response to a change in a condition, means governed by said deflecting means and including a motor for moving said element to a predetermined point, and a plurality of controlling means for decelerating said motor when said element is in the region of the predetermined point, one of which controlling means is effective in amounts proportional to the speed of the motor, and the other of which controlling means operates electrically and independently of the speed of said motor.

2,105,599
ELECTRIC CLOCK ATTACHMENT
Henry W. Hyde, Dedham, Mass.
Application March 19, 1936, Serial No. 69,685
2 Claims. (Cl. 58—26)

1. In an attachment adapted to be interposed between a source of alternating current and a synchronous motor electric clock, a soft iron core, primary and secondary coils on said core, a movable armature of conductive material adapted to be attracted by said core when the latter is magnetized by current flowing in one of said coils, fixed contact points associated with opposite sides of said armature, circuits to said fixed contact points one of which is connected to one side of said primary coil and the other of which is

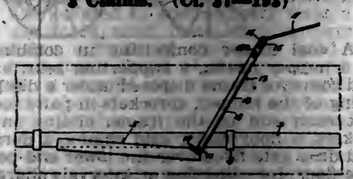
connected to one side of said secondary coil, means for connecting said clock motor across said secondary coil, means for connecting said alternating current source to said armature and the other side of said secondary coil, and means for connecting a direct current source to said armature and the other side of said primary coil.



2,105,600
FOUNTAIN PEN
Glenn E. Johnsohl and Clifford M. Sublette, Denver, Colo.
Application September 5, 1936, Serial No. 99,715
8 Claims. (Cl. 120—42)

1. A cartridge for filling fountain pens comprising: tubular ink retaining portion; a neck portion; a stopper closing said neck portion; a sleeve fitted over said neck portion; a projecting member carried by said sleeve and extending within said neck portion a distance sufficient to force said stopper from place when said sleeve is forced in position on said neck portion.

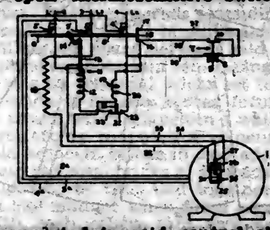
2,105,601
MACHINE FOR APPLYING PRESSURE TO SHOE BOTTOMS
Frank Kennison, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 24, 1937, Serial No. 132,814
21 Claims. (Cl. 12—33)



1. In a machine for pressing the bottoms of shoes mounted on lasts, the combination with a pressing pad shaped to conform substantially to the heightwise curvature of the bottom of a shoe for applying pressure to the forepart and shank portions of the shoe bottom, of a shoe support movable relatively to said pad from a shoe-receiving position to a position opposite said pad for the pressing operation, said shoe support comprising a shoe rest and a heel-end support including a last pin for engaging the heel end of the last in its spindle hole, a device for engaging the toe end of each shoe to determine its lengthwise position on said support, mechanism for moving said device lengthwise of the

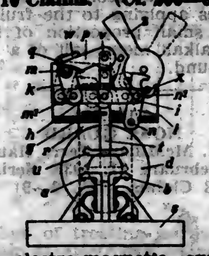
shoe into different positions, and means for predetermining different positions of said mechanism to vary the position of said device in accordance with variations in the lengths of the fore-

parts of shoes of different sizes and thus to locate the junction of the forepart and shank portions of each shoe opposite the junction of the corresponding portions of the pad when the support is in shoe-pressing position.



2,105,602
PIPE-LINE RECLAIMER
Kenneth C. Knapp, Galva, Kans., assignor of one-fourth to O. L. Sherrill, Clinton, Kans., and one-tenth to S. R. Knapp, McPherson, Kans.
Application March 31, 1937, Serial No. 134,146
3 Claims. (Cl. 37—193)

1. A device of the character and for the purpose specified comprising an elongated semi-cylindrical pipe engaging shoe solid at one end and open at its respective opposite end, said shoe at the solid end thereof having a beveled surface, and also provided at said end with laterally extending eyes projecting from opposite sides thereof, and a yoke member having legs straddling the last named end of said shoe and provided at one end with apertures with which said eyes are engaged for loosely connecting the legs of said yoke with said shoe.

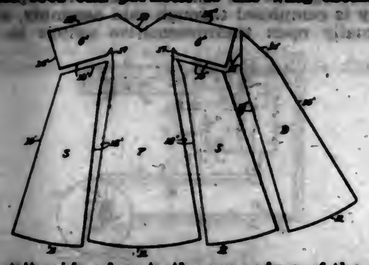


2,105,603
MOTOR PROTECTIVE DEVICE
George G. Landis, Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a corporation of Ohio
Application June 21, 1934, Serial No. 731,784
4 Claims. (Cl. 175—294)

1. The combination with a dynamo-electric machine and a switch for connecting the same with a power line, of a control circuit for said machine, said control circuit including a holding coil for maintaining said switch closed while the machine is running, a relay for energizing said holding coil, a protective unit assembly mounted in the machine, said protective unit assembly so connected that the control circuit through said relay is completed through said assembly, and a normally open thermosensitive switch in said

unit so connected in said control circuit that when the temperature of the machine rises to a predetermined point closing said thermosensitive switch, said holding coil will be short-circuited to permit said main switch to open.

2,105,604
ELECTROMAGNETIC OVERLOAD CIRCUIT BREAKER
Wilhelm Leyhausen, Nuremberg, Germany
Application December 1, 1933, Serial No. 700,579
In Germany October 18, 1933
10 Claims. (Cl. 200—89)



1. In an electro-magnetic overload circuit breaker, magnet coils, contacts between the end faces of the coils, a plunger in one of the magnet coils, a releasing mechanism for opening the contacts, a transfer means between the plunger and the release mechanism, said transfer means including a toggle, a pivoted arm linked to one end of the toggle, a bell crank lever connected to the other end of the toggle, and a switch bar fastened to the free end of the said bell crank lever and displaceable crosswise of the axis of the coils.

2,105,605
SLEEVELESS UNDERGARMENT
Harry Lichtenstein, New York, N. Y., assignor to Gerted Corporation, a corporation of New York
Application February 27, 1937, Serial No. 128,063
2 Claims. (Cl. 2—73)

1. A sleeveless garment comprising a vertical front member, a pair of wing members formed integrally with the upper portion of the front member and extending laterally, one from each side of the front member and around the sides of the garment to substantially the center of the back thereof, the material at the juncture of the lower edges of the wing members and the front member being notched, the edges of the notches being stitched together to cup the upper front portion of the garment, side members attached at their upper edges to the lower edges of the wing members and at their forward edges to the respective side edges of the front member,

and a hook member attached at its upper portion to the free end portions of the wing members

and at its side edges to the rear edges of the side members.

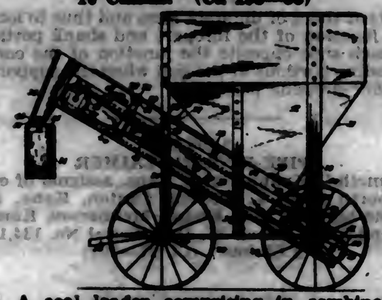
2,165,926
REMOVAL OF SPRAY RESIDUE
Harry C. McLean and Albert L. Weber, New Brunswick, N. J., assignors to Endowment Foundation, New Brunswick, N. J., a corporation of New Jersey
No Drawing. Application May 27, 1935, Serial No. 23,207
2 Claims. (Cl. 99—162)

1. A method of washing fruit and the like to remove spray materials from the surface thereof which includes applying to the fruit a solution containing a small proportion of hydrochloric acid and an alkali metal salt of a sulphonated phenol compound.

2,165,927
NOSE GUARD
Vernon R. McMillan, Terre Haute, Ind.
Application February 21, 1935, Serial No. 7,547
3 Claims. (Cl. 2—9)

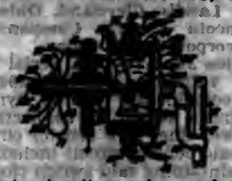
1. In a protective device, the combination with a head helmet, of a nose guard comprising, a head helmet, a horizontally disposed arcuately extending lower bar, operatively secured to the helmet, a spaced upper curved guard bar and a plurality of curved guard rib members defining direct integral connection between said spaced horizontally disposed upper and lower guard bars, each having separate connections with the upper and lower bar, said bars and ribs each covered with a permanent coating of soft resilient material to protect players.

2,165,928
PORTABLE WORK SUPPORT
Matthew M. Merritt, Middleton, Mass., assignor to The Tanning Process Company, Boston, Mass., a corporation of Massachusetts
Application February 25, 1936, Serial No. 65,690
2 Claims. (Cl. 149—12)



1. A drying board for use in putting-out and drying operations upon hides or skins comprising a foundation layer of plywood, and an oil-painted layer of a textile fabric cemented to the plywood.

2,165,929
METHOD FOR THE PRODUCTION OF CELLULOSE ESTERS
Mahlon G. Milliken, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 8, 1935, Serial No. 5,983
11 Claims. (Cl. 260—145)



1. The method of effecting the uniform esterification of non-fibrous cellulose in apparatus and under conditions usually employed for the esterification of fibrous cellulose, which includes admixing 25–75% of discrete particles of non-fibrous cellulose with 75–25% of fibrous cellulose and then subjecting the mixture to esterification.

2,165,610
AUTOMATIC HAGGING AND LOADER
Walter L. O'Brien, Oak Park, Ill.
Application February 16, 1937, Serial No. 126,495
10 Claims. (Cl. 198—53)

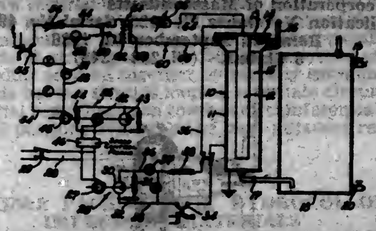
1. A coal loader comprising in combination with a hopper having a supporting gear, an inclined conveyor frame disposed under a discharge opening of the hopper, sprockets in pairs mounted at each end of the frame, chains on said sprockets, a floor under said chains, a normally closed drop gate fixed over the lower end portion of the floor, for collecting at intervals charges of determined bulk from said hopper, flexible aprons connected across to the chains, scrapers and drags secured to the respective front and rear ends of said aprons for moving coal collected at intervals back of said gate, and inclined bars on said drags for lifting the drop gates as the chains draw the aprons thereunder for delivering coal upwardly.

2,165,611
AUTOMATIC SAFETY SWITCH
Oscar L. Olson, Cambridge, Minn., assignor of one-half to Bernard E. Aurelius and Eugene A. Aurelius, Braham, Minnesota
Application May 15, 1936, Serial No. 79,867
3 Claims. (Cl. 200—83)

1. An electric circuit opening and closing device for motor vehicles having an oil circulating

pump and an oil gage operated by air pressure generated by the said pump, said device comprising a cylindrical housing, a pair of U-shaped spring leaves of electro-conductive material, in the electric circuit of the motor, said leaves fixed in diametrically opposite walls of said cylinder and their free ends normally positioned in spaced parallel relation [illegible] central part of the [illegible] element in one end of the [illegible] spring leaf and [illegible] and adjusted [illegible] above the adjacent [illegible] other spring leaf and close electric circuit, means mounted on the opposite side of the housing in alinement with said first described leaf contact means, to engage and press said spring leaves together for closing circuit, said latter means yieldable but maintaining electric contact of the leaves when the expansible element is expanded by air pressure therein and also adapted to maintain electric contact when the expansible element is contracted.

2,165,612
SURFACE ABRASIVE AND POLISHING MACHINE
Vernon R. Porter, Cortland, N. Y.
Application July 18, 1931, Serial No. 91,329
2 Claims. (Cl. 51—71)



1. In a surface finishing apparatus, the combination of a primary zone and a finishing zone that are adapted to successively treat a common elongated work piece, said primary zone comprising a series of stationary head means each including a supply of abrasive tape that are collectively brought into operative tangential engagement about the work piece in angularly staggered relationship to embrace substantially the whole of the work piece profile, actuating means for advancing the respective tapes toward said work piece at a rate sufficient to bring about a penetrative grinding in stepwise stages and thereby impart a substantially smooth superficial finish to the work piece, and which polishing zone comprises a number of similarly disposed stationary head means in series of which the actuated abrasive tapes are collectively advanced to bring about a less intensive grinding rate to refine such initially finished surface and brighten the luster thereof, and means for longitudinally passing the work piece surface through the respective zones for successive treatment therein.

2,165,613
FABRICATED BRICK CONSTRUCTION
Emmett V. Porter, Springfield, Ill.
Application June 17, 1935, Serial No. 26,992
1 Claim. (Cl. 72—60)

A portable panel of brick wall construction comprising a panel made of brick units each laid in rows and arranged with adjacent rows in broken jointed formation; said bricks each provided with two or more transverse holes, which are aligned with holes of adjacent bricks in adjacent rows, reinforcing rods extending through said aligned holes and a binding agent, such as cement filling the space between said bricks and filling said holes about said reinforcing rods; said panel having its terminal bricks set to provide a fitting relation in broken jointed formation with adjacent panels when aligned in a wall therewith and a reinforcing rod with a cement filler between said adjacent bricks in said adjacent panels and said terminal bricks of said adjacent panels, arranged to be thus tied together and reinforced in like manner when fitted together at an angle with each other; said wall construction when set up defining a part of a building construction.

2,165,614
METHOD AND APPARATUS FOR ELECTRIC DEHYDRATION OF EMULSIONS
Claudius H. M. Roberts, Long Beach, Calif., assignor to Petroleum Rectifying Company of California, Los Angeles, Calif., a corporation of California
Application November 16, 1932, Serial No. 643,160
20 Claims. (Cl. 204—306)

1. A method of treating an emulsion by the use of a pair of electrodes defining a treating space, which method includes the steps of: continuously superimposing on an alternating potential of primary wave form a single alternating potential of secondary wave form and of higher frequency than said alternating potential of primary wave form to form a rippled wave form composed of a lower-frequency wave on all portions of which is impressed a single higher-frequency wave; impressing the resultant potential between said electrodes; and subjecting the emulsion to be treated to the action of the electric field thus set up between said electrodes.

2,165,615
TUBE CLOSURE DEVICE
Arthur J. Reusch, Chippewa Falls, Wis.
Application July 23, 1936, Serial No. 92,022
6 Claims. (Cl. 221—39)

1. A closure device for pressure operated containers having a flexible wall of resilient material, a dispensing end comprising a square opening formed in the neck of said container, the top of

said neck being cut off obliquely, an increased material portion formed on one side adjacent the lower inner face and curving upwardly an appreciable distance centrally of the neck opening, a flat bearing surface formed on the top of this material at an angle of approximately 45°, a horizontal groove formed at the junction of the inner periphery of said neck and said increased material portion, vertical parallel grooves formed in the material on the adjoining sides of said first mentioned side and communicating with said first named groove, a spring door unit positioned in the opening in said container neck, including a spring door plate, apron portions extending downwardly on two sides thereof, a flange curved upwardly of one end of said door plate and at approximately right angles thereto, projections formed on one end of each apron portion and adjacent said upwardly extending flange, the opposite end of said door plate adapted to springingly engage the top edge of the higher side of the neck portion, said bearing surface adapted to support the spring door plate.

2,105,616

DOORKNOB

Harold D. Shaw, Fitchburg, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts

Application November 11, 1935, Serial No. 49,129
Renewed September 10, 1936
6 Claims. (Cl. 292—348)

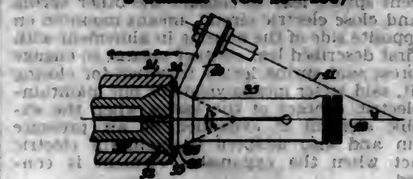
1. As an article of manufacture, a knob comprising a spindle, a knob proper and shank, said shank being adjustable along the spindle and the knob and shank having inter-engaging means for preventing relative rotation thereof, a locking disc located in the knob and having means for adjustment and preventing relative rotation of the knob and spindle, and means to clamp the locking disc to the knob and hold the shank in position with respect to the knob.

2,105,617

DOORKNOB

Harold D. Shaw, Fitchburg, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts

Original application November 11, 1935, Serial No. 49,129. Divided and this application November 13, 1936, Serial No. 110,686
2 Claims. (Cl. 292—347)



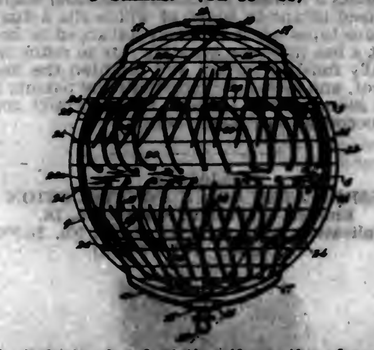
1. The combination with a door knob and means for adjustably securing it to a threaded spindle, said knob having an open end, of a cap located in said open end, a member in threaded connection with the cap and with the spindle to hold the cap against displacement, and yielding means for exerting an outward pressure on the cap.

2,105,618

METHOD OF MAKING COLLETS

Frederick G. Silva, Rochester, N. Y., assignor to Davenport Machine Tool Co., Incorporated, Rochester, N. Y., a corporation of New York

Application September 15, 1934, Serial No. 744,130
2 Claims. (Cl. 29—156)



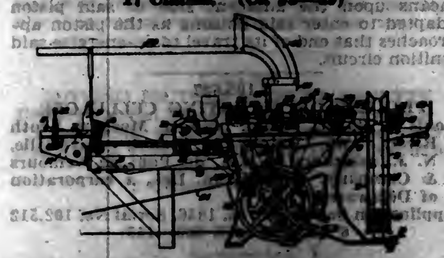
1. The method of producing a collet which comprises shaping a piece of stock to provide an elongated cylindrical portion having a conical portion adjacent one end, providing a central bore in the stock extending along its major axis, slitting the stock longitudinally through said conical portion and through a part of the adjacent cylindrical portion to provide gripping jaws, heat treating the collet to harden the same, compressing the jaws to temporarily reduce the cone angle thereof and bring the outer end portions of the edges of the jaws substantially in contact by gripping the free ends of said jaws beyond the conical portion, uniformly grinding the conical surface of the jaws while thus compressed and releasing the compression on the jaws to permit them to regain their normal cone angle whereby the conical surfaces of the jaws will have line contacts with the coacting tapered surface of the actuating member with which the collect is to cooperate while in use.

2,105,619

DEVICE FOR DEPICTING PREVAILING AIR CURRENTS OF THE EARTH

Bertha O. Smith, Minneapolis, Minn., assignor of one-half to Amice L. Godfrey, Minneapolis, Minn.

Application June 22, 1936, Serial No. 86,561
5 Claims. (Cl. 35—46)



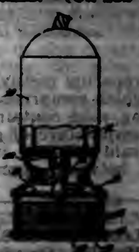
1. A device for depicting the paths of prevailing air currents about the earth comprising a geographical globe, a frame attached to said globe and including a pair of arcuate rods overlying the globe and extending generally north and south relative to the globe at spaced longitudes, a wind indicating structure mounted on said rods for limited upward and downward sliding movement thereon, said wind indicating structure including a central band overlying an equatorial section of the globe and upper and lower bands overlying the horse latitude sections of the globe and a multiplicity of wind direction indicating elements, certain of which are attached to said central band and said upper band and certain of which are attached to said central band and said lower band, said elements being of arched construction between said central band and said upper and lower bands and said elements having upwardly and downwardly projecting portions extending from said upper and lower bands.

2,105,620

BOX MAKING MACHINE

Claude M. Stitt, Antioch, Calif., assignor to Fibreboard Products, Inc., San Francisco, Calif., a corporation of Delaware

Application March 9, 1937, Serial No. 129,882
17 Claims. (Cl. 93—49)



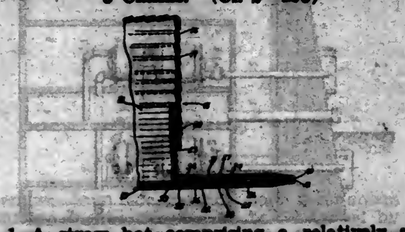
1. A machine for making a box having a reinforcing ring, said box being formed from a blank having a foldably connected portion for fastening the ring to the box, comprising means for folding the blank into a box, means for applying the reinforcing ring to the box, and means for folding said fastening portion about the ring.

2,105,621

MECHANICAL POWDER PUFF

Nicholas Testi, Boston, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware

Application September 24, 1936, Serial No. 102,358
8 Claims. (Cl. 132—76.5)



1. A device of the class described comprising a container for a supply of powder, a perforated cover therefor, a mechanically vibrated diaphragm associated with the container and serving to discharge powder from the supply therein, and power operated means contained within the device for vibrating said diaphragm.

2,105,622

HAT

Nathan W. Tibbals, New Canaan, Conn., assignor to Hat Corporation of America, Norwalk, Conn., a corporation of Delaware

Application March 14, 1936, Serial No. 68,801
5 Claims. (Cl. 2—193)

1. A straw hat comprising a relatively stiff crown portion; a relatively stiff brim portion spaced downwardly and outwardly from said relatively stiff crown portion; and an intermediate flexible collar having upwardly and outwardly extending portions interposed between and respectively connected to said relatively stiff crown and brim portions, said upwardly extending portion being composed of a plurality of superposed annular layers of substantially parallel strands of straw secured together, and said outwardly extending portion being composed of a plurality of circumferential rows of substantially parallel strands of straw lying one within the other and so flexibly secured together by radially extending threads having strands looping alternate circumferential rows that each row has circumferentially spaced portions overlying the next adjacent row.

2,105,623

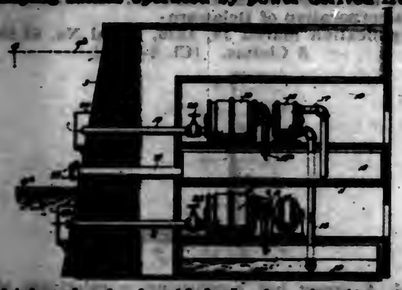
FLEXIBLE PACKAGE FOR HYDROCOLLOID IMPRESSION MATERIALS

Walter J. van Reesema, West Los Angeles, Calif., assignor to Surgident, Ltd., Los Angeles, Calif., a corporation of California

Application July 26, 1937, Serial No. 155,721
3 Claims. (Cl. 206—46)

1. A moisture-impervious package comprising a body of moisture-containing hydrocolloid material adapted to become plastic upon heating, an enclosing envelope of moisture-impervious material surrounding said body, and a thread-like member secured to said package and extending therefrom to facilitate handling of such package.

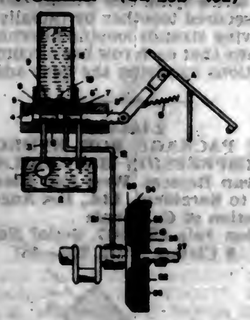
2,105,624



WATER POWER

Max Orlove, Washington, D. C.

Application October 30, 1936, Serial No. 108,257
Renewed December 6, 1937
7 Claims. (Cl. 60—55)



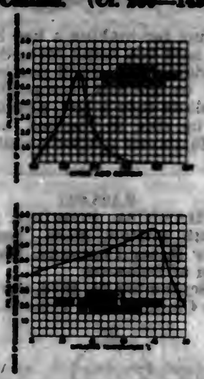
1. In apparatus for generating power, the combination of a water-propelled unit disposed at a low level of a body of water and adapted for constant operation by water-pressure from

said level, a power generator driven by said water-propelled unit, a receiver below the unit for the water discharged therefrom, water-pumping means operated by power derived from

a higher level of said body for elevating the water from the reservoir, and means for storing the water from the pumping means and discharging it by gravity.

2,105,625
HYDRAULICALLY ACTUATED FRICTION CLUTCH
Rudolf Wichtendahl, Hanover, Germany
Application August 21, 1936, Serial No. 97,143
In Germany August 31, 1935
7 Claims. (Cl. 192—91)

1. Means for controlling the operation of an hydraulically actuated friction clutch intended more particularly for power driven vehicles, comprising an air vessel, a reservoir for the hydraulic fluid, the hydraulically actuated friction clutch, a pump adapted to supply the hydraulic fluid to the air vessel, and a control valve for the admission of the hydraulic fluid to the air vessel and for its admission to the pressure chamber of the said clutch, the parts being connected together for operation of the clutch in the manner substantially as hereinbefore described.



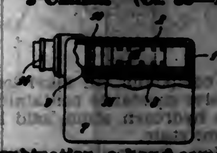
2,105,626
FLAME CONTROL FOR FLUID FUEL BURNERS
Walter W. Williams, Bloomington, Ill.
Application March 4, 1936, Serial No. 67,620
4 Claims. (Cl. 158—28)

1. In an electrically operated and controlled fluid fuel burning mechanism having an electrical ignition circuit and including a fuel and air pump having an air intake, a cylindrical casing closed at the lower end and secured over said intake air inlets provided in the wall of said casing, a piston mounted to reciprocate between said air inlets and said pump air intake, means in the casing increasing the rate of air flow to said pump air intake as the piston moves in the direction of the said pump air intake, a housing secured over the open end of the casing, a switch in the igni-

tion circuit mounted within said housing, and means upon the adjacent side of said piston adapted to enter said housing as the piston approaches that end of its travel to de-energize said ignition circuit.

2,105,627
PROCESS OF NITRATING CELLULOSE
Louis H. Baker, Parlin, Ivan H. Morgan, South River, and Ralph J. Gould, Sayreville, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application September 25, 1936, Serial No. 102,512
6 Claims. (Cl. 260—145)

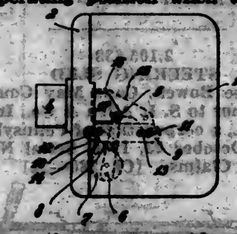
1. Process of preparing methyl alcohol soluble cellulose nitrate which comprises nitrating cellulose with nitrating acid containing about 30% nitric acid at a temperature of about 45° C. for twenty minutes, said cellulose nitrate having a nitrogen content between approximately 11.85 and 12.0%.



2,105,628
FILM LOADING CASETTE
Helmut Becker, Wetzlar, Germany, assignor to Ernst Leitz, G. m. b. H., Wetzlar, Germany
Application November 5, 1935, Serial No. 48,373
In Germany December 12, 1934
1 Claim. (Cl. 88—17)

A film loading casette comprising a casing containing the film and having openings for withdrawing and inserting the leading end of the

film, curved projections on said casing adjacent the said openings, said film being formed into a loop outside the casette between the said openings for automatic engagement with the film driving means of a camera which is to be loaded with the film, portions of the film being drawn around said projections in forming the loop, holders on the casette adjacent the said curved portions for automatically engaging the film to hold it in its loop formation, and against the said projections and means secured to the holders operable by contact with the camera for automatically releasing the film when the casette is placed in operative position within the camera.



2,105,629
MOVING PICTURE CAMERA CASETTE
Helmut Becker, Wetzlar, Germany, assignor to Ernst Leitz, G. m. b. H., Wetzlar, Germany
Application February 27, 1936, Serial No. 65,947
In Germany March 18, 1935
2 Claims. (Cl. 88—17)

1. In combination, a hand camera and a separate film containing casette therefor, said hand camera including a body having a cover and an objective carrying portion arising above the cover along the front edge thereof, means for detachably securing the film casette to the camera for using the film therewith, said means comprising a casing containing the film casette and having an open side for removably placing the casette therein, a film window in the casette facing said open side, cooperating mechanism on the camera and the casing for placing the latter upon the camera with the film window in the casette in operative optical alignment with the camera objective, the top of the camera forming a support for the casing, the sides of the casing and the camera forming a compact boxlike unit adapted to be held by the operator while taking pictures and a cover for closing the open side of the casing when the latter is removed from the camera.

2,105,630
PHOTOGRAPHIC FILM CAMERA
Helmut Becker, Wetzlar, Germany, assignor to Ernst Leitz, G. m. b. H., Wetzlar, Germany
Application March 12, 1936, Serial No. 68,506
In Germany March 23, 1935
5 Claims. (Cl. 88—16.4)

1. A photographic camera including a film casette removably attached to the camera and containing photographic film, a film operating member within the camera projecting into the casette in operative position to engage and operate the film when the casette is attached to the camera, mechanism within the camera for automatically moving the film engaging member out of film operating position when the casette is

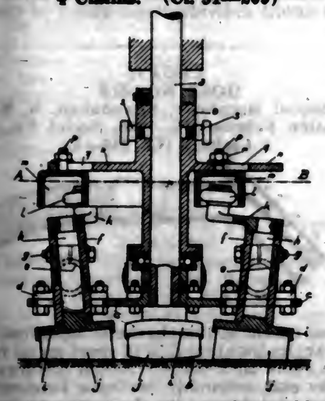
remove from the camera, said mechanism including means adopted to be contacted by the casette when it is attached to the camera for automatically moving the film engaging member back into film operating position.

2,105,631
MOTION PICTURE CAMERA
Helmut Becker, Wetzlar, Germany
Application May 11, 1936, Serial No. 79,844
In Germany May 11, 1935
4 Claims. (Cl. 88—16)

1. In a motion picture camera including a shutter and a picture frequency regulating governor, means for adjusting the shutter to accord with any selected time exposure, means for regulating the governor to accord with a selected frequency of pictures to be taken irrespective of the selected time exposure, coaxially supported shafts for actuating the said adjusting and regulating means and a coupling member for operating the said shafts simultaneously at said selected time exposure after having been adjusted as aforesaid, said coupling member being operable to afford individual operations of the said shafts.

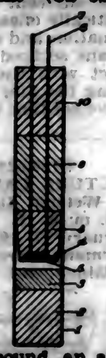
2,105,632
HOSE NOZZLE
Vincent Bernasser, Shandaken, N. Y.
Application February 6, 1936, Serial No. 62,563
1 Claim. (Cl. 240—2)

A hose nozzle of the character described comprising a cylindrical conduit of sheet metal formed with an elbow at a predetermined distance from its outlet end, originally having a longitudinally extending slot formed in the upper wall of the conduit which extends beyond the end of the



elbow; a flash-light comprising a separate casing which is sealed in and closes said slot and is joined to the conduit in fluid tight relation and extends beyond said elbow and the body portion of which rests in said conduit.

2,105,633
STEERING SLED
James Monroe Bowen, Cape May Court House, N. J., assignor to S. L. Allen & Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application October 23, 1936, Serial No. 107,124
6 Claims. (Cl. 280—22)



1. A steering sled having laterally bendable runners, a deck disposed above the runners, runner brackets mounted on the runners, front and rear cross benches supporting the deck from the brackets and pivoted adjacent their ends to the brackets, the front cross bench being slidable laterally of the deck, means secured to the deck between the front and rear benches affording fixed pivots adjacent opposite sides of the sled, side links movable about said pivots extending forwardly from said means having pivotal connections with the ends of the front bench and the front ends of the runners, and means including a handle bar for laterally shifting the front ends of the links and runners to thereby laterally shift the front bench in a corresponding direction a distance proportional to but less than that said front ends are shifted to thereby bend the runners to steer the sled.

2,105,634
MACHINE FOR FACING THE SURFACES OF HARD SUBSTANCES BY PRESSURE
Georges Fernand Brendel, Paris, France, assignor to Societe Anonyme: Societe Marbriere de Paris, Paris, France
Application March 22, 1937, Serial No. 132,260
In France April 10, 1936
4 Claims. (Cl. 51—209)

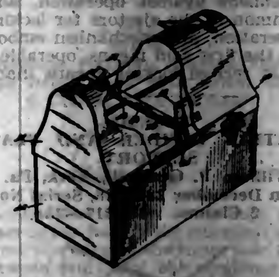
1. Machine for facing the surfaces of hard substances by pressure which comprises a central rotary shaft, satellite shafts inclined relatively to the central shaft and arranged about said shaft, said satellite shafts carrying grinders at their lower end, means controlled by the central shaft for giving the satellite shafts a movement of revolution about said central shaft, arms terminated by rollers and fixed to the upper ends of the satellite shafts and a fixed eccentric rolling track in which said rollers are adapted to slide to give the satellite shafts a reciprocating movement.

2,105,635
IGNITION COMPOSITION
Lawton A. Burrows, Wenonah, and William F. Filbert, Woodbury, N. J., and Ebenezer Emmet Reid, Baltimore, Md., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application October 30, 1935, Serial No. 47,387
14 Claims. (Cl. 52—4)

8. As a new compound, an alkyl lead salt of an acidic explosive substance containing at least one replaceable hydrogen atom, said lead being in the tetravalent state.

14. An ignition composition comprising an alkyl lead salt which burns with explosive rapidity, said alkyl lead salt being a salt of an acidic explosive compound, and said lead being in the tetravalent state.

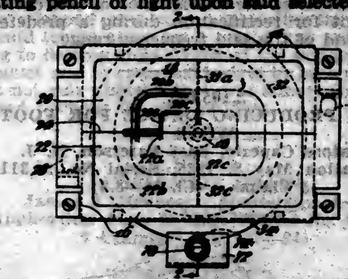
2,105,636
MEASURING LINE CATCHER
James G. Creed, Houston, Tex., assignor to Halliburton Oil Well Cementing Company, Duncan, Okla.
Application March 13, 1937, Serial No. 130,699
4 Claims. (Cl. 24—263)



1. The combination with an oil well or the like and a measuring line of a device for catching the line in the event it breaks, said device comprising line gripping means, control means for normally holding said line gripping means adjacent to and spaced radially from the line and means including a member having a restricted opening therein through which the line may be passed for actuating said control means upon breakage of the line to cause the gripping means to engage the line beneath the point of breakage.

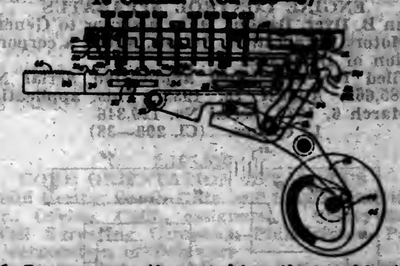
2,105,637
APPARATUS FOR ABRADING STRAND MATERIAL
Charles T. Davis, Beverly Hills, Calif.
Application June 20, 1935, Serial No. 29,151
7 Claims. (Cl. 51—113)

3. In a machine for abrading strand material, a plurality of pairs of opposed laterally reciprocating strand engaging members, said pairs being located in spaced relation to provide a rectilinear strand path, extending between the said pairs, opposed pairs of rotary buffing and abrading discs located between the pairs of engaging members, and means for advancing a strand between the said pairs of members and discs successively.



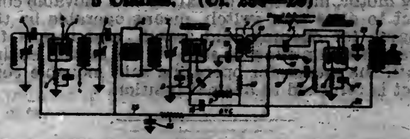
2,105,638
LUNCH KIT
Charles Daum, Forest Hills, Long Island, N. Y.
Application June 27, 1935, Serial No. 28,634
2 Claims. (Cl. 206—4)

1. A lunch box comprising a body and a cover hinged to the same, a plurality of ears formed at the lower portion of the respective sides of said cover; a support extending across the space between the sides of the cover and pivotally mounted on one of said ears for displacement about a horizontal axis, and said other ear being resilient and mounted at one of its ends to the side wall, said ear having an aperture intermediate of its ends, into which the free end of said support may pass, such free end of said support, upon movement, being adapted to contact with and displace said last named ear sufficiently to permit said free end of said support to enter into said aperture, thereby to interlock with the support and ear.



2,105,639
INDICATOR
Lewis H. Davis, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 30, 1936, Serial No. 113,469
6 Claims. (Cl. 116—124.1)

1. In multi-range radio apparatus having means for changing the frequency range of said apparatus, a surface having a plurality of discrete scales thereon, each of said scales representing one frequency range of said apparatus, means responsive to the operation of said range change means for illuminating a selected one of said scales and for producing a frequency-indicating pencil of light upon said selected one of



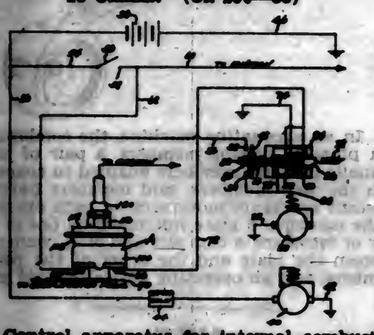
said scales, and means for moving said pencil of light about the said selected scale.

2,105,640
CASH REGISTER
Allen A. Dicke, Montclair, N. J., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application March 26, 1927, Serial No. 178,576
16 Claims. (Cl. 235—9)

1. In an accounting machine, the combination of a plurality of stop members, a pair of longitudinally movable members adapted to cooperate with the stop members, said members having a constant aggregate movement on each operation of the machine, a plate fulcrumed on one of said pair of members, a cam slot and stud connection between the plate and the other of the pair of members, and an operating device for said plate.

2,105,641
AUTOMATIC VOLUME CONTROL CIRCUIT
Frederick H. Drake, Beemton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 3, 1935, Serial No. 19,574
5 Claims. (Cl. 250—20)

3. A method of receiving signals of a predetermined frequency range which includes the steps of amplifying the signals at radio frequency, detecting the amplified signals, amplifying the audio component of detected signals, rectifying the carrier component of the detected signals, varying the signal amplification with direct current voltage derived from the rectified carrier component in a sense inverse to variations in the



received signal carrier amplitude, and automatically suppressing the transmission of said carrier component for rectification during a predetermined band of the said frequency range.

2,105,642
SOUND PRODUCING DEVICE FOR FOOTWEAR
Salvatore Capezio, East Paterson, N. J.
Application May 8, 1935, Serial No. 20,211
15 Claims. (Cl. 36—8.3)

1. A jingle tap comprising a metallic tap hollowed on its upper surface to form a chamber, a washer within said chamber so dimensioned as to be movable therein, and a pin passing through said washer.

2,105,643
ENGINE CONTROL APPARATUS
John B. Dyer, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Refiled for abandoned application Serial No. 695,602, August 18, 1933. This application March 6, 1937, Serial No. 129,246
13 Claims. (Cl. 290—38)

1. Control apparatus for internal combustion engines comprising, in combination, a starting motor, a current source adapted to supply current to said starting motor, a switch comprising fixed and movable contacts for effecting connection between the current source and said starting motor, means for operating said movable contact to close said switch, means operable by the engine for opening said switch, and means for preventing opening of said switch by the engine until the means for operating said movable contact is returned to normal position.

2,105,644
VENDING MACHINE
Albert E. Gebert, Wilmette, and Floyd C. Black, Chicago, Ill., assignors to Advance Machine Co., Chicago, Ill., a corporation of Illinois
Application October 30, 1936, Serial No. 107,436
20 Claims. (Cl. 194—6)

1. In a vending machine, a plurality of article supply holders, ejecting mechanisms individual to the supplies, means for locking said ejecting mechanisms against operation, a normally inactive master control, means whereby said master control may be rendered active to render said locking means inactive to permit said ejecting mechanisms to be selectively rendered active to eject an article from its respective said supply,

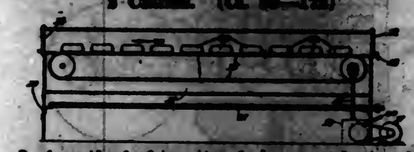
means responsive to the operation of the ejecting mechanisms for locking the remaining ejecting mechanisms against operation, additional means common to the ejectors for locking them against operation, and mechanism embodying a portion of the first said means, operable to render the last recited locking means inactive.

2,105,645
COMBINATION DIVIDER AND PLATFORM SUPPORT
William P. Gemmill, York, Pa.
Application December 28, 1936, Serial No. 117,944
3 Claims. (Cl. 217—22)

1. A three-ply element convertible into a set of angularly related partitions for producing substantially rectangular cells in a box, comprising three separate predetermined lengths of strip-like material arranged in juxtaposition, constituting two outer end zones and an intermediate zone, said intermediate zone having three plies secured to each other, the plies of the outer end zones being free from each other, and means associated with the intermediate zone to constitute bending lines at the extremities of said zone for the outer plies of the outer end zones, the intermediate three-ply zone and the middle ply of each outer end zone constituting walls intervening between adjacent substantially rectangular cells.

2,105,646
DISPENSER FOR MAYONNAISE AND LIKE MATERIALS
Julius Goldfarb, Los Angeles, Max Goldfarb, Altadena, and Harry W. Hahn, Glendale, Calif.
Application January 10, 1936, Serial No. 58,566
4 Claims. (Cl. 221—67)

1. A dispenser for wet materials comprising a substantially cylindrical stand which is open at its upper end and provided in the front with an opening terminating short of said upper end, an inverted receptacle [illegible] being extended into said stand through said upper end, a dispensing unit supported by said receptacle



and having one end extended through said front opening, projecting portions on the other end of said unit and guide means carried by said stand above the plane of the lower side of said unit and cooperating with said projecting portions to maintain the unit in operative position.

2,105,647
SHOE
Theodore Gutowski, Dayton, Ohio
Application December 3, 1936, Serial No. 114,927
6 Claims. (Cl. 36—30)

1. In a shoe having an outer sole, an inner sole and an upper having its marginal edges extending over the edge of the inner sole and positioned between said soles, the combination comprising a cushion member inserted between said soles and consisting of a layer of sponge rubber superimposed upon a layer of fabric, the rubber being smaller in extent than the fabric, a seam of fasteners securing the fabric to the rubber, the layer of rubber being so proportioned and positioned as to lie wholly within the edges of the upper, and means for securing the fabric beyond the rubber to at least one of said soles.

2,105,648
METHOD OF SURFACING WRAPPED BAKERY PRODUCTS
Louis W. Hess, Chicago, Ill., assignor to The W. E. Long Company, a corporation of Illinois
Application October 2, 1934, Serial No. 746,686
9 Claims. (Cl. 99—178)

2. A method of treating bakery products which comprises wrapping the product in a wrapper pervious to heat rays and having a sealing composition on the overlapping edges which will at a predetermined temperature become tacky but not decompose, vaporize or run, which temperature is destructive of mold spores on the surface of the product, holding the edges of the wrapper in overlapped relation and subjecting the product to said temperature for a period just sufficiently long to destroy mold spores on the surface of the product and to cause said edges to become tacky but not run whereby they will adhere to form a closed package for said product.

2,105,649
LUBRICATOR DRAIN
James J. Hennessy, Montclair, N. J.
Application June 10, 1936, Serial No. 84,402
7 Claims. (Cl. 137—34)

1. Means for draining a reservoir comprising an element having a bore leading downwardly from the reservoir, a plunger slidable in said bore and substantially closing the same, there being a drainage passage leading downwardly from a point spaced laterally from said plunger to an outlet into said bore which is normally closed by the side of said plunger, said plunger being movable above said outlet to uncover said outlet and permit drainage of fluid in said reservoir through said passage to below said plunger.

2,105,650
CORE ORIENTATION APPARATUS
Donald Haring, South Gate, and Clay H. Bowlin, Jr., Covina, Calif., assignors to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware
Application July 14, 1937, Serial No. 153,526
11 Claims. (Cl. 175—183)

1. The method of determining magnetic anisotropy of a core taken from a bore hole comprising rotating the core in proximity to a pick-up coil to produce a varying flux therein, and providing indications of the phase relationship of the voltage induced in the coil to the angular position of the core.

2,105,651
VEHICLE SPRING
Cyrus J. Holland, Chicago, Ill., assignor to Holland Company, a corporation of Illinois
Application October 24, 1934, Serial No. 749,891
6 Claims. (Cl. 267—4)

1. A cap for a vehicle spring comprising a cylindrical cup-shaped metallic member having

thickened bands extending about the wall thereof and having a thickened annular portion on the bottom wall of said member for engaging the

outer turn of a volute spring, said bottom wall being provided with a depressed portion having an axial opening therethrough.

2,105,652
STEEL FOR PERMANENT MAGNETS
Kotaro Honda, Sendai, Japan
No Drawing. Application November 13, 1933, Serial No. 697,874. In Japan May 1, 1933
3 Claims. (Cl. 75—123)

2. A permanent magnet formed of an alloy comprising as essential ingredients 3 to 50% nickel, 1 to 50% titanium and at least 20% of iron, characterized by a coercive force in the neighborhood of 250 gausses or more.

2,105,653
STEEL FOR PERMANENT MAGNETS
Kotaro Honda, Sendai, Japan
No Drawing. Original application November 13, 1933, Serial No. 697,874. Divided and this application July 18, 1934, Serial No. 735,898. In Japan May 1, 1933
4 Claims. (Cl. 75—123)

2. A permanent magnet formed of an alloy containing 3 to 50% of nickel, 3.1 to 50% of titanium, cobalt to the extent of not over 60% and at least 20% iron and a small amount of impurities, characterized by a coercive force in the neighborhood of 250 gausses or more.

2,105,654
NICKEL, TITANIUM, COBALT, IRON, AND COPPER PERMANENT MAGNET
Kotaro Honda, Sendai, Japan
No Drawing. Original applications November 13, 1933, Serial No. 697,874, and July 18, 1934, Serial No. 735,898. Divided and this application June 6, 1935, Serial No. 25,242. In Japan May 1, 1933
6 Claims. (Cl. 75—125)

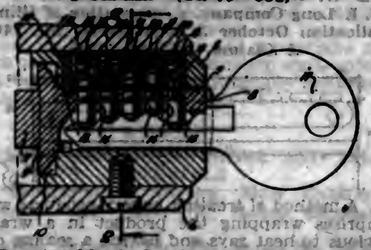
3. A permanent magnet formed of an alloy containing 10.1% to 40% nickel, 3.1% to 40% titanium, 0.01% to 50% cobalt, 0.1% to 20% copper and at least 20% iron and a small amount of impurities, characterized by a coercive force in the neighborhood of 250 gausses or more.

2,105,655
ALLOY OF NICKEL, TITANIUM, COBALT, IRON, AND ALUMINUM FOR PERMANENT MAGNETS
Kotaro Honda, Sendai, Japan
No Drawing. Original applications November 13, 1933, Serial No. 697,874 and July 18, 1934, Serial No. 735,898. Divided and this application June 6, 1935, Serial No. 25,244. In Japan May 1, 1933
3 Claims. (Cl. 75—124)

1. An alloy containing about 10.1% to 40% nickel, 3.1% to 40% titanium, .01% to 50% cobalt, .1% to 20% aluminum, and at least 20% iron and a small amount of impurities, characterized by a coercive force of about 250 gausses or more.

2,105,656
NICKEL, TITANIUM, COBALT, IRON, AND MANGANESE PERMANENT MAGNET
Kotaro Honda, Sendai, Japan
No Drawing. Original applications November 13, 1933, Serial No. 697,874, and July 18, 1934, Serial No. 735,898. Divided and this application June 6, 1935, Serial No. 25,245. In Japan May 1, 1933
6 Claims. (Cl. 75—123)

3. A permanent magnet formed of an alloy containing 10.1% to 40% nickel, 3.1% to 40% titanium, 0.01% to 50% cobalt, .1% to 20% manganese and at least 20% iron and a small amount of impurities, characterized by a coercive force in the neighborhood of 250 gausses or more.



2,105,657
ALLOY FOR PERMANENT MAGNETS
Kotaro Honda, Sendai, Japan
No Drawing. Application November 19, 1935, Serial No. 50,617. In Japan May 1, 1933
6 Claims. (Cl. 75—123)

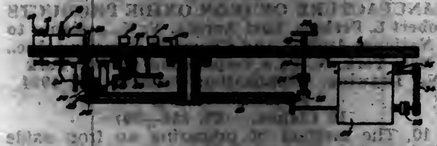
1. A permanent magnet formed of an alloy consisting of 3 to 19.9% nickel, 3 to 10% titanium, 5 to 60% cobalt, molybdenum in an amount less than 6%, and the remainder iron formed by casting the alloy to a desired shape and then annealing it at a temperature of from 500° C. to 900° C, to increase the coercive force thereof to the neighborhood of 250 gausses or more.

2,105,658
PERMANENT MAGNET
Kotaro Honda, Sendai, Japan
No Drawing. Application November 19, 1935, Serial No. 50,618. In Japan May 1, 1933
3 Claims. (Cl. 75—123)

1. A permanent magnet made of an alloy containing 20 to 40% of nickel, 3 to 10% of titanium, 0.5 to 60% of cobalt vanadium in an amount less than 6% and at least 20% iron and a small amount of impurities, characterized by a coercive force in the neighborhood of 250 gausses or more.

2,105,659
LOCK
Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application November 6, 1936, Serial No. 109,417
3 Claims. (Cl. 70—364)

1. In a tumbler lock, a bored casing, a rotatable cylinder mounted in the bore, said casing and cylinder having radial bores adapted to be aligned,



pin type tumblers and drivers respectively in said radial bores, and the radial bores in the casing being substantially oval with their major dimension lengthwise of the lock so as to assure free entrance of the tumbler drivers into said radial bores in the casing regardless of normal endwise shifting of the cylinder in the casing, while retaining a close fit between the tumbler drivers and said radial bores in the casing to guard against any possible rotation of the cylinder except when the junctures of the tumblers and their drivers are in line with the line of parting between the cylinder and casing bore.

2,105,660
MERCHANDISE TICKET PRINTER
Arthur C. Kirshner, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application February 1, 1936, Serial No. 61,921
6 Claims. (Cl. 101—69)

1. In a machine of the class described, the combination of an insertable ticket; a plurality of printing mechanisms; a common operating means therefor; and a plurality of members normally preventing operation of said means, said members adapted to be moved by the insertion of said ticket into the machine in relation to any one of said printing mechanisms to release said operating means for operation.

2,105,661
MULTIPLEX FILM PHONOGRAPH
Fritz Kloepfel, Berlin, Germany, assignor to Klangfilm G. m. b. H., Berlin, Germany, a corporation of Germany
Application November 2, 1936, Serial No. 781,232
In Germany November 2, 1935
1 Claim. (Cl. 179—100.3)

A mixing arrangement for sound film apparatus, comprising a plurality of film spools, a plurality of sound reproducers, a plurality of film feed members for feeding film past said reproducers, and a horizontal supporting member, the said film spools and film feed members being mounted with their axes perpendicular to the said supporting member, the said spools and said film feed members being mounted in the same plane whereby the edges of the films travel parallel to said supporting member, and a single large wheel mounted below said bed for driving said film spools and directly driving the said feed members.

2,105,662
AIR CHAMBER DIESEL ENGINE
Franz Lang, Munich, Germany, assignor, by mesne assignments, to Lanova Corporation, New York, N. Y., a corporation of Delaware
Application December 9, 1935, Serial No. 53,541
In Germany December 12, 1934
3 Claims. (Cl. 123—32)

1. In an injection engine of the character described, a cylinder and a piston operating therein, a combustion chamber inwardly offset with respect to the cylinder and opening downward thereinto, said chamber comprising in plan two lobes and a constriction therebetween defining an element of substantially V-shape in plan projecting and tapering inward of said chamber at one side of said constriction, an air storage chamber opening into said constriction at the other side thereof through a restricted orifice aligned with the vertex of said element, and an injection nozzle at said one side of said constriction disposed to inject fuel across said combustion chamber toward said orifice, said nozzle being disposed in proximity to one side of said inwardly projecting element with its tip adjacent the base of said element, the latter acting to split the hot blast fluid stream ejected from said air storage chamber through said orifice toward said element and to deflect the portions of the split stream laterally into said lobes and away from said nozzle, thereby shielding the latter from the hot blast ejected through said orifice.

2,105,663
BLADE HAFT
Ernest L. Laverty, Toledo, Ohio
Application October 2, 1935, Serial No. 43,396
2 Claims. (Cl. 30—162)

2. A blade haft having portions formed to substantially define a chamber, the chamber having an opening, a blade supporting element slidably movable in the chamber and outwardly through the opening, a slot formed in the chamber wall, one edge of the slot located in substantially the same plane as a portion of the slidably movable blade holder, whereby angular move-

ment of the blade holder element with respect to the haft is prevented by abutting of the slot edge and extending portion of the blade holder element when the holder element is extending through the opening and is located in a position of use.

2,105,664
CATALYTIC HYDROGENATION OF HYDROAROMATIC CARBOXYLIC ACIDS AND THEIR ESTERS

Wilbur A. Lazier, Marshallton, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 21, 1934, Serial No. 754,124. In Great Britain April 17, 1930

14 Claims. (Cl. 260—153)

1. The process for the production of homocyclic hydroaromatic alcohols which comprises catalytically hydrogenating the carbonyl group in the acyl radical of a compound selected from the class consisting of homocyclic hydroaromatic carboxylic acids and their esters, at a pressure of at least 10 atmospheres and at a temperature in excess of 200° C.

2,105,665
CHROMIUM SULPHOMOLYBDATE CATALYST

Wilbur Arthur Lazier, New Castle County, Del., and John Victor Vaughen, Lakewood, Ohio, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 20, 1935, Serial No. 41,274

6 Claims. (Cl. 23—226)

1. The process for the production of a hydrogenation catalyst, which comprises mixing an aqueous solution of ammonium molybdate with an aqueous solution of chromium nitrate and thereby precipitating chromium molybdate, passing hydrogen sulphide through the resulting mixture until the precipitate turns from apple-green to dark brown, adding acid to the mixture until the mother liquor becomes colorless, filtering and washing and drying the precipitate.

2,105,666
SYNCHRONOUS MOTOR

Edgar D. Lilja, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill.

Continuation of application Serial No. 651,515, January 12, 1933. This application April 6, 1935, Serial No. 15,042

26 Claims. (Cl. 172—278)

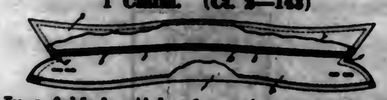
7. A synchronous alternating current motor combining a stator having at least two pole pieces defining a rotor recess and which are polarized oppositely when the stator is energized, shading means enclosing a side portion of one of said pole pieces, shading means including a short-circuited winding enclosing a side portion of said other pole piece and having a resistance substantially greater than said first mentioned means for producing an unsymmetrical distribution of shaded and unshaded fluxes about the rotor recess, and a rotor in said recess exposed to the faces of said poles and having synchronous and also induction motor characteristics.

2,105,667
TYPESETTING DEVICE

Jay Will Lyons, New York, N. Y.

Application January 15, 1937, Serial No. 120,659

7 Claims. (Cl. 276—37)



1. A type setting device of the character described comprising an elongated tubular barrel member, a suitably arranged longitudinal slot traversing the full length of said tubular barrel member, and a suitably arranged moving shield member for widening and narrowing said longitudinal slot, substantially as described.

2,105,668
COLLAR

Joseph Lyons, St. Louis, Mo., assignor to New Era Shirt Company, St. Louis, Mo., a corporation of Missouri

Application February 19, 1937, Serial No. 126,657

1 Claim. (Cl. 2—143)

In a folded article of wearing apparel consisting of a cape portion and a band portion and having an outer ply and an inner ply of material and an interlining between said plies, the improvement comprising a narrow strip of thermoplastic fabric extending along one of said portions the full length of the article adjacent and defining the fold line and uniting and stiffening the outer ply and the interlining along said strip, the other portion and the remaining part of the portion to which it is applied being free from such attaching and stiffening material.

2,105,669
PLASTIC WORKING

John Parsons, Bainbridge, N. Y., assignor to American Plastics Corporation, a corporation of New York

No Drawing. Application June 22, 1935, Serial No. 27,267

9 Claims. (Cl. 18—47.5)

1. The method of making articles out of casein, comprising preparing an extruded rod of uncured casein, cooling said rod to room temperature, seasoning said rod by refrigeration at a temperature substantially below room temperature under non-drying conditions, cutting said seasoned and uncured rod into articles of the desired shape, and curing the articles thus formed.

2,105,670
MANUFACTURE OF IRON OXIDE PRODUCTS

Robert L. Perkins, East Aurora, N. Y., assignor to National Aniline and Chemical Company, Inc., New York, N. Y., a corporation of New York

No Drawing. Application January 30, 1934, Serial No. 707,545

10 Claims. (Cl. 134—59)

10. The method of preparing an iron oxide pigment from a black iron oxide residue, which comprises mixing the iron oxide residue with a member of the group consisting of sulfuric acid and ammonium sulfate and calcining the resultant product in admixture with a chloride of the general formula ACl_x, wherein A represents NH_4, Fe, Ca, Ba, or Sr, and x represents the valence of A.

2,105,671
MICROSCOPE

Siegfried Reusch, Wetzlar, Germany, assignor to Ernst Leitz, G. m. b. H., Wetzlar, Germany

Application March 10, 1933, Serial No. 660,439

In Germany March 23, 1932

5 Claims. (Cl. 88—40)

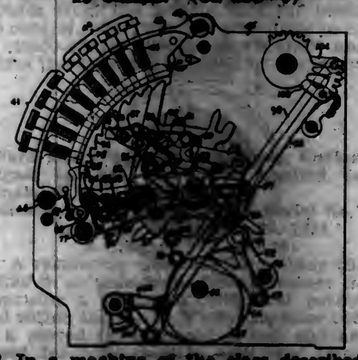
2. A device for providing complementary color illumination for the purpose set forth comprising a condenser, an anisotropic crystal plate, a light analyzing plate above the same consisting of a central portion and an outer ring portion, and a light polarizing plate below the crystal plate, the direction of polarization in the polarizing plate being parallel to the direction of polarization of one of the said portions of the analyzer plate and at right angles to the direction of polarization of the other portion of the analyzer plate and a mounting connected to the condenser for containing and supporting the said three plates in mutually optical operative relation to each other and to the condenser.

2,105,672
RUST PREVENTING COMPOSITION AND METHOD OF RUST PREVENTION

Robert Edward Hunter, Collingdale, Pa.

No Drawing. Application June 25, 1937, Serial No. 151,332. In Canada June 25, 1937

2 Claims. (Cl. 148—6.5)



1. A rust preventing composition for forming non-ionizing iron salts upon application to iron or steel articles, comprising about 27 grams of ammonium sulfocyanate, about 75 cubic centimeters of methanol, approximately 200 cubic centimeters of gasoline and about 125 cubic centimeters of butyl alcohol.

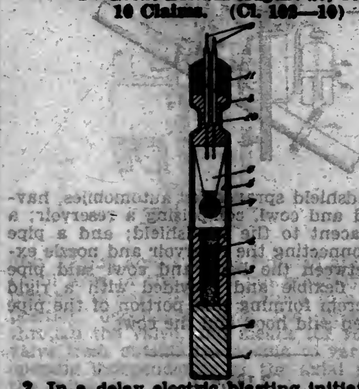
2,105,673
CASH REGISTER

Bernis M. Shipley, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Application July 20, 1935, Serial No. 32,046

13 Claims. (Cl. 235—9)

13. In a machine of the class described, the combination of a single bank of keys; a plurality of latches always located in a single plane and cooperable with certain of the keys in said bank of keys; and a driving element having means thereon to drive said latches different distances as controlled by the keys.



2,105,674
DELAY ACTION DETONATOR AND FUSE AND DELAY COMPOSITION FOR USE THEREIN

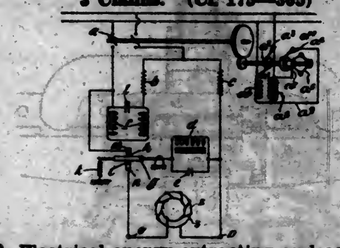
Charles Edwin Sesson, Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

Application August 27, 1936, Serial No. 98,255

In Great Britain August 29, 1935

10 Claims. (Cl. 102—10)

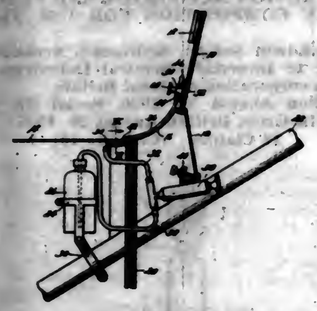
2. In a delay electric blasting initiator a substantially gasless delay ignition composition comprising zinc, antimony, and potassium permanganate.



2,105,675
MEANS FOR DELIVERING AN INTERMITTENT ELECTRICAL CURRENT

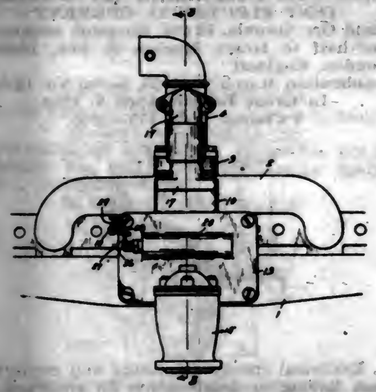
Donald Orr Sprosie, Ilford, England, assignor of one-half to Henry Hughes & Son, Limited, London, England

Application March 29, 1935, Serial No. 13,652



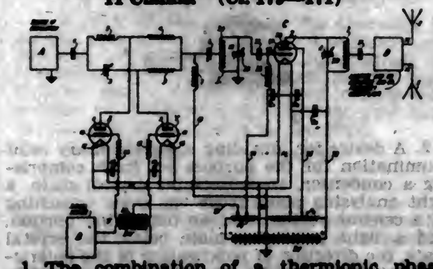
In Great Britain April 6, 1934

3 Claims. (Cl. 175—365)



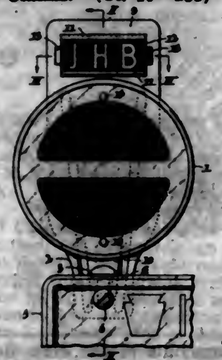
3. Electrical energy extracting and converting means having in combination an electrical inductance shunted by an electrical condenser to form an oscillatory electrical circuit, a direct current supply, a mechanically actuated switch for connecting said circuit intermittently to said supply, two output terminals, a conductor connecting one side of said circuit to one of said output terminals, a stationary contact connected to the other output terminal, a movable contact connected to the other side of said circuit, and actuating means for said movable contact to connect the same to said stationary contact at the first voltage peak of the condenser voltage oscillation.

2,105,676
WINDSHIELD SPRAYER
Clarence E. Stow, Kansas City, Mo., assignor to Westco Products, Inc., a corporation of Missouri
Application August 24, 1936, Serial No. 97,566
6 Claims. (Cl. 26—40.5)



1. A windshield sprayer for automobiles, having a hood and cowl, comprising a reservoir; a nozzle adjacent to the windshield; and a pipe line interconnecting the reservoir and nozzle extending between the hood and cowl said pipe line being flexible and provided with a rigid section therein forming that portion of the pipe line between said hood and the cowl.

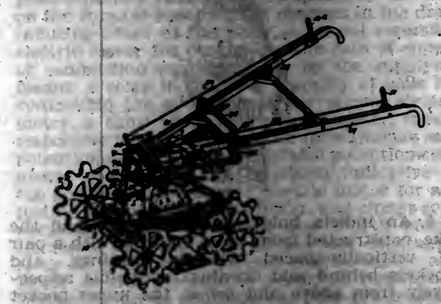
2,105,677
VAPORIZING APPARATUS FOR INTERNAL COMBUSTION ENGINES
Ray J. Stumbo, Salem, Oreg., assignor of one-third to Robin Reed, Salem, Oreg.
Application June 3, 1935, Serial No. 24,597
7 Claims. (Cl. 123—133)



1. In a device for transforming oil into an explosive vapor or gas for operating gas engines, the combination with an exhaust pipe or manifold of a gas engine having an opening therein, of a member seated over said opening and forming a section of the wall of said manifold, said member having internal circuitous passageways therein for the flow of oil to be vaporized, a shielding member adjustable to shielding positions and non-shielding positions between the first member and the interior of the manifold, and thermostat means controlling the position of the shielding member.

2,105,678
MODULATION
George L. Usselman, Port Jefferson, Long Island, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 30, 1932, Serial No. 635,508
Renewed March 4, 1936
11 Claims. (Cl. 179—171)

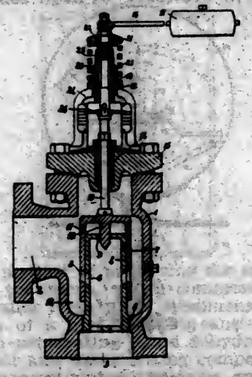
1. The combination of a thermionic phase modulator tube having an input electrode, a source of high frequency oscillations, a circuit tuned to the frequency of the oscillations of said high frequency source connected to said input electrode, and a phase splitting circuit, means for applying oscillations to said phase splitting circuit from said source of high frequency oscillations and from said phase splitting circuit to said tuned circuit connected with the input electrode of said thermionic modulator tube, said means and tuned circuit comprising means for matching the impedance between said phase splitting circuit and said tube, said phase splitting circuit having two branches of different electrical characteristics, of a push-pull amplitude modulator comprising a pair of thermionic devices each having an input electrode and an output electrode, a circuit connecting the input electrodes of said devices to a source of modulating potentials, and circuits connecting the output electrodes of said devices to the branches of said phase splitting circuit, and a frequency multiplier coupled to the output electrodes of said modulator.



2,105,679
EMBLEM OR SIGN
Fred Weindel, Jr., Allentown, Pa., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa., a corporation of Maryland
Application May 27, 1936, Serial No. 81,976
2 Claims. (Cl. 40—125)

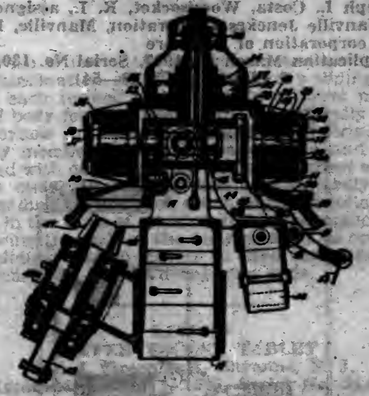
1. The combination with a sign or emblem of the type described of a unitary backing support

having projections therebeyond in opposed directions, one of the projections embodying an embossment and an attachment slot, the other projection having parallel slideways for the reception of movable display elements, and relatively-intervening spring risers at the ends of said slideways for engagement by the outer confronting edges of the movable display elements.



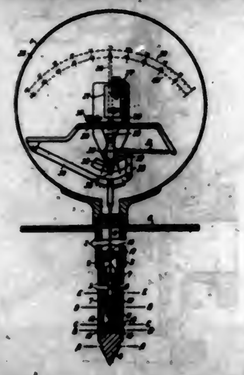
2,105,680
TRACTOR
Samuel Weiss, Portland, Oreg., assignor to Vaughan Motor Co., Inc., Portland, Oreg., a corporation of Oregon
Application October 15, 1936, Serial No. 45,165
12 Claims. (Cl. 180—17)

4. In a motor driven tractor provided with handle bars, the combination of a power shaft, a pair of parallel clutch shafts, each connected to one of the driving wheels of the tractor, gears on the power shaft, loose gears carried by the clutch shafts and driven by said gears on said power shaft, clutch mechanisms for engaging said loose gears selectively with the clutch shafts and thus operatively connecting the clutch shafts to the power shaft, each of said clutch mechanisms comprising axially slidable disks carried by said loose gears, cooperating clutch disks longitudinally slidable on said clutch shafts and interposed between the first mentioned disks, a member longitudinally slidable on the clutch shaft adapted, by imposing pressure, to cause the engagement of said cooperating disks with the disks carried by said loose gears, a 2-arm V-shaped rockable operating lever pivoted on the clutch shaft, and a control collar slidable over said lever for operating the same, and means operable from the handle bars for positioning said control collar, whereby selectively to connect the clutch shafts with the power shaft and thus control the direction of travel of the tractor.



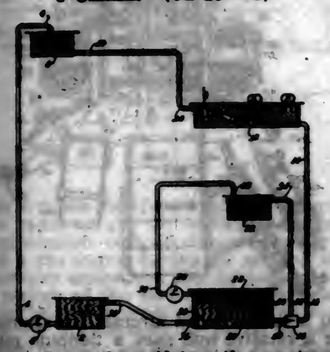
2,105,681
VALVE
Clifford Harry Armstrong, London, England, assignor to Cepex Regulators Limited, London, England
Application September 10, 1935, Serial No. 39,978
In France September 28, 1934
5 Claims. (Cl. 50—39)

1. A regulating valve for controlling the flow of fluid in accordance with the pressure thereof, comprising a casing, a cylindrical ported seat fixed within the casing, a valve member comprising a ported sleeve closed at one end and arranged for both rotative and axial movement upon said seat to vary the port opening, said seat having an opening at one end and said sleeve having a guide pin entering and closely fitting said opening, means for opposing axial movement of the valve member means affording constant access for fluid from the inlet side of the valve to opposed areas of the closed end of the sleeve to provide a substantial degree of axial balance, fluid from the other side of the valve



only having access to the exposed and relatively small area of the guide pin whereby the valve member is normally maintained in a regulating position dependent upon the pressure drop through the valve, and means for rotating the valve from outside the casing to vary the port opening independently of the axial position of the valve.

2,105,682
AIRCRAFT HAVING ROTATIVE SUSTAINING WINGS
James Allan Jamieson Bennett, Geniata, Newton Mearns, and Frederick Leighton Hedgess, Clarkston, Scotland, assignors to Autogiro Company of America, Willow Grove, Pa., a corporation of Delaware
Application September 13, 1935, Serial No. 40,266
In Great Britain September 17, 1934
23 Claims. (Cl. 244—18)

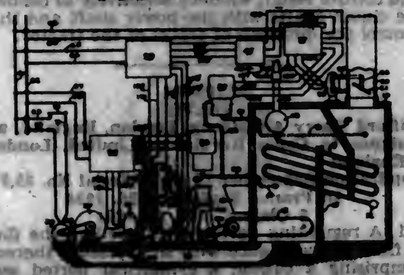


2. In a multi-bladed aircraft sustaining rotor having a rotative hub part, a flapping pivot assembly for a plurality of blades, the assembly including a pivot device rotatively mounted on the hub part, and the blades being rotatively mounted on said device.

2,105,693
APPARATUS FOR DETERMINING THE MOISTURE CONTENT OF SUBSTANCES
Charles Lawrence Burdick, London, England
Application May 12, 1936, Serial No. 79,954
In Great Britain May 25, 1935
4 Claims. (Cl. 73—51)

1. An apparatus for determining the moisture content of substances having interstices, comprising a tubular member having a pointed end adapted to penetrate said substances to said interstices, a hygroscopic element within said tubular member, apertures in said tubular member, indicating means carried at the end of said tubular member remote from said pointed end and operatively interconnected with said hygroscopic element, a partition extending across the interior of said tubular member between said hygroscopic element and said indicating means and means for connecting the portion of the interior of said tubular member between said partition and said pointed end to a suction pump.

2,105,694
TREATMENT OF ACID SETTING BATHS USED IN THE MANUFACTURE OF CELLULOSE PRODUCTS FROM VISCOSE
Joseph L. Costa, Woonsocket, R. I., assignor to Manville Jenckes Corporation, Manville, R. I., a corporation of Delaware
Application March 12, 1937, Serial No. 130,796
9 Claims. (Cl. 18—54)



1. A process of purifying the contaminated acid setting solution resulting from the decomposition of viscose to form cellulose products such as thread, ribbon, sheets or tubing, which comprises mixing with the setting solution an oily liquid substantially not soluble in the setting solution for which sulphur and other colloidal decomposition products produced in the decomposition of viscose have a preferential affinity, and thereafter separating the oily liquid from the setting solution.

2,105,695
INDICIA HOLDER FOR TELEPHONES
George D. Cox, Philadelphia, Pa., assignor to Williams and Morris Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 20, 1936, Serial No. 111,768
20 Claims. (Cl. 40—10)

4. An indicia holder for telephones and the like, constructed from sheet material with a pair of vertically-spaced window openings, and pockets behind said openings accessible respectively from above and below, the upper pocket having pairs of horizontal ledges at opposite sides thereof and at different vertical levels defining subdivisions of different widths whereof the narrowest is at the bottom of said upper pocket and the widest at the top, for receiving cards of like widths one behind another with the bottom edges of the cards stopped by the respective pairs of ledges and with indicia bearing portions of such cards exposed at corresponding different levels at the upper window opening, and the lower pocket being proportioned to receive a single card for exposure of an indicia bearing portion of the latter at the lower window.

2,105,696
COMBUSTION CONTROL SYSTEM
Lewis L. Cunningham, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application July 15, 1935, Serial No. 31,462
1 Claim. (Cl. 236—15)

In a combustion control system for a furnace having means for feeding fuel to the fuel bed of the furnace, means for supplying combustion supporting air and a stack for inducing draft through the furnace, the combination of, means responsive to the load on the furnace for controlling the rate of fuel supply to the fuel bed of the furnace, a damper associated with the stack for controlling the draft through the furnace, a reversible electric motor for positioning said damper, a relay including a plurality of coils for controlling the operation of the electric motor, a first adjustable potentiometer, means responsive to variations in the load on the furnace for adjusting said potentiometer, a second adjustable potentiometer, means responsive to variations in the draft through the furnace for adjusting the second potentiometer, circuit connections between the potentiometers and the coils of the relay to position the damper in accordance with the load on the furnace and the draft through the furnace for maintaining the draft through the furnace at predetermined values as determined by the load on the furnace regardless of changes in the draft inducing effect of the stack, a second reversible electric motor for controlling the rate of supply of combustion supporting air by the supplying means, a relay including a plurality of coils for controlling the operation of the second electric motor, a third adjustable potentiometer, means responsive to over-fire pressure for adjusting said potentiometer, a fourth adjustable potentiometer, means responsive to a condition indicative of the position of the second electric motor for adjusting the fourth potentiometer, and circuit connections between the third and fourth potentiometers and the coils of the last mentioned relay to position the second electric motor and hence control the rate of supply of combustion supporting air to maintain the over-fire pressure substantially constant regardless of changes in the load on the furnace, changes in the condition of the fuel bed or changes in the draft through the furnace.

2,105,697
LATHE ATTACHMENT
Guy O. Knudsen, Austin, Minn.
Substitute for abandoned application Serial No. 636,804, July 17, 1932. This application February 6, 1937, Serial No. 124,538
3 Claims. (Cl. 82—34)

1. In a lathe provided with a bed, guide means on the bed, a head stock at one end of said bed and a tool carriage movable along said guide means; a work supporting attachment for supporting work at right angles to said guide means and laterally of said bed in a position for engagement by a tool supported by said carriage, said attachment comprising a base, means carried by said base engageable with said guide means to support said base above said guide means and in adjusted position relative to said head, clamping means engaging the base and the bed from below the bed for holding said supporting means against movement on said guide means, a shaft rotatably carried by said base and having an end portion thereof projecting laterally of said bed and having means at said projecting end to which the work may be secured, a gear on said shaft, a second gear meshing with said first gear, and an arbor secured to said second gear and engageable with said head for rotation thereby.

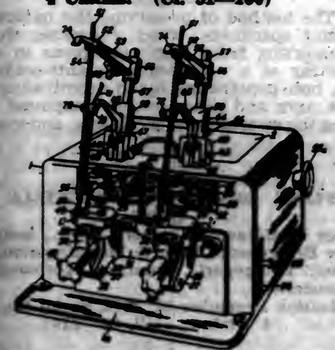
2,105,698
METHOD OF PRESERVING THE NATURAL COLOR IN PLANT SPECIMENS
George B. Fessenden, Mount Vernon, N. Y.
Application April 17, 1936, Serial No. 74,884
2 Claims. (Cl. 35—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of preserving the natural color in plant specimens, which comprises the steps of immersing fresh plant specimens in a bath, consisting of a non-bleaching anti-oxidant, an inert, non-penetrating liquid dehydrating agent, and a color and tissue setting compound, thence drying the impregnated specimens, and mounting.

2,105,699
COUPLING DEVICE FOR FLEXIBLE MEMBERS
Carney Freddino, Bridgeport, Conn., assignor to The Bridgeport Chain & Manufacturing Company, Bridgeport, Conn., a corporation of Connecticut
Application December 21, 1936, Serial No. 116,560
4 Claims. (Cl. 24—116)

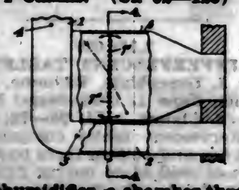
1. An article of the character described having in combination, a body member and a sliding collar, each formed of a flat strip of sheet metal, said body member being provided centrally with a keyhole slot open at one side of the strip, said body member being a U-shaped strip and provided with cord-engaging elements formed at the free ends of said strip and bent inwardly and extending toward each other, and said collar being in the form of a hollow four-sided prism embracing the ends of the body member to operate in sliding relation thereto to effect clamping engagement of said cord-engaging ends.

2,105,800
EFFERVESCENT TABLET
Carl J. Greenblatt, Bayonne, N. J.
Application June 1, 1935, Serial No. 24,484
4 Claims. (Cl. 99—78)



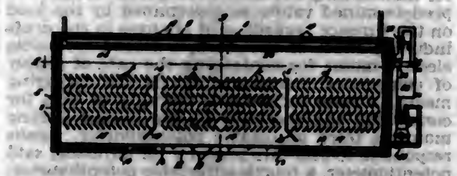
1. An effervescent tablet comprising a disc, having flat top and bottom faces parallel to each other, each of said faces having projections extending therefrom, said disc having an opening extending through its axial center and having

other openings extending therethrough, said tablet adapted to be dropped into a fluid and thereby



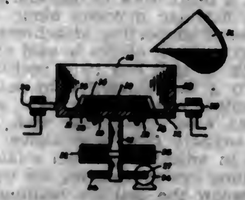
automatically positioned to effervesce and dissolve, the openings in the tablet functioning as passages for the fluid to flow therethrough.

2,105,691
LENS GRINDING AND POLISHING MACHINE
Lowell L. Hesebin, Columbus, Ohio
Application April 13, 1936, Serial No. 74,665
4 Claims. (Cl. 51—160)



1. A lens grinding and polishing machine comprising a lap holder and a lens holder, a frame for carrying one of said holders, said frame being rockable both longitudinally and transversely of the machine so as to produce a longitudinal and transverse movement of the lens holder and lap holder relative to each other, means for rocking the frame longitudinally of the machine, means for rocking the frame transversely of the machine, and means for bodily moving the frame in one of said directions to vary the movement of the lap and lens relative to each other, said last-named means comprising an eccentric upon which the frame is supported and about which the frame rocks in the direction which it is moved by said eccentric.

2,105,692
AIR CONDITIONING APPARATUS
Clarence C. Hemicke, Palisade, N. J., assignor to Auditorium Conditioning Corporation, a corporation of New Jersey
Application May 17, 1935, Serial No. 21,971
4 Claims. (Cl. 62—129)

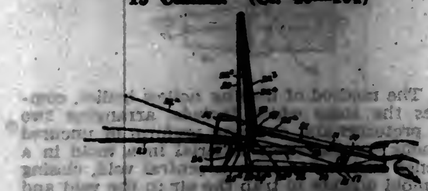


4. In a dehumidifier, a chamber through which air is passed, a plurality of heat exchangers arranged in alinement across said chamber and being adapted together to span the cross-sectional area of said chamber, a pair of pipes for circulating cooling medium through each heat exchanger, said pipes being journalled in the walls of said chamber and supporting said heat exchangers for rotation to vary the cooling effect of the heat exchanger on the air passing through said chamber.

2,105,693
WHISKY AGING APPARATUS
Lester L. Jones and Frank Mertellare, Denver, Colo.
Application April 18, 1934, Serial No. 721,217
13 Claims. (Cl. 99—277.1)

1. Whisky aging apparatus comprising a tank having closely spaced charred oak members arranged therein to baffle vertical flow of whisky in the tank, heating means at the bottom of the tank for producing upward movement of the whisky in a heated condition through and in reactive contact with said charred oak members, cooling means at the top of the tank producing condensation of vapors emanating from the upwardly moved whisky, and exterior pump means having its intake at the top of the tank for drawing off vapors and condensate therein, said pump having its discharge connected to the lower part of the tank for returning the condensate to the lower part of the body of the whisky and for assisting in the circulation of the whisky in the tank, said pump means including a positively cooled condenser whereby the said vapors are positively liquefied before return to the main body of the whisky.

2,105,694
METHOD OF MAKING MATRICES
Alfred W. Klemp, Detroit, Mich., assignor, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application June 1, 1936, Serial No. 82,871
5 Claims. (Cl. 22—216)

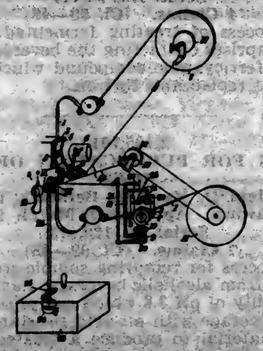


1. The method of casting a matrix in which an abrasive gear may be molded, which comprises heating a metal master gear to a temperature of approximately 250 degrees Fahrenheit, pouring a molten alloy consisting principally of zinc into a mold and over the master gear while slowly rotating the mold at a speed sufficient to work the molten alloy around the teeth of the master.

2,105,695
SELF-CLOSING CAP FOR CONTAINERS
Gaston L. Latour, San Francisco, Calif.
Application August 3, 1936, Serial No. 93,947
3 Claims. (Cl. 221—60)

1. In a device of the type described, a neck for a container having a bore therein with two shoulders disposed at the end of the bore and on opposite sides thereof, a spring closure for closing the bore, and a hollow washer mounted on the under surface of the closure, said neck having side walls extending from the shoulders and constituting guides for the sides of the closure, the container contents when forced against the closure for opening it also bearing against the inner wall of the hollow washer for causing the washer to seal the spaces between the closure and the side walls.

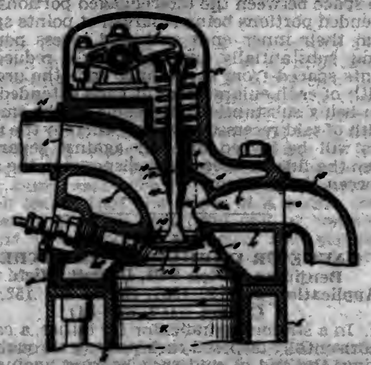
2,105,696
LEAFED ARTICLE
George S. Lewis, Cleveland, Ohio
Application September 9, 1936, Serial No. 99,937
15 Claims. (Cl. 46—104)



1. Apparatus of the type described comprising a base, a swinging leaf having a free edge and an opposite heel edge, a swinging anchoring member hingedly connecting the base with the leaf at a point on the latter between said edges and adjacent to the heel edge, and means connected with the heel edge of said leaf for swinging the latter.

2,105,697
ADHESIVE AND COATING COMPOSITION
Alexander D. Macdonald, Malden, Mass., assignor to B. B. Chemical Co., Boston, Mass., a corporation of Massachusetts
No Drawing. Application September 5, 1934, Serial No. 742,873
7 Claims. (Cl. 134—36)

1. A composition comprising polymerized haloprene dissolved in a cyclic ether of the glycols.



2,105,698
APPARATUS FOR PROJECTING PICTURE OR SOUND FILMS
Hans Friedrich Nitsche, Dessau, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application May 14, 1936, Serial No. 79,757
In Germany May 18, 1935
3 Claims. (Cl. 88—16.2)

1. An apparatus for projecting picture and sound films comprising in combination, a winding-off drum, means for braking said winding-off drum, means for altering the pressure of said braking means on said winding-off drum, a winding-on drum, means for driving said winding-on drum, means for altering the draft of said winding-on drum, a picture window and a gate, means for pressing said picture window against said gate, and means for altering the pressure of said picture window against said gate, an objective for focusing the picture, means

for adjusting said objective to sharp focusing, a sound drum for scanning a sound record, pressure rollers for pressing a sound film against said sound drum, means for altering the pressure of said pressure rollers, an optical sound-projection system, means for sharp adjustment of said system, and means for controlling simultaneously all the altering and adjusting means to adapt the devices controlled by the latter to the particular kind of film fed through the apparatus.

2,105,699
MONOVALVE CYLINDER HEAD CONSTRUCTION
Walter M. Pate, New Orleans, La., assignor of one-half to Thomas F. Boyle, New Orleans, La.
Application January 11, 1937, Serial No. 120,962
2 Claims. (Cl. 123—79)

1. In a mono-valve cylinder head construction, a combustion chamber having a valved port, an exhaust passageway extending coaxially from the port and delivering the exhaust to an outlet adjacent that part of the cylinder head remote from the cylinder, and an air supply passageway opening into the exhaust passageway adjacent the

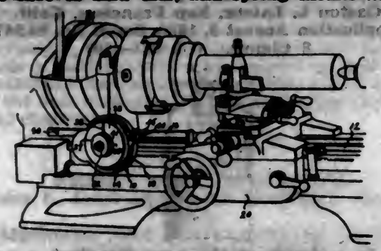
port, said air supply passageway being constructed and disposed to deliver air directly into the port.

2,105,700
PROCESS FOR PURIFICATION OF BEVERAGES
William D. Ramage, Berkeley, Calif.
No Drawing. Application July 13, 1936, Serial No. 90,441
4 Claims. (Cl. 99—48)

1. A process of treating fermented beverages which comprises contacting the beverage with an insoluble ferricyanide compound which contains an element replaceable by iron.

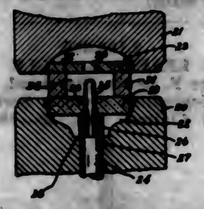
2,105,701
PROCESS FOR PURIFICATION OF BEVERAGES
William D. Ramage, Berkeley, Calif.
No Drawing. Application March 6, 1937, Serial No. 129,473
7 Claims. (Cl. 99—48)

2. A process for removing soluble iron by base exchange from alcoholic beverages having a minimum acidity of pH 3.8 which comprises contacting the beverage with an acid resistant base exchange material to produce a treated beverage containing less than six parts per million of iron.



2,105,702
FLEXIBLE SHAFT COUPLING
Herman J. Schelms, Berkeley, Calif.
Application August 6, 1934, Serial No. 738,594
3 Claims. (Cl. 64—14)

3. A coupling of the character described comprising a pair of annular axially aligned members having on adjacent sides thereof alternate extended and recessed portions, the extended portions of each member being inserted in but spaced from the sides of the recessed portions of the other member, and a filler of flexible material in the space between the interengaged portions, said extended portions being enlarged at points spaced from their inner ends and said recess portions being substantially correspondingly reduced at points spaced from their inner ends the greatest width of each enlargement of each extended portion being substantially the same as the smallest width of said recessed portions, whereby the members will be locked together against separation when the filler is operatively disposed in the space between the portions.



2,105,703
GAUGE OR INDICATOR FOR LATHES
Benjamin Milton Self, Detroit, Mich.
Application July 9, 1937, Serial No. 152,692
4 Claims. (Cl. 82—34)

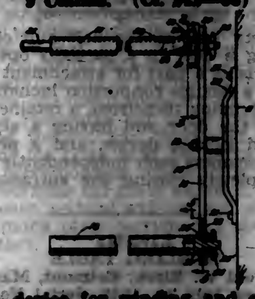
1. In a stationary indicator for lathes, a casing, a horizontally disposed rack passing through said casing, the end of said rack bearing against the movable carriage of the lathe, a train of gears actuated by said rack, a rotary dial actuated by said train of gears and responsive to the movement of said rack, friction means to retain said dial in operative connection with said train of gears, and means to disengage said dial from said train of gears, a pointer rotatably seated upon said dial and adapted to be selectively set upon the face of said dial, and spring means acting

upon said rack to thrust said rack into a positive contact with the movable tool carriage.

2,105,704
METHOD OF MAKING HOLLOW BODIES
Leo C. Shippy, Lockport, N. Y., and Wilmar Oscar Gebhart, Anderson, Ind., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 28, 1933, Serial No. 686,758
7 Claims. (Cl. 18—39)

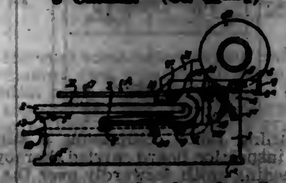
1. The method of making hollow bodies, comprises the steps which include, arranging two disc preforms and one ring preform of uncured phenolic condensation material in a mold in a manner such as to form a central void, closing the mold quickly to trap the air in the void and then subjecting the preforms to heat and pressure within the mold to cause the material to flow along the walls of the mold and to keep the material away from the center of the body, and releasing the air from the body whereby the body is loosened from the mold.

2,105,705
HINGE
Roy Arthur Spotholz, St. Louis, Mo.
Application February 25, 1937, Serial No. 127,848
2 Claims. (Cl. 16—125)



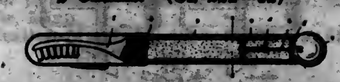
1. A hinge in which one leaf is composed of two integral portions formed at right angles with each other, and in which the other leaf is formed by two portions at right angles to each other, the portion of the latter leaf adjacent the pintle of the hinge having an extension outwardly formed therein, the plane of which is substantially parallel to the portion of the leaf adjacent the pintle of the hinge.

2,105,706
FASTENER
David R. Stamy, Huntington Woods, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application February 16, 1935, Serial No. 6,791
4 Claims. (Cl. 85—5)



1. A fastener of the class described comprising, in combination, a resilient head portion, a neck portion integrally formed with said head portion and disposed in substantially right angular relationship at one edge of said head portion, and an attaching portion integrally formed with said neck portion comprising a pair of spaced arms projecting from respective opposite edge portions of said neck portion normally overlapping said head portion and having their lower surfaces tapered in the direction of their free ends, said arms being bendable into attaching position by relative separation of the inner faces thereof into substantially the plane of the neck portion.

2,105,707
DEVICE FOR WINDING AND CUTTING CELLOPHANE
Louis G. Stampfli, Cincinnati, Ohio
Application July 20, 1936, Serial No. 91,044
9 Claims. (Cl. 242—56)



1. In a device for winding and cutting web material, the combination of, a rotatable winding reel comprising a plurality of arms held in spaced relationship thereon, a cutting knife, and means for mounting the knife for longitudinal movement on one of the arms and with its cutting edge projecting beyond the surface of the arm.

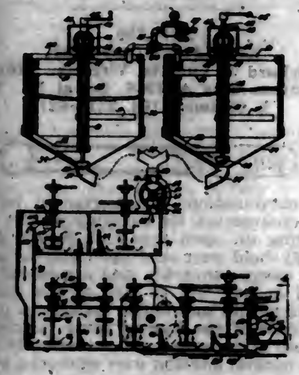
2,105,708
APPARATUS FOR USE IN MAKING DRAWINGS
Harry J. Trefzger, Ferguson, Mo.
Application June 6, 1935, Serial No. 25,259
Renewed June 21, 1937
5 Claims. (Cl. 41—4)

5. An apparatus of the class described comprising a base element, a frame pivotally supported by said base element, an air-moving apparatus mounted on said frame, a drawing-receiving element supported by said base element and positioned so that air is directed by said air-moving apparatus toward the surface of said drawing-receiving element, a straight-edge hingedly attached to and extended from said frame, means mounted on said frame for holding a drawing in place on said drawing-receiving element, and means including a pivotally supported lever for subjecting said frame to pivotal movement.

2,105,709
RESILIENT CLOSURE
Richard J. Violette, Virginia, Minn.
Application May 4, 1936, Serial No. 77,743
2 Claims. (Cl. 221—82)

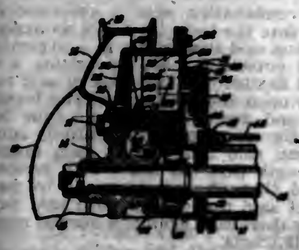
1. In combination, an instrument handle of hollow construction for carrying powder therein and having an open free end, means laterally removably held over said open end to normally act as a closure therefor, and a resilient teather attached at one end to said means and at its other end within said hollow handle to permit of the contents of the handle being poured therefrom when said means has been laterally removed from its normal position over said open end.

2,105,710
CASING FOR SUPPOSITORIES
Josef Wedel, Hamburg, Germany
Application March 27, 1936, Serial No. 71,669
In Germany March 28, 1935
1 Claim. (Cl. 128—264)



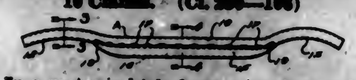
The combination with a suppository for insertion into the body tracts; of an applicator for protecting said suppository in a hygienic manner against outside contact comprising a conically tapered flexible tube, the base of said tube being entirely open and the opposite end being entirely closed and depressed into said tube to form a holder for said suppository entirely surrounding the same, said tube having such diameter and such length that the finger of a person may be inserted through said open end to contact the walls of said pocket and push said suppository entirely therefrom against a normal resistance of the body tracts.

2,105,711
METHOD FOR PRODUCING LAYERS OF DISTENDED FIBROUS MATERIAL
George C. Weatherred, Chicago, Ill., assignor to Cellufoam Corporation, Chicago, Ill., a corporation of Delaware
Application January 22, 1936, Serial No. 60,315
3 Claims. (Cl. 92—39)



1. The method of producing a coherent layer of distended fibrous material of substantially uni-

form width and thickness, which consists in maintaining contiguous pools of liquid mix having their surfaces at progressively lower levels, supplying measured quantities of fiber and liquid including a foaming agent to the first pool of the series in the amounts required to provide a mix of the desired consistency, constantly maintaining individual agitation in each of the pools to the extent required to cause foaming of the mixture and to separate and maintain the fibers in distended relation within the foamy mass, dis-

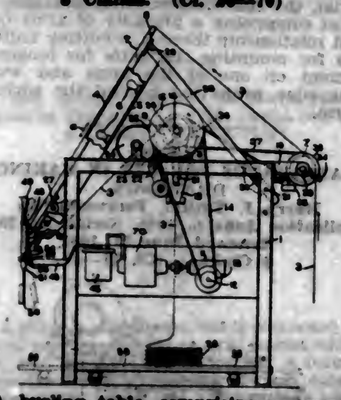


charging from each pool by overflow to the surface of the next pool in the form of a broad even layer and discharging from the last pool of the series in the form of a broad even continuously horizontally advancing layer of uniform thickness, confining the sides of the advancing layer to maintain a uniform width for the layer, and extracting liquid from the layer during its advancement to the extent necessary to make the layer self-sustaining and capable of manipulation.

2,105,712
HYDRAULIC BRAKE
Robert L. Welch and John T. Sheup, Canton, Ohio
Application July 18, 1936, Serial No. 91,372
9 Claims. (Cl. 188—90)

1. A device of the character described including two members located laterally of each other, one of the members being mounted for rotation relative to the other member, a fluid chamber between said members, diametrically opposed high points upon one member projecting into said chamber, vanes carried by the other member slidable into said chamber, and operating means to project said vanes laterally into said chamber, said operating means formed to permit retraction of the vanes as they approach and pass said high points.

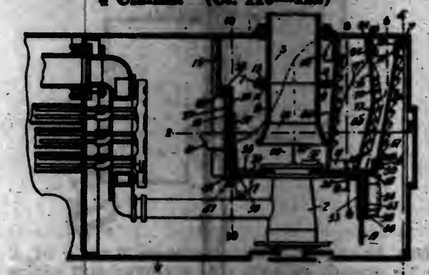
2,105,713
FRAME
Albert R. Werickhoff, Lake Orion, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 23, 1936, Serial No. 12,577
10 Claims. (Cl. 280—106)



6. In a motor vehicle frame structure, a hollow frame member, and a reinforcing member for stiffening said frame member, said reinforcing member being welded to said frame member and extending downwardly therefrom, said reinforcing member having a web portion spaced from said frame member intermediate the length thereof, said web portion being deflected toward and into engagement with said frame member at one end thereof.

2,105,714
BOLT AND CHAIN LOCK
Frank R. West, Detroit, Mich.
Application December 30, 1933, Serial No. 704,675
Renewed June 16, 1937
13 Claims. (Cl. 292—264)

1. A safety lock of the bolt and chain type for securing a door in a partially opened position, comprising a part for attachment to a door casing and a flexible connection including a lock member extending therefrom, a retainer member secured to the door and having a slot for receiving said locking device, and a plurality of impeding members each independently and normally completely closing the entrance to said slot.



2,105,715
BURLING TABLE
Harold W. Birch, Belmont, Mass.
Application July 24, 1936, Serial No. 92,319
8 Claims. (Cl. 26—70)

1. A burling table comprising a supporting frame, an inspection board carried thereby, a feed roll for feeding cloth forwardly over the inspection board, a guide roll over which the cloth passes as it travels to the inspection board, means to

rotate the feed roll either forwardly or backwardly, and a one-way driving connection between the feed roll and the guide roll which is operative when the feed roll is rotated backwardly and is non-operative when the feed roll rotates forwardly.

2,105,716
LOCOMOTIVE DRAFT CHAMBER
George Samuel Beyler, Peterborough, Ontario, Canada
Application November 2, 1936, Serial No. 108,736
4 Claims. (Cl. 110—122)

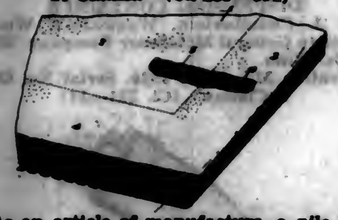
1. The combination with the locomotive body and the stack, of a vertical wall located at the rear of the stack and having a rectangular central opening extending upward from its lower edge to a point intermediate of its height, horizontal wall portions extending forward from such lower edge at each side of the opening, a vertical plate extending between and overlapping the sides of such opening, a horizontal plate extending between and overlapping the horizontal wall portions, a removable bar plate overlying each overlapping vertical and horizontal plate portion means for tying each horizontal wall portion, the corresponding overlapping plate portion and overlying bar plate together, and means for tying each vertical wall portion, corresponding overlapping plate portion and overlying bar plate together.

2,105,717
INTERNAL COMBUSTION ENGINE
Walter Scott Burn, Hartlepool, England, assignor to The National Gas and Oil Engine Company, Limited, Alfred Blakeston Rolmford, Ashton-under-Lyne, England, and Walter Scott Burn, Hartlepool, England
Application November 13, 1935, Serial No. 49,632
In Great Britain November 13, 1934
6 Claims. (Cl. 123—65)

4. An internal combustion engine comprising a cylinder having two separate and complete circumferential rows of ports at different levels below the top and an inner top shaped to present an approximately double concave surface to the combustion space, the upper row of ports nearer to the cylinder top being tangentially and upwardly inclined so as to cause entering air streams to flow uniformly upward and around in helical paths against the inner wall of the cylinder toward the top and the inner top surfacing causing it to then reverse and flow downward again centrally of the cylinder inside the area of initial flow of the entering air streams, thereby stabilizing the flow of the scavenging air and permitting the same ports to be utilized for supercharging, and a valve controlling the air entry through said upper ports by a timing arrangement opening the same to air admission only after the lower row has been opened to gas exhaust; the said lower row of ports being also upwardly and somewhat tangentially inclined to the cylinder axis.

2,105,718
DISPENSING CONTAINER
Alfred J. Chamberlain, Wauwatosa, Wis., assignor to General Metalware Company, Minneapolis, Minn.
Application March 16, 1936, Serial No. 68,981
3 Claims. (Cl. 221—11)

1. A dispensing receptacle having a relatively large pouring spout, said pouring spout being externally threaded, a smaller spout having a sleeve portion, opposed inner and outer surfaces of said sleeve being threaded internally and externally respectively and said inner threads being adapted to be screwed onto the external threads of the pouring spout, said smaller spout having a restricted pouring nipple, and a removable cap for said nipple having a threaded formation interengageable with the external threads of the sleeve portion of the smaller spout.

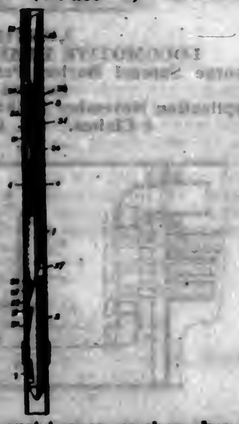


2,105,719
PORTABLE ELECTRIC LIGHT
Cap B. Collins, Washington, D. C.
Application October 8, 1935, Serial No. 44,111
3 Claims. (Cl. 171—76)

1. A portable flashlight, comprising relatively rotatable tubular casing sections, a generator comprising spaced end plates to fit within one casing section, bars holding said end plates in fixed spaced relation, pole pieces secured to and supported by said end plates and having radially projecting poles with current generating windings thereon, a shaft journalled between the end plates, a spider on said shaft between said end plates, bar magnets carried by said spider and projecting oppositely from said spider into cooperative relation with said radial poles, means for securing said generator unit in said casing section, a gear unit in said casing section and including an end element in driving relation to said shaft, a winding shaft journalled in said

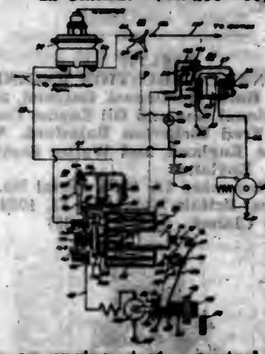
gear unit, a spring barrel rotatable about said winding shaft and having a driven relation to the first gear element of said gear unit, a spring connected between said winding shaft and spring barrel and a winding connection between the second casing section and said winding shaft.

2,105,720
FLOOR COVERING
Wellesley B. Cooper, Amsterdam, N. Y., assignor to Bigelow-Sanford Carpet Co., Inc., Thompsonville, Conn., a corporation of Massachusetts
Application January 26, 1937, Serial No. 122,454
10 Claims. (Cl. 139—391)



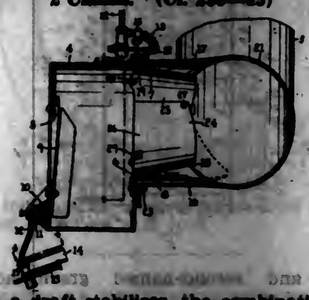
1. As an article of manufacture, a pile fabric floor covering comprising a backing fabric of warp and weft yarns and pile tuft yarns interwoven therewith to form an uninterrupted pile tread surface, certain areas of which surface are normally exposed to more wear than other areas, said first-mentioned areas being provided with heavier yarns than said other areas so that the tread surface of said first-mentioned areas is more highly resistant to abrasive wear tending to shorten the pile, than the tread surface of said other areas, whereby to enhance the wearing qualities of said areas exposed to greatest wear.

2,105,721
WHIPSTOCK
Cecil C. Cutrer and Joseph Leroy Broussard, Sulphur, La., assignors to George J. Barrett and Sesthene Robichaux, Houston, Tex.
Application June 4, 1935, Serial No. 24,960
12 Claims. (Cl. 255—1)



1. A device as set forth comprising a body insertable in a well opening having an inclined longitudinal face on one side and provided with a guide channel, a slide in said channel and a sleeve secured to said slide and loosely engaging about the stem of a drill to hold the drill in spaced relation to the inclined face.

2,105,722
WELL-BORING APPARATUS
George J. Barrett and Sesthene Robichaux, Houston, Tex.
Application November 20, 1935, Serial No. 50,729
7 Claims. (Cl. 255—1)



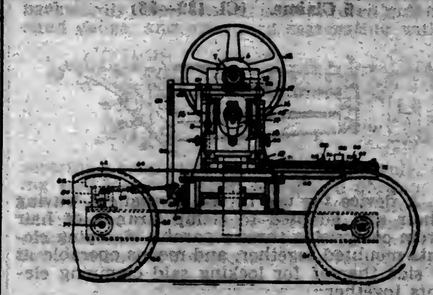
1. A whipstock comprising an anchor shaped to be lowered into a well, means for fixing the anchor to the wall of the well, a deflector shaped to be lowered into the well and adapted to rest on the anchor, means for attaching the deflector to the anchor, said deflector having a sloping face and a tool guide movably mounted on said face.

2,105,723
STARTER CONTROL SYSTEM
John B. Dyer, Pendleton, and William E. Brown, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 14, 1934, Serial No. 735,102
12 Claims. (Cl. 290—36)

12. In an engine starter control system, the combination which comprises, a storage battery, an engine driven generator for charging the battery, a cut out relay associated therewith, an electric starting motor for starting the engine, and a control circuit for connecting the battery with said starting motor, said control circuit including a relay magnet having a winding, a switch operated by the cut-out relay, a connection extending from said winding to said last-named switch and from said switch directly to the battery whereby when said last-named switch is closed said winding is connected directly with the battery, and a second switch for controlling the action of the relay magnet winding.

2,105,724
DRAFT STABILIZER
Edward A. Field and Edward A. Field, Jr., Chicago, Ill.
Application July 26, 1935, Serial No. 33,243
2 Claims. (Cl. 236—45)

2. In a draft stabilizer, the combination with a smoke flue having a side opening therein, of a housing having an inlet opening and with an outlet opening provided with a cylindrical rearwardly projecting flange, a cylindrical collar conformed to fit against the side of the smoke flue at the outside of the opening thereof, the housing flange being rotatably adjustable on said collar to permit the vertical positioning of the housing, means for securing the housing and collar to said smoke flue with the housing in its adjusted position, a rearwardly tapered discharge flue for said housing projecting into said opening in said smoke flue, said discharge flue comprising a pair of segmental complementary sections pivotally connected at their inner ends, their outer ends being connected to said housing, and a counterbalanced gate for said inlet opening.



2,105,725
BANDAGE BINDER CLIP
Ernest Freiberg, Brooklyn, N. Y.
Application August 26, 1937, Serial No. 160,941
2 Claims. (Cl. 24—95)

1. A bandage binder clip comprising a frame, the bars of which are of semi-circular cross-section to form a groove, and a plate bendably connected to a bar of said frame, a plurality of teats formed with said plate adapted to press the material of an elastic band into the groove of said frame when said plate is bent upon said band, and a means to secure said binder to a bandage.

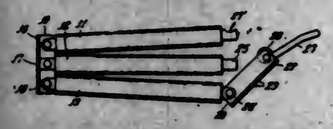
2,105,726
STRIP CUTTING AND APPLYING MACHINE
Nester Fries, Fort Wayne, Ind., assignor to Flashfold Bar Corporation, Fort Wayne, Ind.
Application July 22, 1933, Serial No. 681,903
2 Claims. (Cl. 93—36)

1. In a strip cutting and applying machine, a reciprocating die, means to feed a tape to the die and simultaneously apply an adhesive substance to one side of the tape, a flexible belt having depressible upstanding stops at selected intervals of its length for engaging material to be treated, means to drive the belt intermittently for carrying the material into and from registration with the die and a knife cooperating with the die and independently reciprocable for cutting a strip from the tape and applying it to the said material.

2,105,727
INSECTICIDES
Charles R. Gnadinger, Minneapolis, Minn.
No Drawing. Original application January 6, 1933, Serial No. 650,505. Divided and this application September 8, 1936, Serial No. 99,817
2 Claims. (Cl. 167—14)

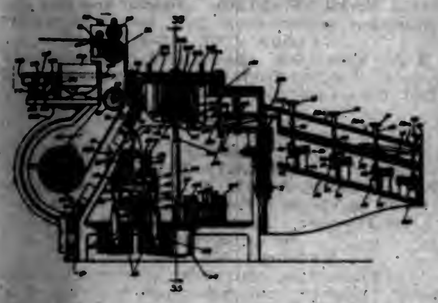
2. An insecticide containing a polyselenide of a metal selected from the group consisting of alkali metals and alkaline earth metals.

2,105,728
ADHESIVE TAPE
Leon W. Geller, Astoria, N. Y., assignor of two-thirds to Nelson J. Funarow, New York, N. Y.
No Drawing. Application July 8, 1936, Serial No. 89,985
9 Claims. (Cl. 154—43)



1. Adhesive tape comprising a sheet of transparent cellulosic material joined to a sheet of transparent gelatinous material, and an adhesive applied to the outer surface of said sheet of gelatinous material.

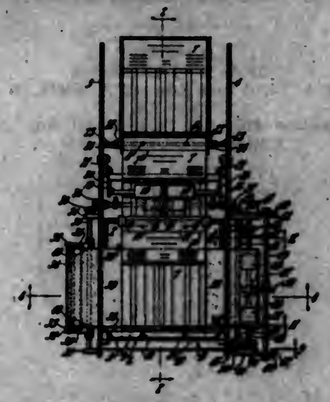
2,105,729
HAIR CURLING DEVICE
Abraham Goodman, Brooklyn, N. Y., assignor to Delaware Company, Inc., a corporation of Delaware
Application July 1, 1936, Serial No. 88,981
2 Claims. (Cl. 132—41)



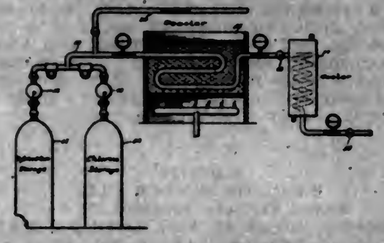
1. In a hair curling device, a curler comprising a tubular form having an open outer end, a wire loop pivotally connected to the form, a rigid cylindrical roller mounted on the bight of the loop, said roller being adapted to engage the opening in the end of the form and having beveled ends that contact with the wall of the end of the form, when the loop is swung into latched position, to self-center the roller in the opening.

2,105,720
HAIR WAVING APPLIANCE
Max Gottlieb, Chicago, Ill.
Application March 2, 1936, Serial No. 66,685
5 Claims. (Cl. 132—33)

1. A device for use in the permanent waving of hair and adapted to clamp strands of hair therein comprising three separable clamping elements mounted together, and means operable at one side thereof for locking said clamping elements together.



2,105,731
COMPOSING MACHINE
Roy V. Graves and Axel J. Rehnman, Minneapolis, Minn., assignors to The Graves Process, Inc., Minneapolis, Minn., a corporation of Delaware
Application January 22, 1931, Serial No. 510,644
Renewed December 2, 1937
16 Claims. (Cl. 197—12)



4. In a machine of the character described, a type wheel provided with character units, a movable carriage for supporting material for receiving imprints of said character units, electric means for actuating said type wheel and for moving said carriage, a keyboard provided with a plurality of character keys corresponding to said character units, electric circuits connecting said character keys and said electric means, switches adapted to be closed by depression of said character keys for completing the circuits to said electric means, and electric means associated with each of said keys to maintain said switches closed for a predetermined time interval.

2,105,732
FLATBED TYPEWRITING MACHINE
Edward Hano and James Mason Prentice, Holyoke, Mass.; said Prentice assignor to said Hano
Application August 24, 1935, Serial No. 37,727
15 Claims. (Cl. 197—126)

13. In combination, in a manifold machine, a fixed writing plate, means for locating manifold forms and transfer sheets on the writing plate, gravity-actuated means for imparting a tension to the manifold forms, gravity-actuated means for imparting a tension to the transfer sheets, and operative connecting means between said first-named and second-named gravity-actuated means.

2,105,733
CHLORINATION PROCESS
Henry B. Hass and Earl T. Mollee, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
Application June 8, 1935, Serial No. 25,633
12 Claims. (Cl. 260—163)

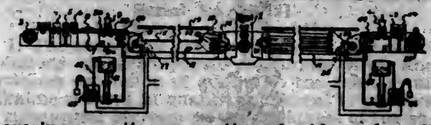
1. The process of substitutively chlorinating compounds of the class consisting of saturated hydrocarbons of not to exceed sixteen carbon atoms of the paraffin and naphthene series and their partially chlorinated derivatives, which consists in subjecting a mixture of chlorine and the material to be chlorinated under a pressure in excess of ten atmospheres to a temperature which is capable of causing a reaction between them which is at least 90% complete within one minute in the absence of light and a catalyst.

2,105,734
METAL COIL
Clarence S. Henderson, Batavia, Ill., assignor to Acme Steel Company, Chicago, Ill., a corporation of Illinois
Application November 11, 1935, Serial No. 49,246
1 Claim. (Cl. 206—59)

A coil comprising a wooden core made up of a plurality of thin laminations secured together and each extending substantially throughout the circumference of the core, each of said laminations having its ends offset with respect to the ends of an adjacent lamination, a short lamination interposed between said laminations and overlapping the ends of one of said laminations,

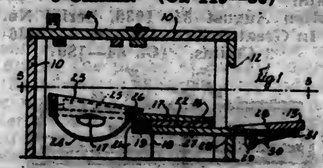
and a length of metal strapping wound in superimposed layers on said core.

2,105,735
PRESSURE RELEASING APPARATUS
James P. Hodge, Amarillo, Tex., assignor to General Mills, Inc., Minneapolis, Minn., a corporation of Delaware
Application October 16, 1935, Serial No. 44,440
14 Claims. (Cl. 169—71)



1. A chamber having an opening in a wall thereof, means normally closing said opening and comprising a movable frame, means for locking the frame in closed position, and a panel movably supported in said frame and having an operative connection with the locking means and adapted, upon abnormal pressure in the chamber, to actuate said locking means and effect the release of the frame.

2,105,736
PROCESS AND MECHANISM FOR ROLLING ENDLESS LENGTHS OF METAL IN REVERSIBLE MILLS
Edwin B. Hudson, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
Application August 20, 1934, Serial No. 741,133
10 Claims. (Cl. 80—39)

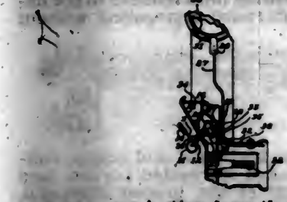


1. In combination, a rolling device, means for providing an endless supply of metal thereto, means for segregating a portion of said supply on either side of said rolling mechanism, and means for taking up and paying out said segregated portion on either side of said rolling mechanism.

10. A process for the reversible rolling of strip metal without end wastage which comprises providing an endless supply of metal, segregating for rolling purposes a portion of said endless supply, rolling said segregated portion forwardly and backwardly under tension until reduced to the desired gauge, and afterward segregating without

severing a contiguous portion of said supply, rolling said last mentioned segregated portion, and continuing the steps of the process aforesaid, whereby to produce an endless, uniform rolled supply of metal, from which parts may be severed for use after the completion of the rolling thereof.

2,105,737
NEST BOX FOR HENS
Oscar H. Hunsby, Waco, Tex., assignor of one-half to Marrero Cross, Waco, Tex.
Application July 5, 1935, Serial No. 29,737
6 Claims. (Cl. 119—50)



1. A nest box for hens, comprising, a casing having an opening in a vertical side wall thereof for the passage of a hen to and from the interior of the casing, an outwardly opening door hingedly mounted at its bottom edge portion for closing said casing opening, a removable hanger mounted on transversely disposed supports at its opposite sides whereby to rock within the casing, a nest located on the rear end portion of the hanger, said hanger being constructed with a platform forward of its pivotal axis and the forward portion of the hanger being normally in a lowered position with the rear portion carrying the nest raised, but when in either the normal or its tilted operated position with the forward portion raised and rear portion lowered the hanger being nearly in a horizontal position, and means cooperatively connecting the forward portion of the hanger and the door whereby the door is automatically opened when the forward portion of the hanger is swung downwardly and the door thereby provides a substantially horizontal external platform at the casing opening whereby a hen can conveniently enter the casing and move upon the nest, the weight of the hen on the nest tipping the hanger whereby to close the door and holding it closed until the hen leaves the nest and transfers its weight to the portion of the hanger forward of its pivotal axis, thereby depressing the forward portion of the hanger and automatically opening the door.

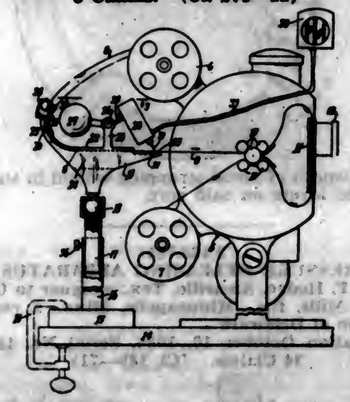
2,105,738
TIRE PRESSURE INDICATOR
George F. Hutchings, St. Louis, Mo.
Application January 14, 1935, Serial No. 1,717
7 Claims. (Cl. 73—31)

1. In a device of the character described, the combination of a smooth and rounded head in contact with an inner tube, a member bearing the head and having a projection therefrom at

substantially a right-angle thereto, a spring normally pressing the said member and thereby the said head into contact with the inner tube, a rockable member with which the said projection

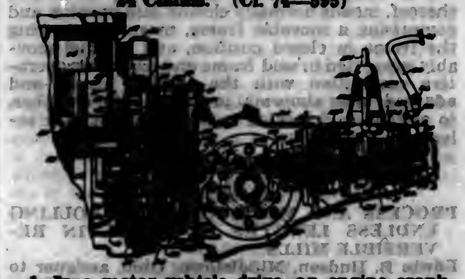
engages, a projection from the said rockable member, a wire connected with the said projection, and a scale with which the said wire is adapted to register.

2,105,739
PIANOFORTE
Mordecai Victor Jacobs and Herbert Spencer Bird, London, England, assignors to Mordecai Victor Jacobs and Michael Kemble, London, England
Application August 31, 1936, Serial No. 98,709
In Great Britain January 22, 1936
3 Claims. (Cl. 84—186)



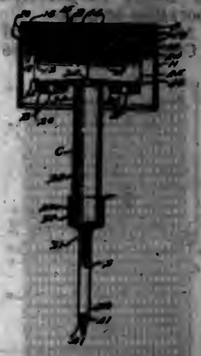
1. A keyboard lid for a miniature piano having a horizontal portion, a ledge carried by said horizontal portion, and a vertical front wall portion terminating in a bottom edge, the bottom edge being provided with elongated recesses, and a strip pivotally secured in each recess and movable from a position parallel with the edge to a position perpendicular to the edge so that when the lid is raised, each strip will extend upwardly beyond the vertical front wall, to constitute the back of a music desk of which the said ledge constitutes the base.

2,105,740
AUTOMOBILE COLLAPSIBLE BERTH
James Knudsen, Chicago, Ill.
Application November 27, 1935, Serial No. 51,728
7 Claims. (Cl. 155—7)



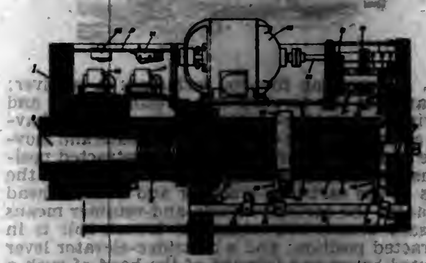
1. In an automobile body, an articulated rear seat assembly including a plurality of angularly arranged sections hingedly connected in series, and means slidably supporting one of said sections in the body whereby said sections may be disposed by a forward movement into a horizontally aligned position to form a bed, said sections including a rear section normally concealed in the rear of the body hinged at an upper portion to an adjoining section of said assembly and extending rearwardly downwardly therefrom behind said adjoining section, said rear section when concealed being supported in an inclined position with its lower end rearmost and pivotally fastened to the automobile body so as to define a storage space between it and said adjoining section.

2,105,741
SOUND DEVICE
Jacob M. Kuhlik, Brooklyn, N. Y., assignor to Hattie B. Kuhlik, Kings County, N. Y.
Application June 30, 1936, Serial No. 88,140
3 Claims. (Cl. 274—11)



1. A sound unit arranged for use with a motion picture projector comprising a support, a guide head mounted for universal movement on said support and said guide head having a passage therethrough for a film, a sound pick-up pivotally mounted in said unit and engaging the sound track of the film as the latter moves through said passage and a counterbalance on the pick-up for controlling the pressure of said pick-up on the film.

2,105,742
MOTOR VEHICLE
Roger K. Lee, Highland Park, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application February 13, 1936, Serial No. 63,696
24 Claims. (Cl. 74—595)



1. In a motor vehicle drive, an engine crankshaft and supporting structure therefor, means for journalling said crankshaft adjacent its opposite ends in said supporting structure, a clutch having driving and driven clutching members, a shaft adapted to be driven by said crankshaft through said clutch, said driving clutch member being drivingly connected to said crankshaft and being disposed intermediate said crankshaft journals, said driven clutch member being drivingly connected to said driven shaft.

2,105,743
PISTON, AND PISTON AND CONNECTING ROD ASSEMBLY
Roger K. Lee, Highland Park, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application May 19, 1934, Serial No. 726,687
2 Claims. (Cl. 309—16)

1. In a piston having head and skirt portions, a piston pin receiving boss having a portion thereof extending through said head portion, a cylindrical securing member threaded on said extended boss portion, the outer face of said head portion having a cylindrical recess closely receiving said securing member, and a locking pin engaging the contacting cylindrical surfaces of said extended portion and said recess, a portion of the wall of said recess overhanging the adjacent end of said pin, said securing member and said pin presenting in conjunction with said head portion a substantially uninterrupted flat face therefor.

2,105,744
TOOL SLIDE
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Peoria, Ill.
Application June 1, 1937, Serial No. 145,745
17 Claims. (Cl. 82—34)

1. A tool slide comprising a housing, a tool-holding quill slidably mounted in the housing for axial movement, a rotary driving member, a pair of magnetic clutches arranged in connection with said member to separately cooperate in locking relation therewith, a driving connection between one clutch and the quill to move the same axially, a similar connection between the other clutch and the quill to also move the same axially in the same direction but at a different speed with the same speed of the driving member, and means to selectively energize the clutches.

2,105,745
NONSTICKY MOLASSES AND SIRUP LIQUID PRODUCTS, AND METHOD FOR MAKING THE SAME
Lawrence W. Lewis, Beverly Hills, Calif.
No Drawing. Application September 9, 1935, Serial No. 39,731
11 Claims. (Cl. 99—141)

1. The process of treating concentrated water solutions of carbohydrate-containing sirup and molasses consisting of adding to the solution an alkaline reagent in quantity sufficient to produce a substantial decrease in the stickiness of the solution but insufficient to produce thickening or solidification.

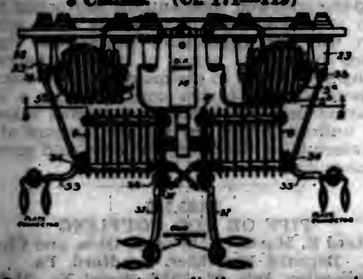
2,105,746
PLAYING BALL
Alexander D. Macdonald, Malden, Mass., assignor to B. B. Chemical Co., Boston, Mass., a corporation of Massachusetts
No Drawing. Application September 5, 1934 Serial No. 742,872
3 Claims. (Cl. 154—47)

1. In the manufacture of golf balls, the method of securing a thermoplastic cover to a rubber thread-wound core which comprises applying to the core and substantially uniformly a solution of polymerized chloroprene in a solvent which will not appreciably attack the rubber threads during the period of contact therewith, causing the solvent to dissipate after the solution has been applied to the core, whereby a layer of polymerized chloroprene is deposited substantially uniformly over the surface portions of the core, assembling the cover and core, and molding the assemblage.

2,105,747
PIPE OR ROD COUPLING
Stoddard B. Martin, Lakewood, Ohio, and Charles Bernard Waechter, Bradford, Pa.
Application July 22, 1936, Serial No. 91,926
5 Claims. (Cl. 285—196)

4. A coupling comprising a sleeve for accommodating pipe or rod ends, packing means abutting opposite ends of the sleeve, collar members adapted to overlie the packing and adjacent sleeve ends and having inclined walls, and individually operable key members having inclined walls for engagement with the respective inclined walls of said collar members, whereby said packing is subject to compressive forces when said key is moved circumferentially of said sleeve.

2,105,748
HYDRAULIC BRAKE LOCKOUT
Roy C. McCarty, Seattle, Wash., assignor of two-ninths to Earl J. MacAllister, three-ninths to John H. Von Harten, both of Seattle, Wash., and two-ninths to Ralph G. Hale, Spokane, Wash.
Application May 27, 1936, Serial No. 82,078
4 Claims. (Cl. 303—24)

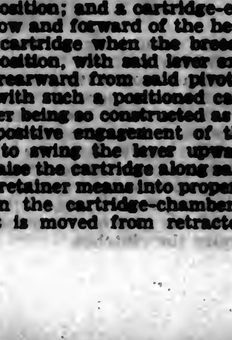


1. In a device of the kind described, a body element providing an upright surgeway for a pressure transmitting fluid, valve means movable upwardly within said surgeway by the surge flow of

said fluid, stop means for said valve element in the lower portion of the surgeway, and a plurality of valve seat means in the side wall of the upper portion of the surgeway each adapted to be

closed singly by said valve means when the fluid surge passing upwardly through said surgeway and outwardly through the valve seat means exceeds a predetermined amount.

2,105,749
DIATHERMY APPARATUS
Arthur H. McClelland, Los Angeles, Calif., assignor to Edgar J. Rose, Los Angeles, Calif.
Application May 6, 1936, Serial No. 78,186
3 Claims. (Cl. 171—119)

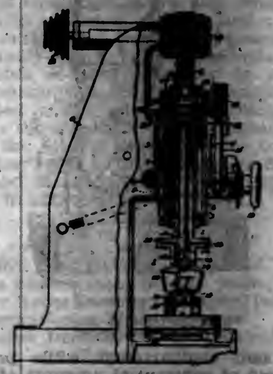


1. In a vacuum tube diathermy apparatus, a band-switching generating and output circuit assembly which comprises: tank inductance means including a plurality of coil sections provided with means for short circuiting any desired portion of such sections to vary the effective inductance of said inductance means, said inductance means being divided into two electrically balanced halves, each half including a major coil section and a minor coil section in non-inductive relation to one another, said major coil sections of said two halves being disposed in spaced relation along a common magnetic axis; and a pickup circuit including a pickup coil disposed in inductive relation to each of said minor coil sections.

2,105,750
ANNEALING COVER
Edward N. Millan, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
Application October 9, 1935, Serial No. 44,190
14 Claims. (Cl. 263—49)

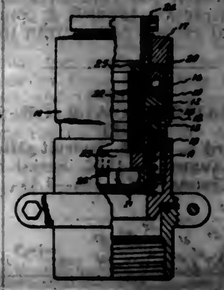
1. A composite box annealing cover comprising a cast steel base member providing side and end walls, and a roof arch of relatively light material welded thereto.

2,105,751
CONDENSER DEVICE FOR REFRIGERATORS
Roland H. Money, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application May 28, 1936, Serial No. 82,299
6 Claims. (Cl. 257—36)



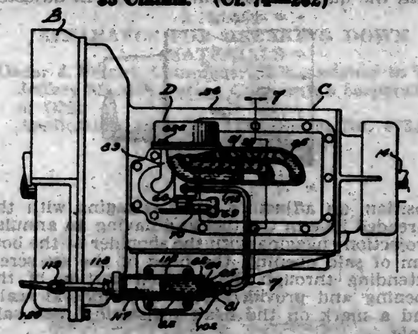
1. A condenser for refrigeration units formed of a plurality of sections, each comprising tubular elements, a bendable tubular element between the sections, and side members for the sections, said side members having connections having locking means for holding the side members in extended and angular relation with each other, as desired.

2,105,752
REPEATING FIREARM
Harold F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Incorporated, New Haven, Conn., a corporation of Connecticut
Application October 1, 1935, Serial No. 43,999
5 Claims. (Cl. 42—17)



1. A repeating firearm including: a receiver; a barrel at the forward end of said receiver and having a cartridge-chamber; a breech-bolt having cartridge-guide-and-retainer means and movable in the receiver to closed and retracted positions; means for locating a cartridge below the axis of the cartridge-chamber and with its head adjacent the cartridge-guide-and-retainer means of said breech-bolt when the breech-bolt is in retracted position; and a cartridge-elevator lever pivoted below and forward of the head of such a positioned cartridge when the breech-bolt is in retracted position, with said lever extending upward and rearward from said pivot and in engagement with such a positioned cartridge, said pivoted lever being so constructed as to be forced by direct positive engagement of the cartridge therewith, to swing the lever upward and forward and raise the cartridge along said cartridge-guide-and-retainer means into proper position for insertion in the cartridge-chamber when said breech-bolt is moved from retracted to closed position.

2,105,753
MACHINE FOR BORING CONICAL SURFACES
Herman A. Ortegren, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan
Application November 29, 1935, Serial No. 52,313
9 Claims. (Cl. 51—31)



1. A machine for the purpose described having a head, means for rotating said head, and means for holding work with the axis of a conical surface of the work coincident with the axis of rotation of said head; said machine including a plurality of hones positioned about the axis of rotation of said head in a longitudinal inclined position relative to said axis, and crank members pivotally mounted at one end for turning movement on said head relative thereto and upon the free ends of which crank members said hones are mounted with their work engaging surfaces parallel with said conical surface of the work.

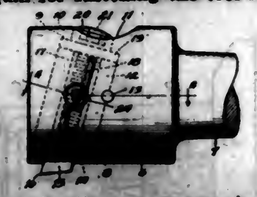
2,105,754
WELL DRILLING HEAD
Herbert C. Otis, Dallas, Tex.
Application January 21, 1937, Serial No. 121,553
14 Claims. (Cl. 255—1)

1. The combination with a rotatable drilling head member having amplified recesses in its bore, of a driving medium for said member engaging in the bore of the member and provided with a bore for receiving a driving element which is slidable through said medium, and projections depending from said medium and freely engaging in the amplified recesses of the rotatable member, whereby said medium may be freely engaged in said member over a comparatively wide amplitude of angular variation.

2,105,755
POWER TRANSMISSION
Herbert F. Patterson, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application January 25, 1934, Serial No. 708,225
25 Claims. (Cl. 74—262)

1. In a power transmission, a plurality of speed ratio controlling devices, manually controlled selector means including a common selector element for said controlling devices, power operating means for actuating said controlling devices selectively in response to actuation of said selector means, and manually operating power applying means for selectively actuating said controlling devices independently of the first said power operating means.

2,105,756
RELAY FOR AUTOMOBILE LIGHTING CIRCUITS
Frank D. Rehmer, Midland, Pa., assignor to Bocji Corporation, Pittsburgh, Pa., a corporation of Delaware
Application August 12, 1935, Serial No. 35,902
15 Claims. (Cl. 200—87)



1. A relay having a fixed magnetizable core, a fixed magnetizable base member on which the core is carried, a winding about the core, an armature at the end of the core opposite the base member formed of magnetizable material, a spring outside the winding tending to separate the armature and base member the armature and the base member substantially enclosing the core and winding, and a contact arranged for cooperation with the armature when the relay is de-energized.

2,105,757
BORING TOOL
Benjamin F. Rosenberg, Chicago, Ill., assignor to Scully-Jones & Company, Chicago, Ill., a corporation of Illinois
Application March 12, 1937, Serial No. 130,695
2 Claims. (Cl. 77—58)

1. A boring tool comprising a boring bar having a head at one end thereof provided with a transverse opening extending from the end of the head diagonally toward the opposite side and having a reduced portion opening through the opposite side and providing a shoulder, a split quill

fitting in said opening, a pin engaging with the head and quill for holding the quill in position, said quill having a central bore of angular cross section, a cutting tool fitting in said bore and having a threaded hole at the inner end thereof, a set screw mounted in the head and engaging with the quill for fastening the tool in adjusted

position, an adjusting screw engaging with the threaded hole in the tool and having an annular projection engaging with the shoulder at the bottom of said opening, the head of the set screw extending through the reduced portion of the opening and provided with a peripheral scale, and a mark on the head registering with said scale.

2,105,758

HOSE MANUFACTURE

Frederick Scarborough, Springfield, Mass.

Application March 30, 1936, Serial No. 71,459

2 Claims. (Cl. 66—178)

1. As a new article of manufacture, a stocking formed of a plurality of interlocking loops of thread and comprising a lower foot portion, a body part extending upwardly therefrom, a knee portion extending from the upper end of the body part and a flare portion extending from the upper end of the knee portion, the knee portion being provided with a longitudinal slit which terminates at its upper side at a distance from said flare portion and is formed by failure of a plurality of vertically aligned loops of thread to interlock with the loops at a side thereof.

2,105,759

REDUCING APPARATUS

Robert W. Stevenson, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio

Application December 19, 1933, Serial No. 703,112

10 Claims. (Cl. 83—11)

1. Reducing apparatus for garbage comprising the combination with a casing defining a horizontally extending reducing chamber therein, of a rotary reducing unit in the said chamber mounted to rotate on a horizontal axis, means cooperating with the said unit to effect a grinding and shredding action on the garbage fed into the reducing chamber, a compartment separate from the reducing chamber but communicating therewith for collecting irreducible materials from the reducing chamber, means on the reducing unit for throwing irreducible materials into the said compartment incident to operation of the reducing unit, means interposed between the reducing chamber and the said compartment and adapted to admit the irreducible materials

into the said compartment while preventing entry therein of substantial amounts of reduced materials, and means for flushing both said reducing chamber and said compartment to remove adhering particles of garbage therein and to aid said grinding action.

2,105,760

PROCESS FOR THE PRODUCTION OF ZEIN

Lloyd C. Swallen, Terre Haute, Ind., assignor, by mesne assignments, to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application May 8, 1935, Serial No. 20,401

2 Claims. (Cl. 87—28)

1. Process for extracting zein from proteinaceous material derived from maize to give a stable solution which comprises contacting said material with ethyl alcohol of about 92%–98% concentration at a temperature of about 55°–65° C., with the hydrogen ion concentration adjusted during the extraction to such a point that the pH of the final extract falls within the range of about 6.0–7.0.

2,105,761

SERVICE STATION POWER OIL REMOVAL UNIT

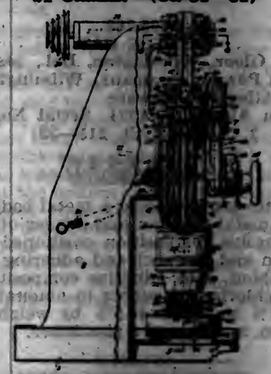
Edward L. Weed, Detroit, Mich.

Application August 3, 1936, Serial No. 93,923

18 Claims. (Cl. 184—1.5)

1. In a service station power oil removal unit adapted to remove oil from the crankcase of an internal combustion engine, when running, by suction from the intake manifold thereof, the combination of a connector permanently

mounted adjacent to said engine comprising an air suction tube and an oil suction tube suitably connected to the intake manifold and low point of the crankcase of said internal combustion engine respectively, a reservoir, an oil receiver adapted to empty by gravity into said reservoir, a valve sealing the outlet of the said oil receiver, an air suction hose and an oil suction hose hermetically connected at one end through the upper portion of said oil receiver, and a chuck connected to the other end of said hoses adapted to be manually positioned over the ends of the suction tubes of said connector in hermetically sealed relationship thereto whereupon a vacuum is created in said oil receiver which withdraws oil from the crankcase of said engine to said receiver, the said valve sealing the outlet of the oil receiver being adapted to open under the pressure head of oil in said receiver when vacuum created in said receiver is relieved.



2,105,762

MACHINE FOR HONING CONICAL SURFACES

Thomas Zimmerman, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan

Application December 5, 1935, Serial No. 52,976

21 Claims. (Cl. 51—31)

1. The method of finishing the circular conical surface of a member, which method consists in rotating a finishing instrumentality about an axis coincident with the axis of the work and in contact with the conical surface of the work along a line or lines extending transversely of said surface and in contact therewith throughout the width thereof, and simultaneously moving said instrumentality in the direction of the length of said line or lines of contact with an advancing rotative movement to vary the path of travel of said instrumentality during succeeding rotations.

2,105,763

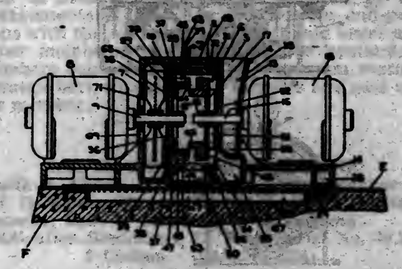
KEY RECEPTACLE

Homer H. De Berry, Tulsa, Okla.

Application March 3, 1937, Serial No. 128,871

7 Claims. (Cl. 70—456)

1. A key holder and receptacle comprising a casing having a chamber extending entirely through the same, reversely positioned keys within the casing, the adjacent ends of said keys being pivotally connected together and means whereby either key may be projected through one of the open ends of the chamber.



2,105,764

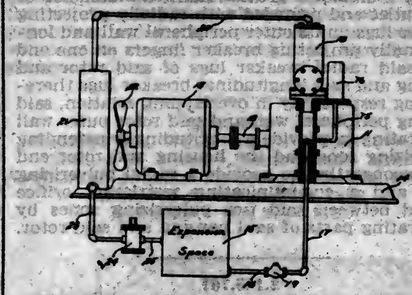
APPARATUS FOR BREAKING DOWN MATERIALS

Oscar J. Feight, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio

Application June 22, 1932, Serial No. 678,069

2 Claims. (Cl. 83—11)

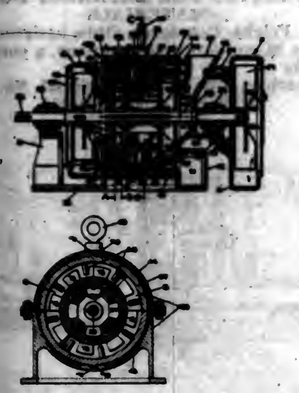
2. Apparatus for breaking down materials comprising the combination with power driven grinding and pulverizing mechanism, of a casing defining a pulverizing zone containing said mechanism, a discharge opening for withdrawing pulverized material from the pulverizing zone, a removable cylindrical grinding liner within the casing having a tramp material opening adjacent its bottom leading to a tramp bin, said casing having another tramp bin positioned laterally of said pulverizing zone adjacent the bottom of said casing, the liner having its inner edge tapered adjacent said tramp bin for guiding tramp material to said bin.



2,105,765

COMPRESSOR SYSTEM

Wilfred Fournace, Oakland, Calif., assignor, by mesne assignments, to Fournace Development Corporation, Ltd.

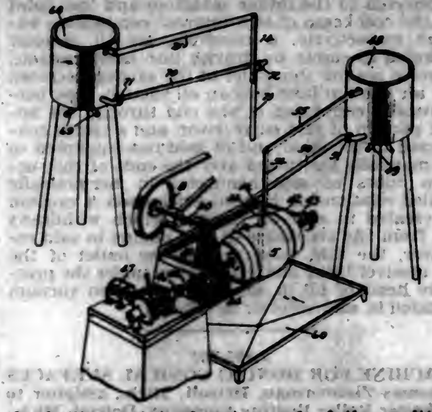


Application November 4, 1931, Serial No. 572,952

12 Claims. (Cl. 230—175)

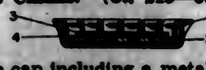
1. In a compressor mechanism, means forming a closed compartment, said compartment having a wall separating the space into two chambers, a pair of cylinder blocks, respectively supported on opposite sides of the wall, pistons for said blocks, and a valve mechanism for each cylinder and also supported on the wall.

2,105,766
FINE GRINDING MILL
Rodie V. Francis, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application August 9, 1934, Serial No. 739,118
8 Claims. (Cl. 83—11)



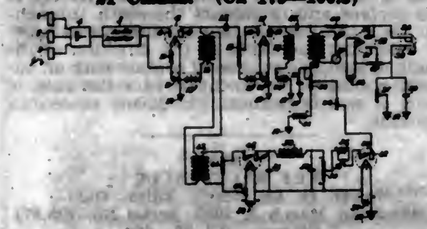
5. In a rotor assembly for a pulverizing mill, the combination with a cylindrical cage having longitudinally extending locking channels, of a plurality of segmental wearing shoes each forming a segment of a cylinder and having an inwardly extending locking foot adjacent each longitudinal edge, adjacent pairs of feet of adjacent shoes being adapted to fit into one of said locking channels, whereby said shoes are locked to said cage and cover the cylindrical face thereof.

8. In a coal pulverizing mill, the combination with a cylindrical housing having an inner peripheral wall and an outlet end wall with a central outlet opening therein, said inner peripheral wall being provided with radially projecting breaker lugs and said outlet end wall being provided with axially projecting breaker lugs, of a rotor comprising a cage carried within said housing in alignment with said outlet opening and having a diameter greater than the diameter of said outlet and provided with radially projecting breaker lugs on its outer peripheral wall and longitudinally projecting breaker fingers on one end wall, said radial breaker lugs of said rotor and housing and said longitudinal breaker lugs thereof being respectively in overlapping relation, said housing peripheral wall and said rotor outer wall cooperating to provide a longitudinally extending pulverizing zone and the housing and rotor end walls cooperating to provide a radial pulverizing zone, and a communicating restricting orifice formed between said two pulverizing zones by cooperating parts of said housing and said rotor.



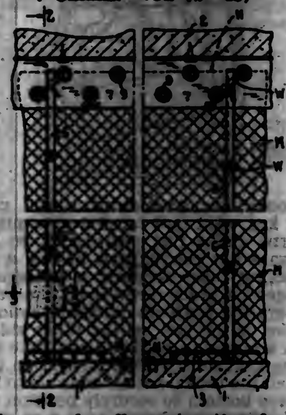
2,105,767
PROCESS OF REMOVING COATING FROM CONTAINERS
Fredrick Gottelman, Milwaukee, Wis.
Application August 20, 1934, Serial No. 740,662
9 Claims. (Cl. 141—6)

1. That process step which consists in removing a coating having a high melting point from the interior of a container by treating said coating with a non-aqueous liquid immiscible with said coating, and at a temperature in excess of



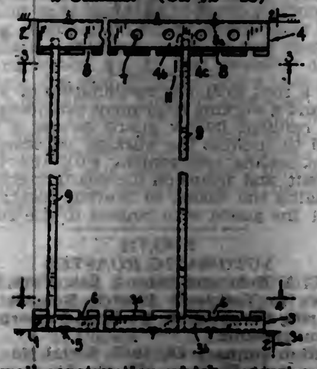
the boiling point of water and of the melting point of the coating.

2,105,768
BOTTLE CAP
Walter E. Gloor, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application August 2, 1934, Serial No. 738,292
3 Claims. (Cl. 215—39)



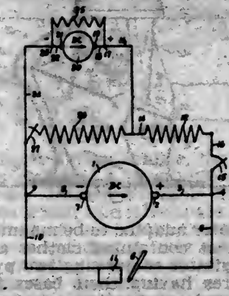
3. A bottle cap including a metal body, a cork cushion, a metal foil spot and a layer of thermoplastic adhesive composition positioned between the cushion and the spot and adhering the spot to the cushion, said adhesive composition consisting of chlorinated rubber in amount of from about 29.5% to about 40.5% by weight of the composition, a resin and a plasticiser.

2,105,769
METHOD AND MEANS FOR ELECTRO-PHOTOGRAPHICALLY RECORDING SOUND
Edmund H. Hansen, Hollywood, Calif.
Application May 4, 1931, Serial No. 535,654
21 Claims. (Cl. 179—100.3)



1. A method for electro-photographically recording sound wherein a glow lamp is excited by a speech modulated alternating current and a direct current component consisting in: modulating the direct current component proportionally to the envelope of the alternating component, and progressively decreasing the amount of current flowing through said glow lamp as the modulated alternating current passes a predetermined level.

2,105,770
WALL CONSTRUCTION
Harry Holdsworth, Brownville, N. Y., assignor to Holdsworth Bros. Inc., New York, N. Y., a corporation of New York
Application October 15, 1936, Serial No. 105,661
7 Claims. (Cl. 72—46)



1. An improved wall construction for a room, said construction comprising a base member which is connected to the floor of the room, said base member having transverse recesses at the top thereof, said recesses being substantially perpendicular to the plane of the wall, channel irons having their main walls located in said recesses and having the inner surfaces of their side walls close to the longitudinal edges of said base member so that the bottom ends of the channel irons are prevented from substantially shifting relative to said base member, the main walls of said channel irons having vertical slots at the top ends of said main walls, a top member connected to the ceiling and having a vertical flange, said vertical flange being located in said vertical slots.

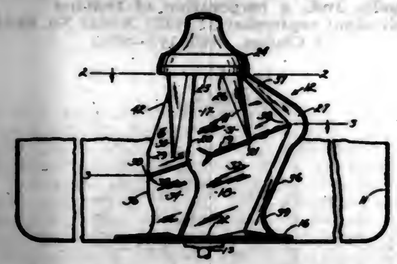
2,105,771
WALL CONSTRUCTION
Harry Holdsworth, Brownville, N. Y., assignor to Holdsworth Bros. Inc., New York, N. Y., a corporation of New York
Application January 7, 1937, Serial No. 119,421
2 Claims. (Cl. 72—46)

1. A wall construction which comprises a hollow lower member and a hollow upper member and intermediate upstanding members, said lower member and said upper member each having separated and inwardly directed webs located respectively at the top of said lower member and the bottom of said upper member, said webs having spaced slots, said upstanding members having their top and bottom end-portions located in said slots of said lower member and of said upper member, the widths of said upstanding members being substantially equal to the widths of said slots, the transverse dimensions of said upstanding members being substantially equal to the transverse dimensions of said bottom and top members, so that said upstanding members can be assembled slidingly with said lower and upper members and said upstanding members are held in predetermined normal position by the engagements of their top and bottom end-portions with the walls of the slots of said lower and upper members, the heights of said upstanding members being less than the maximum vertical distance between said lower member and said upper member.

2,105,772
DYNAMO-ELECTRIC MACHINE
Frank J. Lyden, Indianapolis, Ind., assignor to J. D. Adams Manufacturing Company, Indianapolis, Ind., a corporation of Indiana
Application September 13, 1935, Serial No. 40,304
9 Claims. (Cl. 171—224)

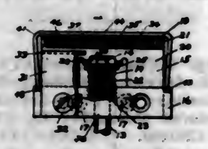
1. In combination, a main generator and main generator circuit, a supplementary exciter generator and supplementary circuit connected thereto, said generators being arranged in parallel; and a pair of opposed windings of the main generator so arranged that the windings are in series relationship to each other and one of the field windings in shunt relationship to one of said generators and the pair of series connected field windings in shunt relationship to the other of said generators.

2,105,773
HUMIDIFIER WITH TRUNCATED CONES
Gottlieb R. Magney, Minneapolis, Minn.
Application January 17, 1931, Serial No. 509,359
Renewed November 18, 1933
19 Claims. (Cl. 261—115)



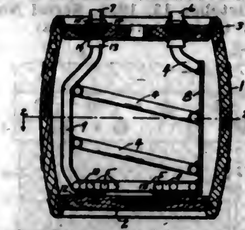
1. A humidifier structure having in combination, a unit comprising a plurality of spaced

members having liquid receiving surfaces, said surfaces being in substantially parallel relation, a plurality of bars spaced about said members extending to and secured to said members, and a plate to which said bars are secured and means for directing a finely divided spray transversely of said members whereby it may contact said surfaces and pass out between said members.



18. A humidifier structure adapted to be used with a furnace having a heated chamber therein comprising means for delivering a finely divided spray of liquid into said chamber for humidification, a magnetically operated valve for controlling said means, a thermostatically operated device disposed in said chamber to be operated by the heat of said chamber connected to said valve for operating said valve and means in said chamber for heating said liquid.

2,165,774
AGITATOR FOR WASHING MACHINES
Jabez Curry Nelson, Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application December 23, 1935, Serial No. 55,716
8 Claims. (Cl. 259—101)



1. An agitator adapted to be mounted for oscillation in a vat containing clothes and washing fluid, said agitator comprising two pyramidically shaped figures having their bases facing upon each other and constituting a body portion for the agitator, said bases extending at an angle to the horizontal, and a plurality of blades extending from said body portion.

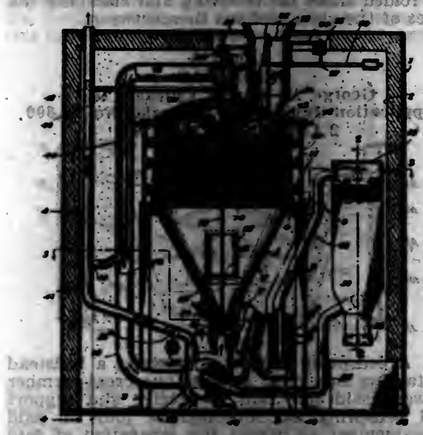
2,165,775
SHAVING IMPLEMENT
John L. Nilson, Chicago, Ill.
Application March 17, 1937, Serial No. 131,280
5 Claims. (Cl. 30—43)

4. A shaving implement comprising a stationary comb, a movable comb positioned against said stationary comb, a driving shaft adapted to reciprocate said movable comb so that the teeth of said movable comb operate transversely to the openings in said stationary comb, and a resilient member surrounding said driving shaft and adapted to oscillate in both a lateral and thrust movement free from contact with said driving shaft for applying frictionless pressure to the movable comb.

2,165,776
BEER COOLER KEG
John Panagopoulos, Youngstown, Ohio
Application April 22, 1937, Serial No. 138,342
2 Claims. (Cl. 257—15)

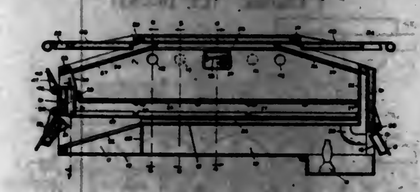
2. A cooler keg comprising a coil positioned within a keg, said coil formed of a plurality of spiral turns and a flat convolution on its lower portion, said flat convolution having a plurality of connecting tubes forming a passage for the cooling agent, a brace member on one side of said coil cooperating with an upright section of the outlet tube of the coil on the other side of said coil, both adapted to hold the complete coil erect within the keg, short spikes formed on the brace and connecting tube portions adapted to be driven into the keg bottom to securely position the complete coil within the keg.

2,165,777
GUARD FOR ROCK DRILLS
William A. Smith, Sr., Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application June 4, 1936, Serial No. 83,431
3 Claims. (Cl. 286—7)



1. In a rock drill, the combination of a rotary casing and a working implement extending thereinto, a resilient hollow guard having a wall at one end to encircle the working implement and being in sealing engagement with the working implement, and means on the guard interlockingly engaging the casing to prevent rotary movement of the guard with respect to the casing.

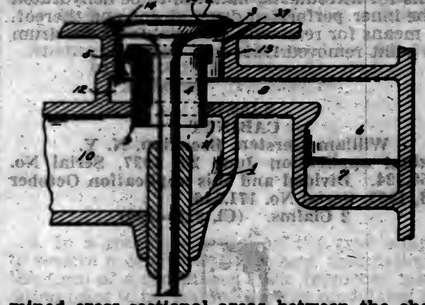
2,165,778
AUTOMATIC ROASTER
Harry C. A. Behr and Jules J. Eck, York, Pa., assignors to Yorktown Electric Roaster Manufacturing Corporation, York, Pa., a corporation of Pennsylvania
Application January 28, 1937, Serial No. 122,860
11 Claims. (Cl. 24—34)



3. In an automatic roaster, the combination of a container provided with a discharge opening,

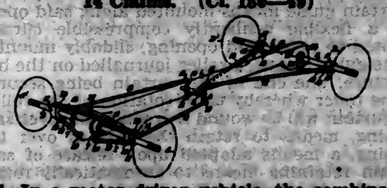
a blower under said discharge opening, a valve slidably mounted partly in said discharge opening of the container and in said blower, coffee guiding means above said valve and movable

therewith, and a deflecting unit in said container above said guiding means, whereby coffee passing through said guiding means will be directed against said deflecting unit.



2,165,779
BROODER
William A. Benzing and Mary La Visa Benzing, Lincoln, Nebr.
Application February 2, 1935, Serial No. 4,602
5 Claims. (Cl. 119—31)

1. A brooder having a heating chamber enclosing a brooder chamber at the bottom and sides and ends thereof, the front portion of said brooder chamber extending downwardly through said heating chamber, a reticulated floor and a dropping board within said brooder chamber, said floor and said dropping board each consisting of a plurality of hingedly connected sections whereby the forward sections of said floor and said dropping board may be inclined in a downward and forward direction to provide a ramp for the chicks, said brooder being provided with an opening in the lower portion of the front wall of the brooder.



2,165,780
INTERNAL COMBUSTION ENGINE
Joseph Rex Davis, Clarksburg, W. Va.
Application October 6, 1932, Serial No. 632,514
17 Claims. (Cl. 123—52)

1. An internal combustion engine including a cylinder and intake manifold, a positively operated valve between the manifold and cylinder, a chamber adjacent the valve, and a sleeve mounted in the manifold and associated with said valve so as to provide a passage of varying predeter-

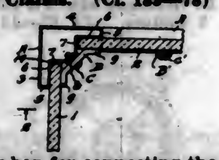
mined cross-sectional areas between the chamber and manifold.

2,165,781
CHASSIS FOR MOTOR DRIVEN VEHICLES
Frederick William Dixon, Reigate, England
Application November 17, 1936, Serial No. 111,312
In Great Britain November 18, 1935
14 Claims. (Cl. 180—49)

1. In a motor driven vehicle, the combination of a chassis including a longitudinally extending central girder frame; steerable front wheels; half axles on which said wheels are carried; universal connections, one at the inner end of each half axle for suspending it from said frame; and means for swinging said half axles simultaneously in opposite directions so as to steer the vehicle.

2,165,782
APPARATUS FOR DEHYDRATING OIL-CONTAINING MATERIAL HAVING A HIGH WATER CONTENT, PARTICULARLY WHALE FLESH
Philipp Lorenz Fauth, Wiesbaden-Dotzheim, Germany, assignor to Gesellschaft zur Verwertung Fauth'scher Patente m. b. H., Wiesbaden, Germany
Application May 16, 1935, Serial No. 21,788
In Germany May 14, 1934
7 Claims. (Cl. 87—13)

1. Apparatus for dehydrating oil-containing materials having a high water content including a sealed boiling drum, a heating jacket for said boiling drum, a conveyor screw rotatably disposed inside said boiling drum, an inner perforated drum disposed inside said boiling drum,

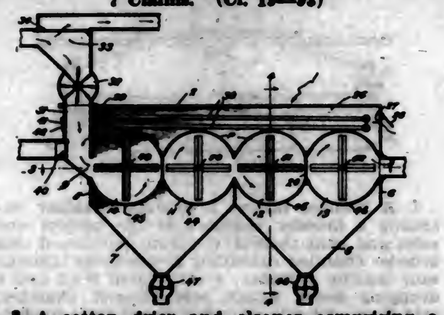


which perforated drum divides the said conveyor screw into an inner screw and an outer screw, means for introducing material to be dehydrated to the inner perforated drum at one end thereof, and means for removing material from the drum at a point removed from said one end.

2,105,783
CABINET
William Gersten, Brooklyn, N. Y.
Original application June 28, 1937, Serial No. 150,724. Divided and this application October 28, 1937, Serial No. 171,546
2 Claims. (Cl. 312—190)

1. In an article of the character described, the combination of a box structure having an opening, a curtain guide means mounted along said opening, a flexible resiliently compressible curtain adapted to cover said opening, slidably mounted in the guide means, a roller journalled on the box structure; one end of the curtain being secured to the roller whereby upon rotation of the roller, the curtain will be wound thereon to uncover said opening, means to retain the curtain over the opening, a means adapted upon release of said curtain retaining means to automatically rotate the roller to wind up the curtain, and further adapted to return to operative condition upon manual sliding of the curtain to cover the opening, a brake mounted on the article, adapted to retard movement of the curtain while the latter is being wound up on the roller, and an auxiliary braking means comprising a member fixed from the axis of the roller, a distance less than the radius of the fully wound up curtain, whereby said member shall cause the individual coil layers of the wound up portion of the curtain to be compressed and further retard further movement of the curtain during the last portion of the travel of the curtain.

2,105,784
WINDOW CHANNEL OR THE LIKE
Paul C. Hagberg, Cleveland, Ohio
Application October 12, 1936, Serial No. 105,316
7 Claims. (Cl. 189—78)

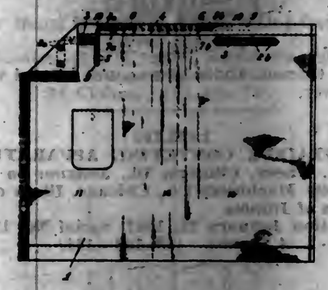


2. A glazing bar for connecting the juxtaposed edges of glass sections together, comprising a sheet of material having portions thereof at opposite sides of its medial axis longitudinally folded inwardly toward each other, the free marginal edges of the folded portions being brought together and interlockingly folded together, the folded portions of the sheet at opposite sides of the medial axis forming hollow wing portions to provide seats for the edges of the respective glass sections, and clamping means detachably secured to the interlockingly folded portions of the sheet aforesaid, and having portions extending in spaced relation to the hollow wing portions of the folded sheet for receiving and clamping the edges of the glass sections therebetween.

2,105,785
BEDSTEAD
George M. Harris, Chicago, Ill.
Application June 17, 1936, Serial No. 85,800
2 Claims. (Cl. 5—310)

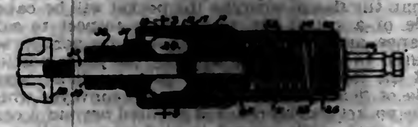
1. A bedspring support comprising a bedstead containing side rails, at least one cross-member between said side rails to receive and support said bedspring, an intermediate joint in said cross-member to permit the separation of said cross-member into sections, said cross-member having drop-portions inwardly of said end portions and a bottom portion uniting the drop portions, said joint being in one of the drop portions, and said joint being separable by relative up and down movement of said sections.

2,105,786
COMBINATION SEED COTTON CLEANER-DRIER
Nelson B. Henry, Columbus, Ga.
Application March 7, 1936, Serial No. 67,720
7 Claims. (Cl. 19—93)



3. A cotton drier and cleaner comprising a casing having a cotton inlet at one end and a discharge outlet at the other end, a series of cylindrical chambers formed in said casing between the inlet and outlet thereof, beaters rotatable in said chambers to move the cotton in opposite directions axially in each chamber and spirally across the axes of said chambers, and means for drying the cotton during its movement through said chambers.

2,105,787
TRAVELING OR LIKE RUG
Carl Herpich, Berlin-Charlottenburg, Germany
Application January 6, 1937, Serial No. 119,327
In Germany February 1, 1936
1 Claim. (Cl. 2—69)

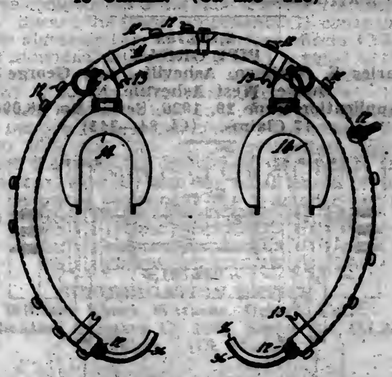


In a traveling or like blanket of substantially rectangular shape consisting of a central portion

and two side portions, adapted to be worn around the body of the wearer with the opposite sides in overlapping relationship, a casing extending along one edge of the blanket, a band in and adjustable relative to the casing and effective in the central portion of the blanket, and cooperative fastening means secured to each side portion

and approximately adjacent said edge, said blanket when wrapped around the body of the wearer having the side portions in overlapping relationship and secured in position by the fastening means and said adjustment of the band being confined to the central portion whereby the side portions are maintained smooth across the front of the wearer.

2,105,788
STUD SETTER
Claude L. Hess, Detroit, Mich.
Application April 13, 1934, Serial No. 720,452
4 Claims. (Cl. 81—53)

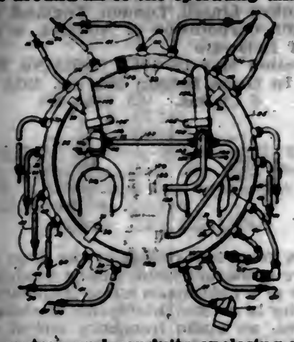


1. In a device of the character described, a combined casing and driving element having a substantially cylindrical chamber therein, a driven element within said casing element and limitedly movable both rotatively and longitudinally in said chamber, means yieldably urging one of said elements toward a predetermined longitudinal and angular position with respect to another, said driven element having a work-receiving socket therein accessible from outside through an aligned opening in the casing, clutching means also within the casing and movable into and out of the socket in the driven element, means including a cam carried by said casing and having surfaces inclined circumferentially and outwardly flaring for moving said clutching means into the socket upon movement of the driven element relatively to the casing under the influence of work forced into the socket, said yieldable means comprising a spring acting both torsionally and longitudinally, and secured at one end to the driving element and at the other end to the driven element, and anchoring means for the end of said spring which is secured to the driving element including means for holding said end of the spring in any of various spaced circumferential positions, whereby the torsional effect of said spring may be varied.

2,105,789
RADIO RECEIVER
Alfred Aubyn Limell, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application May 16, 1932, Serial No. 671,329
In Great Britain May 25, 1932
5 Claims. (Cl. 250—20)

4. In a receiving system of the type adapted to receive a characteristic tuning modulation in the form of a continuous audio frequency modulation prior to normal intelligence modulated carrier waves, an audio frequency circuit wherein the said tuning modulation currents flow, a visual indicating network for facilitating accurate tuning of the system, said network comprising a rectifier connected in circuit with an indicator, and a highly selective device, sharply resonant solely to said tuning modulation frequency, electrically associated with the indicating network and audio circuit and causing maximum current flow in the indicating network when the receiver has been tuned to develop the maximum tuning modulation current in said audio circuit.

2,105,790
RADIO SHIELDING FOR ELECTRICAL DISTRIBUTING SYSTEMS
Joseph J. Maguch, Newark, N. J.
Application September 23, 1929, Serial No. 394,618
43 Claims. (Cl. 123—148)



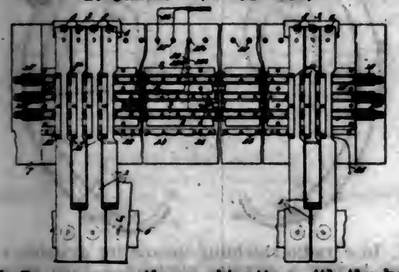
1. In a radio shielding means for aviation engines having a circular contour, a tube shaped to conform to the contour of an engine and provided with a plurality of projecting outlets and means for removably attaching the tube to an engine.

2,105,791
IGNITION SHIELDING
Joseph J. Maguch, Newark, N. J.
Application July 11, 1931, Serial No. 550,676
20 Claims. (Cl. 123—148)

1. A radio shielding system for both the high and the low tension portions of the entire ignition system of an internal combustion engine comprising a rigid manifold to enclose a plurality of wires, flexible conduits enclosing wires from the

rigid manifold to the spark plugs, conductive housings around all of the

ignition system and conduits enclosing wires interconnecting units of the ignition system.



2,105,795
UNSATURATED KETONES
Johannes Nelles, Leverkusen-Schlebusch, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application June 22, 1936, Serial No. 86,092. In Germany June 29, 1935
5 Claims. (Cl. 260—134)

1. The products of the formula:—

CHX=CXCOCY=CHY

wherein one of the X's and one of the Y's stand for hydrogen and the other X and Y stand for a member of the group consisting of hydrogen and alkyl radicals.

2,105,793
PIPE ORGAN
Charles S. Norburn, Asheville, and George M. Geave, West Asheville, N. C.
Application June 29, 1936, Serial No. 88,006
17 Claims. (Cl. 84—341)

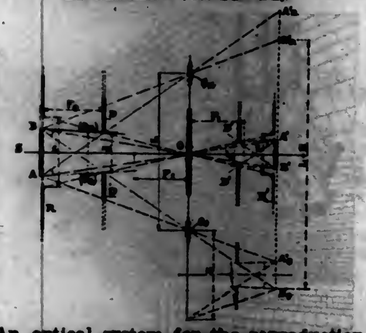
1. In an organ, the combination with the keys of a manual, of an organ switch including slides adjacent said keys and each carrying contacts corresponding to the several keys, and contact plates mounted on said keys for cooperation with said slide-carried contacts to form an organ switch.

2,105,794
COMBINATION CLOSET TANK COVER AND VENTILATOR
Charles C. Norris, Riverside, Calif.
Application February 8, 1937, Serial No. 124,636
3 Claims. (Cl. 4—213)

1. A ventilating attachment for use in combination with a water closet having a bowl and a flush tank which comprises a hollow cover adapted to fit over the tank and form the top

closure thereof, and a blower unit housed within said cover.

2,105,795
CONTAINER CONVEYING APPARATUS
Ivan H. Risser, Chicago, Ill., assignor to U. S. Bottlers Machinery Co., Chicago, Ill., a corporation of Illinois
Application January 23, 1937, Serial No. 121,928
4 Claims. (Cl. 198—131)



1. The combination with a bottle conveyor, of a bottle receiving pocket therefor comprising a tubular portion of rubber adapted to receive the neck portion of a bottle and having an integral flat mounting flange formed about its receiving end, the side-walls of the pocket being thinner than the flange whereby the pocket will be capable of a swivel-like action with respect to said flange, and the flange having its outer portion secured to the conveyor whereby the inner portion of the flange adjacent the pocket will be capable of flexing with respect to the conveyor when the pocket has been flexed or tilted beyond a certain angle with respect to said inner portion of the flange.

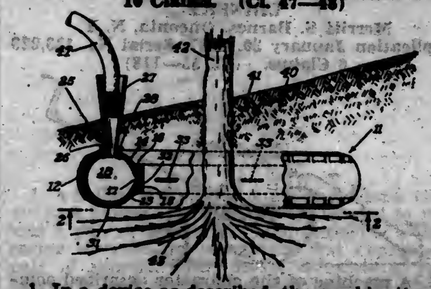
2,105,796
ADJUSTABLE FINGER RING
Robert A. Russell, Rustburg, Va.
Application October 12, 1937, Serial No. 169,730
5 Claims. (Cl. 63—16)

5. A finger ring comprising a band split to provide spaced ends, aligned threaded shanks formed on the spaced ends, a sleeve having a threaded bore receiving the shanks for rotation thereon to vary the diameter of the band for adjustment thereof to fit fingers of various sizes, said sleeve having a slot diagonally arranged therethrough and disposed centrally thereof, a turn button pivotally mounted in the slot and frictionally held therein, said turn button being movable into and out of said slot and of a length to engage the finger when moved out of said slot to hold the sleeve against rotation and said slot being of a length whereby access may be had to either end of the turn button for moving the latter out of said slot.

2,105,797
REPRODUCTION AND PROJECTION OF GOFFERED FILMS
Anne Henri Jacques de Lasteyrie Saint Genies, Versailles, France
Application May 2, 1935, Serial No. 19,490
In France May 4, 1934
14 Claims. (Cl. 88—24)

1. An optical system for the reproduction by projection of lenticulated films comprising means for supporting the film to be reproduced in a plane, means for supporting the copy film in a plane, an optical copying system, said optical copying system having a small aperture the plane of its pupil being different from the zone of convergence of each of said films, means for moving said film to be reproduced and said copy film relatively to said optical copying system, the movements of both said films relative to said optical copying system being homothetic, said planes of said films remaining parallel to one another during the said relative movements for exposing successively the elements of said lenticulated copy film by the elementary light beams emanating from said film to be reproduced, and shutters the circumferences of which are equal to said respective zones of convergence of each of said two films, said shutters being arranged in the respective planes of said convergence and being rigid relative to said films.

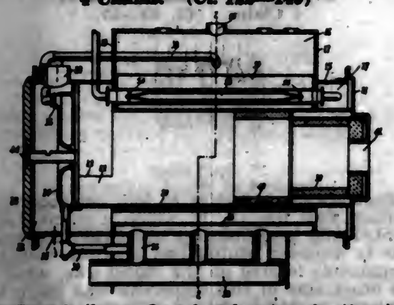
2,105,798
VESSEL OR BOX FOR CANNING
Anders Fredrik Tottmann, Lycksele, Sweden
Application May 29, 1936, Serial No. 82,001
In Sweden October 28, 1934
2 Claims. (Cl. 220—61)



1. In a canning vessel of sheet metal, in combination, a lid having a central recess, and having an outwardly bent undoubled, single-sheet edge portion, the vessel having an outwardly bent single-sheet edge portion, a sealing ring between said two edge portions, and a continuous, seamless, annular connecting member formed with a channel-shaped cross section, enclosing the edge portions of the lid and vessel together with said sealing ring, said connecting member being doubled twice and together with the edge portion of the vessel being folded down closely along the wall of the vessel, whereby the connecting member is firmly clamped between the wall of the vessel and the folded down edge portion of the vessel.

2,105,799
PHOTOGRAPHIC OBJECTIVE
Albrecht Wilhelm Tronnier, Bad Kreuznach, Germany, assignor to the Corporation of Jos. Schneider & Co., Optotechnische Gesellschaft, Berlin, Germany
Application August 31, 1935, Serial No. 38,816
In Germany January 15, 1935
1 Claim. (Cl. 88—57)

Photographic objective of four components in contact with the air, in which a single, uncemented and asymmetrical bi-concave dispersive lens is disposed behind two separate collective components located on the object side, while on the other side of this dispersive lens there is a cemented meniscus-shaped collective component, the collective cemented surface of which is concave toward the image side, has said cemented component having a convex outer surface toward the image side and the total focal length of the dispersive component being between 40% and 80% of the focal distance of the entire objective, the refractive power of the two separate collective components being such that the rest effect ($\bar{\varphi}_{VI}$) toward the front components (I) consisting of the algebraic sum of the surface effects ($\Sigma\bar{\varphi}_{V}$) each individual one of which ($\bar{\varphi}_{VI}$) is equal to the product of the auxiliary radiation incidence height (h_1), the refraction difference (n'_1-n_1) and radii reverse value ($1:r_1$), whereby the surface index is then designated by I amounts to between 50% and 95% of the rest effect ($\bar{\varphi}_{VII}$) toward the collecting component (II) next to the front lens, whereby also the focal length of the first collective component (I) is smaller per se than the focal length of the entire objective.

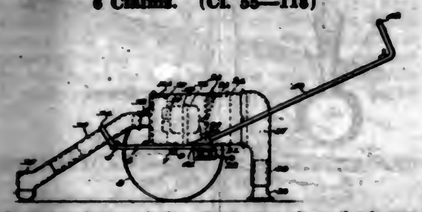


2,105,800
SUBIRRIGATION DEVICE
William Elmer Watkins, Hemet, Calif.
Application January 19, 1937, Serial No. 121,213
10 Claims. (Cl. 47—48)

1. In a device as described, the combination of a flexible circular conduit adapted for burial in the ground surrounding a tree or shrub, a funnel

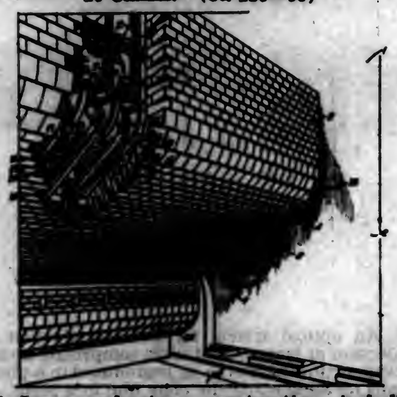
connected to the upper side of the conduit and extending above the ground level for charging the conduit with water, the conduit having openings in the bottom for seepage of water to the soil, the conduit on account of its flexibility being adapted to be slightly distorted in the ground, the conduit having an annular slot facing towards the tree or shrub.

2,105,901
BOILER
Albert Edward Watts, Montreal, Quebec, Canada
Application May 4, 1936, Serial No. 77,741
4 Claims. (Cl. 122—149)



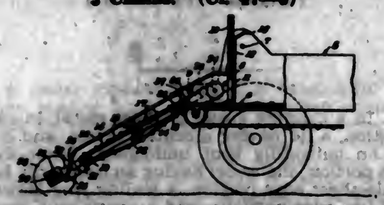
1. In a boiler, a fire chamber terminating in a water wall, a water chamber about said fire chamber, baffles spaced from the walls of said water chamber and forming open ended circulatory passages, a water connection from the bottom of the water chamber to said water wall and discharge pipes from said water wall to said water chamber and directing a flow of preheated water into said passages.

2,105,902
PREPARATION OF NITRATES OF MONOHYDRIC ALIPHATIC ALCOHOLS
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa.
No Drawing. Application September 19, 1936, Serial No. 101,613
6 Claims. (Cl. 260—144)



1. The process which comprises nitrating a monohydric aliphatic alcohol of less than 6 carbon atoms in the presence of an alkyl ester of a monohydroxy aliphatic carboxylic acid.

2,105,903
LAWN CLEANING AND FERTILIZING MACHINERY
Merritt S. Barnes, Oneonta, N. Y.
Application January 30, 1937, Serial No. 123,229
6 Claims. (Cl. 55—116)



1. A machine of the character described comprising a wheeled frame, a housing mounted on said frame having an inlet opening in its forward end and its rear end open, a suction fan mounted in said housing adjacent the inlet opening, means for driving said fan, an adjustable telescopic suction tube adapted to be detachably connected to the inlet opening of said housing, a cutting unit mounted in the rear end of said housing and a distributor spout connected to the rear end of said housing.

2,105,904
ARCH AND WALL CONSTRUCTION
Lee M. Beall, Tulsa, Okla.
Application June 11, 1934, Serial No. 730,603
10 Claims. (Cl. 110—99)

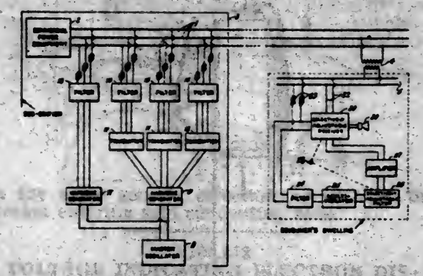
1. In a refractory construction including spaced supports, courses of straight tiles suspended from said supports, interposed courses of tiles suspended between the courses of straight tiles and having angularly extending lower ends positioned in overlapped relation to the ends of two adjacent straight tiles to provide bonded joints in the longitudinal direction of said supports, and a multiplicity of interengaged projections and recesses on contacting faces of the tiles which are positioned transversely of said supports and arranged close to one another and each comprising but a small fraction of the tile's area and thickness to prevent dropping out of portions of the tiles that may be cracked incidental to expansion and contraction in a direction transversely of the supports.

2,105,905
ROW CROP MULCHER
Gail Challis, Russell Springs, Kans., assignor of one-half to T. T. Logan, Russell Springs, Kans.
Application May 7, 1937, Serial No. 141,262
3 Claims. (Cl. 47—8)

1. A row crop mulcher, comprising in combination with a vehicle in the nature of a spreader having a rearwardly travelling conveyor and provided with an operating sprocket, an end gate over said conveyor, said end gate having a discharge opening therein, an adjustable door for regulating discharge through said opening, a hood extending rearwardly from said end gate, a conveyor frame having a pivotal connection with said vehicle, cover discs for travelling in a lister furrow and adjustably mounted at the end of said conveyor frame, a rearwardly operating mulch conveyor carried by said frame and driven from said sprocket and a cover over said mulch conveyor extending from a position beneath said hood downwardly to deposit mulch from said spreader's conveyor in the bottom of a furrow in advance of said cover discs.

2,105,906
SUBSTITUTED SECONDARY AMINES AS ANTIOXIDANTS FOR DETERIORABLE ORGANIC COMPOSITIONS
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 7, 1932, Serial No. 646,218
27 Claims. (Cl. 18—59)

1. A method of preserving rubber which comprises incorporating therein an age-resister comprising an alkyl amino di-hydrocarbon ether.



2,105,907
DIFFERENTIAL CONCENTRATION OF NON-METALLIC MINERALS
Arthur Crago, Mulberry, Fla., assignor to Phosphate Recovery Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application February 15, 1933, Serial No. 656,987
5 Claims. (Cl. 209—167)

1. A process of differential concentration which comprises agitating a pulp, nearly free from slimes, of suitably divided particles of an ore of the class consisting of phosphate-calcite-silica ores, fluorspar-calcite-silica ores, and fluorspar-barite-silica ores, in the presence of a fraction of one per cent of a free fatty acid and a fraction of one per cent of a substantially insoluble and unsaponifiable oil, without added alkali or other agent capable of substantially affecting its pH value; and separating in the case of a phosphate-calcite-silica ore a concentrate relatively rich in phosphate and relatively poor in calcite-silica, in the case of a fluorspar-calcite-silica ore a concentrate relatively rich in fluorspar and relatively poor in calcite-silica, and in the case of a fluorspar-barite-silica ore a concentrate relatively rich in fluorspar and relatively poor in barite-silica.

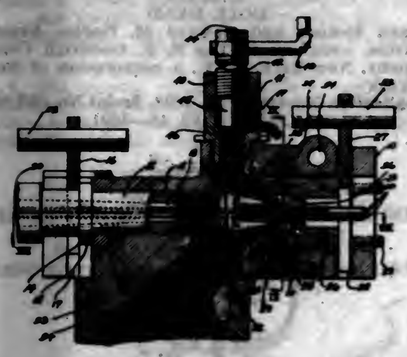
2,105,908
VULCANIZATION OF RUBBER
Howard L. Cramer, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 16, 1935, Serial No. 6,826
22 Claims. (Cl. 18—53)

21. The process of treating rubber which comprises vulcanizing in the presence of the reaction product of an aldehyde and an amine selected from the group consisting of the primary and secondary hydrogenated furyl amines, hydrogenated furfuryl amines and hydrogenated 2-furyl ethyl amines.

2,105,909
CARRIER SUPPLY SYSTEM
Robert D. Duncan, Jr., East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a corporation of Delaware
Application August 1, 1936, Serial No. 93,908
2 Claims. (Cl. 179—15)

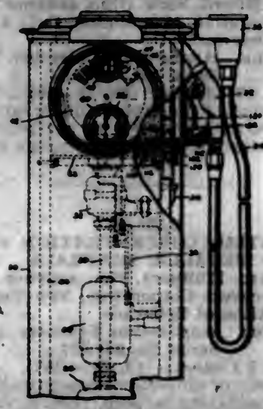
1. In a transmission system in which a plurality of modulated suppressed-carrier high-frequency bands and carrier replacement high frequency waves are transmitted to a receiving point as discrete frequencies, receiving apparatus comprising, a receiver selectively operable to receive any one of said plurality of modulated suppressed-carrier high-frequency bands, means responsive to said replacement carrier waves for supplying to said receiver any one of several replacement carrier frequencies corresponding to the carrier suppressed from said modulated high-frequency bands received by said receiver, and common control means for operating said last mentioned means and said receiver so that when a particular modulation band is received by said receiver, said last mentioned means operates to supply thereto a corresponding replacement carrier frequency for intelligibly reproducing the desired modulation by said receiver.

2,105,910
DOLL HEAD
Frank Fenton and Howard M. Dodge, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 10, 1932, Serial No. 642,060
21 Claims. (Cl. 46—169)



1. A hollow doll head comprising a pliable elastic wall having its outer surface formed to provide a pair of apertured facial elements, a rigid casing member for supporting and exposing a pair of supplementary facial elements at said apertures, and means extending inwardly of the head from said pliable wall and attached thereto adjacent the eye sockets for retaining said rigid member.

2,105,811
HAIRPIN DISPENSER
Michael Frank and David Willinger, Freeport, N. Y.
Application September 29, 1936, Serial No. 103,941
3 Claims. (Cl. 312—30)



1. A dispenser for hairpins comprising, a hopper, a feed screw extending upwardly into said hopper, a follower on the upper end of said screw operative by said screw to elevate the contents of the hopper, a toothed wheel at the bottom of the hopper threaded onto said screw and operative to elevate the same, a magnet swingably mounted at one side of the hopper for movement over the same to attract the contents therefrom, and means for swinging said magnet and operating said wheel including a foot pedal.

2,105,812
BEAD WIRE DIE
John T. Gordon and Robert W. Snyder, Akron, Ohio, assignors to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application August 29, 1935, Serial No. 38,419
9 Claims. (Cl. 18—13)

4. The method of continuously forming insulated bead wires which comprises the steps of moving each of a plurality of wires to be insulated through separate guide openings of slightly larger all-around cross-section than said wires, whereby the wires may be moved through said openings with a clearance space entirely around same, the wires being moved to and through said openings in straight lines substantially coincident with the axes of the respective openings, continuously supplying rubber to said wires immediately in advance of said openings to coat the wires on all sides to thereby maintain the wires spaced from the walls of the openings as they pass through said openings, thereafter passing said rubber-coated wires through a single opening spaced from the first-mentioned openings and of greater cross-section than the combined cross-section of the wires and supplying rubber under pressure to said wires in the space between the first- and second-mentioned opening, to form an integral coating embracing all of said wires.

2,105,813
FLUID DISPENSING APPARATUS
Harry T. Gess, Rutherford, N. J., assignor to L. N. S. Corporation, New York, N. Y., a corporation of Delaware
Application May 8, 1931, Serial No. 536,108
26 Claims. (Cl. 261—95)

1. In fluid dispensing apparatus having fluid flow establishing means and fluid metering means, in combination, index means, the movement of which away from a constant initial position is proportional to the amount of fluid passed through the metering means, means to initiate the operation of the flow establishing means controlled by the index means at its initial position and means to halt the flow of fluid controlled by the index means at its extreme position of movement.

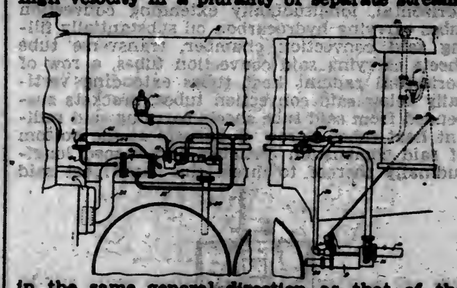
2,105,814
FOLDING ELECTRIC STOVE
Constantine F. Lent, New York, N. Y.
Application February 11, 1936, Serial No. 63,294
9 Claims. (Cl. 219—19)

1. In a device of the class described comprising an electric stove having adjacent boxlike members hinged together, each member containing heating elements; an electric wire service outlet connected into one of said boxlike members; a flexibly slidable electric connection included in the circuit with said service outlet, a wire winding loosely surrounding said wire connection, said flexible connection serving as a current lead for supplying current to the heating element in the box like member adjacent to the member into

which the service wire is connected, said electric connection being housed when said adjacent boxlike members are folded together.

2,105,815
SHIP FENDER
Elov F. Maag, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Original application January 5, 1934, Serial No. 705,749. Divided and this application October 17, 1936, Serial No. 106,205
2 Claims. (Cl. 114—219)

1. A marine fender comprising an elongated tubular member of resilient material having an internal air space therein of substantial proportions, and a plurality of suspension means anchored at intervals in one side wall of said tubular member but not extending through said space to the opposite wall for securing the same to a pier or the like.



2,105,816
LOOM SHUTTLE
Samuel J. Major, Providence, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I., a corporation of Rhode Island
Application March 8, 1937, Serial No. 129,702
6 Claims. (Cl. 139—196)

1. In a loom shuttle, the combination with a thread block secured within a recess formed in said loom shuttle, of a reinforcing member having a portion located between one side of the thread block and shuttle body and held in position thereby and a portion extending rearwardly of the shuttle from said thread block and terminating in an end engaging one side of the shuttle body at a point spaced from said thread block to provide a reinforcement for that portion of the side of said shuttle body located adjacent to the thread block.

2,105,817
FEED WATER HEATING SYSTEM
Rudolf M. Ostermann, Kenilworth, Ill., and Arthur Williams, Munster, Ind., assignors to The Superheater Company, New York, N. Y.
Application August 15, 1933, Serial No. 685,263
15 Claims. (Cl. 122—32)

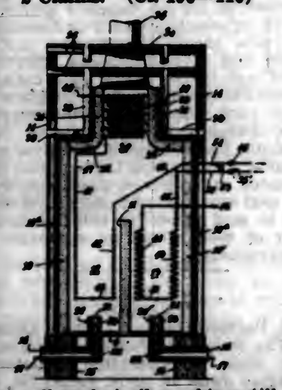
1. In a boiler feeding system, an exhaust steam injector, and a pump for supplying water under pressure to the injector, said injector having a water nozzle providing a plurality of passages disposed to introduce and direct the water supplied to the condensing zone of the injector at high velocity in a plurality of separate streams

in the same general direction as that of the stream entering said condensing zone.

2,105,818
VOLTAGE INDICATING ELECTRON DISCHARGE TUBE
Henry W. Parker, Toronto, Ontario, Canada, assignor to Rogers Radio Tubes Ltd., Toronto, Ontario, Canada, a corporation of Ontario, Canada
Application June 22, 1937, Serial No. 149,559
4 Claims. (Cl. 250—27.5)

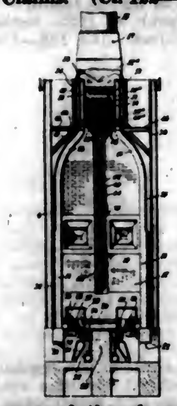
1. An electronic voltage indicator comprising, a substantially evacuated envelope, one end of which is transparent, a cathode, control vanes, and an electron target disposed within said envelope with terminals therefor emerging from said envelope, said target surrounding said cathode and vanes and being insulated therefrom, the surface of said target facing said cathode being coated with carbon in the form of black soot and bearing on such coating an additional coating of substance adapted to be rendered fluorescent upon electron bombardment, said coated surface being disposed facing the transparent portion of said envelope and further electronic means enclosed in said envelope and connected within said envelope to said vanes for controlling the bombardment of said target by electrons from its associated cathode.

2,105,819
FURNACE
Ralph M. Parsons, Mount Vernon, Ohio, assignor to The Ralph M. Parsons Company, Mount Vernon, Ohio, a corporation of Delaware
Application June 16, 1934, Serial No. 730,874
Renewed May 25, 1937
5 Claims. (Cl. 196—110)



6. An upshot oil still comprising, in combination, a rectangular combustion chamber, a con-

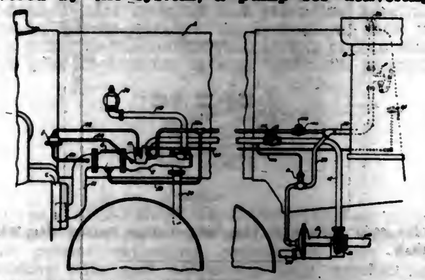
vection chamber above said combustion chamber and formed as a continuation thereof, a bank of horizontal, longitudinally extending convection tubes carrying hydrocarbon oil substantially filling said convection chamber, transverse tube sheets carrying said convection tubes, a row of horizontal radiant heat tubes extending vertically below said convection tubes, brackets suspended from said tube sheets carrying said radiant heat tubes, a row of burners at the bottom of said combustion chamber and spaced longitudinally thereof to direct the flame past said



radiant heat tubes toward the lower tubes of said convection bank, and means to withdraw combustion gases from the top of said combustion chamber in substantially a direct line with said burners whereby the combustion gases pass through said furnace upwardly without substantial change in direction, said radiant heat tubes being disposed adjacent the path of the flame to receive heat both by radiation and convection for rapidly extracting heat therefrom before the flame impinges upon the lower tubes of the convection bank.

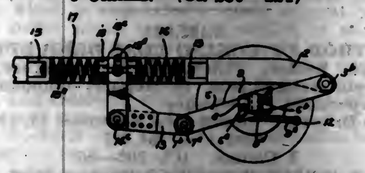
2,105,820
TUBE STILL
Ralph M. Parsons, Mount Vernon, Ohio, assignor to The Ralph M. Parsons Company, Mount Vernon, Ohio, a corporation of Delaware
Application March 2, 1935, Serial No. 8,988
2 Claims. (Cl. 196—110)

1. A two cell upshot oil cracking still comprising, in combination, side walls forming a rectangular furnace chamber, a central vertical longitudinal wall in the lower part of said furnace chamber dividing said chamber into a pair of narrow vertical combustion chambers communicating at their upper parts above said center wall, additional side walls located above said first walls and offset inwardly therefrom to form a convection chamber narrower than said furnace chamber located directly above and spaced from said center wall to receive gases equally from both combustion chambers, a hood above said convection chamber to receive combustion gases therefrom, a bank of horizontal convection tubes carrying hydrocarbon oil substantially filling said convection chamber, vertical rows of horizontal side wall radiant heat tubes adjacent said first side walls to shield the same from radiant heat and additional vertical rows of horizontal tubes on both sides of said center wall to shield the same from radiant heat, said additional rows terminating at the top of said center wall whereby an unobstructed passage is provided from said combustion chambers to said convection chamber, and a row of burners spaced longitudinally along the bottom of each combustion chamber to direct a flame upwardly between said rows of side wall tubes toward said convection tubes.



2,105,821
FURNACE
Ralph M. Parsons, Chicago, Ill., assignor to The Ralph M. Parsons Company, Chicago, Ill., a corporation of Delaware
Application August 29, 1936, Serial No. 96,939
10 Claims. (Cl. 122—356)

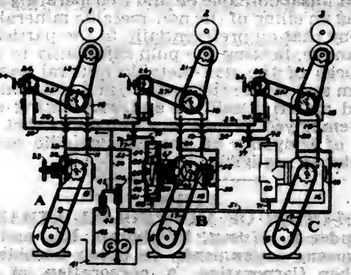
1. In a furnace of the class described, side walls defining a combustion chamber, additional side walls defining a convection chamber located directly above said combustion chamber, a framework located entirely outside of said walls, a bank of convection tubes in said convection chamber, tube sheets suspended from said framework and carrying said tubes, a vertical bank of radiant heat tubes located at the center of said combustion chamber, tube sheets for said radiant heat tubes suspended from said framework independently of said first tube sheets, and rows of burners on opposite sides of said bank of radiant heat tubes to direct a flame upwardly between said bank and said first side walls.



2,105,822
FEED WATER HEATING SYSTEM
Emanuel Rawson, Chicago, Ill., and Arthur Williams, Munster, Ind., assignors to The Superheater Company, New York, N. Y.
Application August 15, 1935, Serial No. 36,264
17 Claims. (Cl. 102—265)

1. A system for supplying heated feed water to a boiler including an exhaust steam injector for delivering heated feed water to a boiler, said injector having a water inlet of variable area for controlling the rate at which water is delivered by the system, a pump for delivering

water to said inlet under pressure, means for varying the area of said inlet, and automatic control means for maintaining said pressure substantially constant regardless of variations in the rate at which water is delivered by the system.



2,105,823
AUTOMOBILE FRONT END SUPPORTING MECHANISM
George L. Schofield, National City, Calif., assignor to said George L. Schofield, as trustee for Carrie L. Schofield, Georgia Louise Schofield Geer, and Elizabeth Susan Schofield Stacy-Judd, Los Angeles, Calif.
Application November 21, 1934, Serial No. 754,095
9 Claims. (Cl. 280—124)

1. In an automobile front end supporting mechanism, a pair of frame members extending substantially longitudinally of the body of the automobile, a pair of levers pivotally mounted on opposite sides of the front end of each frame member and extending downwardly and backwardly therefrom, wheels pivotally mounted intermediate the ends of each pair of said levers, bellcrank members pivotally connected between the lower backwardly extending ends of said levers and pivotally supported by said frame members intermediate their ends, and compression springs engaging the opposite sides of the one member of each of said bellcrank members and secured to said frame member.

2,105,824
SECTIONAL DRIVE
Paul Simonds, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 2, 1936, Serial No. 88,524
14 Claims. (Cl. 271—2.3)

1. A hydraulic drive, comprising two hydraulic motors, a power pump for supplying motive liquid to each motor to drive the same, means for driving said pumps, a control pump driven in unison with each motor at a speed proportional to the speed thereof, fluid channels connecting said control pumps in series, and hydraulic means operated in response to the volumetric output of one control pump varying from the volumetric input

of the other control pump for varying the displacement of one of said power pumps.

2,105,825
PLASTIC
Claude H. Smith, Tallmadge, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 10, 1934, Serial No. 724,948
2 Claims. (Cl. 91—68)

1. A tank lined with a plastic combination which comprises asphalt and a rubber distillation residue which on the vertical walls of the tank will not flow at a given temperature between 0 and 200° F. and will not become brittle at a temperature 100 degrees F. below said given temperature.

2,105,826
CONCENTRATION OF NONMETALLIC MINERALS
Francis X. Tartaron, Mulberry, Fla., assignor to Phosphate Recovery Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 18, 1935, Serial No. 45,599
14 Claims. (Cl. 209—166)

1. The process of concentrating non-metallic minerals from ores containing them in association with silicious matter, which comprises agitating a pulp of suitably divided particles of such a non-metallic mineral ore in the presence of a substantially insoluble and unsaponifiable oil, a fatty acid of less than thirteen carbon atoms to cooperate with said oil in effecting collection of the non-metallic mineral values, and an activating agent causing said fatty acid to have a preferential affinity for said values, said activating agent consisting of a soluble salt of a metal whose oxide does not exert an alkaline reaction when added to water, and separating a concentrate relatively rich in said values and relatively poor in silicious matter.

2,105,827
CONCENTRATION OF NONMETALLIC MINERALS
Francis X. Tartaron, Mulberry, Fla., assignor to Phosphate Recovery Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 11, 1935, Serial No. 53,932
2 Claims. (Cl. 209—166)

1. A process of concentrating by flotation a non-metallic mineral included in the group consisting of phosphates, barite and fluorspar, which comprises agitating a pulp of suitably divided

particles of the ore containing the non-metallic mineral, in the presence of a substantially insoluble and unsaponifiable oil and a cooperating agent causing an oiling of the non-metallic mineral particles by that oil preferentially to the particles of the gangue, heating the pulp sufficiently to cause air flocks of the non-metallic mineral particles to form and rise to the surface, and collecting the floated material, said oil and cooperating agent being employed in such small amounts that their effect of buoyancy on the non-metallic mineral particles is negligible.

2,165,228

PRODUCTION OF MORPHOLINE ETHANOLS

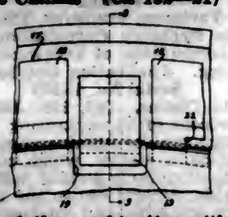
Alexander L. Wilson, Pittsburgh, Pa., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York

No Drawing. Application December 4, 1934, Serial No. 755,912

13 Claims. (Cl. 260—28)

1. As a new chemical compound, dimethyl morpholine ethanol, the same being a strongly basic liquid soluble in water and boiling at about 220° C. under atmospheric pressure.

2. The process of making a morpholine ethanol, which comprises reacting a $\beta\beta'$ dihalogenated dialkyl ether with ammonia, treating the resultant reaction mixture with a strong base, fractionally distilling the resultant product, and recovering from the distillate the selected morpholine ethanol.



2,165,229

WHEEL, OR RIM

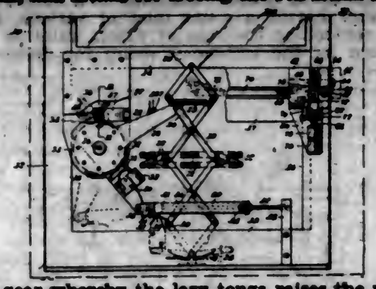
Alva W. Woodward, Kent, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware

Application December 20, 1935, Serial No. 55,266

8 Claims. (Cl. 152—21)

1. In a wheel, the combination with a rim portion having a peripheral locking-ring-receiving groove and a transverse driving-lug-receiving recess at the edge thereof, a side flange having a driving lug extending inwardly into said recess between the side walls thereof to prevent relative rotation between said side flange and rim, and a split locking ring arranged within said groove, the ends of said locking ring being spaced apart a sufficient distance to receive said lug whereby said lug prevents substantial relative rotation between said ring and felloe and also between said ring and side flange.

2,165,230



WINDOW OPERATING AND DOOR LOCKING MECHANISM

Thomas McG. Allen, Pittsburgh, Pa.

Application March 5, 1933, Serial No. 659,942

6 Claims. (Cl. 292—127)

1. In a window operating mechanism, a bell crank for raising and lowering the window, spring actuated lazy-tongs compressed by lowering of the window for automatically raising it, a gear and pinion for operating said bell crank, said gear having a releasable connection with the crank, and means for freeing the bell crank from

the gear whereby the lazy-tongs raises the window.

2,165,231

PRODUCTION OF HYDROGEN CYANIDE

Leonid Andrussow, Mannheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application November 23, 1935, Serial No. 51,974. In Germany November 29, 1934

5 Claims. (Cl. 23—154)

1. In the production of hydrocyanic acid by passing a gaseous mixture containing ammonia, hydrocarbons and oxygen at elevated temperatures over catalysts the use of alloys of platinum and iridium containing from about one-half per cent to about 15 per cent of iridium as catalysts in the form of gauze from wires the thickness of which is at least 0.1 millimetre.

2,165,232

METHOD OF COKING COAL BRIQUETTES

Joseph Becker, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, a corporation of Delaware

No Drawing. Application November 21, 1934 Serial No. 754,177

7 Claims. (Cl. 202—26)

3. A method of making briquettes from coking-coal, comprising: treating low-volatile coking-coal of under 20% volatile matter, dry basis, by pulverising it to particles mostly under 1 mm. and by limited oxidising of it, the oxidising being effected at a temperature of a range around the order of about 400° F. to promote the action and render the coal substantially non-caking and yet avoid softening of it or substantial production of gas by heat decomposition of the coal, and admixing about 7% of pitch, fluxed in at its free-flowing temperature, and briquetting the mix, and thereafter carbonising the briquettes, the carbonising being effected at a temperature range and within a time that give an end-temperature, inside the carbonising chamber, of between about 600° and 700° C. at the finish of a carbonising period of about 2 to 5 hours and leave in the finished briquettes a volatile content of an amount under a half and near a third of the amount of the volatile content of the original coal.

2,165,233

CONTINUOUS OUTLET SYSTEM

Sidney R. Feuer, Hyman Freedman, Hyman Hozinsky, and Arthur Rabinder, Brooklyn, N. Y.

Application May 2, 1936, Serial No. 78,532

2 Claims. (Cl. 247—5)

1. A continuous electrical conduit and outlet device comprising an elongated molding of solid flexible electrical insulating material having a pair of longitudinally extending laterally spaced parallel slits therein penetrating from the outer face of said molding to points short of the inner surface thereof, electrical conducting means embedded in said molding and extending longitudinally thereof adjacent the bottoms of each of said slits and exposed to the interiors of said slits and plug means for making electrical contact

with said conducting means comprising an insulating member carrying a pair of spaced conductive prongs extending respectively into said molding slits and contacting said conducting means and tongue means on said insulating member compressively engaging opposite side surfaces of said molding whereby said conductive prongs are gripped in said slits and pressed in firm engagement with said conducting means.

2,165,234

MANUFACTURE OF PIGMENT

Edmund J. Flynn, Palmerton, Pa., assignor to The New Jersey Zinc Company, a corporation of New Jersey

No Drawing. Application December 31, 1934, Serial No. 760,045

6 Claims. (Cl. 134—28)

2. The improvement in calcining a pigment containing chemically precipitated zinc sulfide with which is associated a small amount of excess sulfur which comprises adding to and intimately admixing with the pigment an amount of zinc oxide slightly in excess of that required to react with said excess sulfur to form zinc sulfide, and calcining the resulting mixture of pigment and zinc oxide at a temperature of at least 500° C. while said mixture still contains excess sulfur.

2,165,235

STERILIZING LIQUID

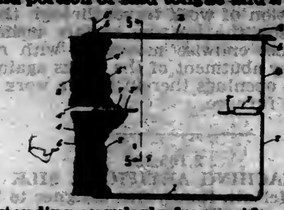
Georg Alexander Krause, Munich, Germany, assignor, by mesne assignments, to Katadyn Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application December 12, 1933, Serial No. 702,263. In Germany December 12, 1932

17 Claims. (Cl. 99—220)

1. The method of sterilising liquids, consisting in adding to a liquid determined quantities of carriers of oxygen such as hydrogen peroxide, and then exposing said liquid to the action of oligodynamically active metal which acts catalytically upon said hydrogen peroxide.

2,165,236



FILE FASTENER

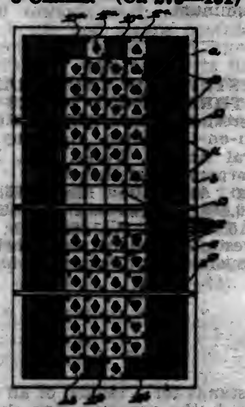
William Lang, West Orange, N. J., assignor to The Estes Manufacturing Company, West Orange, N. J., a corporation of New Jersey

Application May 22, 1936, Serial No. 81,446

8 Claims. (Cl. 229—35)

4. The combination with a file fastener clamping member comprising a tongue having a sheet engageable portion extending through sheets to be secured together and an end portion bent angularly with respect to said engageable portion and overlying said sheets, of an extension device for said tongue comprising an engaging portion removably and frictionally secured to the bent end portion of said tongue and a tongue por-

tion extending angularly from said engaging portion and substantially in the same plane as and in alignment with the sheet engageable portion of said tongue.



2,165,237

GAME APPARATUS

Marie S. Mayer, Vineland, N. J., and George W. Schilling, Philadelphia, Pa.

Application February 27, 1936, Serial No. 66,938

8 Claims. (Cl. 273—131)

1. Game apparatus of the checker type including a game board subdivided into checker squares of three different colors, the squares of one color being disposed in and completely filling a central field extending from the marginal row at one end to the marginal row at the other end, and the squares of the other colors being disposed alternately with respect to each other in sets of rows, one set extending along each side of the central field.

2,165,238

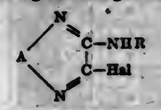
RAIL WEARING SURFACE

George C. McCormick, Needham, Mass., assignor to General Alloys Company, Boston, Mass., a corporation of Massachusetts

Application January 21, 1937, Serial No. 121,544

4 Claims. (Cl. 263—6)

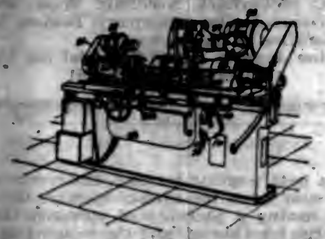
1. In a heat treating furnace, the combination of a rail and a wearing surface member therefor, the rail having a plurality of openings therein through the top thereof, and the wearing surface member comprising a body portion overlying the rail and having a plurality of integral holding



means formed thereon comprising hooks projecting downwardly from the surface member through the openings in the rail, and extending in the direction of work travel through the furnace, whereby the wearing surface member is locked against endwise movement with respect to the rail by abutment of the hooks against the walls of the openings therein during work travel through the furnace.

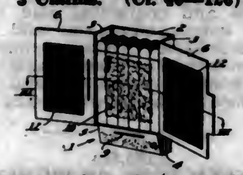
2,105,839
BLEACHING ARTIFICIAL SILK
Homer E. McNutt, Rome, Ga., assignor to Tubize Chatillon Corporation
No Drawing. Application July 25, 1935, Serial No. 33,664
4 Claims. (Cl. 8—2)

1. A method for inhibiting the corrosion of aluminum in the presence of an aqueous solution containing an alkali metal hypochlorite and free alkali which comprises neutralizing the free alkali content of the solution with a compound selected from the group consisting of carbonic acid, acetic acid, boric acid and borax, and bringing the solution thus neutralized into contact with the aluminum.



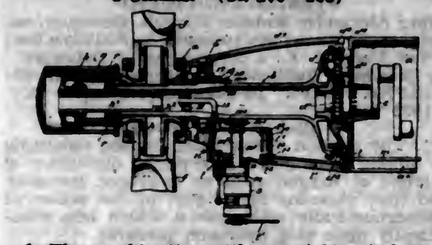
2,105,840
VAT DYESTUFFS OF THE PYRAZINOANTHRAQUINONE SERIES
Heinrich Nerenheimer and Wilhelm Ruppel, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 23, 1936, Serial No. 70,406. In Germany March 28, 1935
5 Claims. (Cl. 260—29)

1. Vat dyestuffs of the pyrazinoanthraquinone series corresponding to the general formula



wherein A stands for a radical of an anthraquinone to which the pyrazino ring shown is attached in 1.2-position, and R for an aryl group selected from the class consisting of benzene and anthraquinone radicals.

2,105,841
AUTOMATIC LINE BEARING GRINDER
Conrad L. Ott and Harold E. Balsiger, Waynesboro, Pa., assignors to Landis Tool Company, Waynesboro, Pa., a corporation of Pennsylvania
Application July 26, 1932, Serial No. 625,386
57 Claims. (Cl. 51—72)



1. A machine for grinding each of a plurality of bearings of a cam shaft comprising a wheel base having a grinding wheel mounted thereon, a work carriage traversable at right angles to the plane of the grinding wheel, a back-rest on said work carriage, opposite each of the bearings to be ground, means for moving the wheel base toward and from the work, and means for moving the back-rest which is in the plane of the grinding wheel into engagement with the work, and means for effecting a movement of the back-rest synchronized with the feeding-in of the wheel base as the work is reduced in size thereby maintaining a constant pressure of the back-rest upon the work, substantially as set forth.

2,105,842
SAFETY MATCH PACKET
Oliver P. Pindell, Columbus, Ohio
Application August 10, 1936, Serial No. 95,078
3 Claims. (Cl. 40—126)

1. A paper match packet comprising a cover having a back and a pair of relatively movable front sections, a group of paper matches flatly arranged within said cover and bearing on their outer surfaces indicia printed in contrasting primary colors, and substantially transparent or translucent panels of corresponding color positioned in registration with openings formed in the movable front sections of said cover and disposed for selective juxtaposition with the indicia appearing on said matches.

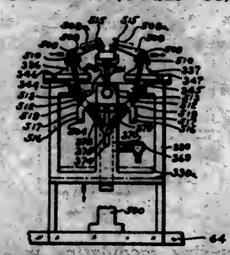
2,105,843
CONTROLLABLE PITCH PROPELLER
Charles I. Preston and Harry Melville Hammill, Williamsport, Pa., assignors to Aviation Manufacturing Corporation, Chicago, Ill., a corporation of Delaware
Application November 29, 1935, Serial No. 52,151
8 Claims. (Cl. 170—163)

1. The combination with a variable pitch propeller provided with hydraulic means for varying the pitch of the propeller blades, of means for delivering lubricating oil under pressure from the engine-lubricating system, comprising a constantly open device for restraining the rate of flow of oil from the engine sufficiently to prevent substantial reduction of the oil pressure in the lubricating system to less than that required for proper lubrication of the engine, means for accumulating a sufficient quantity of oil from the flow-restricting device to operate the pitch-change means, and means for delivering oil from the accumulating means to the hydraulic pitch-changing means.

2,105,844
CONTAINER BLANK
Walter G. Reagan, Lebanon, Ind.
Application August 29, 1936, Serial No. 98,569
8 Claims. (Cl. 229—1.5)

1. A blank for conical packages, comprising a polygonal sheet of flexible somewhat resilient material, such as paper, provided at one corner with a locking tongue flanking a re-entrant notch and also having a tongue-receiving slit within that half of the blank which carries the tongue and within the quadrant of said half most remote from said tongue.

2,105,845
PRODUCTION OF ORGANIC SULPHUR COMPOUNDS
Walter Reppe and Fritz Nicolai, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application November 22, 1935, Serial No. 51,084. In Germany December 4, 1934
11 Claims. (Cl. 260—43)



1. The process of producing organic sulphur compounds which comprises treating an organic base containing at least one reactive hydrogen atom bound to the nitrogen atom with an alkylene 1.2-sulphide below about 300° C.

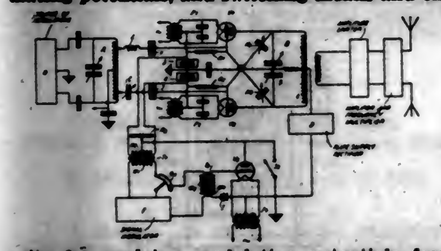
2,105,846
RADIAL ENGINE
John J. O. Ballanech, New Kensington, Pa., assignor to Fred Gelden, New Kensington, Pa.
Application November 19, 1934, Serial No. 753,738
6 Claims. (Cl. 121—120)

1. In a radial engine having a casing including a plurality of radially disposed cylinders, pistons in each of said cylinders, a transversely disposed main shaft in said casing, and transmission means between the pistons and the main shaft comprising, a pair of spaced pinions keyed to the said shaft, a gyrating frame in said casing, connecting rods pivotally connected to said gyrating frame and said pistons, a pair of spaced ring gears in said gyrating frame engaging the pinions on said main shaft, a rotating disk on said main shaft having a counterweight thereon, and means for driving said rotating disk through said ring gears.

2,105,847
LABELING MACHINE
Herman Stake and Axel W. Carlson, Worcester, Mass.; said Stake assignor to said Carlson
Application August 12, 1935, Serial No. 35,744
8 Claims. (Cl. 216—54)

1. In a wiper mechanism for bottle labeling machines, a vertically reciprocable slide member, wiper supports laterally movable in transversely disposed guides on said member, a wiper on each support resiliently engageable with the bottle, means to laterally move said wipers in said guides and towards each other to a position above the bottle and means operable in timed relation therewith to vertically move the slide member with the wiper supports fixed relative thereto, causing the wipers to resiliently engage the label and wipe it into firm contact with the bottle with gradually increasing pressure.

2,105,848
METHOD FOR TREATING TOBACCO
Rush D. Teuton, Philadelphia, Pa., assignor to Warton Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 11, 1935, Serial No. 15,787
5 Claims. (Cl. 24—24)



3. The method of treating tobacco which comprises first subjecting tobacco while in a moist state and at room temperature to a preliminary treatment in an atmosphere at a temperature such as to heat the tobacco and cause evolution of ammonia therein and having a relative humidity below 100% and such as to prevent deposition of moisture on the tobacco and minimize the evaporation of moisture from the tobacco and then subjecting the tobacco to an atmosphere at a temperature and having a relative humidity such as to promote the evaporation of moisture from the tobacco and while the tobacco retains a substantial amount of moisture subjecting the tobacco to an atmosphere at a temperature and having a relative humidity such as to regulate the moisture content of the tobacco to a predetermined amount of moisture.

2,105,849
PHASE MODULATION
George Lindley Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 12, 1934, Serial No. 752,629
8 Claims. (Cl. 179—171)

3. Phase or amplitude modulating means comprising, a pair of thermionic tubes each having an

anode, a cathode, and a control electrode, a circuit adapted to be energized by wave energy of carrier wave frequency, phase shifting means connecting different points on said circuit to the control electrodes of said tubes, a source of modulating potentials, and switching means and cir-

cuits for applying modulating potentials from said source in phase opposition to the cathodes of said tubes or in phase to the anodes of said tubes, or both in phase opposition to the cathodes of said tubes and in phase to the anodes of said tubes.

2,105,850

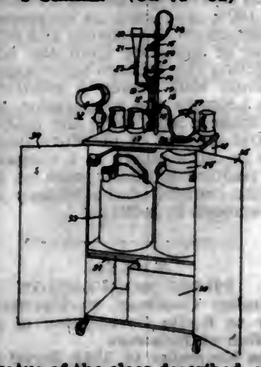
PROCESS FOR THE REFORMING OF GASOLINE DISTILLATE

Adrianus Johannes van Peski, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 22, 1936, Serial No. 86,584. In the Netherlands July 10, 1935

11 Claims. (Cl. 196—52)

1. In the process of reforming gasoline distillates to improve their antiknock rating, the steps comprising contacting a gasoline distillate of low antiknock rating at a reforming temperature between 225° and 500° C. with a reforming catalyst in the presence of a small quantity of a tertiary alkyl halide for a time sufficient to effect reforming without forming a substantial amount of gas.



2,105,851

LUBRICANT DEMETALLIZER

Arnold C. Vobach, Whiting, and Matthew Fairlie, Hammond, Ind., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine

Application September 22, 1936, Serial No. 101,904

5 Claims. (Cl. 73—51)

1. Apparatus of the class described, comprising an upright glass tube, an inlet for introducing fluid to be tested into the upper portion of the tube, an outlet for withdrawing fluid from the lower portion of the tube, a magnetized element extending downwardly into the tube in the path of travel of fluid from the inlet to the outlet for collecting metal particles contained in fluid passing through the tube, and a well communicating with the interior of the tube and disposed below the outlet for collecting non-metallic solids contained in fluid passing through the conduit.

2,105,852

MANUFACTURE OF THREADS FROM VISCOSE

Walther Zetzsche and Erich Graumann, Premnitz, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

Application June 12, 1936, Serial No. 85,967

In Germany June 27, 1935

5 Claims. (Cl. 18—54)

1. A process of producing curled staple fibers from viscose which comprises spinning viscose into a precipitating bath in which the viscose is decomposed only to cellulose xanthate, subjecting the xanthate threads to a mechanical curling operation, decomposing the xanthate threads to threads of cellulose hydrate and cutting the threads to staples.

2,105,853

GOLF BAG

Alan M. Brodie, Richmond, Va.

Application May 16, 1936, Serial No. 80,159

1 Claim. (Cl. 150—1.5)

A golf bag comprising a body and a bottom secured to the lower end thereof, said bottom having a perforate club-supporting surface and an annular depending flange adapted to be detachably connected to the bag body, the club-supporting surface of said bottom being formed with a plurality of relatively large openings, the material intermediate said openings being downwardly inclined toward said openings.

2,105,854

BUILDING

Frederick W. Bunk, Washington, D. C.

Application April 2, 1937, Serial No. 134,962

7 Claims. (Cl. 72—1)

1. In a building of the character described, a wall structure including vertical posts, and head and base rails, wall plates mounted between the posts and rails, an expansible joint between the vertical sides of the plates and the upper ends of the plates and head rails, each joint including an inter-fitting connection between the rails and

plates and a folded metallic strip having the free edges thereof respectively secured to adjacent edges of relatively movable parts with the folded portion of the strip being confined in the inter-fitting connections and presenting flatly contacting relatively movable portions.

2,105,855

DRY SHAVER

Charles Cuba, Brooklyn, N. Y.

Application February 6, 1937, Serial No. 124,730

16 Claims. (Cl. 30—43)

1. In a dry shaver, a guard plate head having a tubular shank, a blade carrier, a wafer blade carried by said carrier and having a cutting edge, means pivotally mounting said carrier on an axis parallel to the cutting edge of the blade, said blade carrier including an arm located in said shank and a carrier plate located over said guard plate head, means for rocking said blade carrier on its pivot and reciprocating it along its pivot axis, and a cover mounted on said guard plate over said pocket.

2,105,856

INSECTICIDAL OIL

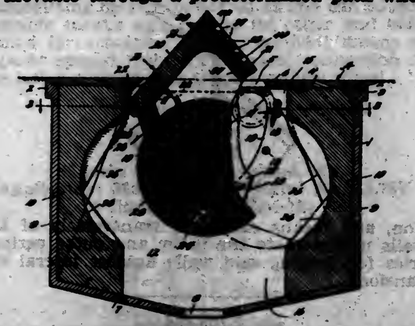
Lyle R. Coleman, McAllen, and Gerald L. Cowley, Alamo, Tex.

No Drawing. Application March 21, 1935, Serial No. 12,130

1 Claim. (Cl. 196—149)

A new insecticidal oil, non-toxic to vegetation, consisting of a distillate fraction from crude petroleum oil which is characterized by having a viscosity of from 65 to 200 seconds Saybolt at 100° F., a specific gravity between .9000 and .9600, distilling between 500° F. and 800° F., and yielding an unsulphonated residue of between 60 and 85 percent.

2,105,857



TRAFFIC SIGNAL DEVICE

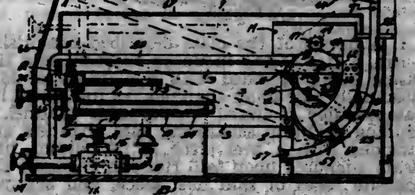
George T. Darby, Jacksonville, Fla.

Application January 2, 1936, Serial No. 57,206

13 Claims. (Cl. 40—135)

6. A traffic signal comprising a movable frame, said frame including a normally erect signalling element and a counterweight constituting a shock absorbing medium adapted to return said element to its normal position after depression, two spaced pivots for said frame, either of which is movable through a predetermined path when

the other functions as a pivot, means in connection with said pivots for directing their respective movements alternately through said predetermined path depending upon the direction of the depressing force.



2,105,858

TOASTING MACHINE

William A. Graham, Houston, Tex.

Application December 19, 1936, Serial No. 116,330

16 Claims. (Cl. 53—5)

1. A toasting apparatus comprising, in combination, a gas burner, a fuel line for said burner leading from a source of fuel under pressure, a normally closed valve interposed in said line, a carriage for the article to be heated, means for supporting the carriage for movement toward or from the burner, said valve and supporting means for the carriage having coacting parts to open the valve for fuel flow to the burner when the carriage is substantially at the limit of its movement in one direction, releasable means for holding the carriage at such limit of its movement, and means under control of the fuel flowing through the fuel line for releasing said means to allow the carriage to move in the opposite direction to a second position.

2,105,859

SAFETY VEHICLE TIRE

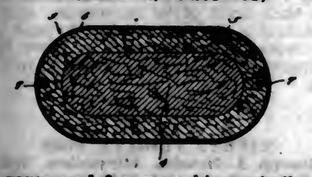
Joseph J. Hruska, Milwaukee, Wis.

Application September 30, 1936, Serial No. 103,430

3 Claims. (Cl. 152—10)

1. A safety rim of the class described formed from sheet metal and the like, comprising an annular member, said annular member comprising a pair of substantially parallel walls having an integral connecting bead portion along the outer peripheries thereof and forming a continuation of the walls, the inner edges of the walls being flared outwardly, means spanning the

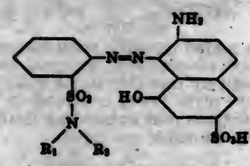
inner peripheries of the walls and connected thereto for firmly bracing the walls at their inner ends and holding the same in firm spaced rela-



tion, and means extending transversely of the walls intermediate the inner and outer peripheries for holding said walls against lateral expansion.

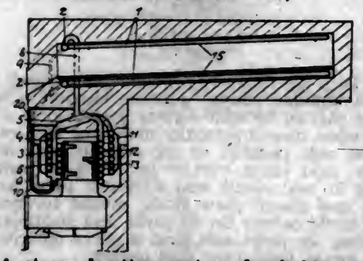
2,105,860
TIRE
Joseph J. Hruska, Milwaukee, Wis.
Application July 3, 1935, Serial No. 29,728
5 Claims. (Cl. 152—22)

1. A device of the class described comprising a rim, a tire casing mounted thereon, said tire casing being provided with a plurality of longitudinally extending channels, an individual inflatable tube mounted within each channel, a dividing partition separating said channels and provided with a heel piece at its bottom, heel cleats anchored upon said rim and engaging the opposite faces of said heel piece, and bearings carried by the heel cleats for contacting with the heel piece and supporting the heel piece in a manner to reduce friction to a minimum between the heel cleats and the heel piece.



2,105,861
PASSING BALL
Joseph Klecka, Downers Grove, Ill.
Application June 12, 1937, Serial No. 147,959
1 Claim. (Cl. 273—58)

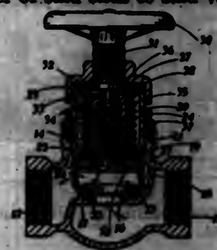
In a game and fun provoking missile, a hand ball comprising a padded filler of sawdust, a surrounding layer of raw cotton contained within said core, and an outer soft surfaced jacket having plush-like finish and constituting a protective covering for said sawdust and said cotton, said sawdust filler, cotton and confining jacket being compressed to form a soft hand ball, and having a flat-like form, the sections of said jacket being sewed together.



2,105,862
RED AZO-DYESTUFFS AND A PROCESS FOR THEIR MANUFACTURE
Oskar Knecht and Theodor Wirth, Basel, Switzerland, assignors to the firm of Chemical Works, formerly Sandoz, Basel, Switzerland
No Drawing. Application November 9, 1935, Serial No. 49,110. In Switzerland November 21, 1934
2 Claims. (Cl. 260—92)

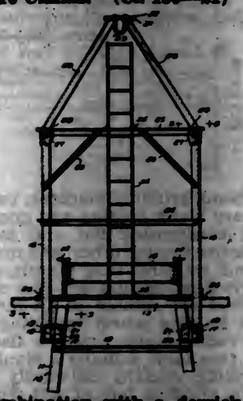
1. Red monoazo-dyestuffs of the general formula:

wherein R_1 stands for a benzene nucleus and R_2 represents an unsubstituted alkyl group, said dyestuffs being in the dry state red to brown-red powders, soluble in water with a red coloration and dyeing animal fibres red shades of excellent fastness properties.



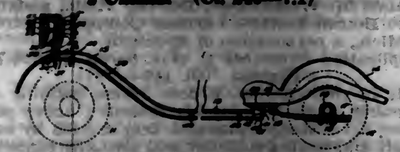
2,105,863
STEAM BAKING OVEN
Wilhelm Pfeiffer, Topl, near Karlsbad, Czechoslovakia
Application September 23, 1936, Serial No. 101,996
In Austria July 27, 1935
4 Claims. (Cl. 237—67)

1. A steam heating system for baking ovens comprising in combination, a tubular boiler, heating tubes, tubular connections between said boiler and the heating tubes to form a closed pressure proof heating circuit, a separator for the water and steam, and the water tubes of said boiler having the ends thereof interconnected with said separator for the water and steam mixture, a common collecting tube, said heating tubes being connected thereto, and one of said tubular connections forming the steam supply pipe communicating with one end of said collecting tube, and the other of said tubular connections forming the condensate discharge pipe communicating with the other end of said collecting tube.



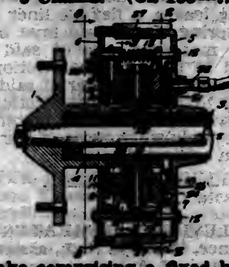
2,105,864
FLUID-CONTROLLING VALVE
Philip Keith Saunders, Wolverhampton, England
Application October 16, 1936, Serial No. 106,038
In Great Britain November 30, 1935
7 Claims. (Cl. 251—31)

1. In a valve, a valve body, an axially-movable valve member, a metal bellows the ends of which are maintained substantially cylindrical, concentric rings for clamping one of said ends to said valve body, other concentric rings for clamping the other of said ends to said valve member,



one of said rings at each end being flexible, and means for radially distorting said flexible rings during the clamping.

2,105,865
GIN POLE FOR DERRICKS
William Schwemlein and Samuel B. Settle, Parkersburg, W. Va., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a corporation of West Virginia
Application October 15, 1935, Serial No. 45,130
16 Claims. (Cl. 189—21)



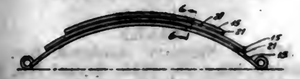
1. The combination with a derrick, of a gin pole comprising a plurality of lower legs secured adjacent their lower ends to the upper end of the derrick, a plurality of upper legs having their lower ends secured to the upper ends of said lower legs and converging toward their upper ends, and supporting means carried by the upper ends of said upper legs.

2,105,866
HEADLIGHT CONTROL MEANS FOR MOTOR VEHICLES
Milton W. Shaeffer, Hanover, Pa.
Application May 25, 1936, Serial No. 81,482
5 Claims. (Cl. 240—7.1)

1. Headlight control mechanism for a motor vehicle comprising a headlight, movable means connected to the headlight for vertically moving the beam thereof, resilient means connected for vertical movement with a wheel of the vehicle with respect to the body thereof, and motion transmitting means connected at one end to said movable means and having its other end connected for actuation by said resilient means at a point spaced from the point of connection of the latter with said vehicle wheel.

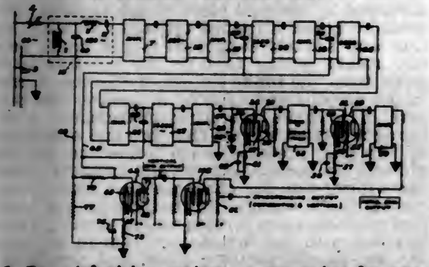
2,105,867
BRAKE
Marvin Stewart, Ashland, Ky.
Application May 25, 1936, Serial No. 81,767
3 Claims. (Cl. 188—72)

1. A brake comprising a fixed brake housing, a tubular member extending out of said housing and fixed to a wheel hub, a braking plate splined to said tubular member, floating brake linings arranged at opposite sides of the braking plate, pressure plates arranged opposite the brake linings and slidably supported in the brake housing, means acting to urge the pressure plates away from the brake linings, a chamber formed in the housing and adapted to receive fluid pressure of a brake operating mechanism, a diaphragm carried by said chamber and acted upon by the fluid pressure, a rib formed on the diaphragm to contact one of the pressure plates, cams formed on the other pressure plate, an adjusting plate mounted to the housing for a limited rotation, cams formed on the adjusting plate to coact with the first-named cam in adjusting the last-named pressure plate, and providing a stop therefor, and means for adjusting said adjusting plate.



2,105,868
TYPEWRITER STAND
Arvine N. Thomas, Canton, Ohio, assignor to James P. Ward, Jr., Chicago, Ill.
Application June 14, 1937, Serial No. 148,198
6 Claims. (Cl. 311—1)

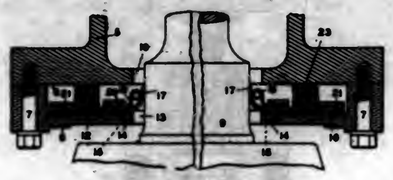
1. In a knock-down typewriter stand or table, front and rear leg frames, each including vertical corner legs and horizontal cross bars connecting the legs adjacent the upper and lower ends thereof, a foot board detachably connected at its ends to the lower cross bars, side aprons detachably connected to the upper ends of the legs of each



leg frame, a table top removably supported on the leg frames, and a shelf slidably mounted in the side aprons.

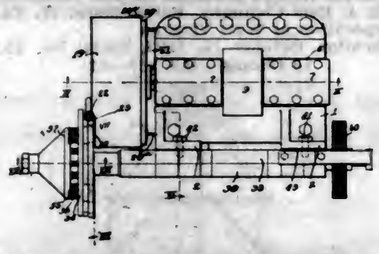
2,105,569
VEHICLE SPRING
Tom H. Thompson, Detroit, Mich.
Application April 16, 1935, Serial No. 16,618
14 Claims. (Cl. 267—47)

1. A leaf spring assembly comprising superimposed spring leaves, a flexible liner interposed between the spring leaves, said liner being composed of two materials, one of said materials being adapted to increase the friction between the spring leaves and the other of said materials being adapted to decrease the friction between the spring leaves, one of said materials being arranged to act only when parts of the other material has been subjected to wear.



2,105,570
TELEVISION APPARATUS
Arthur W. Vance, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 23, 1934, Serial No. 727,091
10 Claims. (Cl. 178—7.1)

1. In a television system, a generator for producing synchronizing impulses, said generator being located at the television transmitter and comprising a source of alternating current having a certain frequency, means for multiplying said frequency to produce a sine wave current having a comparatively high frequency, and means for selecting only the peaks of said sine wave to produce said synchronizing impulses.

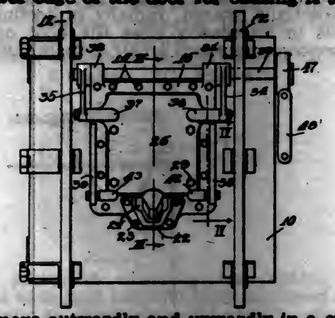


2,105,571
OIL AND DUST SEAL FOR JOURNAL BOXES
Albert Vigne, Webster Groves, Mo., assignor to National Bearing Metals Corporation, St. Louis, Mo., a corporation of New York
Application March 20, 1936, Serial No. 69,750
5 Claims. (Cl. 286—6)

1. In a device of the class described, a sealing unit for use with a journal box provided with a channel and also cooperating with an axle projecting into said box through an opening of such size as to permit relative movement between the axle and box; said unit comprising a sealing plate, a flexible sealing sheet contacting with the axle throughout its periphery to form an oil seal and with a wall of the box, lugs on the sealing plate cooperating with a wall of the channel to prevent rotation of the plate, said lugs permitting relative vertical movement between the plate and box but preventing substantial horizontal movement between said parts, and an ex-

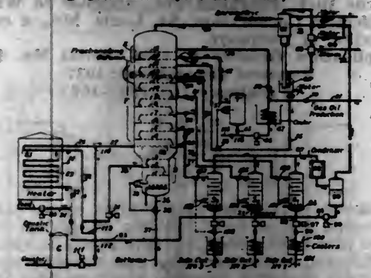
pansion member holding the sheet against a wall of the channel.

2,105,572
GRINDING MACHINE
Arthur L. Warner, Carpentersville, Ill., assignor to Illinois Iron & Bolt Company, Carpentersville, Ill., a corporation of Illinois
Application July 23, 1934, Serial No. 736,534
3 Claims. (Cl. 51—124)



2. In a blank grinding machine, partially overlapped rotary blank holding and grinding wheels presenting confronting flat end faces inclined slightly relative to each other, and means for supporting and rotating said wheels so that the blanks carried on the flat end face of said blank holding wheel are rotated in an inclined plane, said blank holding wheel including a plurality of spaced radial blank supports fixedly carried on its end face each defining a blank supporting seat extending radially outwardly toward the plane of the grinding face of said grinding wheel, and clamping means for holding the blanks on said supports, the grinding arc of movement of each blank being substantially coextensive with the overlap of said wheels and the inclination of said inclined plane being such to progressively cause only the edge of each blank to be fed transversely closer to said grinding face as the blank is rotated through said grinding arc and to bring the blank edge to be ground into closest cooperation with said grinding face as the blank is traveling the last quarter of said grinding arc.

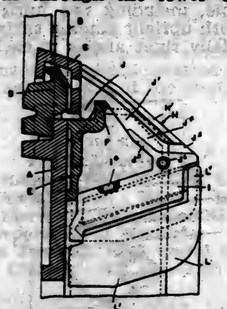
2,105,573
DOOR AND OPERATING MECHANISM
Claude M. Weinheimer, Detroit, Mich., assignor to Detroit Electric Furnace Company, Detroit, Mich., a corporation of Michigan
Application December 3, 1934, Serial No. 755,744
2 Claims. (Cl. 110—176)



1. In combination, a door frame defining an opening, a shaft rotatably mounted above said door, a vertically swingable arm carried by said shaft and having its outer end pivotally connected to the door adjacent its upper edge, whereby the upper edge of the door is moved outwardly and upwardly away from said opening in an

arcuate path, and inclined slot guide means for the lower edge of the door for causing it to ini-

tially move outwardly and upwardly in a curved path and thereafter in a straight line path.



2,105,574
PROCESS FOR PREVENTING CORROSION IN THE DISTILLATION OF HYDROCARBON OIL
Blair G. Aldridge and Edward G. Ragatz, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application July 16, 1934, Serial No. 734,529
3 Claims. (Cl. 196—25)

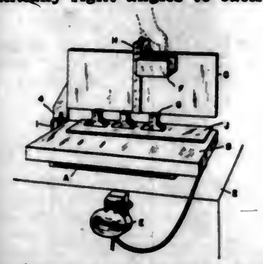
1. In a process for distilling oil, the steps comprising heating the oil in a heating zone, withdrawing the heated oil from the heating zone and then commingling caustic alkali solution with the said heated oil, introducing the heated oil together with the said commingled caustic alkali solution into a separating zone where vaporization takes place and vapors and unvaporized oil are separated, withdrawing at least a portion of the unvaporized oil containing caustic alkali from said separating zone and commingling said withdrawn oil containing caustic alkali with oil being heated in said heating zone.

2,105,575
APRON TUYERE FOR STOKERS
Royce L. Beers, Birmingham, Mich., assignor to Detroit Stoker Company, Monroe, Mich., a corporation of Michigan
Application October 7, 1935, Serial No. 43,949
13 Claims. (Cl. 110—75)

1. In a furnace, the combination with a furnace wall, of an apron tuyere detachably engaging said wall and projecting into the furnace chamber, said unit comprising an apron portion extending rearward and downward from said wall, a return-portion extending forward to said wall and together therewith and said apron portion forming an air chamber with ports opening therefrom through the lower end of said

apron, and a heat insulating unit detachably engaging said return-portion and covering the same.

2,105,576
WATER PRESSURE REGULATOR
William Thomas Birch, Chicago, Ill.
Original application March 4, 1925, Serial No. 9,313. Divided and this application November 30, 1936, Serial No. 112,499
1 Claim. (Cl. 50—23)



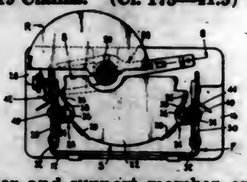
A water pressure regulator comprising a casing having an inlet and an outlet, means in said casing dividing said casing into an inlet chamber and an outlet chamber and carrying a ported valve seat, a valve movable in said inlet chamber and engageable with said seat, means in said casing connected to said valve to move said valve to open and to closed positions, respectively, with a snap action, a first cup-shaped member movable with said valve and having an outwardly extending imperforate annular wall, a second cup-shaped member secured stationary on said casing and having an outwardly extending imperforate annular wall disposed in nested relation with a wall of said first cup, the lip of one cup being in spaced-apart relation to the opposed bottom of the other cup to provide an air chamber when said valve is in open position, the opposed walls of said cup members being spaced to permit free relative movement of the cups and provide a narrow passage therebetween.

2,105,577
CORE BOX STRIPPING MACHINE
George C. Carney, Detroit, Mich., assignor to Harry W. Diefert, Detroit, Mich.
Application June 3, 1936, Serial No. 84,217
6 Claims. (Cl. 22—10)

1. In apparatus of the class described, a substantially horizontal base, a substantially horizontal core table substantially parallel to said base, yieldable means supporting the table upon

and cushioning it from the base, means for guiding a core box when manually lifted from a core on said table, including two upright members having smooth upright guiding surfaces disposed at substantially right angles to each other, one

of said members being rigidly fastened to said base, the other of said members being adjustable across the guiding surface of the first mentioned member, and a vibrator connected to one of said members.



2,105,378

VARIABLE CONDENSER

Samuel Cohen, Brooklyn, N. Y., assignor to General Instrument Corporation, New York, N. Y., a corporation of New York

Application May 8, 1934, Serial No. 724,490

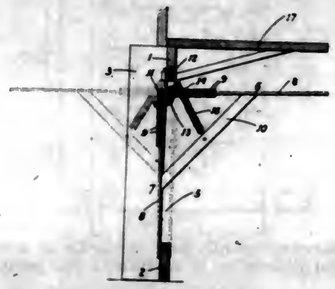
19 Claims. (Cl. 175—41.5)

1. A spacer and support member or comb for a variable condenser, said member comprising a holding portion or strap, and mounting lugs projecting outwardly therefrom and adapted to be secured to the frame of a condenser, said lugs being so connected to the comb as to be somewhat yieldable relative thereto.

4. A spacer and support member or comb for a variable condenser, said comb comprising a piece of sheet metal shaped and bent to form an upper holding portion or strap, a lower holding portion or strap extending in a direction parallel to but lying in a plane angularly related to the plane of the first strap, interconnecting portions bent to channel shape, and mounting lugs struck out between said interconnecting portions and adapted to be secured to the frame of a condenser, said lugs being so connected at one end only to said comb as to be somewhat yieldable relative to the comb.

12. A single ball end thrust bearing for a condenser, said bearing including an adjustable bearing plate for holding the ball bearing at the end of the condenser shaft, said plate being secured at one end to the end plate of the condenser and having an adjusting screw at its opposite end, another part of the plate having a locating lug dimensioned to fit within an aperture in the end plate.

2,105,879



AUTOMATIC DOOR FOR TURKEY NESTS

Arthur D. De Hart, Modesto, Calif.

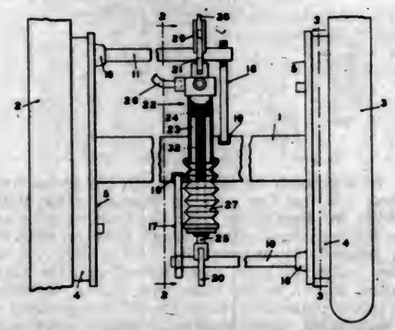
Application November 17, 1936, Serial No. 111,267

1 Claim. (Cl. 119—50)

A closure for a nest for fowls, comprising a frame adapted to surround a door opening, a pivot member secured on the frame, a door turnably mounted on said member and including circumferentially spaced, radially projecting door sections to alternately close the door opening, each section comprising a pair of spaced panels, a

stop for the door as each section reaches a closed position, a diagonal brace extending between the sides of the door sections on one side, and a snap action tension spring secured at one end on the frame and at the other end to the brace centrally of its ends.

2,105,880



TRAILER OR TRUCK BRAKING MECHANISM

Burns Dick, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application October 9, 1935, Serial No. 44,146

Renewed December 2, 1937

6 Claims. (Cl. 188—106)

1. In braking mechanism, the combination of a dead axle of a vehicle, a wheel at each end thereof, a brake for each wheel and comprising a drum and a cooperating friction device, supporting brackets secured to the central part of the axle and positioned on opposite sides thereof, shafts positioned on opposite sides of the axle, one end of each shaft being journaled in a bracket and the other end being supported by and connected to actuate the friction device of one of the brakes, an arm mounted on each shaft adjacent the first named end, a fluid motor interposed between and connected to the arms to rotate the shafts in opposite directions to actuate the friction devices, independently operable means for rotating said shafts, said last named means comprising a pull-rod, and an equalizing lever connected at its center to the pull-rod and at its ends to the arms secured to the shafts.

2,105,881

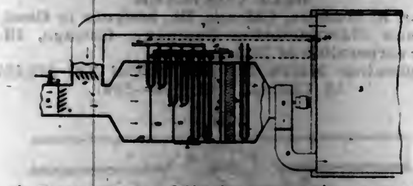
FRICTION TAPE WRAPPING

Donald W. Fother, Downey, Calif., assignor to Emsco Asbestos Company, Downey, Calif., a corporation of California

Application September 10, 1935, Serial No. 39,919

2 Claims. (Cl. 229—87)

1. A protective wrapping for friction tape adapted to be bent longitudinally in curved form, comprising an elongated paper sheath extending longitudinally of the tape and having its edges folded over the tape, said sheath having corrugations extending at right angles with the edges of the tape so that the sheath is longitudinally distensible in conformity with the curved surface of the tape as the tape is bent into longitudinally curved form.



2,105,882

AIR CONDITIONING SYSTEM

Walter L. Fleisher, New City, N. Y.

Application November 6, 1934, Serial No. 751,684

4 Claims. (Cl. 257—1)

4. In an air conditioning apparatus, a conditioner having an air inlet and an air outlet, a plurality of tempering elements within said conditioner between said inlet and said outlet, different of said elements covering different portions of the cross sectional area of said conditioner, and means in addition to said elements for regulating the resistance to air flow through different portions of the cross sectional area of said conditioner.

2,105,883

ELECTRICAL SWITCH

Landon C. George, Chicago, Ill.

Application January 21, 1937, Serial No. 121,603

2 Claims. (Cl. 200—153)

1. In an electric switch mechanism, a wall plate, a shaft rotatably mounted on the wall plate, a liquid flow switch, a plate fixedly mounted on said shaft in proximity to the wall plate and providing a support for said switch, said supporting member providing an arcuate slot, a pin projecting from said wall plate into said slot to provide a stop limiting the oscillation of said supporting member, said switch being respectively in open and closed positions when said pin is positioned at opposite ends of said slot, a sleeve of cushioning material mounted on said pin, and resilient means positioned between and providing a yieldable separator for said plates adapted to hold the supporting plate against rotation unless actuated by manual rotation of the shaft.

2,105,884

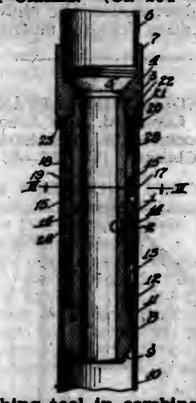
PLUG CONTACT

Charles A. Hauser, Detroit, and Laurence H. Thomas, Birmingham, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a corporation of Michigan

Application June 22, 1936, Serial No. 86,684

3 Claims. (Cl. 173—332)

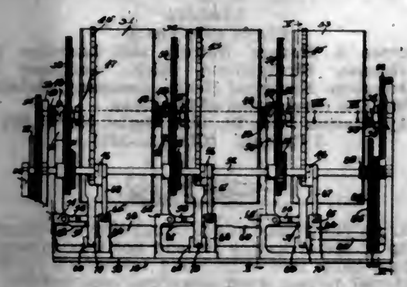
1. An electrical contact comprising a U-shaped strip of metal having its end portions inwardly return-bent, said strip being formed of flexible material having good electrical conductivity, a low coefficient of friction at high temperatures and the oxide of which is a relatively good conductor, and a resilient reinforcing member arranged within the U and embracing the return-bent portions thereof, said reinforcing member being formed of material which retains its resiliency when subjected to heat.



2,105,885

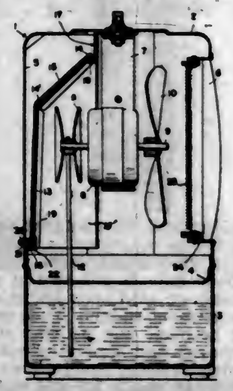
HOLLOW TRIP CASING SPEAR

Frank J. Hinderliter, Tulsa, Okla.



Original application March 30, 1932, Serial No. 601,951. Divided and this application January 7, 1935, Serial No. 615

4 Claims. (Cl. 294—86)

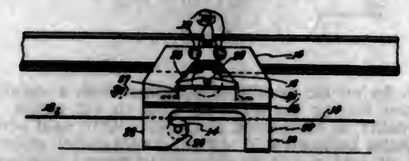


1. In a fishing tool in combination, a hollow body, clutch means surrounding said body and adapted for gripping engagement with a pipe in which said body may be inserted, a deformable packing element on said body below said clutch means, a cam element slidably fitted on said body and disposed between said packing element and said clutch means and supported solely by said packing element whereby upon downward movement of said clutch means on said body said cam element simultaneously deforms said packing element to form a fluid tight seal with the pipe surrounding the tool and expands said clutch elements into gripping engagement with said pipe.

2,105,836
SPRING MOTOR AND REFRIGERATOR DRIVE
Alexander F. Indrieri, Chicago, Ill., assignor of two percent to Edgar Bernhard, and fifteen percent to Dominick Petrunelli and Vito Scavo, all of Chicago, Ill.
Application April 1, 1936, Serial No. 72,007
2 Claims. (Cl. 185—40)

1. A spring motor comprising an elongated supporting and winding shaft rotatably secured at its ends in a frame structure, a plurality of cylindrical casings freely rotatable around said shaft, spiral springs in each of said casings affixed to the shaft at the inner ends thereof and to the casings at the outer ends thereof, dog clutch members carried by the sides of each of the casings, dog clutches slidably mounted on the shaft for engaging the clutch members, gears carried by said clutches, a drive shaft mounted alongside of said casings, gears on said drive shaft meshing with the clutch gears, means on said drive shaft for locking the casings against rotation, a cam sleeve slidably mounted beneath the casings, and means riding on said cam sleeve for engaging and disengaging the clutches and for releasing the casing locking means.

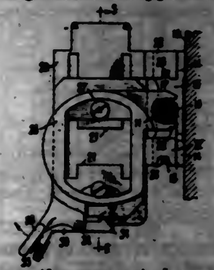
2,105,887
AIR CONDITIONING APPARATUS
George W. Langford, Ann Arbor, Mich.
Application December 16, 1935, Serial No. 54,724
9 Claims. (Cl. 183—9)



1. An air conditioning apparatus, comprising means forming an air passageway and means forming a liquid receptacle below said air passageway, means for creating a flow of air through said air passageway, a filter through which said air passes, said filter having an overhanging portion, and means below said overhanging portion for elevating liquid from said receptacle and throwing the elevated liquid directly against said overhanging portion.

2,105,888
PROCESS OF TREATING METAL
Carl F. Lauenstein and Paul F. Ulmer, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill., a corporation of Illinois
No Drawing. Original application April 22, 1932, Serial No. 606,907. Divided and this application March 7, 1936, Serial No. 67,702
4 Claims. (Cl. 148—14)

4. The method of coating and alloying a ferrous metal, of the group consisting of iron and steel, with silicon, which includes the steps of placing the ferrous metal, together with common salt and a source of silicon selected from the group of materials consisting of ferro-silicon, silicon and an ore of silicon, in a container, heating said container and contents to a point sufficient to break down the salt to chlorine and sodium and cause direct combination of the chlorine and silicon and free the sodium for action as a reducing agent on the ferrous metal, whereby the surface of the ferrous metal is alloyed and coated with silicon.



2,105,889
BELT CONVEYER
John R. Madeira, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 29, 1937, Serial No. 133,557
12 Claims. (Cl. 198—204)

1. In a sectional conveyer, an endless flat conveyer belt, a plurality of supporting standards, and longitudinally extending spacing members connecting said supporting standards together, said spacing members forming sides extending along said belt and having portions extending beneath and supporting the edges of said belt to prevent the spillage of material onto the lower run of said belt, and means to prevent material spilling through the joints between adjacent spacing members from collecting on the lower run of the belt comprising a collecting chute on each side of each of said standards, said chutes being disposed beneath the joints between said spacing members and arranged to discharge material away from said standards.

2,105,890
GATE LIFTER
Eugene Merfeld, Astoria, Long Island, and Albert Kindelmann, Floral Park, N. Y., assignors to International Projector Corporation, New York, N. Y., a corporation of Delaware
Application December 12, 1936, Serial No. 757,998
11 Claims. (Cl. 88—17)

1. In a film-carrying apparatus, a film-trap door, a support on which said door hangs, and manually operable means on the door movable relative to the door and independently engaging and interacting with the support for disengaging

the door from the support, by movement in a direction parallel to the face of the film.

2,105,891
AUTO-VENT
Willard L. Morrison, Chicago, Ill.
Application March 11, 1933, Serial No. 660,770
Renewed October 2, 1937
12 Claims. (Cl. 296—91)

10. An air deflecting device for automobiles comprising a transparent deflector section pivotally mounted in the window opening on an up and down axis, and upper and lower pads fitting over the reveals of the window opening for holding said section in place, whereby the deflector section may be installed without defacing the window reveals.

2,105,892
DISPENSING DEVICE
Robert E. Perry, Chicago, Ill.
Application January 27, 1937, Serial No. 122,402
14 Claims. (Cl. 221—65)

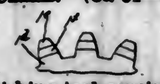
1. A powder dispensing device comprising, in combination, a hopper having an outlet, a measuring valve in said outlet, a chamber below said outlet adapted to receive an article upon which powder is adapted to be deposited, a trigger in said chamber operable upon insertion of said article, and toggle mechanism operable by said trigger to snap said valve into open and closed position.

2,105,893
HOT WATER HEATING SYSTEM
Anton Salmonson, Stapleton, N. Y.
Application May 6, 1936, Serial No. 78,113
3 Claims. (Cl. 126—362)

1. The combination with a storage tank for hot water, of a plurality of independently operable, external hot water heating elements each having at its bottom a valveless water supply connection with the bottom of the tank, and at its top a water discharge connection with the top of the tank, each of said discharge connections including a normally gravity closed valve capable of automatically opening in response to the differential in pressure created by the thermo-syphon circulation of water when the corresponding heating element is functioning to heat the water therein and of preventing reverse flow of water through the heating element not functioning, whereby either heating element may be utilized for heating water, the other element being in reserve.

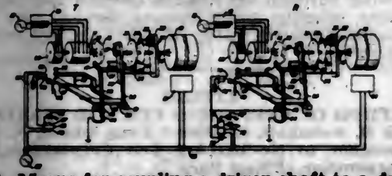
2,105,894
METHOD OF PREPARING FUR FOR FELTING
Jack D. Sartakoff, Elmhurst, Long Island, N. Y., assignor to No-Mercury Felt Corporation, a corporation of New York
No Drawing. Application December 8, 1936, Serial No. 114,770
4 Claims. (Cl. 8—21)

3. The herein described method which comprises singeing the fur hairs indiscriminately while on the skin, thereafter cutting the fur from the skin, and thereafter felting the fur.



2,105,895
TILE
Otto A. Stever, Los Angeles, Calif., assignor to O. H. Kruger, San Marino, Calif.
Application March 5, 1936, Serial No. 67,244
Renewed June 23, 1937
2 Claims. (Cl. 72—18)

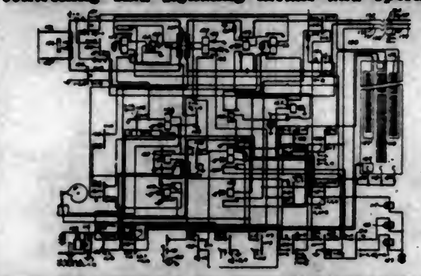
1. A tile made of thin sheet material having a front body of which the rear side is designed to



seat upon bonding material so as to form the solid surface material for the bonding material, portions integral with and extending from the body rearwardly for cutting into and thereby becoming embedded in the bonding material, and escape means in the portions in form of stamped in pieces cut sufficiently so that uncut adjoining portions project in bends towards one side of the first-named portions and thereby leaving apertures through which surplus bonding material may escape from behind the body towards the outside while the first-named portions are forced into the bonding material until the body becomes seated snugly.

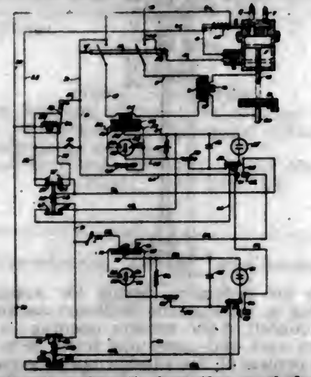
2,105,896
METHOD AND MEANS FOR HONING GEARS, AND FOR TRUING THE HONING MEANS
Everard Stubbs, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont
Application January 4, 1935, Serial No. 397
3 Claims. (Cl. 51—204)

1. A gear finishing tool consisting of an abrasive member having gear teeth conjugate to those of the gear to be finished, and composed of nonmetal mineral grains suitable to abrade steel, bonded together, such grains in different zones of the tool teeth being different from one another in steel cutting capabilities.



2,105,897
DRIVE FOR ROTATING ELEMENTS OF ELECTROOPTICAL SYSTEMS
Charles C. Towne, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 20, 1934, Serial No. 721,525
20 Claims. (Cl. 178—69.5)

1. Means for coupling a driven shaft to a driving shaft comprising means for causing the phase relationship between said shafts to change rapidly in one direction, and means automatically set into operation whenever the phase relationship is changing in the other direction for causing the phase relationship to change only relatively slowly in said other direction.



2,105,898
TELEPHONE EXCHANGE SYSTEM
Wiley Whitney, Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 21, 1936, Serial No. 65,032
6 Claims. (Cl. 179—27)

1. In a telephone system, an operator's position, trunk lines extending to said position, a plurality of groups of selector switches having access to said trunk lines, a cord circuit at said operator's position for connection with said trunk lines, signaling means at said operator's position and a discriminating relay at said position for controlling said signaling means and operable

only when a connection to said operator's position is established over a selector switch of one of said groups.

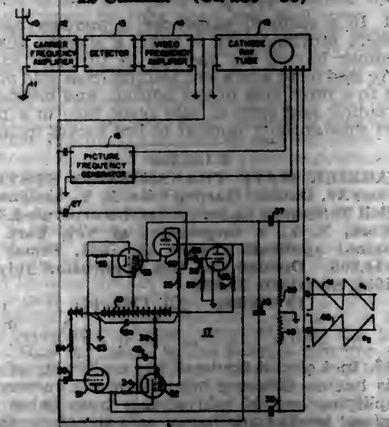
2,105,899
CURRENT FLOW TIMING DEVICE
David C. Wright, Euclid, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application April 27, 1935, Serial No. 18,490
27 Claims. (Cl. 219—4)

1. Apparatus for timing the periods during which a work-circuit is closed and open, comprising: on-timing means for controlling the duration of the closed period; and off-timing means for controlling the duration of the open period between successive closed periods; the duration of one of said periods being dependent upon the magnitude of the voltage applied to one of said timing means, said one period being greater for small voltages applied to said one timing means and less for large voltages; said one timing means including means for causing termination of said one period and for effecting initial operation of the other of said timing means.

2,105,900
SHAFT BEARING
Charles C. Barber, Rockville Centre, N. Y., and Charles W. McWilliams, Kearny, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 20, 1935, Serial No. 50,644
2 Claims. (Cl. 308—72)

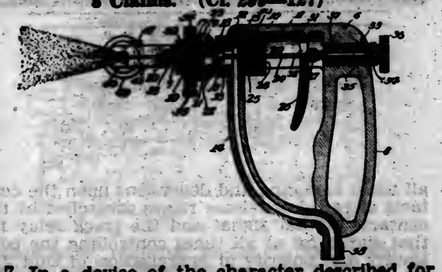
1. A support for a shaft bearing and the like comprising a rear member and a front member to support a bearing, said front member having

an upper band and a lower band, and interior pads suitably disposed along each of said bands



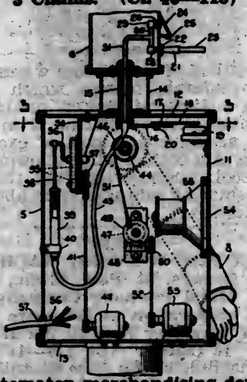
to support the bearing and flexible laterally along its surface when more than a predetermined pressure is applied to said front member.

2,105,901
FROTH FLOTATION METHOD
Frederic A. Brinker, Denver, Colo.
No Drawing. Application March 29, 1935, Serial No. 11,996
16 Claims. (Cl. 209—167)



1. A method for the froth flotation separation of sulfide ores containing copper sulfide and sulfides of the class zinc and iron sulfides, comprising preparing a flotation pulp from the ore, supplying a cyanide compound thereby inhibiting flotation of the sulfides of said class, supplying sulfuric acid thereby activating depressed copper sulfide, supplying a frothing and a promoting agent, subjecting the pulp to froth flotation, and removing a copper sulfide concentrate substantially free from sulfides of said class and rejecting substantially all the sulfides of said zinc and iron class with the tailings.

2,105,902
PERIODIC VOLTAGE GENERATOR
Madison Cawein, Manhasset, N. Y., assignor to Hazeltine Corporation, a corporation of Delaware
Application February 15, 1934, Serial No. 64,022
12 Claims. (Cl. 250—36)

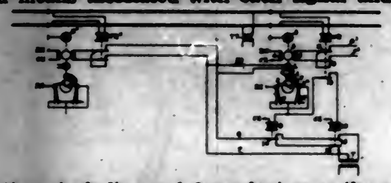


1. A periodic voltage generator comprising capacitance means, a direct-current circuit, a pair of circuits for charging said capacitance means to opposite polarities from said direct-current circuit, means for controlling said pair of circuits periodically to effect alternate charges of said capacitance means to opposite polarities, one of the circuits of said pair including two impedance means of substantially equal values and symmetrically disposed therein for the periodic current of said generator, and an output circuit in which the periodic voltages developed across said impedance means appear as balanced oppositely poled voltages.

2,105,903
SPRAYING DEVICE
Floyd O. Clisbe and Vaughn Kelly, Chicago, Ill.; said Kelly assignor to said Clisbe
Application February 12, 1934, Serial No. 710,766
8 Claims. (Cl. 299—127)

7. In a device of the character described for applying coating material of the lacquer or varnish type, the combination of a nozzle having a minute discharge orifice, means for delivering the material to the nozzle at a pressure in excess of 150 pounds per square inch for discharge through said orifice in a fine, high velocity stream, and means applied to the stream at a point directly in front of the orifice for breaking up and atomizing said stream and forming the latter into a substantially flat, fan-shaped sheet for coating purposes.

2,105,904
AUTOMATON MERCHANDISING DEVICE
Frank L. Dale, Hartsville, Ind.
Application June 20, 1936, Serial No. 86,380
3 Claims. (Cl. 46—118)



1. An automaton merchandising device including a body, a head oscillatable in a horizontal plane, a pair of arms one of which is pivoted at the shoulder of the body and movable from a point adjacent the lower extremity of the body to a position of salute and motor-actuated means associated with the body whereby upon a single movement of said arm from one position to the other, the head is timed to oscillate from front to profile and profile to front.

2,105,905
AUTOMATIC BLOCK SIGNALING SYSTEM FOR RAILROADS
Salisbury M. Day, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application September 6, 1934, Serial No. 742,953
5 Claims. (Cl. 246—39)

1. In a block signaling system, signals of the movable color screen type having contacts oper-

ated by said screen in accordance with the indication displayed by the signal, a track circuit next in advance of each signal and having a track relay, a polarized line circuit associated with each signal for controlling the signal next in the rear, and means associated with each signal and at

all times including and dependent upon the contacts of two slow release relays controlled by the contacts of that signal and the track relay for that signal for at all times controlling the continuity and polarity of energization of said line circuit for the signal next in the rear.

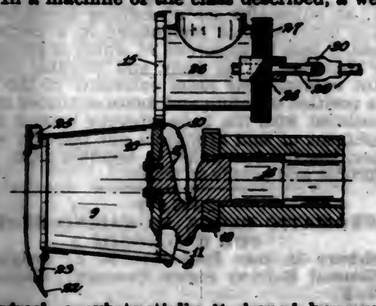
2,105,906
METHOD OF HOT PLATING CONTAINERS

Louis J. B. Demers, St. Paul, Minn., assignor to Superior Metal Products Company, St. Paul, Minn., a corporation of Delaware

Application October 26, 1936, Serial No. 107,601

7 Claims. (Cl. 91—70.2)

1. The method of hot plating a container having an imperforate bottom which consists in applying a coating of molten plating material to said container, then placing it in such position as to accumulate a pool of excess coating material on said bottom while allowing said container to cool progressively from the top down and then removing said pool from above while in molten condition.



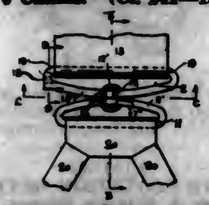
2,105,907
ELECTRIC WELDING MACHINE

Louis J. B. Demers, St. Paul, Minn., assignor to Superior Metal Products Company, St. Paul, Minn., a corporation of Delaware

Application November 25, 1936, Serial No. 112,750

10 Claims. (Cl. 219—4)

1. In a machine of the class described, a welding wheel, a substantially U-shaped horn supporting said wheel and means supporting said horn for rotation about the axis of said wheel.



2,105,908
GARMENT SUSPENDER

James Ward Dick, High River, Alberta, Canada

Application January 2, 1936, Serial No. 57,223

In Canada September 24, 1934

6 Claims. (Cl. 241—18)

1. Braces or suspenders comprising shoulder straps, tabs for attachment to a garment and a separable swivel connection between said straps and said tabs pivoting about a vertical axis and having a slot in one member extending from a pivot hole along its base to one side and widened at the top to disengage the pivot pin and having projections or ridges formed on the inner end of the slot.

2,105,909
SUSPENDER CONNECTION

James Ward Dick, Calgary, Alberta, Canada

Application June 22, 1936, Serial No. 86,603

In Canada September 24, 1934

6 Claims. (Cl. 241—18)

1. In a garment suspender, a member having a stem provided with a head, a shocket shaped member having an opening in the side to receive said head and a slot leading from said opening to a pivot hole in the bottom, and means for retaining said stem in said pivot hole in a position substantially normal to the socket member.

2,105,910
CARRIER WAVE TRANSMISSION SYSTEM

Homer W. Dudley, Garden City, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Original application July 31, 1931, Serial No. 554,266. Divided and this application July 25, 1935, Serial No. 33,903

19 Claims. (Cl. 178—44)

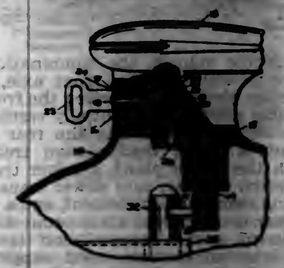
16. In a circuit transmitting a plurality of signals having different minimal levels, means for amplifying one of said signals from below the minimal level of another of said signals to above said level, and means to equalize said amplified signals.

2,105,911
PURIFICATION OF PHTHALIC ANHYDRIDE

Harold B. Foster, Williamsville, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a corporation of New York

No Drawing. Original application January 21, 1926, Serial No. 82,857. Divided and this application June 17, 1931, Serial No. 545,075

18 Claims. (Cl. 260—128)



1. A process which comprises subjecting a substance selected from the group consisting of impure catalytic phthalic acid and impure catalytic phthalic anhydride to the action of a sulfuric anhydride substance selected from the group consisting of sulfuric acid, oleum and sulfur trioxide, distilling, and collecting the distillate.

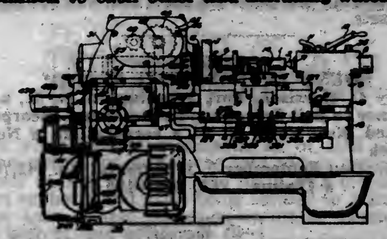
2,105,913
LOCKING HANDLE FOR AUTOMOBILE HOODS

Lester K. Franklin, Chicago, Ill.

Application December 7, 1936, Serial No. 114,634

3 Claims. (Cl. 70—215)

1. In a lock for use with the hood of an automobile adapted to be opened and closed from the front portion thereof and having a bracket positioned at substantially the forwardmost top portion of the hood and a body member having a lower portion attached to said bracket, a bolt extending below the lower portion and carrying adjacent its lower end a projection, said projection adapted to normally lie within a recess of a stud anchored in the top portion of the radiator construction of the automobile so as to latch the hood against vertical movement, an upper portion forming a turnable handle, said handle attached to said bolt and adapted upon being turned to turn said bolt and move the projection out of said recess to thereby permit vertical movement of the hood, the lower portion of said body member having a hollowed out portion extending inwardly and transversely from its face, a locking cylinder housed in said hollowed out portion, said lower portion of said body member having at the rear of said hollowed out portion a vertically extending passage connecting at its lower end with a recess in the bracket, a bolt housed in said passage and having a circular recess, said locking cylinder having at its inner end a projection positioned within said circular recess, said locking cylinder adapted to receive and to be turned by a key fitted thereto, so that upon turning the key to locking position said key turns said cylinder which carries the projection downwardly to engage the lower shoulder of the bolt below the circular recess to pull the bolt down into the recess in the bracket and prevent turning of the handle, and upon said key being turned to unlocking position said key turns said locking cylinder and carries the projection upwardly to engage the upper shoulder of the bolt above the circular recess to pull the bolt above the recess in the bracket to permit turning of the handle.



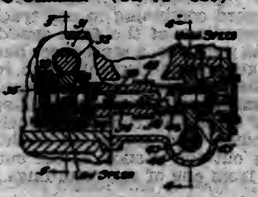
2,105,912
LATHE

Frank A. Fritzsch, Cincinnati, Ohio, assignor to The Ledge & Shipley Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application July 17, 1935, Serial No. 31,855

33 Claims. (Cl. 82—31)

1. The combination of a work support, a tool support, actuating means for cutting movement between said supports, a train of feeding means for feeding movements of said actuating means, forward and reverse quick traverse means for said actuating means, part of said train of feeding means and of said quick traverse means being common to each other and including automatic



transmission relieving means in said train of feeding means operated by preponderance of speed in said quick traverse means, and cushioning means active at the end of reverse movement of said quick traverse means for positioning said actuating means at the end of its cycle of movements.

2,105,914
POWER TRANSMISSION MECHANISM

Frank A. Fritzsch, Cincinnati, Ohio

Original application July 17, 1935, Serial No. 31,855. Divided and this application May 7, 1936, Serial No. 78,433

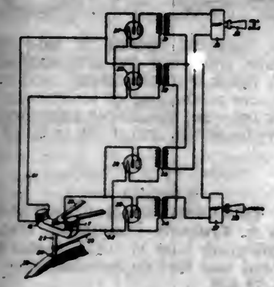
5 Claims. (Cl. 74—389)

1. In a power transmission mechanism employing a driven member, and a plurality of drive members having drive connections with said driven member including an anchor member in one of said drive connections reacted upon by another of said drive connections, with said other of said drive connections rotatable in either direction, and also including automatic disconnecting means interrupting said one of said drive connections upon such reaction, the combination of a means automatically holding said disconnecting means in disconnecting relation at the termination of rotation in one direction of said other of said drive connections until reversal of direction of rotation of said other of said drive connections.

2,105,915
MANUFACTURE OF ATTRITION DEVICES

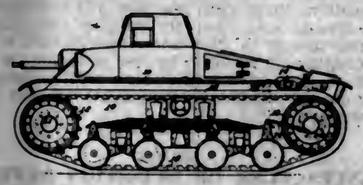
George Griffin, Paterson, N. J., assignor, by mesne assignments, of three-fourths to Miller P. Griffin and one-fourth to John W. Steward

Application December 30, 1935, Serial No. 56,731



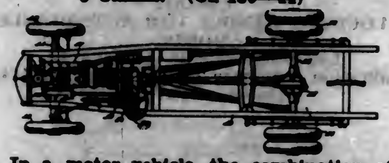
6 Claims. (Cl. 51—185)

1. The method of forming an attrition appliance which consists in softening a surface por-



tion of a normally tough plastic substance, bringing into direct contact with each other said surface portion and a layer of grits, and pressing the grits and substance together while said surface portion still remains in softened state and maintaining the pressure until said surface portion sets.

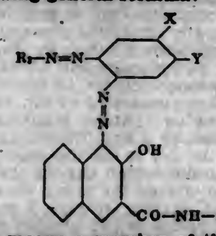
2,105,916
SOUND REPRODUCING SYSTEM
Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 5, 1934, Serial No. 742,761
8 Claims. (Cl. 179—100.4)



1. In a reproducing system the combination with a record combining in one track two independed recordings of the same sounds picked up at different positions, a reproducer having a stylus and two generating elements each responsive to both of the recordings and two reproducing circuits terminating in spaced loud-speaking receivers, of means for connecting each element to both circuits, and means in each circuit for balancing out the portion of the outputs of the elements from one of the recordings.

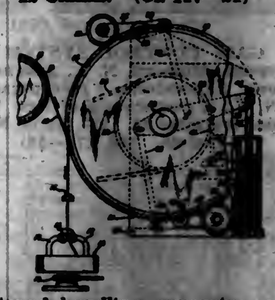
2,105,917
COMBAT VEHICLE
Arthur W. Herrington, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana
Application August 8, 1936, Serial No. 94,983
8 Claims. (Cl. 180—9.1)

1. In a motor vehicle of the endless-tread type, the combination of the hull, a journal bearing piercing a side wall of the hull, a rock shaft journalled in said bearing with one end within the interior of the hull and its other end outside the hull, a wheel-pintle carried by said rock shaft with its axis parallel with and eccentric to the axis of the rock shaft, a belt-supporting idler journalled on said pintle, an arm carried by the inner end of the rock-shaft within the hull, and spring means within the hull and acting upon said arm to rock said shaft in one direction.



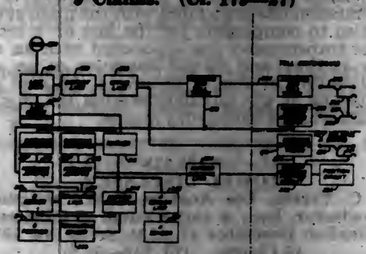
2,105,918
4-WHEEL DRIVE VEHICLE
Arthur W. Herrington, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana
Application December 5, 1936, Serial No. 114,372
9 Claims. (Cl. 180—44)

1. In a motor vehicle, the combination of a main frame provided with a front axle, a rear axle, a traction element supporting the front axle and swingable about a substantially vertical axis, a traction element supporting the rear axle, a power plant, a power transmission train connected with the power plant, a power transmission connection between said power transmission train and the rear traction element, and a supplemental power transmission train connecting said first-mentioned power transmission train and the front traction element, said supplemental power transmission train comprising a pair of mating clutch elements, of the ratchet type, one of which is axially-shiftable relative to the other, and means for rotating said axially-shiftable clutch element and automatically axially biasing said axially-shiftable clutch element toward its fellow clutch element.



2,105,919
WATER INSOLUBLE ORTHO-DISAZO DYESTUFFS AND FIBRE DYED THEREWITH
Erwin Hoffa and Hans Heyna, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application January 27, 1934, Serial No. 708,691. In Germany February 2, 1933
8 Claims. (Cl. 260—84)

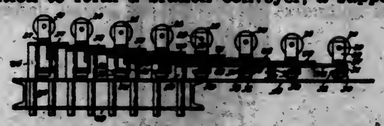
4. The water-insoluble ortho-disazo dyestuffs of the following general formula:



wherein R_2 means a member of the group consisting of radicals of the benzene and naphthalene series, R_1 stands for a radical of the group consisting of halogen-phenyl, dihalogen-phenyl, halogen-methyl-phenyl, nitro-phenyl, dinitro-phenyl, nitro-halogen-phenyl, nitro-dihalogen-phenyl, nitro-methyl-phenyl, nitro-dimethyl-phenyl, nitro-alkoxy-phenyl, nitro-dialkoxy-phenyl, nitro-trifluoro-methyl-phenyl, nitro-arylsulfonyl-phenyl and nitro-alkoxy-methyl-phenyl, X stands for a member of the group consisting of hydrogen, alkoxy, methyl, halogen and nitro and Y for a member of the group consisting of a methyl and alkoxy, yielding, when produced on the fiber, brown dyeings of good fastness properties, particularly of very good fastness to washing and to chlorine.

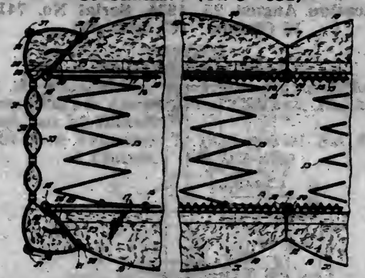
2,105,920
STRAND HANDLING APPARATUS
Vaughn L. Johannesson, Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 29, 1936, Serial No. 108,155
12 Claims. (Cl. 117—21)

1. In strand handling apparatus, a take-up means, a capstan for receiving strand material and delivering it to said take-up means, and means responsive to a stoppage of the take-up means and the capstan for maintaining the tension on the length of strand between the capstan and take-up means.



2,105,921
NUMBER CHECKING SYSTEM
Franklin A. Kerr, Elizabeth, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 11, 1936, Serial No. 68,256
9 Claims. (Cl. 179—27)

1. In a telephone system, a subscriber's line having a test terminal, automatic switches for establishing telephone connections with said subscriber's line, an operator's position, a connection established from said subscriber's line to said operator's position, control equipment common to said switches for directing the operation thereof, means under the control of said operator's position to seize said control equipment and means in said control equipment, responsive to seizure by said operator's position and registration of the number of said subscriber's line, to connect a checking current to said established connection over said test terminal.



2,105,922
CONVEYER
Edward H. Maltby, White Bear Lake, Minn., assignor to Standard Conveyor Company, a corporation of Minnesota
Application November 30, 1934, Serial No. 754,721
14 Claims. (Cl. 198—36)

1. The combination with a spiral conveyer having a plurality of vertically spaced convolutions, of a switch comprising, a section of individually and laterally movable rollers for supporting loads, connected together for movement in unison and adapted to form a part of said spiral conveyer in one position and in another position to form a branch conveyer, a support-

ing plate extending beneath all of said rollers and means for supporting said rollers independently of each other on said plate, said independent supports and plate being formed to maintain the axes of said rollers substantially horizontal in both of said positions.

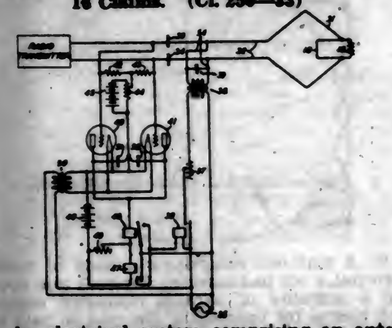
2,105,923
MATTRESS
Max Marsack, Milwaukee, Wis., assignor to Li-On Bedding Company, Milwaukee, Wis., a corporation of Wisconsin
Application January 28, 1937, Serial No. 122,734
30 Claims. (Cl. 5—351)

17. A mattress comprising a body of resilient material, a top pad covering the body and providing a plurality of parallel elongated cushions, and means for connecting the pad to said body at the junctures of said cushions.

21. A mattress of the kind described in combination, a spring assembly, a cover member therefor divided transversely into a plurality of individual parallel sections and attached to said spring assembly along the junctures of adjacent sections, stiffening means connected to the cover member adjacent its marginal edges, and means for securing said stiffening member and marginal edges of the cover member to the adjacent edges of the spring assembly.

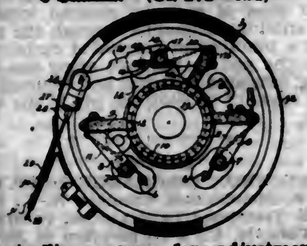
27. The method of constructing a multi-cushion mattress consisting in providing a resilient core, prebuilding a cover pad made up of a plurality of plies of material secured together by lines of stitching extending through the pad and defining a plurality of associated cushions, then securing the pad to the core along the lines of stitching, tensioning the pad and securing the peripheral edges of at least one ply to the edges of the core.

2,105,924
ELECTRON DISCHARGE DEVICE
Hallam E. Mendenhall, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 2, 1935, Serial No. 43,293
9 Claims. (Cl. 250—27.5)



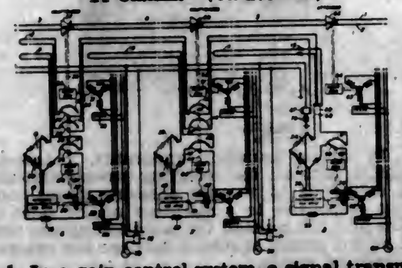
1. An electron discharge device comprising a

cathode, an output electrode including a plurality of reticulated output grids extending radially with respect to said cathode, an auxiliary



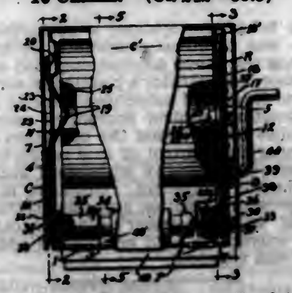
electrode including a plurality of rod members disposed between said grids, and means for producing a magnetic field adjacent said cathode.

2,105,925
ANTENNA SYSTEM
Francis F. Merriam, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 25, 1934, Serial No. 741,356
16 Claims. (Cl. 250—33)



1. An electrical system comprising an antenna, a source of heating energy, and means actuated by the formation of a frozen deposit on said system for connecting said source of energy to said antenna and for discontinuing the supply of energy only after said deposit has melted.

2,105,926
MANUAL CONTROL FOR AUTOMOBILE GENERATORS
Otto Mueller, Toledo, Ohio
Application November 18, 1935, Serial No. 50,328
6 Claims. (Cl. 171—324)

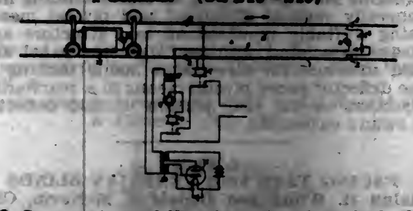


1. Controlling means for adjustment of a brush support having a pair of pins thereon, comprising a brush carrying member pivoted on one of said pins, a spring engaging the other pin and said brush carrying member, an adaptor having apertures therein removably fitting over said projecting pins on said brush support and secured thereon by said spring, and manual means for moving said adaptor from a point remote from said generator.

2,105,927
GAIN CONTROL SYSTEM
Harry Nyquist, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 24, 1936, Serial No. 112,461
14 Claims. (Cl. 178—44)

1. In a gain control system, a signal transmission line divided into sections, a main gain control station and auxiliary gain control stations associated with the sections of said transmission line, means at said stations for controlling the gain on the respective sections of the transmission line, emergency means for varying the gain control means at the main station not only to compensate for the loss on the section of the transmission line associated with the main station but also to compensate for the loss on a section of the transmission line associated with an auxiliary station, and means operative at an auxiliary station in case of failure of the gain control means at the auxiliary station for effecting operation of the emergency means.

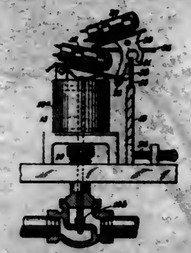
2,105,928
TOWEL DISPENSER
Jay C. Perrin, Los Angeles, Calif., assignor to Towleaver, Inc., a corporation of California
Application December 17, 1934, Serial No. 757,778
16 Claims. (Cl. 242—55.5)



16. In a towel dispenser, a roll of towel material including a tubular core having one end fully open, and a trunnion having a portion permanently fixed to the other end of said core and a projecting portion including a flange spaced outwardly from and being substantially parallel with said other end, said projecting portion defining a bearing between the flange and adjacent the end of the roll.

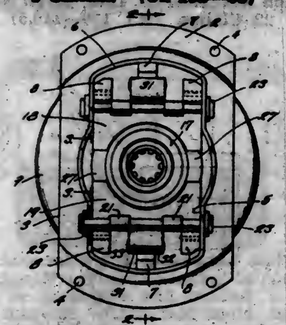
2,105,930
ROLLER FEED MECHANISM FOR ROLLER BEARING ASSEMBLING MACHINES
Axel F. Rehnberg, Rockford, Ill., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Original application December 16, 1933, Serial No. 702,883. Divided and this application January 11, 1936, Serial No. 58,690
9 Claims. (Cl. 193—37)

1. A roller feeding device comprising a chute disposed so as to conduct rollers or the like by gravity from a source to a receptacle, said chute having a longitudinal passageway provided therein for said rollers having substantially parallel inner side walls at least one side wall of which is formed for broadside engagement by the rollers in planes perpendicular to the axis of the passageway at relatively close intervals in their travel through said chute to deflect the rollers substantially into parallelism.



2,105,929
SIGNALING SYSTEM FOR RAILROADS
Wade H. Reichard, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application January 22, 1935, Serial No. 2,896
4 Claims. (Cl. 246—249)

3. In a system of the character described, the combination, with a trackway, of a track circuit including a track relay, a resonant wayside circuit including track wires extending along the track parallel with the track rails and the track circuit and energized with alternating current, a wayside signal control circuit normally controlled by said resonant circuit and said track circuit, and a tuned loop on a vehicle movable over the trackway and having substantially maximum coupling with said track wires.

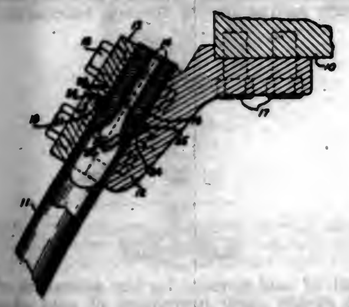


2,105,931
CONTROL DEVICE FOR OIL BURNERS
Nathaniel Rae, Patchogue, N. Y.
Application June 20, 1932, Serial No. 618,653
4 Claims. (Cl. 200—83)

1. A switch mechanism comprising a movably mounted switch, electrically-operated means for actuating said switch and maintaining the same in one position, an electrically-heated thermostatic element movable into engagement with said switch to maintain the same in said position for an interval after said electrically-operated means is deenergized, and a movably mounted switch having means thereon extending into

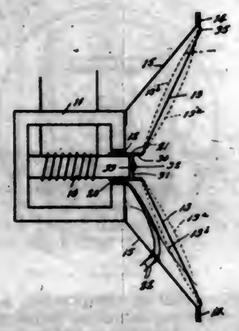
the path of said element for the actuation of the second switch upon movement of said element into engagement with said first switch, said last-named means being disposed in the path of said first switch for returning the second switch to the initial position upon release of the first switch by said element.

2,105,932
FRICTION CLUTCH
Carl A. Rucsenberg, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application February 7, 1936, Serial No. 62,745
8 Claims. (Cl. 192—68)



1. A friction clutch comprising, a cover plate, a pressure plate mounted for axial movement on said cover plate, a compression spring urging said pressure plate in one direction along the axis thereof, levers for moving said pressure plate against the force of said spring, and a lever operating sleeve slidably mounted on said pressure plate and engageable with said levers, said spring being so arranged relative to the clutch parts that one end thereof bears directly on the pressure plate and the other end bears directly upon said sleeve.

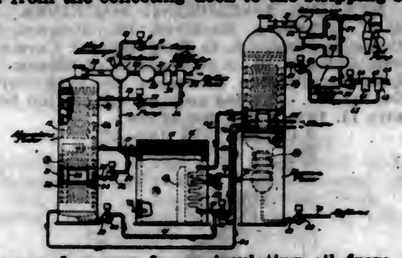
2,105,933
DEVICE FOR ATTACHING MEMBERS
Frank C. Spencer, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 18, 1936, Serial No. 111,282
6 Claims. (Cl. 287—20)



6. A device for locking a hollow member to a two part support, comprising a plug having a

transverse channel fitted within the member, the support parts having recesses cooperating to receive the member therein, one of the support parts having a transverse channel intersecting the recess thereof opposite the channel

in said plug, a locking pin in the channel of the support part, and means for clamping the support parts together to cause said pin to deflect the wall of the member into the channel of said plug to firmly lock the member to the support.

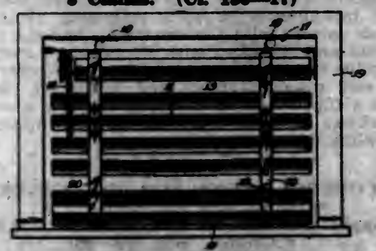


2,105,924
ELECTROACOUSTIC DEVICE
Clifford E. Stevens, Glen Ridge, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application November 23, 1929, Serial No. 409,212
22 Claims. (Cl. 179—115.5)

21. A diaphragm comprising a seamless truncated conical portion and an integral web extending across the apex end thereof, said web being relatively flexible as compared to the conical portion.

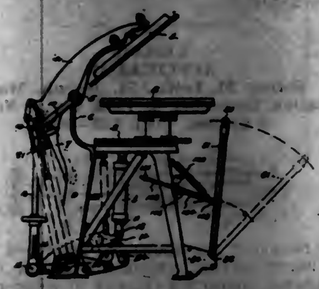
2,105,925
OIL TREATMENT
Harry Robert Swanson, White Plains, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application November 26, 1930, Serial No. 498,218
11 Claims. (Cl. 196—73)

6. Apparatus for the distillation of hydrocarbon oils comprising a heater for heating the oil to vaporization temperature, a fractionating column having a stripping section, a collecting deck associated with the stripping section, means for discharging unvaporized oil from the heater onto the collecting deck, means for conducting oil from the collecting deck to the stripping sec-



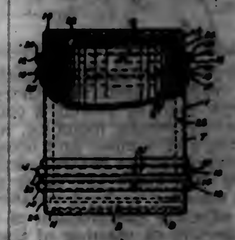
tion, and means for recirculating oil from the collecting deck through the heater.

2,105,926
MOTOR VEHICLE
Milton Tibbetts, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application October 20, 1934, Serial No. 749,151
12 Claims. (Cl. 296—84)



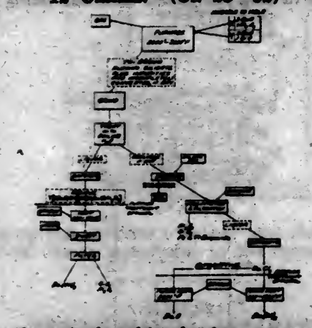
1. A construction for motor vehicles comprising a structure having a window opening therein, a deflector panel, pivotal means for supporting said deflector panel in said window opening for swinging movement about an axis extending in a generally vertical direction, said pivotal means being shiftably mounted on said structure and means associated with said deflector panel and said structure for directing a bodily shifting of the deflector panel pivotal means in a rearwardly direction as the rear portion of said deflector is swung outwardly.

2,105,927
FACING TAPE FOR VENETIAN BLINDS
Ralph H. White and Donald J. McNevin, Chicago, Ill.
Application April 5, 1937, Serial No. 135,996
8 Claims. (Cl. 156—17)



1. In combination with the ladder tape of a Venetian blind, a facing tape having a width at least as great as the width of the ladder tape, a series of loops on the back side of the facing tape, and fastening means secured to the facing tape by the loops and having fingers securing the facing tape to the ladder tape whereby the facing tape completely conceals the ladder tape from normal view.

2,105,928
GARMENT OR IRONING PRESS
Philip N. Brown and Ernest Davis, Syracuse, N. Y., assignors to The Prosperity Company Inc., Syracuse, N. Y., a corporation of New York
Application April 20, 1932, Serial No. 606,797
Renewed October 17, 1936
27 Claims. (Cl. 192—131)



1. A garment or ironing press comprising, cooperating pressing jaws, operating mechanism to open and close the press, control mechanism controlling the actuation of the operating mechanism including, a movable member shiftable inwardly towards and outwardly away from the press a distance sufficient to require the operator to step away therefrom, and operator actuated means for operating the control mechanism; and means included in one of the aforesaid mechanisms normally in inoperative position and connected with the movable member so that it is movable into operative position upon the outward shifting thereof.

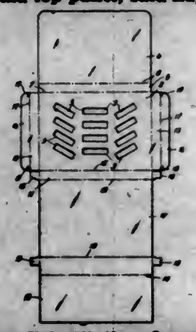
2,105,939
BARREL
Edward G. Cook, Brookiyn, N. Y., assignor of one-fourth to Isadore Goldberg, New York, N. Y.
Application September 23, 1933, Serial No. 690,650
8 Claims. (Cl. 220—5)

1. A cask comprising drawn metallic heads having tubular wall portions with plural convoluted key-forming means thereon; an intermediate shell, said shell having plural convoluted key-forming portions thereon constructed to underlie said first named convoluted key-portions; and a pourable hardenable bonding means in said key forming portions and moldable thereby, to bond said heads and shell together.

2,105,940
MANUFACTURE OF BARIUM COMPOUNDS
Elbert E. Fisher, St. Louis, Mo.
Application March 28, 1936, Serial No. 71,447
12 Claims. (Cl. 23—53)

1. In the art of making barium compounds, the process comprising, fusing together barium sulphate, alumina and silica in proportions such that the barium oxide content of the barium sulphate is substantially three molecules of barium oxide to each molecule of silica and three molecules of barium oxide to each molecule of alumina so as to obtain substantially sulfur free tribarium silica aluminate.

2,105,941
MEAT PROCESSING AND MOLDING DEVICE
Stanley F. Gleason, Philadelphia, Pa., assignor to Ham Boiler Corporation, Port Chester, N. Y., a corporation of Delaware
Application August 22, 1933, Serial No. 686,358
6 Claims. (Cl. 100—57)

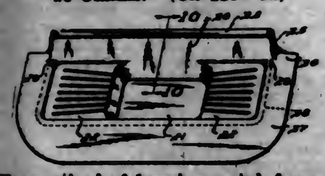


3. An apparatus for processing and molding meat, comprising a mold adapted to contain the meat to be processed and molded, a follower member movable within said mold, means for applying following pressure to said follower member, a flexible, resilient sealing member carried by the periphery of said follower member, effectively to seal said mold against ingress of extraneous matter and to permit escape from said mold of some of the juices extruded from said meat during the treatment thereof when the pressure within said mold is sufficient to distort said sealing member, and means for supporting and reinforcing said flexible, resilient sealing member, said sealing member having a cross-section such that its width is maximum at its peripheral portions and is less than said maximum at its inner portions.

2,105,942
DISPLAY AND SHIPPING CARTON
Robert S. Ghiselin, Chicago, Ill., assignor to Lewis-Howe Company, St. Louis, Mo., a corporation of Delaware
Application March 13, 1937, Serial No. 130,623
3 Claims. (Cl. 206—44)

1. A display and shipping carton for smaller

containers, comprising a top body panel having openings to receive containers, a bottom body panel, a front end wall connecting said top and bottom panels, a display and cover flap at the rear edge of said top panel, said flap being scored

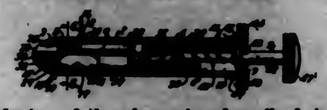


along a line parallel with the edge of the top panel so that the major portion of said flap can be folded over parallel to said top, and a rear end wall, said rear end wall projecting above said top panel and being scored in register with said score in said display and cover flap.

2,105,943
REFRACTORIES
Victor Moritz Goldschmidt, Oslo, Norway
No Drawing. Application July 1, 1935, Serial No. 29,574. In Austria July 13, 1934
24 Claims. (Cl. 106—9)

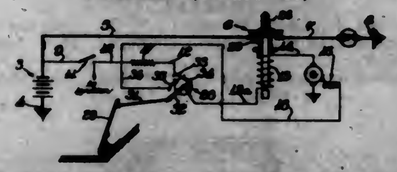
1. That method of making refractories comprising preparing a batch containing a mixture of coarse and fine granules of olivine-bearing rock of which at least 50 per cent are relatively coarse granules, and said rock containing more than about 70 per cent of olivine mineral, less than about 10 per cent each of monoclinic pyroxene, feldspar, and iron calculated as FeO, and less than about 15 per cent of magnesium hydrosilicates; and shaping and drying the mixture to form a refractory article.

2,105,944
METHOD OF MAKING SINKS
Vincent J. Graf, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application March 31, 1933, Serial No. 663,711
Renewed October 7, 1935
16 Claims. (Cl. 113—51)



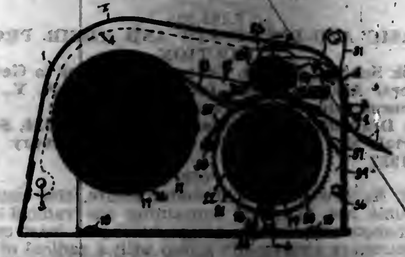
1. The method of forming a sink from a single metal blank, which comprises stamping the blank to form a horizontal basin and apron forming panel and an upright back panel, drawing the terminal end portion of the back panel to form a rearwardly projecting flange and to form from the metal of said end portion a horizontal extension of the apron forming portion of the horizontal panel, and folding said apron forming portion and horizontal extension downwardly to provide an apron having the rear edge thereof terminating in substantial vertical alinement with the rear edge of said flange.

2,105,945
HOT WORKABLE BRONZE
Daniel R. Hull, Watertown, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application October 31, 1933, Serial No. 695,615
5 Claims. (Cl. 75—154)



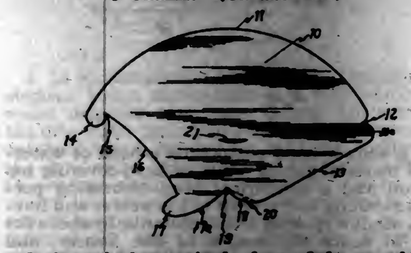
4. An alloy composed of from 2% to 36% tin, from 0.25% up to less than 5% manganese and balance copper, which is characterized by being hot workable.

2,105,946
APPLICATOR
Sidney M. Lewis, St. Joseph, Mo.
Application December 6, 1935, Serial No. 53,165
9 Claims. (Cl. 128—260)



1. A device of the character described, including a barrel having compartments for containing separate chemicals capable of inter-reaction, a nozzle on the barrel for retaining the chemicals in said compartments and having outlet passages in communication with said compartments, and means in the barrel for effecting simultaneous ejection of the chemicals from said compartments for discharge through said passages.

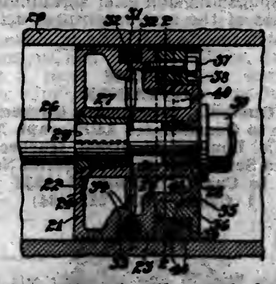
2,105,947
AUTOMATIC STARTING MECHANISM
Paul H. Maurer, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York
Application August 7, 1933, Serial No. 684,607
Renewed October 7, 1936
7 Claims. (Cl. 290—37)



1. A power plant including an internal combustion engine, starting mechanism therefor including a magnetic starting switch, a control circuit for said starting switch including a battery, a manual switch and a make and break device; a manually operable power control member, means for operating said make and break device from said control member, a shunt resistor for maintaining the effective energization of the control circuit irrespective of opening of the make and break device, an engine-driven generator having a field winding connected in shunt with the portion of the control circuit including said make and break device, and means including said generator for maintaining said control circuit deenergized responsive to self-operation of the engine at or above a predetermined speed, said shunt resistor being of such value as to cooperate with the voltage of the generator in opposing flow of battery current through the magnetic starting switch to cause said switch to open at a predetermined engine speed.

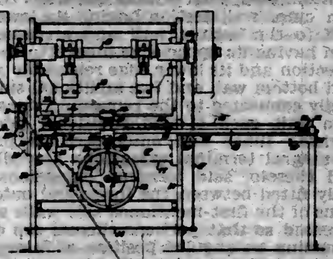
2,105,948
SALES TAX CHECK MACHINE
Albert Mellmann, Detroit, and Morris Sheras, Manistee, Mich., assignors to Tax-Auditor Systems, Inc., Detroit, Mich.
Application April 12, 1934, Serial No. 74,152
10 Claims. (Cl. 101—5)

10. In a machine for cancelling and delivering sales tax receipts, the combination of coacting feed rolls, one of which is provided with a peripheral groove and the other of which is provided with a projecting slitter in register with said groove to cooperate with said groove to act upon and slit a sales tax receipt as it is fed between said rolls for cancellation purposes within its margins, and a stripper blade within said groove to remove the slitted strip.



2,105,949
CONICAL CUP AND ICE CREAM RECEPTACLE
Method Morin, Chicago, Ill.
Application October 8, 1936, Serial No. 104,677
5 Claims. (Cl. 229—1.5)

1. A conical receptacle formed from a blank having a central slot and an arcuate edge, two opposed converging side edges extending from said arcuate edge, a pair of spaced apart projecting tongues formed integral with one of said side edges, the lower portions of said side edges merging in a reentrant angle whose apex is the axis of said arcuate edge, said arcuate edge having a slit therein.

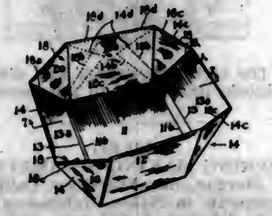


2,105,950
PISTON
Chester W. Metzger, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application March 7, 1936, Serial No. 67,693
4 Claims. (Cl. 309—4)

1. A piston comprising a plurality of sections, one of said sections having a series of arcuate recesses, wearing blocks in the recesses, and means

securing the sections together and clamping the wearing blocks immovably in the recesses.

2,105,951
SPRING MAKING APPARATUS
David G. Morgan, San Francisco, Calif., assignor of one-fourth to Noble Mahlmann and one-fourth to Edward J. O'Leary, San Francisco, Calif.
Application February 5, 1935, Serial No. 5,918
2 Claims. (Cl. 164—12)



2. A spring making machine comprising a bed for supporting a strip from which springs are to be made, means for feeding the strip over the bed, means for cutting the strip to form a blank, a stop having a plurality of positions of adjustment and mounted on the bed in the path of movement of the strip for actuating the cutting means, whereby a blank of selected length depending upon the position of adjustment of the stop is cut from the strip, means interposed between the cutting means and said stop for punching the blank, a carriage for the punching means, and means associated with the carriage for indicating the central position of the punching means between the cutting means and said stop for each of the several positions of adjustment of the stop.

2,105,952
COMPOSITIONS OF MATTER
William Henry Moss, London, England, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application October 29, 1935, Serial No. 47,226. In Great Britain August 24, 1933
17 Claims. (Cl. 106—40)

1. Compositions of matter comprising a thermoplastic plasticizable organic base material selected from the group consisting of cellulose derivatives and polyvinyl compounds and, as plasticizer therefor, an ester of an aryl substituted aliphatic acid with a polyhydric alcohol, said alcohol consisting of an open hydrocarbon

chain substituted by at least two hydroxyl substituent groups and said ester containing at least two radicles of the aryl-substituted acid.

2,105,953
CONTAINER
Alphonse Ouellette, Rosemount, Quebec, Canada, assignor to Consolidated Lithograph Manufacturing Co. Limited, Montreal, Quebec, Canada
Application September 18, 1936, Serial No. 101,485
In Canada August 22, 1936
1 Claim. (Cl. 229—34)

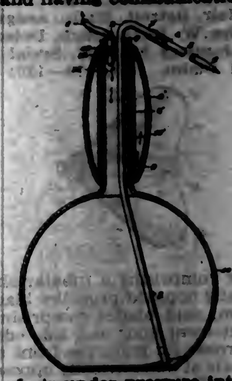
A container of the character described comprising a square bottom wall, side walls extending upwardly from two of the opposite edges of the bottom wall, each of said side walls comprising an outer wall section having its lower edge hinged to the bottom wall and an inner wall section having its upper edge hinged to the outer wall section and its lower edge releasably secured to said bottom wall and two additional side walls hingedly connected to the remaining sides of the bottom wall, each of said additional side walls comprising inner and outer sections provided with integral terminal extensions hingedly connected thereto, said terminal extensions being slidably fitted between the inner and outer wall sections of the first-mentioned side walls and being creased so that portions thereof are capable of assuming an angular position with respect to the first-mentioned side walls when partly withdrawn therefrom.

2,105,954
PIPE ALIGNING TOOL
Walter H. Rippe, Hutchinson, Minn.
Application August 1, 1936, Serial No. 93,871
1 Claim. (Cl. 113—102)

A portable pipe aligning tool comprising a single rod the end portions of which are bent laterally on the same side of said rod, a pair of aligning channels on the ends of the rod and rigidly secured thereto, said channels being endwise spaced and aligned the one with the other, a pair of arms rigidly secured to the rod with their free end portions overlying the aligning channels and spaced therefrom, said aligning channels having one of their sides rigidly secured to the arms, and a pair of clamping screws having threaded engagement with the arms for movement toward or from the aligning channels.

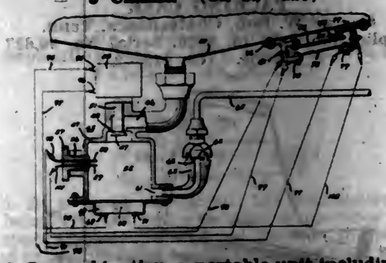
2,105,955
BASIC AZO-DYESTUFFS AND THEIR PRODUCTION
Erik Schirm, Dessau, Germany, assignor to General Aniline Works Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 6, 1934, Serial No. 709,949. In Germany February 7, 1933
4 Claims. (Cl. 260—76)

2. As new articles of manufacture, the water soluble azo dyestuffs containing the radical of a diazotised aromatic amine having at least one quaternary ammonium group with a radical of a coupling component comprising an aromatic diaceto acetyl diamine.



2,105,956
SHOWER HOOD
Herman Schnaittacher, New York, N. Y., assignor to Venus Corporation, New York, N. Y., a corporation of New York
Application May 20, 1937, Serial No. 143,685
5 Claims. (Cl. 2—68)

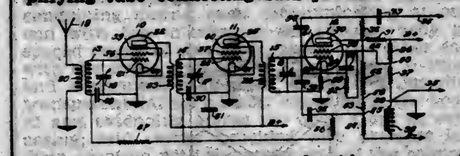
1. A shower hood comprising a hood of waterproof material having a curved head covering top portion and a cylindrical head embracing portion extending to the neck of the wearer and having a window opening from substantially above the eyes to below the mouth of the wearer, and laterally beyond the eyes of the wearer, a window of transparent waterproof material secured at three edges of said opening, said window being free at the lowermost edge of the opening, and means separating the lowermost portion of the transparent window from the hood portion to provide air communication between the interior and the exterior of the hood.



2,105,957
LIQUID DISPENSING DEVICE
Arthur N. Severson, Milwaukee, Wis.
Application March 24, 1937, Serial No. 132,777
5 Claims. (Cl. 215—4)

1. A device for dispensing liquids comprising, a receptacle having an elongated neck, a stopper sealing the neck, a delivery tube extending through and carried by the stopper, said tube terminating adjacent to the lower end of the receptacle, and a bulb closely embracing the elongated neck and having communication therewith

for forcing of air under pressure into the receptacle.



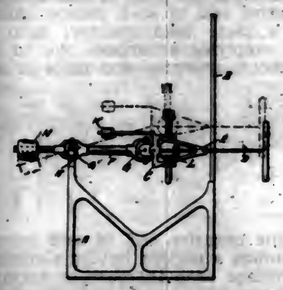
2,105,958
REFRIGERATING APPARATUS
Jacob Smilack, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application November 22, 1934, Serial No. 754,271
Renewed March 11, 1937
3 Claims. (Cl. 62—129)

1. In combination, a portable unit including an element which dehumidifies air and which has water dripping therefrom, means for catching the drip water from said element, said drip water catching means having an inlet for conducting the drip water thereinto and an outlet adapted to conduct drip water therefrom, means connected to a source of energy for creating a pressure in said drip water catching means to cause removal of drip water upwardly therefrom through said outlet, said last named means being normally ineffective and rendered effective automatically in response to the flow of a predetermined amount of drip water from said element to said catching means, and means also deriving its energy from said source of energy for said pressure creating means for prolonging the effectiveness of said drip water removing means for a predetermined period of time after the accumulation of drip water in said catching means has been diminished beyond the point for initiating effectiveness of said drip water removing means.

2,105,959
AUTOMATIC VOLUME CONTROL SYSTEM
Harold F. Spearin, Chicago, Ill., assignor to Alfred Crossley, Chicago, Ill.
Application December 14, 1935, Serial No. 54,464
5 Claims. (Cl. 250—20)

1. A radio signal receiving system, including a radio frequency amplifying tube and a detector tube, each having a cathode, grid and plate; a source of substantially direct current voltage; means connecting the plate of said detector tube to the positive end of such source, said means including a plate load resistor; gain control means for supplying a variable bias to the amplifying tube connecting said plate of said detector to the negative end of said source, said means including a portion having a substantially constant voltage drop thereacross during application of the variable bias to said amplifying tube during control action; and a connection between the grid of said amplifying tube and a point on said last-named means negative with respect to the cathode of said amplifying tube for rendering the gain control means effective.

2,105,960
RAZOR BLADE SCRAPER
Robert L'Welfe, Seattle, Wash.
Application August 6, 1937, Serial No. 157,708
2 Claims. (Cl. 30—333)



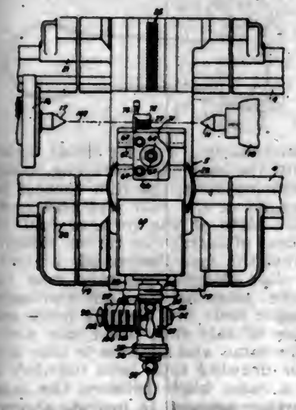
1. In combination, a razor blade, and means for holding the same for scraping, comprising, two cooperating jaws, the first thereof provided with a handle at the rear end and a flattened rectangular plate at the forward end, the rear outer corners of such plate turned downward on a slope from the face thereof for wedges, a second jaw plate slidably mounted over the first, clamp fingers extended from the rear outer edges of such upper plate and slidably down along the outer edges of said first lower jaw and loosely beneath the same, and adapted to slide along said wedges for drawing such jaws together and for clamping a razor blade between the same, said fingers further adapted to provide abutments to prevent said blade from moving backward from a predetermined position for use in scraping a surface, lugs on the rear portion of said upper plate astride a forward portion of the handle for maintaining the jaws in alignment, and for holding the blade in stored position between the blades lengthwise when not for use in scraping.

2,105,961
CARRIAGE FOR RÖNTGEN APPARATUS
Michele Andreini, Milan, Italy
Application February 21, 1935, Serial No. 7,605
In Italy February 23, 1934
5 Claims. (Cl. 250—94)

1. A Röntgen tube carriage, comprising a frame with tube holding means in one side thereof, a screen rigidly connected to and carried by said frame, a base, a lever system comprising a plurality of levers forming members of a link parallelogram system, a plurality of universal

joints connecting said levers at spaced points to the base, and a plurality of universal joints connecting said levers to the frame, said levers be-

ing four in number and vertically and horizontally spaced from each other and being counterweighted with respect to their joints to the base.



2,105,962

DIAMETER GAUGING APPARATUS

Clifford A. Bickel, Sidney, Ohio, assignor to The Monarch Machine Tool Company, Sidney, Ohio, a corporation of Ohio

Application May 28, 1935, Serial No. 23,887

11 Claims. (Cl. 82—24)

1. In a machine for turning work-pieces, means for supporting and rotating a work-piece about a rotational axis, a carriage, a cross slide on said carriage, a tool holder on said cross slide having a reference portion, a cutting tool on said tool holder, a tool-setting gauge for engaging said reference portion and having a tool-contacting portion spaced toward said axis a selected distance from said reference portion, means for clamping said cutting tool with its cutting edge engaging said tool-contacting portion, means associated with said carriage and said cross slide for indicating the relative positioning thereof with said tool-contacting portion and said cutting tool edge coinciding with said rotational axis, a cross slide mechanism for moving said cutting tool from its position of coincidence with said rotational axis outwardly to a predetermined radius, and measuring means associated therewith for directly indicating the reaching of said predetermined radius by said tool and cross slide.

2,105,963

PROPELLER

Joseph N. Blair, Detroit, Mich., assignor of one-half to John W. Roxborough, Detroit, Mich.

Application January 11, 1937, Serial No. 120,669

1 Claim. (Cl. 170—159)

A propeller comprising a tubular shaft, a pair of diametrically opposed propeller blades extending therefrom, said blades comprising substantially straight front ends and side edges curving rearwardly from said ends, the front ends terminating in a pair of diametrically opposed laterally projecting cutting blades extending along the same upon opposite sides thereof, respectively, and inclining laterally and rearwardly, and said side edges of the propeller blades having formed thereon a pair of laterally and oppositely extending trailing fins extending from said cutter blades in angular relation thereto.

2,105,964

PACKING CASE

George W. Bob, Chattanooga, Tenn.

Application July 16, 1936, Serial No. 90,827

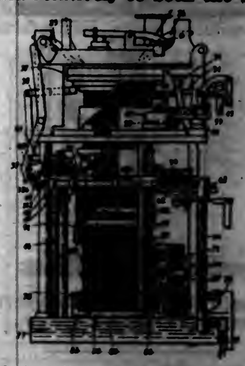
5 Claims. (Cl. 229—23)

1. A foldable packing case including side and end walls formed of paperboard material and flexibly joined at adjacent edges to permit said walls to be folded, rigid frames reinforcing said end walls, reinforcing cleats extending along said side walls, and means attaching said reinforcing cleats to said side walls, said cleats being unconnected to said side walls over an end zone approximately equal to the thickness of the end frames to permit said zones to be bent out of the plane of said side walls, when said walled structure is folded.

2,105,965

KNITTING MACHINE

William Edward Beeton, Leicester, England



Application July 13, 1937, Serial No. 153,979½

In Great Britain December 24, 1935

10 Claims. (Cl. 66—46)

1. A knitting machine, having an instrument bed for a line of needles, instruments movable in

said bed, means movable in relation to the bed along the line of instruments to move successive instruments, an instrument picker for picking the instruments, which picker is movable, along said line and relatively to both the bed and said

means, to bring it into register with successive instruments of the line, means for locating said picker in relation to the line by the instruments themselves, and means for moving the picker along the line upon movement of the instruments in the bed.

2,105,966

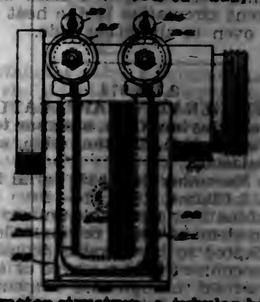
WATCH CONSTRUCTION

John E. Bowen, Akron, Ohio

Application May 3, 1937, Serial No. 141,478

4 Claims. (Cl. 58—107)

1. In a watch movement, the combination of a balance wheel and a hairspring provided with a spaced overcoil, and a pin fixed on the bridge and extending from a point radially inward of the rim of the balance wheel, through the overcoil and projecting over the main body of the hairspring.



2,105,967

FLUID METER

Charles Southard Burdsal and Ralph Ernest William Titel, Phoenix, Ariz., assignors of fifty-one percent to said Burdsal and forty-nine percent to said Titel

Application July 20, 1936, Serial No. 91,510

2 Claims. (Cl. 73—213)

2. In a meter structure, a tubular body, a vertically disposed open front casing secured to and depending from said body, an upstanding U-shaped tube arranged within, supported from the bottom of and positioned inwardly adjacent the open front of the casing, an indicator within said tube in the form of a body of fluid responsive to pressure from within said tubular body to form it into parallel columns of different heights, a pair of spaced independent valve controlled pressure conducting means, each communicating at one end with the interior of the tubular body at spaced points of the latter, and at the other end with the upper ends of the sides of said U-tube, and a normally stationary vertically adjustable transparent carrier slidably engaging in the body of and extending across the open front of said casing, said carrier provided with pressure indicia coacting with the upper end of the column of greatest height of the indicator.

2,105,968

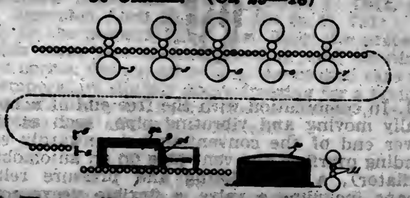
METHOD OF ROLLING FERROUS SHEETS

Alfred J. Castle, Chicago, Ill., assignor to Inland Steel Company, Chicago, Ill., a corporation of Delaware

No Drawing. Original application October 28, 1933, Serial No. 695,721. Divided and this application February 26, 1934, Serial No. 712,663

4 Claims. (Cl. 29—18)

1. The method of surfacing ferrous sheets which consists in subjecting their surfaces in cold condition to the rolling action under pressure, of a metal roll of a sclerescope hardness over 70 and presenting a mat working face.



2,105,969

METHOD OF AND APPARATUS FOR PRODUCING FERROUS SHEET METAL

Alfred J. Castle, Chicago, Ill., assignor to Inland Steel Company, Chicago, Ill., a corporation of Delaware

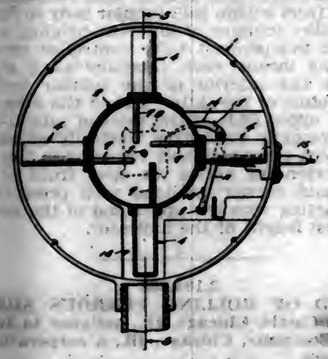
Application August 7, 1935, Serial No. 35,185

30 Claims. (Cl. 29—18)

1. The method of producing cold reduced sheets involving the annealing of the cold reduced sheets in stacks which comprises subjecting surfaces of certain of the sheet material to the rolling action under pressure of rolls at least one of which has a dull or mat working face to produce dull or mat surfaced sheet material, stacking the sheets so that as to each pair of contacting surfaces at least one thereof is a mat surface, and in such surfaced and stacked condition annealing the sheets.

2,105,970

PARKING METER



Leo J. Darley, Jackson, Miss., assignor, by mesne assignments, to Gravity Meter Corporation, a corporation of Delaware

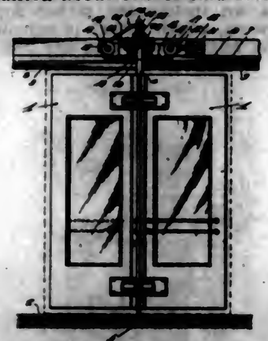
Application November 3, 1936, Serial No. 109,831

15 Claims. (Cl. 161—15)

1. In a parking meter, a housing having a sight opening, a hollow member rotatably mounted in the housing, a plurality of receptacles carried by said member, a gravitative flowable material in

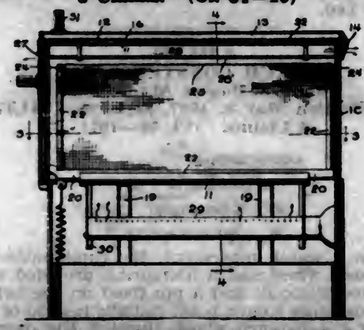
said member, means whereby each said receptacle receives a charge of such material from said member while at the sight opening, and discharges such material back into the member dur-

ing the next revolution of the member, and means whereby said member may be rotated to move the receptacles successively from and to the sight opening.



2,105,971
AUTOMOTIVE RADIATOR SEALING AND PRESSURE RELIEF MEANS
Arthur F. Grigg, Metuchen, and John E. Zeller, Montclair, N. J.
Application July 12, 1937, Serial No. 153,130
3 Claims. (Cl. 137—69)

1. In combination with the free end of a normally moving and vibrating pipe (such as the lower end of the conventional downwardly extending overflow and vent pipe on an automobile radiator), a pipe closing and pressure relief means including a valve, a flexible sleeve connecting and supporting said valve on said pipe, said valve having an upwardly facing valve seat with a valve opening therein, a gravity biased valve member freely resting on said seat to normally close its opening, said valve seat and said valve member being so constructed as to have only a limited annular contact area, valve member retaining means secured to said seat and loosely surrounding said valve member to permit it to partake of limited lateral cleaning movements on its limited area seat induced by the movements and vibrations of said pipe.

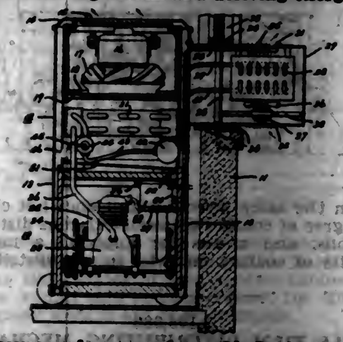


2,105,972
TROLLEY FOR REVOLVING DOORS
Thurlee M. Hagenbeck, Evansville, Ind., assignor to International Door Company, Evansville, Ind., a corporation of Illinois
Application August 3, 1935, Serial No. 35,395
19 Claims. (Cl. 20—18)

11. In a revolving door trolley, a rail system, a carrier, sets of rollers for supporting said carrier with respect to said rail system, and means pivotally mounted about one of said sets of rollers

for locking said carrier in a predetermined position with respect to said rail system.

2,105,973
MATRIX DRIER
Pearl Junius Hereford, Huntington, W. Va.
Application July 13, 1936, Serial No. 90,424
3 Claims. (Cl. 34—16)



1. A device of the character described, comprising an oven having a heatable bottom, a foraminous matrix support mounted slidably on said bottom, burners located beneath said bottom for heating the same, heat passages around the edges of the bottom to permit heat to rise to the topside of said foraminous support, apertures in the walls of the oven, and an arcuate heat deflector mounted in the oven in parallel relation to said foraminous support to concentrate the heat to a matrix supported on its support, said arcuate deflector being formed with a baffle at its topside to prevent circulation of the heat from one side of the oven to the other side.

2,105,974
REFRIGERATING APPARATUS
Harry B. Hull, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application November 20, 1935, Serial No. 50,722
3 Claims. (Cl. 62—129)

1. In combination, a portable unitary structure including an element which dehumidifies air and which is adapted to have water dripping therefrom, means connected to a source of energy for circulating a fluid through said element to cause same to dehumidify the air, means for catching the drip water from said element, said drip water

catching means having an inlet for conveying the drip water thereinto and an outlet adapted to conduct drip water therefrom, means for closing said inlet and for creating a pressure in said drip water catching means, said last named means including means disposed in the air above water in said catching means and deriving energy from

said source of energy for said fluid circulating means for heating and expanding the air above the water in said catching means, and a conduit connected to said outlet and extending upwardly above said drip water catching means, said pressure creating means being effective to force water from said drip water catching means through said conduit.

2,105,975
WELL PUMP
Frank C. Knies and Richard N. Vickers, Smackover, Ark.
Application March 17, 1936, Serial No. 69,368
6 Claims. (Cl. 103—155)

1. In a standing valve, a tubular casing having its upper end adapted for connection with the lower end of a well tube, walls of the valve casing being formed with upper and lower longitudinally extending ducts offset relative to each other longitudinally of the valve casing to stagger the ducts and dispose their ends out of opposed relation to each other, a core fitting in the bore of the tubular valve casing and formed with a bore open at its lower end and having side ports communicating with lower ends of both ducts and with the upper end of the lower duct, the bore of said core being blocked between the upper end of the lower duct and the lower end of the upper duct and the upper duct having its upper end opening directly into the casing, said core having its upper end adapted for connection with a reciprocating pump serving as a closure for the upper end of its bore, and valve members carried by said core for controlling directional flow of liquid through the core and ducts.

2,105,976
BEARING
Joseph Ulfranc Langlois, Hull, Quebec, Canada
Application July 8, 1937, Serial No. 152,633
In Canada January 19, 1937
5 Claims. (Cl. 308—187)

1. In a bearing comprising reciprocating shaft supporting elements therein; pressure relieving bypass leading from one side to the other of said elements.

2,105,977
PROCESS OF MAKING FOOD PRODUCT
Gaston J. Ley, John H. Payne, and George Akau, Honolulu, Territory of Hawaii, dedicated to the free use of the People of the United States
No Drawing. Application January 14, 1937, Serial No. 120,504
2 Claims. (Cl. 99—93)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. In the preparation of taro flour, the process which comprises cooking, peeling and washing taro corms, thence subjecting the cooked taro to a temperature slightly above freezing for a period of substantially 30 hours, thence slicing, drying, grinding and sifting the material.

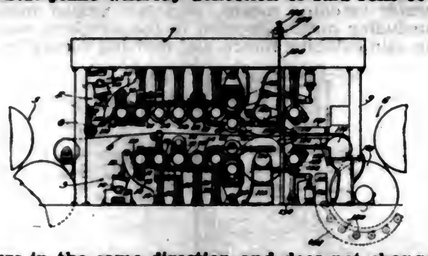
2,105,978
SULPHURIZED VIOLANTHRONE DERIVATIVES AND PROCESS OF PREPARING SAME
William Hiram Lycan, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 26, 1935, Serial No. 28,476
6 Claims. (Cl. 260—17)

1. The process which comprises condensing a member of the group consisting of organic carbonyl halides, organic sulphonyl halides, aldehydes, carboxylic acid anhydrides and di-halomethyl carbon compounds with a violanthrone having the Bz2,Bz2' positions free and thereafter heating the product with sulphur.

2. The product obtainable by condensing a member of the group consisting of organic carbonyl halides, organic sulphonyl halides and aldehydes, carboxylic acid anhydrides and di-halomethyl carbon compounds with a violanthrone having the Bz2,Bz2' positions free and thereafter heating the product with sulphur.

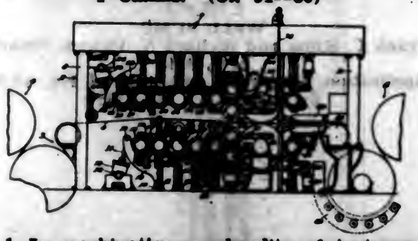
2,105,979
TRESTLE BRACE
Forest E. Manley, Galva, Ill.
Application March 29, 1937, Serial No. 133,723
2 Claims. (Cl. 304—5)

1. A trestle brace comprising two similar sockets to receive the legs of the trestle, and a flat horizontal plate integrally connected at its opposite side edges with the lower edges of the inner walls of said sockets, said horizontal plate cooperating with the inner walls of the socket to provide a trough for reception of the trestle beam, said horizontal plate constituting the sole connection between the socket so as to permit free flexing of the latter about lines coincident with the junctures of the edges of said plate with the edges of the inner walls of the socket, whereby spreading of the lower ends of the trestle legs will cause gripping engagement of the inner walls of said socket with opposite sides of the trestle beam, each socket comprising a top wall integrally secured to the upper edge of the inner wall thereof along one edge, an outer wall integrally connected at its upper edge to the opposite edge of said top wall, and side walls integral with the side edges of the outer wall and having flanges abutting and secured to the inner wall, rivets securing said flanges to the inner wall of each socket and having conical inner heads arranged to penetrate the side of the trestle beam.



2,105,980
SWEAT BAND FOR HATS
John Margulies, Yonkers, N. Y., and David H. Young, East Orange, N. J.; said Young assignor to said Margulies
Application December 6, 1935, Serial No. 53,232
3 Claims. (Cl. 2—181)

1. A sweatband for a hat, comprising a leather having overlapped ends and elastic means passing through said overlapped ends at a plurality of points to hold them together resiliently.

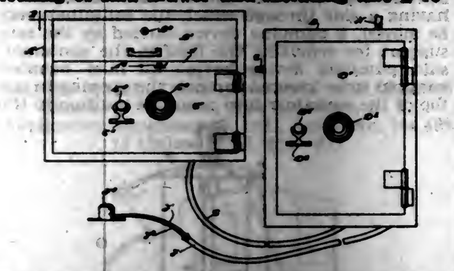


2,105,981
MACHINE FOR APPLYING MOBILE FILMS
Peter J. Massey, River Forest, Ill., and William F. Thiele and Bert F. Raprager, Wisconsin Rapids, Wis., assignors, by mesne assignments, of nine-tenths to Consolidated Water Power & Paper Company, Wisconsin Rapids, Wis., a corporation of Wisconsin, and one-tenth to Peter J. Massey, Chicago, Ill.
Application September 11, 1935, Serial No. 40,189
18 Claims. (Cl. 91—50)

1. A coating machine for coating continuously advancing flexible webs which comprises in combination, a juxtaposed pair of oppositely driven rolls having uniform surfaces between which said flexible web passes, means for applying a preformed film of coating material to the surface of each of said rolls whereby said films are transferred to said web, each said means comprising a plurality of contacting distributing rolls disposed with axes in substantially the same horizontal plane whereby deflection of said rolls oc-

curs in the same direction and does not change the degree of contact between adjacent distributing rolls, and means for applying a metered quantity of coating material to said distributing rolls.

2,105,982
MOBILE FILM DISTRIBUTING MECHANISM
Peter Jay Massey, River Forest, Ill., and William F. Thiele and Bert F. Raprager, Wisconsin Rapids, Wis., assignors, by mesne assignments, of nine-tenths to Consolidated Water Power & Paper Company, Wisconsin Rapids, Wis., a corporation of Wisconsin, and one-tenth to Peter J. Massey, River Forest, Ill.
Application December 20, 1935, Serial No. 55,368
4 Claims. (Cl. 91—50)

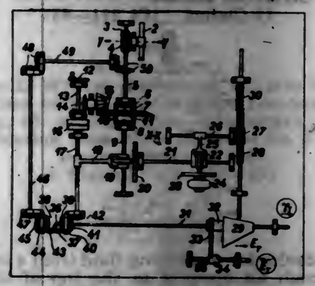


1. In combination, a plurality of juxtaposed rolls having their surfaces closely adjacent each other and their axes in parallel relationship, said rolls being supported adjacent their ends and being of such a length and weight as to deflect substantially at their longitudinal centers, the axes of said rolls being disposed in substantially the same horizontal plane whereby deflection of said rolls is negligible in changing the uniform clearances between adjacent roll surfaces, and means for applying a mobile coating material to one of said rolls whereby said material is transferred from roll surface to roll surface in the form of a relatively thin film of uniform thickness suitable for the coating of paper.

2,105,983
MONEY DRAWER AND LOCKER
William C. Miller and Albert L. Abbott, Canton, Ohio, assignors to Diebold Safe & Lock Co., Canton, Ohio, a corporation of Ohio
Application October 25, 1934, Serial No. 749,948
17 Claims. (Cl. 70—57)

1. In combination: a control-cabinet provided with a closure; a time-control lock for said closure; a drawer and locker unit comprising a locker provided with a lock-equipped closure and a drawer equipped with drawer-closing and locking means; an electric circuit system controlling

the closing and locking of said drawer and the unlocking of the drawer and the locker-closure, said electric system including means outside said control-cabinet for initiating the closing and locking of said drawer and including also a re-

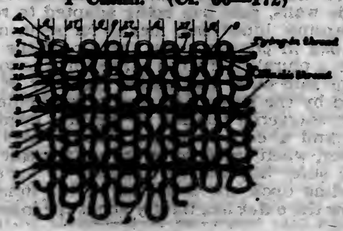


lay system housed in said control-cabinet having a reset switch operable only after gaining access to the interior of said control-cabinet, and means within said control cabinet for throwing said relay system out of commission.

2,105,984
WOOD STAINING
Charles G. Moore, Lakewood, and Milton Zucker, Cleveland, Ohio, assignors to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 31, 1929, Serial No. 403,993
6 Claims. (Cl. 134—18)

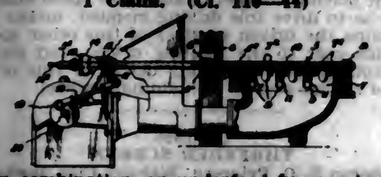
6. A dye solution for use as a wood stain consisting of a dye dissolved in water, a high boiling organic miscibilizing solvent selected from the group consisting of ethyl lactate and mono-ethyl ether of ethylene glycol, and alcohol.

2,105,985
SIGHTING DEVICE FOR FOLLOWING AERIAL TARGETS
Karl Papello, Dover, Switzerland, assignor, by mesne assignments, to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application July 26, 1935, Serial No. 33,235
In Germany August 4, 1934
3 Claims. (Cl. 235—61.5)



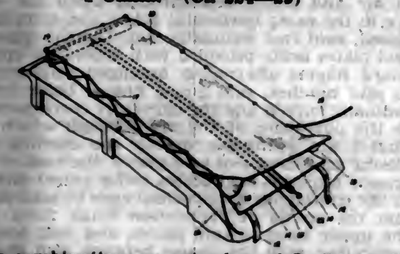
1. In a sighting device for following an aerial target, a hand wheel for adjusting the sighting device, two speed change gears, each of these gears having a driving member and a driven member, the driven member of each speed change gear being adjustable relatively to the corresponding driving member by means of an adjusting device, a motor of constant speed coupled to the driving member of one of the two speed change gears, means for adjusting the adjusting device of this one speed change gear according to the reciprocal magnitude of the time of flight required by a projectile fired from near the sighting device for hitting the target to which the said sighting device is directed, means for so coupling the driven member of this one speed change gear to the driving member of the other speed change gear as to drive this driving member, means for coupling the driven member of this other speed change gear to the sighting device, and means for coupling the adjusting device of this other speed change gear to the said hand wheel.

2,105,986
THRESHER SCREEN
Soren F. D. Petersen, Webster City, Iowa
Application July 7, 1936, Serial No. 89,403
1 Claim. (Cl. 209—394)



In a thresher screen expressly designed for handling soy beans, a relatively stationary frame, a pair of horizontally disposed spaced parallel rocker shafts mounted for oscillation in said frame, a pair of duplicate longitudinally elongated flat plates constituting screen slats and fixedly secured along corresponding longitudinal edges to said rocker shaft, the free swingable longitudinal edges of said slats being provided with longitudinally spaced notches to permit passage of air and grain therethrough when the slats are in the same horizontal plane and completely closed, said free swingable longitudinal edges of said plates being provided with depending spaced guard fingers alternately arranged with respect to said notches, said guard fingers being longitudinally curved and the curvature corresponding to the curvature of the arc through which the fingers are swingable during the opening and closing movements of said plates, the ends of the fingers adjacent said plates being joined directly to the contiguous longitudinal edge of said plates and the points of connection being flush with the upper faces of said plates, and said notches registering with the spaces between said fingers.

2,105,987
KNITTED FABRIC
Joseph P. Prisam, Rome, Ga.
Application June 29, 1936, Serial No. 88,026
1 Claim. (Cl. 66—172)



An accordion stocking top comprising two threads, one of said threads being knitted into alternate courses in every wale, the other one of said threads being knitted in intermediate courses in alternate wales and floated across intervening wales, and an unknitted elastic thread incorporated in said stocking top in spaced courses and secured to said stocking top by the floats of said second mentioned thread.

2,105,868
FUEL AGITATOR
Henri A. Ridot, Paris, France, assignor to Société Anonyme: Fours et Appareils Stein, Paris, France, a corporation of France
Application October 2, 1934, Serial No. 746,595
In France October 23, 1933
1 Claim. (Cl. 110—44)

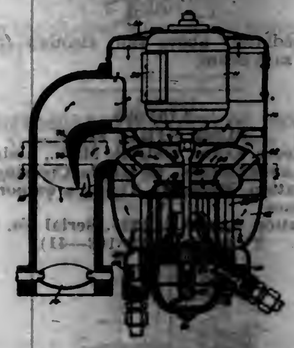
In combination, an underfeed furnace including a retort, a fuel agitator including a tubular member extending through a lateral wall of the furnace and immediately above the retort and mounted for oscillation about its longitudinal axis, tubular fingers carried by and communicating with said member and extending into the retort, means conducting a cooling fluid to said fingers, a gear on said member exterior to the furnace, a second gear meshing with said first gear, a crank connected with said second gear so as to impart an oscillatory motion thereto.

2,105,969
TRAVELING BAG FOR AUTOMOBILES
Weaver A. Rush, Beatrice, Nebr.
Application September 16, 1932, Serial No. 633,538
Renewed August 29, 1935
1 Claim. (Cl. 224—29)

In combination, an outer bag of flexible material adapted to be placed upon the top of an automobile and having a width less than that of the top of the automobile and a length substantially equal to that of the top of the automobile, the outer contour of the bag conforming substantially to that of the top, said bag having collapsible side walls, said bag being adapted to receive a collapsible inner bag, means for securing the outer bag in position upon the top of the automobile, a plurality of rings carried by the top side edge of said outer bag and a plurality of rings carried by the lower side edge of said outer bag and in staggered relation to the first mentioned rings, and a cord threaded through said rings whereby, when the cord is drawn, the side walls of the outer bag will be collapsed to an extent depending upon the thickness of the inner bag to draw the outer bag tightly about the inner bag.

2,105,990
DISPENSING DEVICE
Paul I. Schultz and James J. Pelouch, Cleveland, Ohio, assignors to The United States Air Compressor Company, Cleveland, Ohio, a corporation of Ohio
Application February 1, 1936, Serial No. 61,982
44 Claims. (Cl. 221—47.1)

1. The combination of a support for a container of fluid, said container having an opening in the top of the container, the said support having a base and a side member carried by the base, said side member being adapted to hold the said container on the said base, the said side member having a side through which the container may be moved, a pumping device carried by the said support for removing the fluid in the container, said pumping device having an inlet member adapted to be lowered through the opening in the top of the container into operative position in the

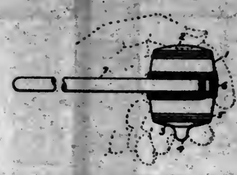


said container and adapted to be raised up from the opening in the container out of operative position so that the said container may be moved sidewards through the side of the support, and lift equalizing means carried by said support for counterbalancing part of the weight of said inlet member so that said inlet member may be raised and lowered through the opening in the top of the container with a minimum of auxiliary effort when the said container is moved in and out of its position on the support.

2,105,991
DISPENSING DEVICE
Paul I. Schultz and James J. Pelouch, Cleveland, Ohio, assignors to The United States Air Compressor Company, Cleveland, Ohio, a corporation of Ohio
Original application February 1, 1936, Serial No. 61,982. Divided and this application April 22, 1937, Serial No. 138,434
12 Claims. (Cl. 221—85)

1. A device for dispensing fluid from a container through an opening in the top of the container comprising, in combination, a holding member for accommodating said container, said holding member having a side portion through which said container may be moved, a cover for said holding member, a pump supported by said cover, the said pump having an inlet member adapted to be inserted through the opening of the container into said container, the said inlet member being adapted to be raised out of said container so that the container may be moved through the side portion of said holding member, and adapted to be lowered into said container so that fluid therein may be removed, and fluid means supported by said holding member for raising said inlet member.

2,105,992
LIQUID FUEL CONDITIONING APPARATUS
Charles P. Talmage, Kew Gardens, N. Y.
Application December 29, 1933, Serial No. 704,489
13 Claims. (Cl. 261—91)



1. In a device of the character described, the combination of a saturation chamber communicating with the atmosphere at its upper end, a fuel cup mounted within said chamber for rotation on a vertical axis, power means to rotate said cup, means concentric with the rotary axis of said cup and communicating with the bottom thereof to feed liquid fuel upwardly into the cup as an incident to rotation thereof, a fan arranged to rotate with said cup to agitate and mix the atmosphere within the chamber, with fuel overflowing from, and thrown outwardly from the edge of said cup, an annular fuel collecting ring supported within said chamber and formed with a circumferential port providing communication between the interior of the chamber and the interior of the fuel ring, and a manifold connected to said fuel ring and opened to the atmosphere adjacent one end, and arranged to be connected with a fuel consuming means at its other end.

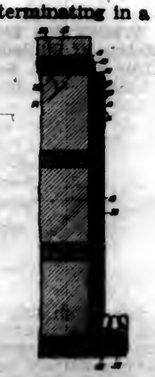
2,105,993
SHOT SHELL
William E. Wagner, Kilworthy, Ontario, Canada, assignor to Western Cartridge Company, East Alton, Ill., a corporation of Delaware
Application June 24, 1936, Serial No. 373,127
Renewed May 3, 1937
3 Claims. (Cl. 102—15)

2. A loaded shot shell having a primer and a propellant charge, the base of the shell having a well containing coarser grained propellant than the remainder of the charge and the well being dimensioned to control the ballistics of the shell.

2,105,994
WHIPPING TOP
Philip Zelenoff, Philadelphia, Pa.
Application July 13, 1937, Serial No. 153,165
1 Claim. (Cl. 46—70)

A whipping top comprising an approximately cylindrical main body of relatively large diameter having an arcuate convex upper surface and an arcuate convex lower surface, and a relatively thin cylindrical leg extending from the lower surface, the top being adapted to be set in rotation by a cord wound around its body portion, the lower surface around the leg forming an annular shoulder adapted to be supported on the player's fingers with the leg extending therebetween and therethrough, the upper surface of the top being adapted to be centrally held by the player's thumb, the top being adapted to be set in rotation by pulling the string, and the leg being adapted to guide the top in its initial rotation between the fingers, the top to be then dropped to the ground where the initial rotation keeps it in motion until the whip can be used to prolong the rotation indefinitely.

2,105,995
BRAKE BEAM SAFETY GUARD STRUCTURE
Edwin G. Busse, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application August 1, 1935, Serial No. 34,153
14 Claims. (Cl. 188—210)



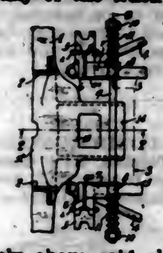
1. In combination, a railway truck side frame member, including a spring seat and a bracket extending upwardly and inwardly therefrom, spaced brake beams, and an elongated member having portions secured to said brake beams and having another portion offset laterally of the truck from said first-mentioned portions and extending immediately above said bracket and cooperating therewith to safeguard said assembly.

2,105,996
FLASHING
Edwin W. Byers, Chicago, Ill.
Application April 17, 1937, Serial No. 137,425
3 Claims. (Cl. 108—26)

1. A flashing comprising a metal sheet material having an end portion angularly bent at an

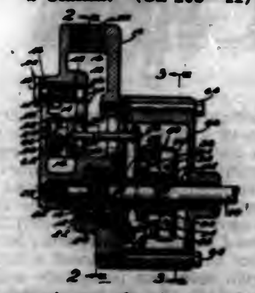
acute angle and terminating in a series of teeth,

said teeth being adapted to engage a wall surface and initially hold said flashing in place.



2,105,897
BACK CUSHION
Franklin O. Church, Buffalo, N. Y., assignor to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application April 25, 1936, Serial No. 76,369
4 Claims. (Cl. 155—179)

1. A back cushion for vehicles having a base, a cushioning element mounted on said base composed of cellular resilient material and having recesses projecting forwardly from said base to provide a front slab and intersecting walls between said front slab and said base, a cover secured to said cushioning element in fixed position on the front area of said cushioning element and extending over the sides of said cushioning element towards said base and being freely movable in a vertical direction relatively to said base, said intersecting walls having less resistance to vertical movement than to sidewise movement.



2,105,906
BRAKE BEAM SAFETY GUARD
Robert B. Cottrell, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application August 1, 1935, Serial No. 34,129
11 Claims. (Cl. 188—210)

1. In combination, a railway truck part having an upwardly facing element, a brake beam adjacent said part, a brake head carried by said beam, and a member carried by said head and extending longitudinally of the truck from said head

and immediately above said element for safeguarding said beam.

2,105,999
PUMP STRUCTURE
James Moore Evans, Detroit, Mich., assignor, by mesne assignments, to Grade Crossing Guard Corporation, Memphis, Tenn., a corporation of Tennessee
Application August 2, 1935, Serial No. 34,323
2 Claims. (Cl. 103—41)

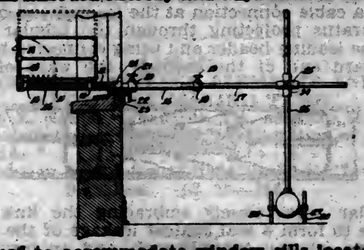
1. In a pumping mechanism, a casing provided with outer enclosing walls and an interior wall to define separate inlet and outlet chambers disposed on opposite sides of the interior wall, a rotary impeller in said casing for transmitting fluid between said inlet and outlet chambers, said impeller being provided with a shaft projecting outwardly of said casing, said interior wall having an opening therein to form a by-pass connection between said chambers, a valve movably supported in said casing for opening and closing said opening and having an operating rod projecting outwardly of said casing, and a speed responsive means on said shaft having an operating connection between the shaft and the rod externally of the casing whereby said valve will be closed upon attainment of predetermined speed.

2,106,000
FAIRLEAD
Charles L. George, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a corporation of Ohio
Application November 25, 1936, Serial No. 112,677
2 Claims. (Cl. 254—190)

2. In a fairlead, an annular guide frame having diametrically opposed bearing trunnions adapted when mounted to permit a rocking of the frame, a sheave frame mounted in said guide frame for swivel movements relative thereto about an axis at right angles to the rocking axis of the guide frame, a pair of peripherally opposed guide sheaves mounted in said sheave frame with their

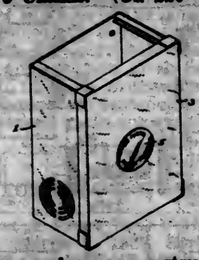
axes in the plane of swivel movements of the sheave frame and with the cable guiding space

between the sheaves substantially coincident with said swivel axis.



2,106,001
THERMOSTATIC CONTROL DEVICE
Otto J. Gross and Jay M. Woolhiser, Kenilworth, N. Y.
Application November 17, 1933, Serial No. 698,443
1 Claim. (Cl. 236—93)

A temperature regulator for a heating system comprising the combination of a metal casing consisting of a part forming a chamber and a part forming a removable cover for said chamber and having an aperture therethrough, an expansible diaphragm, fluid thermostat, a lever pivoted on the outside of said cover, and a member movable in said aperture for moving said lever, said diaphragm being loose in said chamber so as to be readily removed or replaced when said cover is removed, expansion of said diaphragm causing movement of said aperture member and said lever, and said casing having an outer surface shaped so that the regulator may be placed against an outer surface portion of the heating system in good thermal contact therewith.



2,106,002
PORTABLE WINDOW SCAFFOLD
Eric E. Hall, Chicago, Ill.
Application January 6, 1937, Serial No. 119,296
7 Claims. (Cl. 304—24)

1. In a portable window scaffold, the combination of a platform adapted to be projected beyond a window sill, an adjustable extension rod supporting the platform at its outer end and adapted to rest upon a window sill, and a portable weighted member connected to the inner portion of the adjustable extension rod and adapted to rest upon the floor and to counter-balance the weight of the occupant of the platform, the weighted member being adjustable longitudinally of the extension rod to vary the leverage effect of the weight afforded thereby and adjustable vertically

thereof to accommodate window sills located at different levels above the floor.

2,106,003
TERMINAL BOX
Alfred Hewitt, Jamaica, N. Y., assignor to Metropolitan Device Corporation, a corporation of New York
Application March 14, 1936, Serial No. 68,844
6 Claims. (Cl. 220—55)

1. In a box and cover construction having an opening therethrough and a latch accessible through the opening for securing the cover on the box, the combination comprising a frangible insert including a section received in the opening and a flange abutting against the inner surface of the wall surrounding the opening, the flange having a diametrical groove therein, and a strap of less width than the frangible insert extending transversely of the opening for securing the frangible insert within the opening, the strap being of such width as to be received within the groove of the frangible insert.

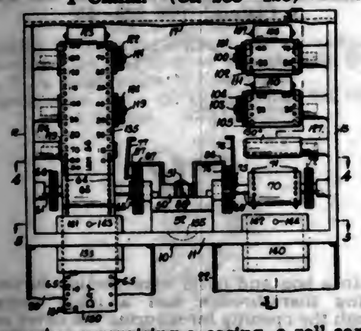
2,106,004
DEVICE USED FOR COATING THE INTERIOR OF A WATER MAIN
Clinton Ingico, New York, N. Y., assignor to National Water Main Cleaning Co., New York, N. Y., a corporation of New York
Application May 20, 1937, Serial No. 143,636
3 Claims. (Cl. 204—5)

1. An apparatus for electrodepositing a protective coating from an electrolyte on the interior surfaces of metal conduits in which the latter receives a positive electric charge, comprising a negatively charged flexible cathode traversing said conduit, and nonconductive centering means carried by the flexible cathode and supporting the same at spaced intervals between its ends and throughout its length against contact with the conduit.

2. An electrodepositing apparatus, as claimed in claim 1, in which each of said inflated rubber bags has a tubular core open at its ends, said apparatus comprising further a link for the trailing end of the cathode projecting through the

tubular core of the rear header and being arranged to drag the latter along with the cathode, and a cable connection at the leading end of the apparatus projecting through the tubular core of the leading header and being connected to the forward end of the cathode, the walls of the

tubular cores closely embracing the link and cable to form a seal against leakage of the electrolyte solution therethrough, and an insulated wire connected to said cathode and projected through the tubular core of the leading header adjacent the said cable.



2,106,005

REGISTERING APPARATUS FOR MACHINES

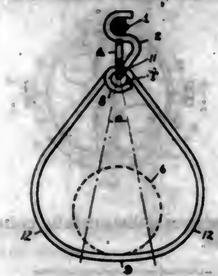
Woodford A. Kennedy, Charlotte, N. C.

Application August 6, 1934, Serial No. 738,701

1 Claim. (Cl. 235—125)

A counter comprising a casing, a roll carrying a plurality of layers of printed tape mounted in the casing, each of said tapes having two offset rows of evenly spaced numbers printed thereon, and the marginal edges of the tapes being perforated, a feed roll mounted in the casing and having teeth projecting therefrom to engage the perforations in the tapes for feeding the same from the roll to the exterior of the casing, a slot in the casing through which the tape is expelled by movement of the feed roll, a driven shaft extending into the casing, a driving connection between the shaft and the feed roll, said casing having a window therein through which one of the rows of graduated numbers on the tape nearest the window is visible, the distance between the window and the exterior edge of the slot in the casing through which the tapes are expelled being such that the reading on one scale of evenly spaced numbers at the exterior of the slot is identical to the reading on the scale visible through the window, so that when the tapes are torn off at the exterior edge of the slot the last number appearing in one column will be identical to the number visible through the window.

2,106,006



CABLE SUPPORTING DEVICE

Charles H. Klein, Cleveland, Ohio, assignor to The National Telephone Supply Company, Cleveland, Ohio, a corporation of Ohio

Application July 27, 1936, Serial No. 92,756

3 Claims. (Cl. 248—61)

3. A device of the character described comprising a cable supporting hanger having a lower portion in the form of an arc the center of which lies in the axis about which said hanger swings

during swinging movement of the cable supported thereby, said portion being of a length approximating the diameter of the cable to be supported by said hanger.

2,106,007

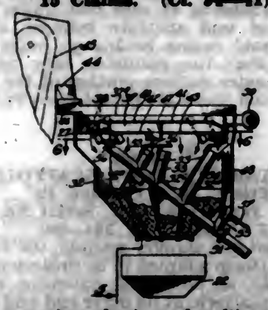
WIRE CONNECTING DEVICE

Charles H. Klein, Cleveland, Ohio, assignor to The National Telephone Supply Company, Cleveland, Ohio, a corporation of Ohio

Application September 9, 1936, Serial No. 99,977

7 Claims. (Cl. 173—263)

1. A wire connecting device comprising a tubular member having angularly related portions, said portions comprising complete tubes and an opening in the wall of said member at the junction of said portions, said opening being in alignment with the passage through one of said portions, and being of such size as to leave more than half of the cross section of the tubular member remaining at said junction.



2,106,008

PORTABLE PAVING PLANT

George J. Kuhrts, Jr., Los Angeles, Calif., assignor to Standard Steel Works, Los Angeles, Calif., a corporation of California

Application December 24, 1934, Serial No. 758,954

15 Claims. (Cl. 94—41)

1. In a paving plant, a plurality of adjacently positioned aggregate bins, means for delivering different size aggregate to the separte bins, and an overflow pipe having a plurality of branches, each branch being open at its upper end and extending to the upper portion of a separate bin.

2,106,009

COOKY MOLDING DEVICE

Karrington M. Lee, Chicago, Ill.

Application November 2, 1936, Serial No. 108,796

2 Claims. (Cl. 107—10)

1. In a device of the type described, a base member having spaced supporting members pivotally mounted thereon, shoulders on said supports, centering members extending upwardly from said shoulders, a mold carrier having slotted ends adapted to rest on said shoulders and to receive said centering members, a mold on said mold carrier and extrusion members on said base member adapted to extend through said mold.

2,106,010

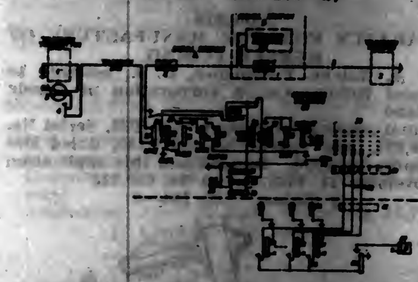
PROCESS OF PURIFICATION AND REGENERATION OF USED LUBRICATING OILS

Mario Giacomo Levi, Alberto Marietti, and Igino Ciarrocchi, Milan, Italy

No Drawing. Application February 23, 1935, Serial No. 7,252. In Italy April 23, 1934

10 Claims. (Cl. 196—16)

1. The step in the process of purification and regeneration of used lubricating oils comprising in the intimate mixing of such oils with anhydrous aluminum chloride at a temperature in the range between 130° C., and 140° C., to cause through polymerization complete precipitation of the impurities of a tarry, asphaltic or like nature contained in such used lubricating oil and to coagulate such tarry, asphaltic and like impurities into a sludge readily separable as a solid or semi-solid.



2,106,011

TELEGRAPH SYSTEM

Clarence E. Lemax, Oak Park, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application November 7, 1935, Serial No. 48,655

8 Claims. (Cl. 178—8)

1. In combination, a line extending between a transmitting station and a receiving station, a selecting device associated with said line and located between the transmitting station and the receiving station, means for transmitting signals comprising codes of impulses over the line, said device normally being cut from under the control of signals transmitted over the line, timing means associated with the selecting device, means for transmitting a special signal of the same character as but of a length not encountered in ordinary transmission over the line, said timing means responsive only to said special signal for placing said selector under the control of the line at the termination of the said special signal, said selector thereafter responsive to signals over the line.

2,106,012

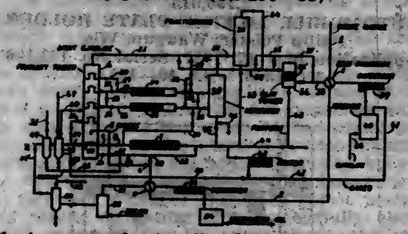
COLORED FASTENER ELEMENTS AND METHOD OF MAKING THEM

Frank E. Nedine, Meadville, Pa., assignor to Joy Manufacturing Company, a corporation of Delaware

Application September 15, 1934, Serial No. 744,184

9 Claims. (Cl. 29—148)

2. The method of producing colored fastener elements which includes, providing a plurality of fastener elements having a connected relationship with respect to each other, and covering a portion of the surfaces of the connected elements while submerging the elements within and subjecting them to an electrolytic dyeing solution, so that the covered portion of the surfaces of the elements will have its original color, and then severing the connected fastener elements and exposing the original grain color of the material.



2,106,013

PROCESS FOR REFINING AND CRACKING OIL

Ernest A. Ocon, New York, N. Y.

Application March 8, 1937, Serial No. 129,578

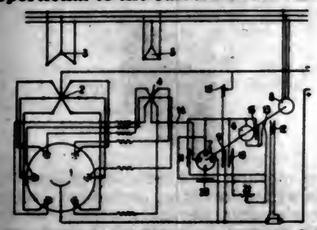
13 Claims. (Cl. 196—53)

1. A process for treating bituminous materials such as mineral oils of wide boiling range substantially free from cracked materials to produce cracking stocks and valuable residual oils, which comprises vaporizing the initial bituminous charging stock with the aid of hot products from a saturating hydrogenation of hydrocarbon oils deficient in hydrogen by directly contacting said products while hot with the bituminous oil undergoing vaporization to form vapors and residual products, and fractionating the vapors to form non-refractory cracking stock distillates and valuable residual stocks substantially free from cracked materials.

2,106,014

ELECTRIC CURRENT CONVERTER

Joseph Maximus Pestarini, Grant City, Staten Island, N. Y.



Application January 11, 1937, Serial No. 120,059

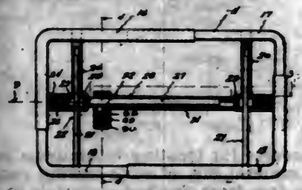
In France January 11, 1936

4 Claims. (Cl. 175—363)

1. In an electric converter unit, the combination with an alternating current supply line, a

direct current distribution line, a mercury vapour converter, a transformer of which the primary winding is connected to the alternating current line and the secondary star-shaped winding is connected to the anodes of said converter, of an induction regulator, of which the triangular primary winding is fed by the alternating current line and the star-shaped secondary winding is connected to the anodes of said converter, a control metadyne for the current of the converter unit, a variator for said control metadyne including a winding through which flows a variable current proportional to the current of the direct cur-

rent network, a modulator generator feeding a further winding of said variator, a shunt generator feeding direct current at constant voltage to a field winding of said modulator generator, a field winding for said modulator generator fed by a variable current proportional to the current of the direct current network, an amplifying metadyne having its secondary brushes connected with the neutral point of the induction regulator and the direct current line, respectively, and a secondary variator winding for said amplifying metadyne connected to the secondary brushes of the control metadyne.



2,166,015

AUTOMOBILE LICENSE PLATE HOLDER

Philip Felster, Waupun, Wis.

Application May 17, 1937, Serial No. 143,100

3 Claims. (Cl. 40—125)

1. A holder for the license plates of automobiles comprising, a frame including a plurality of sections slidably connected together, said sections being of a U-shape in cross-section to receive the marginal edge of a plate, automatic means for preventing the separation of the sections after the sections have been slid toward one another to an adjusted position, manual means for rendering the automatic means inoperable, said manual means being so constructed and arranged as to be inaccessible when a plate is in the frame.

2,166,016

REED FOR MUSICAL INSTRUMENTS

Henry T. Prescott, Chicago, Ill.

Application July 3, 1935, Serial No. 29,617

2 Claims. (Cl. 84—363)

1. A reed for musical instruments comprising a body having a portion adapted to be clamped to the instrument and supporting a vibratable portion of flexible characteristics to be supported free of any clamp, said reed having portions cut out from the bottom to the top at its opposite edges between the vibratable portion and the

portion to be clamped, whereby the vibratable part of the reed is adapted to vibrate with respect to the major axis of the reed and also with respect to a transverse axis located in the vibratable portion thereof.

2,166,017

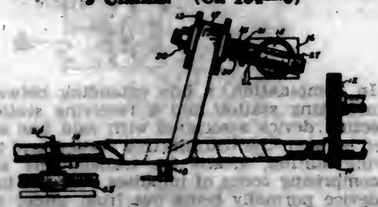
VALVE FOR BRAKES

Harold W. Price, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana

Application October 9, 1935, Serial No. 44,165

2 Claims. (Cl. 121—46.5)

1. For use with a power operating system, a valve for controlling the passage of fluid under differential pressure to a power operator, comprising a casing formed with an inlet port, an outlet, and an exhaust port, a valve member movable in said casing, a pressure responsive means movable with said valve member, and an operating element connected to said pressure responsive means, the valve member being formed with a longitudinally extending passage connecting a space adjacent the pressure responsive means with said outlet, and the casing being provided with an anti-rotation means extending into said passage.



2,166,018

APPARATUS FOR THE MANUFACTURE OF RUBBER TUBING

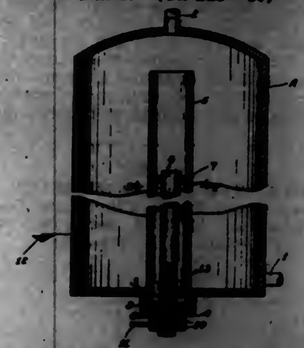
Paul A. Raiche, Providence, R. I., assignor to Davol Rubber Co., a corporation of Rhode Island

Original application January 20, 1932, Serial No. 589,235, now Patent No. 1,940,145, dated December 19, 1933. Divided and this application November 21, 1933, Serial No. 699,018

9 Claims. (Cl. 154—6)

1. In a machine for forming rubber tubes, a rotatable mandrel, a rotatable carrier roll shaft mounted adjacent to said mandrel and adapted to carry a spool of strip rubber, mechanism for rotating said mandrel, a reciprocable hammer mounted adjacent said mandrel for hammering the seams of the strip rubber after it is wound

on said mandrel, and mechanism for relatively shifting the mandrel and hammer longitudinally along the axis of said mandrel.



2,166,019

ELECTRIC WATER HEATER

Samuel Denyse Robertson, St. Louis, Mo., assignor to John J. Mitscherling, St. Louis, Mo.

Application August 5, 1935, Serial No. 34,096

1 Claim. (Cl. 219—40)

In an electric water heater, the combination with a container having an opening therethrough; of a closure cap for said opening; an outer shell electrode secured at its lower end from said cap and projecting into said container, and provided with water passage openings through its side wall adjacent its lowermost end; an inner electrode carried by said cap and spaced from and within said outer electrode, the lowermost end of said inner electrode being threaded and extended outwardly beyond said cap; an insulation element intermediate the ends of said water passage between and constantly engaging both of said electrodes; a washer within said cap and longitudinally engageable with said inner electrode but prevented against rotational movement relatively thereto; and rotatable locking means threadedly engageable with said inner electrode exteriorly of said cap, whereby the inner electrode may be held locked in its longitudinal adjustment.

2,166,020

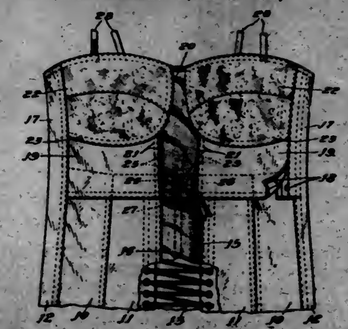
MACHINE FOR SECURING HEADS IN CYLINDRICAL CONTAINERS

Albert H. Schmidlin, St. Joseph, Mich., assignor, by mesne assignments, to Seymour & Peck Company, Chicago, Ill., a corporation of Delaware

Application April 11, 1935, Serial No. 15,784

12 Claims. (Cl. 113—16)

1. Means for crimping a metal band of substantially uniform height about a container head, said means comprising a support for a shell having such a band to be crimped, a standard associated with the support, a lever pivotally carried by the standard, a member operably connected to the lever and adapted to surround the outer edge of the metal band and having a series of surfaces separated by V-shaped grooves and inclined inwardly at substantially 45° and adapted to engage the outer edge of the metal band at intervals therealong so as to crimp the metal band and bend it inwardly, and a second member having outwardly extending V-shaped fins operable in the grooves and said member being operably connected to the lever for pressing the crimped and inwardly bent edge of the metal band down against the head.



2,166,021

GARMENT

Charles H. Schopbach, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a corporation of Illinois

Application October 1, 1936, Serial No. 103,491

6 Claims. (Cl. 2—39)

1. A foundation garment comprising a corset having front and side portions and a brassière portion separate from each other at the front along the lower edge thereof with the sides of the brassière portion secured along the vertical front edges of the side portions, means in the front portion of the corset for positively varying and adjusting the width of the corset portion, and means in the brassière portion for automatically adjusting the brassière to the body of the wearer and compensating for variations in the adjusted width of the front corset portion, said means consisting of a horizontally elastic panel extending from the upper edge to the lower edge of the brassière portion and connected at its side margins to non-elastic portions of the brassière portion, the brassière portion overlying the adjustable corset portion and having greater elasticity in its lower than in its upper portion.

2,166,022

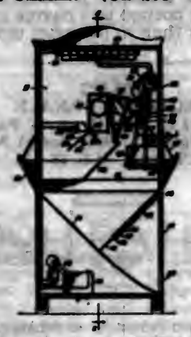
ELECTRIC FURNACE

Gilbert K. Sell, Oynwyd, Pa.

Application May 22, 1935, Serial No. 22,963

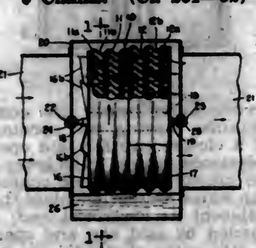
23 Claims. (Cl. 13—9)

1. In an electric furnace, a substantially horizontally located hollow electrode, electric connections for energizing the electrode, mechanism



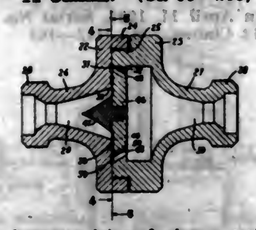
for positively feeding a succession of shaped charges to the furnace through the electrode, and means for rotating the electrode while energized and while having charges fed therethrough by virtue of which rotation erosion of the electrode is discouraged.

2,106,023
LUBRICANT DISPENSER
Harry R. Tear, Evanston, Ill., assignor to The Lubrication Corporation, Chicago, Ill., a corporation of Delaware
Application March 3, 1937, Serial No. 128,723
30 Claims. (Cl. 221—47.3)



1. A dispenser comprising an original package of substantially cylindrical side wall shape and having a closed end adapted to be substantially wholly cut away, and means for cutting away said closed end and for forcing material through an opening in said closed end, comprising an annular knife engageable with said closed end adjacent said side wall to cut out said end and a cutter within the outline of said knife adapted to make an opening in said end, means for relatively moving the package and said knife and cutter to form an opening in said end and then cut it away from the side wall, and means for moving said cut end and said package relatively to each other to force the material from the package through said opening.

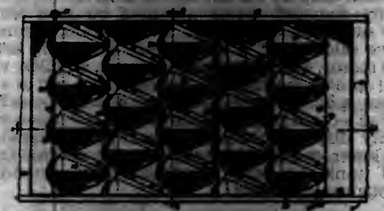
2,106,024
GAME APPARATUS
Milton E. Wood, Hitingville, N. Y.
Application February 10, 1937, Serial No. 124,991
2 Claims. (Cl. 272—102)



1. A game apparatus including a casing of general oblong shape having a flat front vertical wall and having a missile-receiving opening in said front wall in the upper portion thereof and having a second opening in the front wall below the first-mentioned opening and at a point appreciably above the bottom of the casing, said last-mentioned opening extending throughout the full width of the front wall, an inclined shelf on the front of the casing extending throughout the full width of the casing and in position to direct missiles which fall thereon through the said last-mentioned opening into the casing, a hopper in the casing into which missiles which enter the casing through either of said openings are collected, said casing having an outlet opening in its side wall near the lower end of the casing, and a manually operated gate on said hopper which when opened permits the missiles collected therein to fall through said outlet opening.

2,106,025
AIR FILTER AND HUMIDIFIER
Herbert Alfred Faber, Cincinnati, Ohio
Application July 14, 1936, Serial No. 90,457
6 Claims. (Cl. 261—92)

1. In an air filter and humidifier, a set of two mechanically balanced spiral units disposed laterally of each other, oppositely directed, and connected at their centers by a conduit communicating with means for mounting said set of units for rotation about an axis through their spiral centers, and a body of liquid disposed below the set of spiral units and maintained at a level whereby the outer free ends of the units will dip into the liquid at each revolution of the units.

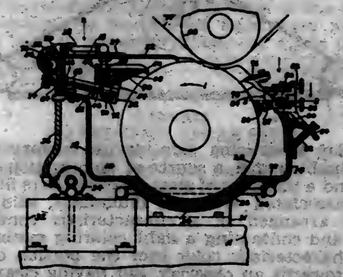


2,106,026
LIQUID HOMOGENIZING AND THE LIKE METHOD AND APPARATUS
John H. Gardner, Belding, Mich., assignor to Gardner Dairy Equipment Corporation, Grand Rapids, Mich., a corporation of Michigan
Application January 25, 1936, Serial No. 60,844
11 Claims. (Cl. 99—285)

1. In a homogenizing device, a pair of walled housing elements adapted to be connected in a liquid conduit flow line, one housing element having a passageway therethrough and laterally of the mouth of the passageway having a pair of annular concentric elevated planar faces thereon

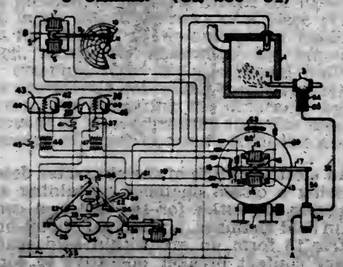
providing an annular recess therebetween, the other housing element having a transverse wall provided with a corresponding pair of annular concentric elevated planar faces thereon providing an annular recess therebetween, means to clamp the two housing elements together with the elevated faces in pressure-sealed engagement, the recesses providing a sealed annular chamber, a plurality of generally radial grooves in one of the annular faces providing communication between the said housing elements, and conduit means extending through the said transverse wall effecting communication between the said annular chamber and the housing having the transverse wall.

2,106,027
RIFFLE
John F. Guest, Kelowna, British Columbia, Canada, assignor of one-half to Joseph L. Rosenberg, New York, N. Y.
Application August 7, 1936, Serial No. 94,769
10 Claims. (Cl. 209—458)



1. A riffle or classifier comprising a receiving pan, baffles in said pan, a floor situated above said pan, said floor being provided with a series of offset peaked members having triangular shaped sides open at their down-stream side, and means under said projections communicating with the receiving pan.

2,106,028
CLOSURE FOR TUBES AND THE LIKE
Karl David Heimsch, Stuttgart, Germany, and Otto Brunnert, Zurich, Switzerland, assignors, by direct and mesne assignments, to Julius Blech, Frankfort-on-the-Main, Germany
Application March 28, 1936, Serial No. 71,443
In Germany March 28, 1935
3 Claims. (Cl. 221—60)



1. A closure for tubes, comprising in combination an externally screw threaded tube neck, a closure head consisting of a cylindrical lower part adapted to be removably fitted in said tube neck in frictional contact therewith and of a conical upper part with a base corresponding to the outer diameter of said tube neck and adapted to bear tightly against the top thereof so that its conical surface forms a continuation of the outer surface of said tube neck, said head having a plurality of passages extending from its lower end to the conical upper part below the top thereof, a screw cap adapted to be screwed on to said neck, an inwardly directed flange on the lower end of said cap adapted to limit the outward movement of said cap on said neck, said cap having a central aperture and a conical upper end corresponding to the upper part of said head, said cap adapted when screwed home to bear with its conical upper end against the conical part of said head and close said passages and when unscrewed to form an outlet passage for the contents of the tube through said passages in said head and through the central aperture in said cap.

2,106,029
INKING MECHANISM AND METHOD FOR PRINTING MACHINES
Albert J. Horton, White Plains, N. Y., assignor, by mesne assignments, to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application April 16, 1935, Serial No. 16,681
26 Claims. (Cl. 101—157)

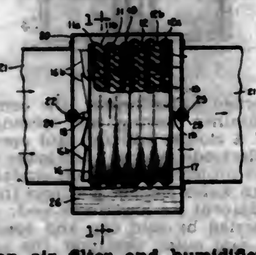
1. In a printing machine, an ink fountain, a rotatable intaglio printing cylinder operable in the fountain, an auxiliary ink fountain within the fountain and comprising a receptacle of definite capacity, means for supplying ink to the auxiliary fountain, the auxiliary fountain overflowing to discharge ink therefrom by gravity onto the printing cylinder and into the fountain to form an ink body in the fountain in which the cylinder rotates.

2,106,030
MEASURING AND CONTROLLING APPARATUS
Raymond D. Junkins, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application June 26, 1934, Serial No. 732,477
5 Claims. (Cl. 236—84)

4. In combination, a thermo-couple sensitive to a variable, a potentiometer, a galvanometer under the joint control of the thermo-couple and the potentiometer, a motor having opposed fields for varying the effect of the potentiometer on the galvanometer, a pair of electron discharge devices each having a grid, a cathode and an anode, the cathode and anode of each of said devices connected in circuit with one of the motor fields,

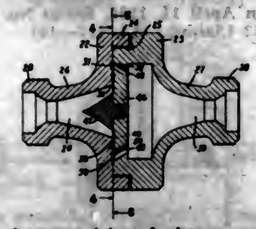
for positively feeding a succession of shaped charges to the furnace through the electrode, and means for rotating the electrode while energized and while having charges fed therethrough by virtue of which rotation erosion of the electrode is discouraged.

2,106,023
LUBRICANT DISPENSER
Harry R. Tear, Evanston, Ill., assignor to The Lubrication Corporation, Chicago, Ill., a corporation of Delaware
Application March 3, 1937, Serial No. 128,723
30 Claims. (Cl. 221—47.3)



1. A dispenser comprising an original package of substantially cylindrical side wall shape and having a closed end adapted to be substantially wholly cut away, and means for cutting away said closed end and for forcing material through an opening in said closed end, comprising an annular knife engageable with said closed end adjacent said side wall to cut out said end and a cutter within the outline of said knife adapted to make an opening in said end, means for relatively moving the package and said knife and cutter to form an opening in said end and then cut it away from the side wall, and means for moving said cut end and said package relatively to each other to force the material from the package through said opening.

2,106,024
GAME APPARATUS
Milton E. Wood, Kingsville, N. Y.
Application February 10, 1937, Serial No. 124,991
2 Claims. (Cl. 273—102)



1. A game apparatus including a casing of general oblong shape having a flat front vertical wall and having a missile-receiving opening in said front wall in the upper portion thereof and having a second opening in the front wall below the first-mentioned opening and at a point appreciably above the bottom of the casing, said last-mentioned opening extending throughout the full width of the front wall, an inclined shelf on the front of the casing extending throughout the full width of the casing and in position to direct missiles which fall thereon through the said last-mentioned opening into the casing, a hopper in the casing into which missiles which enter the casing through either of said openings are collected, said casing having an outlet opening in its side wall near the lower end of the casing, and a manually operated gate on said hopper which when opened permits the missiles collected therein to fall through said outlet opening.

2,106,025
AIR FILTER AND HUMIDIFIER
Herbert Alfred Faber, Cincinnati, Ohio
Application July 14, 1936, Serial No. 90,457
6 Claims. (Cl. 261—92)

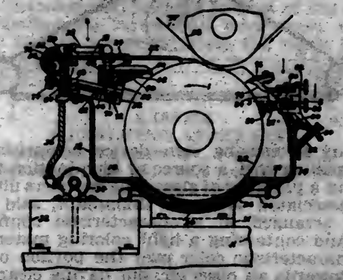
1. In an air filter and humidifier, a set of two mechanically balanced spiral units disposed laterally of each other, oppositely directed, and connected at their centers by a conduit communicating with means for mounting said set of units for rotation about an axis through their spiral centers, and a body of liquid disposed below the set of spiral units and maintained at a level whereby the outer free ends of the units will dip into the liquid at each revolution of the units.

2,106,026
LIQUID HOMOGENIZING AND THE LIKE METHOD AND APPARATUS
John H. Gardner, Belding, Mich., assignor to Gardner Dairy Equipment Corporation, Grand Rapids, Mich., a corporation of Michigan
Application January 25, 1936, Serial No. 60,244
11 Claims. (Cl. 92—265)

1. In a homogenising device, a pair of walled housing elements adapted to be connected in a liquid conduit flow line, one housing element having a passageway therethrough and laterally of the mouth of the passageway having a pair of annular concentric elevated planar faces thereon

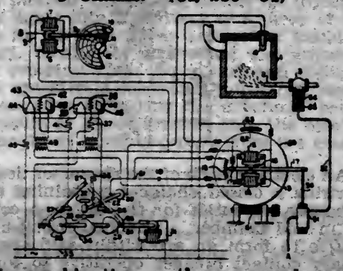
providing an annular recess therebetween, the other housing element having a transverse wall provided with a corresponding pair of annular concentric elevated planar faces thereon providing an annular recess therebetween, means to clamp the two housing elements together with the elevated faces in pressure-sealed engagement, the recesses providing a sealed annular chamber, a plurality of generally radial grooves in one of the annular faces providing communication between the said housing elements, and conduit means extending through the said transverse wall effecting communication between the said annular chamber and the housing having the transverse wall.

2,106,027
RIFFLE
John F. Guest, Kelowna, British Columbia, Canada, assignor of one-half to Joseph L. Rosenberg, New York, N. Y.
Application August 7, 1936, Serial No. 94,769
10 Claims. (Cl. 209—453)



1. A riffle or classifier comprising a receiving pan, baffles in said pan, a floor situated above said pan, said floor being provided with a series of offset peaked members having triangular shaped sides open at their down-stream side, and means under said projections communicating with the receiving pan.

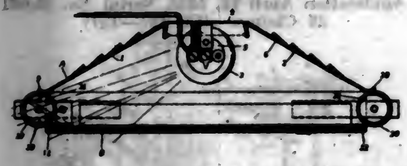
2,106,028
CLOSURE FOR TUBES AND THE LIKE
Karl David Heinsch, Stuttgart, Germany, and Otto Brunnert, Zurich, Switzerland, assignors, by direct and mesne assignments, to Julius Blech, Frankfort-on-the-Main, Germany
Application March 28, 1936, Serial No. 71,443
In Germany March 28, 1935
3 Claims. (Cl. 221—60)



1. A closure for tubes, comprising in combination an externally screw threaded tube neck, a closure head consisting of a cylindrical lower part adapted to be removably fitted in said tube neck in frictional contact therewith and of a conical upper part with a base corresponding to the outer diameter of said tube neck and adapted to bear tightly against the top thereof so that its conical surface forms a continuation of the outer surface of said tube neck, said head having a plurality of passages extending from its lower end to the conical upper part below the top thereof, a screw cap adapted to be screwed on to said neck, an inwardly directed flange on the lower end of said cap adapted to limit the outward movement of said cap on said neck, said cap having a central aperture and a conical upper end corresponding to the upper part of said head, said cap adapted when screwed home to bear with its conical upper end against the conical part of said head and close said passages and when unscrewed to form an outlet passage for the contents of the tube through said passages in said head and through the central aperture in said cap.

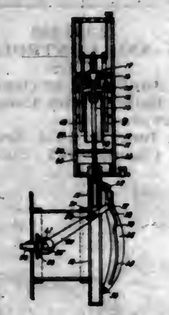
2,106,029
INKING MECHANISM AND METHOD FOR PRINTING MACHINES
Albert J. Horton, White Plains, N. Y., assignor, by mesne assignments, to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application April 16, 1935, Serial No. 16,631
26 Claims. (Cl. 101—157)

1. In a printing machine, an ink fountain, a rotatable intaglio printing cylinder operable in the fountain, an auxiliary ink fountain within the fountain and comprising a receptacle of definite capacity, means for supplying ink to the auxiliary fountain, the auxiliary fountain overflowing to discharge ink therefrom by gravity onto the printing cylinder and into the fountain to form an ink body in the fountain in which the cylinder rotates.



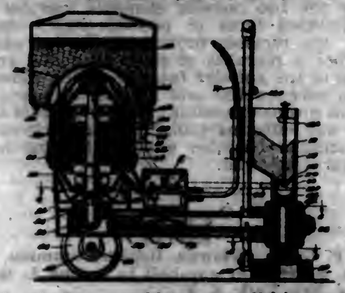
2,106,030
MEASURING AND CONTROLLING APPARATUS
Raymond D. Junkins, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application June 26, 1934, Serial No. 732,477
5 Claims. (Cl. 236—84)

4. In combination, a thermo-couple sensitive to a variable, a potentiometer, a galvanometer under the joint control of the thermo-couple and the potentiometer, a motor having opposed fields for varying the effect of the potentiometer on the galvanometer, a pair of electron discharge devices each having a grid, a cathode and an anode, the cathode and anode of each of said devices connected in circuit with one of the motor fields,



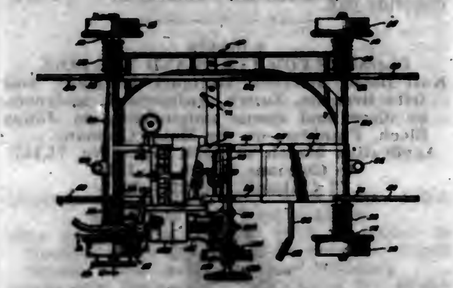
means for maintaining a normal potential relation between the grid and cathode of said devices, means controlled by the galvanometer for periodically in accordance with changes in the variable changing the grid-cathode relationship, control means for the variable operated by said motor, a second reversible motor connected in said circuit, and indicating means actuated by the second motor.

2,106,031
PSEUDO NEON SIGN
Joseph Harris Kleser, Brooklyn, N. Y.
Application March 11, 1937, Serial No. 130,213
4 Claims. (Cl. 40—132)



4. An advertising sign device comprising an illuminable panel, a source of illumination therefor, and a plurality of glass tube members illuminably associated with said illuminant, said tubes being arranged in a characteristic configuration, and containing a light coloring material of the characteristic color over the portion of said tube towards an observer, but having clear glass over a portion adjacent said illuminant.

2,106,032
ARC RUPTURING DEVICE FOR ELECTRIC SWITCHES
Emil Lange, Berlin-Zehlendorf, Germany
Application March 23, 1937, Serial No. 132,584
In Germany April 21, 1936
2 Claims. (Cl. 200—150)

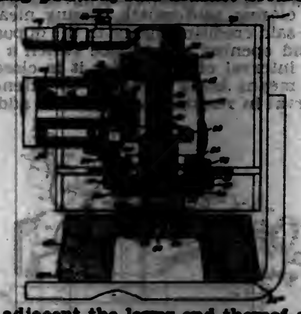


1. An electric switch of the character described comprising a closed chamber containing a fluid and having an outlet for the latter, a confined space in said chamber, a principal circuit breaker operative to form an arc within said space, an auxiliary contact breaker operative to form an arc at said outlet, said space being arranged so that the heating of its fluid by the arc will cause the fluid outside the space to be ejected through the outlet for rupturing the arc at the latter, a switch operating lever acting direct on the principal circuit breaker, and means co-operating with said lever for causing the auxiliary circuit breaker to break the circuit after the latter has been broken by the principal circuit breaker.

2,106,033
TERRAZZO GRINDING APPARATUS
Arthur William Moll, Chicago, Ill.
Application August 25, 1936, Serial No. 97,731
10 Claims. (Cl. 51—177)

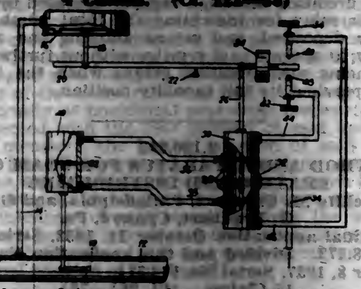
2. A grinding, scrubbing or polishing machine comprising a horizontally disposed frame, a wheeled support for one end of said frame, a vertically disposed motor mounted on said frame over said wheeled support, a water tank mounted above said motor, a drive shaft extending below said motor, a driving pulley thereon, a hollow vertical spindle mounted in the extended end of said frame, a driven pulley thereon, a continuous belt geared to said pulleys, a universally mounted vertically disposed face grinding wheel secured to the lower end of said spindle and a conduit from said tank to said grinding wheel extending through said spindle.

2,106,034
RAIL GRINDER
Arthur William Moll, Chicago, Ill.
Application October 1, 1936, Serial No. 103,497
21 Claims. (Cl. 51—178)



1. Apparatus of the class described comprising a rigid rectangular frame, a pair of parallel spaced axles supported thereby, wheels on both ends of both of said axles, a movable axle housing on each axle, a grinding wheel support frame carried by said housings, and a motor driven grinding wheel carried by said support frame, said support frame being capable of horizontal movement on said axles to provide a lateral adjustment for said grinding wheel.

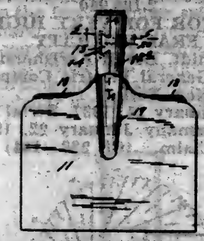
2,106,035
TERRAZZO GRINDING ANGLE SPINDLE
Arthur William Moll, Chicago, Ill.
Application October 10, 1936, Serial No. 105,972
5 Claims. (Cl. 51—177)



1. A terrazzo grinder comprising an angle shaped casing, a spindle therein, a grinding

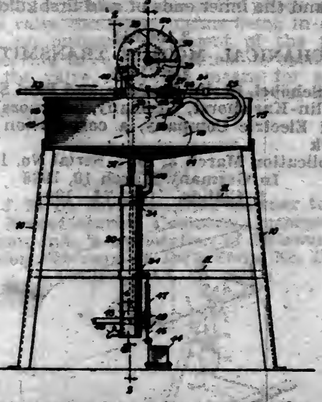
wheel thereon, means for rotating said grinding wheel and a combined bracket and gauge for supporting said casing and associated parts in a working position, said bracket secured to said

casing adjacent the lower end thereof and comprising a plate, a member attached at right angles thereto and adjustable to gauge the distance the grinding wheel may be moved toward said wall.



2,106,036
REGULATOR
George K. O'Connor, Wilmette, Ill., assignor to Smoot Engineering Corporation, Chicago, Ill., a corporation of Delaware
Application October 4, 1934, Serial No. 746,640
4 Claims. (Cl. 121—38)

1. A regulator comprising a weigh beam variably controlled in accordance with a condition to be controlled, a relay cylinder containing a double-acting piston, a control device for controlling said condition connected to said relay piston, fluid connections to opposite ends of said cylinder having a valve actuated by movements of said weigh beam, and fluid stabilizing means acting on said weigh beam and including oppositely-acting jets directed thereagainst and supplied with fluid from said cylinder and its connections.



2,106,037
GARDEN TOOL
George Pirich, Minneapolis, Minn.
Application July 13, 1936, Serial No. 90,397
2 Claims. (Cl. 280—30)

2. In a garden tool, a blade having an extended portion bent into tubular form to form a handle-receiving socket, said extended portion, at one edge, having a dove-tailed ear, and at its other edge, a dove-tailed notch, said ear having an edge portion that projects under an adjacent portion of the socket hardening the notch, and a handle fit snugly in said socket, engagement of the dove-tailed ear in the dove-tailed notch serving to prevent circumferential opening of the handle-receiving socket under expanding pressure exerted by the handle, said dovetailed ear being locked against radial outward movement from the noteh by the over-and-underlapping engage-

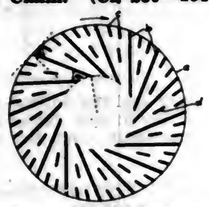
ment therebetween and the portion of the socket surrounding the notch and being held against radial inward movement from the notch by the inserted handle.

2,106,038
MEASURING APPARATUS
Herbert Ramsey, Jr., Nutley, N. J.
Application May 20, 1937, Serial No. 143,651
8 Claims. (Cl. 99—258)

2. An apparatus for curing meat by the artery curing method, comprising means for injecting a curing liquid into the artery of a piece of meat, means for measuring the amount of liquid thus injected, means for measuring the amount of liquid escaping from the meat, and indicating means operatively connected to the two measuring means for indicating the difference between the amount of liquid injected into the meat and the amount of liquid escaping from the meat.

2,106,039
CONDENSER DIELECTRIC MATERIAL
Meyer M. Safford, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application December 12, 1935, Serial No. 54,698
9 Claims. (Cl. 154—2.6)

1. A condenser dielectric comprising an inorganic substance consisting of calcined titanium dioxide of such electrical characteristics that when mixed with 10 per cent shellac and molded into a disc 1/8 inch thick and 4 inches in diameter and its electrical properties measured at 1000



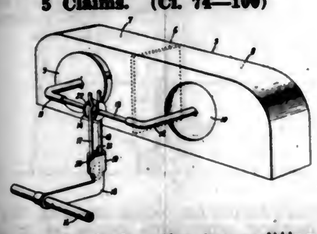
cycles, such disc possesses a power factor of not more than 3 and a dielectric constant of at least 22.

2,106,040

BLOWER ROTOR FOR VERY HIGH PERIPHERAL VELOCITY

Friedrich Schmidt, Berlin-Karlshorst, Germany, assignor to General Electric Company, a corporation of New York

Application January 11, 1937, Serial No. 120,074
In Germany January 22, 1936
1 Claim. (Cl. 230—134)



A blower rotor having vanes extending from the inlet to the outlet providing vane channels, short guide vanes within the vane channels extending inward from the outlet, and short guide vanes within the vane channels intermediate the inlet and the inner ends of said first guide vanes.

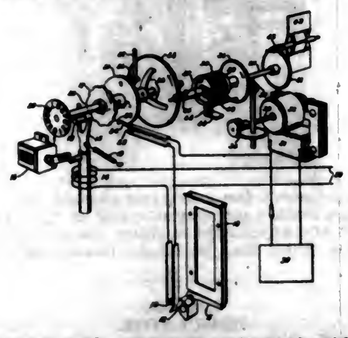
2,106,041

MECHANICAL MOTION TRANSMITTING DEVICE

Fritz Schöbel, Berlin-Pankow, and Paul Schubert, Berlin-Karlshorst, Germany, assignors to General Electric Company, a corporation of New York

Application March 3, 1937, Serial No. 128,842
In Germany March 10, 1936
5 Claims. (Cl. 74—100)

1. In a mechanical motion transmitting device, the combination of an operated member provided with a cylindrical surface and arranged to move in a straight line between two end positions, an operating member including a crank provided with a pair of resilient members adjacent opposite sides of said cylindrical surface and arranged to move transversely of said operated member during its linear movement, and a tapered projection on one of said resilient members arranged to move past said operated member during said transverse movement to force apart said spaced members thereby creating an unstable condition between the two end positions of said operated member.



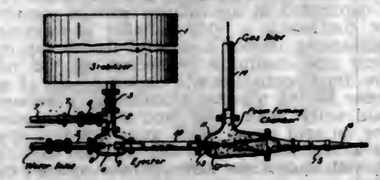
2,106,042

COIN CONTROLLED TIME SWITCH

Julian H. Stark, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application March 8, 1932, Serial No. 597,502
4 Claims. (Cl. 194—6)

1. A coin-operated time switch comprising a credit relay, a coin chute, means responsive to the deposit of a coin in said chute for momentarily energizing said credit relay, a service switch, a movable crediting means actuated in one direction in response to the operation of said relay for closing said switch, timing means for actuating said crediting means in the opposite direction and opening said service switch a predetermined interval of time after it is closed, the crediting means being arranged to extend such time interval in response to deposit of additional



coins and the repeated operation of said relay at any given time in proportion to the number of additional coins thus deposited up to a given maximum corresponding to the full capacity of said crediting means, a register operated by said credit relay for indicating the total number of coins deposited, and means allowing the credit relay to operate said register without further influencing said crediting means when the latter has reached its full capacity position.

2,106,043

METHOD AND APPARATUS FOR FOAM GENERATING AND DISTRIBUTING

Radcliffe M. Urquhart, Philadelphia, and George G. Urquhart, Cynwyd, Pa.

Original application October 18, 1932, Serial No. 638,272. Divided and this application November 8, 1937, Serial No. 173,514
15 Claims. (Cl. 261—76)

1. Method of producing foam, comprising subjecting a foam-forming material to mechanical subdivision induced by turbulent flow; injecting a stream of gas under pressure from an exterior source into the material while so subdivided, further mechanically subdividing the foam, and then withdrawing it at least partially by pressure of the gas.

12. Method of producing a fire-extinguishing foam which comprises ejecting one or more high velocity streams of liquid from a corresponding number of nozzles in such manner as to impart a high degree of turbulence to the body of said stream of liquid, thereby finely subdividing the same, and entraining gas into and by means of the resulting stream of subdivided liquid in the presence of a foam-promoting agent.

2,106,044

DISAPPEARING WALL CABINET BOARD

Lawrence Remaine Young, Seattle, Wash.

Application July 2, 1935, Serial No. 29,628
2 Claims. (Cl. 38—127)

2. In wall cabinet means for installation between the outer and inner portions of a wall, which outer and inner wall portions are spaced apart by standard two by four inch studding; a wall cabinet of shallow depth positioned between said inner and outer wall portions, said wall cabinet having a doorway in its upper portion substantially shorter than said cabinet; a disappearing board member of substantially greater length than said doorway and slightly less length than said cabinet movable through said doorway into and out of said cabinet; groove and pin means guiding the lower end of said board member for vertical movement in said cabinet; a horizontal front cross piece adjustably and rigidly connected with the front portion of said upright side members, said side members having notches at a plurality of elevations receiving said cross piece; and a plurality of horizontal rear cross pieces rigidly connected with the rear portion of said upright side members, the bottom of each of said rear cross pieces being spaced above the plane occupied by the top of said front cross piece for each location provided by said notches a distance equal to the thickness of said board, whereby the board will rest on the top of said front cross piece and engage below one of said rear cross pieces for each vertical position of the board.

2,106,045

FISHING DEVICE

Andrew M. Zambersky, Cleveland, Ohio

Application August 14, 1936, Serial No. 96,087
3 Claims. (Cl. 43—53)

1. A device of the character set forth comprising an elongated body having sides and end walls converging toward its upper end and formed in its upper end portion with an opening, one side of said body being provided with ribs extending substantially in the direction of pull on said device.

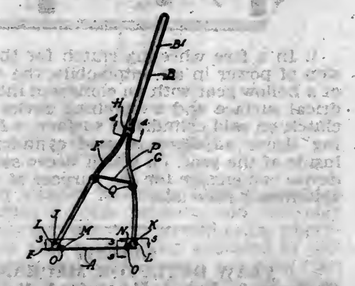
2,106,046

MARKING IMPLEMENT

Sidney D. Barlow and Philip Sussman, New York, N. Y.

Application August 6, 1937, Serial No. 157,688
12 Claims. (Cl. 120—43)

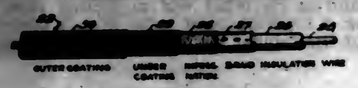
1. A marking implement including a casing having rigid walls and being provided with a transverse partition dividing said casing into a reservoir chamber for a marking fluid and a feed chamber for said fluid, valve controlled means intercommunicating said chambers, piston means in the feed chamber, said piston means having a tubular member movable therewith and at one end communicating with the feed chamber and at its other end projecting from the casing, a marking point valve in said projecting end of the tubular member normally closing the



same and being mounted so as to be responsive to axial writing or marking pressure to move to open position so as to permit a discharge of the marking fluid under pressure of the piston means, with the valve controlled means being in closed position, an outward movement of the piston means serving to cause movement to open position of the valve controlled means for a flow of the marking fluid from the reservoir to the feed chamber.

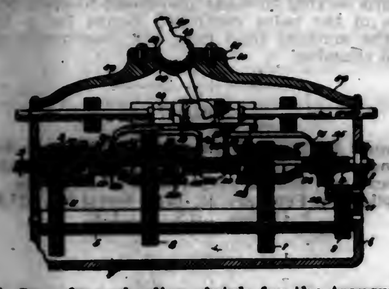
2,106,047

WEED CUTTER



Francis J. Birge, Seymour, Ind., assignor to Seymour Manufacturing Company, Incorporated, Seymour, Ind., a corporation of Delaware

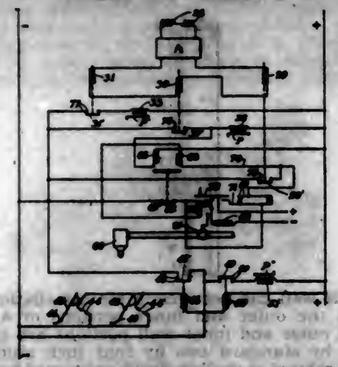
Application February 26, 1937, Serial No. 127,866
2 Claims. (Cl. 30—318)



1. In a tool, the combination of a blade, a wooden handle member made from rounded stock and bifurcated through a portion of its length to provide a pair of resilient arms integral with the handle and each of substantially semi-circular cross-section, said arms extending divergently toward opposite ends of the blade with a reinforcement applied to the handle member adjacent the point at which said arms diverge to oppose any tendency of said member to split beyond said point, means securing the ends of the arms to the blade adjacent its opposite ends respectively, and a spreader secured between the arms intermediate their ends and the point of bifurcation, flexing them apart and causing them to exert tension on the blade.

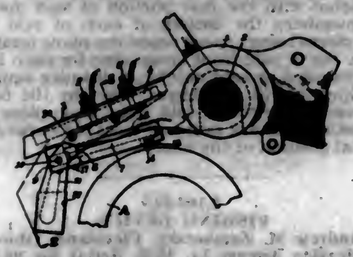
2,106,648
CODED WIRE
Albert T. Candy, Jr., Oak Park, Ill., assignor to Candy & Company, Inc., Chicago, Ill., a corporation of Illinois
Application November 12, 1932, Serial No. 642,278
2 Claims. (Cl. 173—264)

1. The method of coding and identifying individual conductors of a group of similar insulated electric conductors which consists in providing each individual conductor with a colored under coating externally of the insulation and an outer coating of a different color, some of the conductors having outer coatings of the same color and inner coatings of different colors, assembling the conductors in a group and scraping off regions of the exposed coatings to reveal the color of the under coatings without substantially impairing the insulation of the conductor as a whole at such regions.



2,106,649
FREEWHEELING CLUTCH
Nicholas A. Culmsel, Rochester, N. Y.
Application March 24, 1932, Serial No. 600,967
12 Claims. (Cl. 192—46)

1. In a free wheeling clutch for the transmission of power in an automobile, the combination of a hollow gear with an elongated internal cylindrical surface and a clutching device adapted to clutch on said cylindrical surface, a freely rotating sleeve adjacent to said cylindrical surface inside of the gear, on which sleeve said clutching device can engage for the purpose of running the clutching device idle.



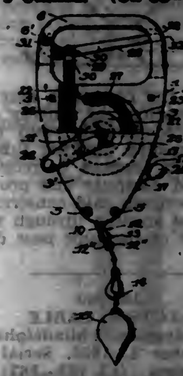
2,106,650
FLAW DETECTOR MECHANISM
Harcourt C. Drake, Hempstead, N. Y., assignor to Sperry Products, Inc., Brooklyn, N. Y., a corporation of New York
Application October 28, 1933, Serial No. 695,611
1 Claim. (Cl. 177—311)

In a flaw detector mechanism for electrical conductors having means responsive to flaw, said responsive means being adapted to generate an electric impulse in the region of flaw, marking means for placing a mark on the conductor when said responsive means detects a flaw, means including an electric circuit whereby said responsive means actuates said marking means, means including a split coil relay for controlling said circuit, means responsive to said impulses in excess of a predetermined magnitude and adapted to energize one coil of said relay, means responsive to said impulses of lesser magnitude than said preceding means and adapted to energize the other coil of said relay, said second coil, when energized, being insufficient to close

said circuit but sufficient to act as a holding coil, and means for establishing an independent circuit through said second coil when said first circuit is closed.

2,106,651
ELECTROMECHANICAL TRANSLATING DEVICE
Orville M. Dunning, East Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application December 6, 1933, Serial No. 701,247
20 Claims. (Cl. 179—100.41)

12. In an electrical recorder including a device for engraving oscillations in a record, said device being adapted for bias against the record and being responsive to modulations of said bias: a piezoelectric bending unit carrying said device above the record, supported for unitary movement toward and away from the record, positioned for bending in the direction of such movement, and having a mass which provides a substantial portion of said bias.



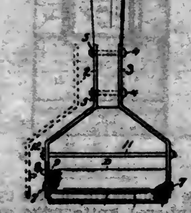
2,106,652
BAKE OVEN
John Faulds, Oak Park, Ill.
Application June 3, 1936, Serial No. 83,288
6 Claims. (Cl. 107—99)

1. In a bake oven, in combination, a casing, a horizontal shaft pivotally mounted within the casing, a reel mounted on the shaft and comprising a pair of end elements, shelves arranged in vertically disposed pairs pivotally mounted on the reel, a side wall of the casing parallel with the axis of the reel being provided with an inwardly inclined deflector for directing ascending

vapor currents inwardly between the shelves of an ascending pair.

2,106,653
GAUGE TAPE CASE
Virgil T. Lainger, Arkansas City, Kans.
Application January 2, 1937, Serial No. 118,770
5 Claims. (Cl. 33—138)

1. In combination with a flexible measuring tape, a case having a handle, a tape spool and a brake drum rigidly disposed on a common shaft thus forming an integral member, said member being rotatably mounted in said case and said tape being attached to said spool, a brake band frictionally engaging said drum, and a brake lever pivotally linked to said band, said lever being hung within and co-planar to said handle.



2,106,654
MULTIPLE SWITCH
Lawrence C. Leighton, Cristobal, Panama, Canal Zone
Application July 18, 1935, Serial No. 32,263
4 Claims. (Cl. 200—11)

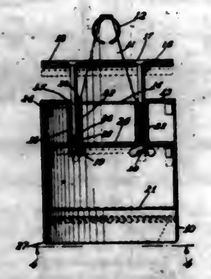
1. A multiple switch comprising a plurality of contact supporting plates, means for supporting said plates in spaced relation, a series of contact fingers mounted upon said plates, a pair of end plates, means for supporting said end plates in spaced relation with said contact supporting plates, a shaft journaled in said end plates, a plurality of contact members carried by said shaft, said shaft being movable axially with respect to one of said end plates and adapted to be moved by the other of said end plates for positioning said contact members in contact engaging relation with said contact fingers, and

means for adjusting the position of said movable end plate for maintaining operative contact pressure between said contact members and said contact fingers.

2,106,655
HAND SCRAPER
Glen D. Lang, Kansas City, Mo.
Application March 5, 1936, Serial No. 67,233
3 Claims. (Cl. 30—169)

1. A hand scraper having a handle provided with two arms, a blade between and rotatably mounted at its opposite ends on said arms, whereby said blade may be rotatably adjusted to different positions, said blade having a cutting edge parallel with the axis of said blade, the latter having in each end holes arranged in a circle concentric with said axis and in staggered relation to the holes in the other end, said blade being endwise reversible between said arms, and a locking pin extending inwardly from one of said arms and adapted to enter any one of said holes in the adjacent end to hold the blade from turning in either direction.

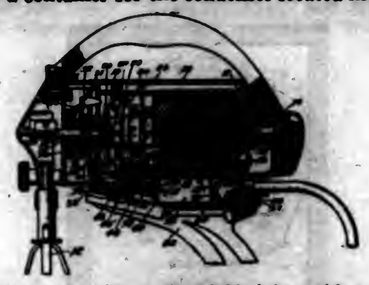
2,106,656
HAIR NET
Donald R. McCown, San Diego, Calif.
Application September 25, 1935, Serial No. 41,011
7 Claims. (Cl. 132—49)



1. In a hair net, a plurality of section members formed of foraminous cloth of sufficient body

to permit stitching, said section members sewed together along portions of their margins to form a substantially semi-spherical head covering, one side of said structure being open upwardly some distance from the lower margin to form the mid-

die back side of said net, and the sides of said open portion being adapted to fold into overlapped relation at the back, and some of said sections being formed in folded secured reinforcing relation from said opening forwardly to provide an adjustable head fitting foraminous structure.



2,106,057
COOKING TOOL
Angelo Napolillo, Chicago, Ill.
Application July 11, 1936, Serial No. 90,054
5 Claims. (Cl. 107—49)

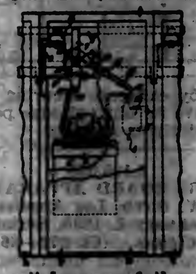
1. A cooking tool comprising a cylindrical form having a peripheral knife edge and upstanding arms, a handle connecting the ends of the arms together, a mold slidably arranged in the form and having a plurality of scallop forming fingers, spring means for retracting the mold within the form, a plate member having operative connection with the mold and disposed contiguous the handle whereby to receive the pressure of the hand of the operator when grasping the handle.

2,106,058
ELECTRIC MOTOR
Emanuel Nielsen and Victor A. Parts, Racine, Wis., assignors to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application December 19, 1936, Serial No. 116,767
19 Claims. (Cl. 171—252)

1. An electrical motor comprising a casing providing a main chamber for housing the motor shaft and conventional motor parts, the casing walls being extended laterally and providing an auxiliary chamber separated from the main chamber by part of the casing wall, a condenser, and a container for the condenser located in said

auxiliary chamber and shielded by said casing walls.

2,106,059
CIGARETTE EXTINGUISHER
Daniel F. Norton, Chicago, Ill.
Application February 18, 1935, Serial No. 6,996
2 Claims. (Cl. 131—51)



1. A device of the character described, comprising in combination, an ashtray and an extinguisher mounted thereon, said extinguisher comprising an inclined tapering tube, having a constricted portion adapted to receive and extinguish a lighted cigarette and provided in its lower side wall beneath said constricted portion with an elongated opening through which ashes from the interior of the tube pass directly into the tray.

2,106,060
ELECTRIC CABLE
John K. Ostrander, Philadelphia, Pa.
Application October 1, 1935, Serial No. 43,044
7 Claims. (Cl. 172—267)

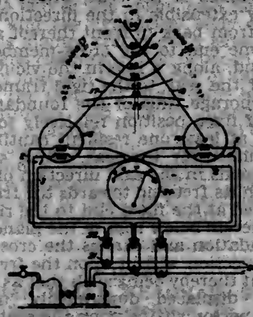
1. An electric cable comprising an inner conductor, a body of insulation therefor, and a second conductor surrounding the insulation and forming a protective armor therefor, said conductor comprising sets of bare conductors, the metal of one set being hard, untwisted and of circular cross-section, and that of the other set being soft and of rectangular cross-section, the total cross section of all of the hard wires being greater than that of the soft wires, all of said wires being spirally wrapped around the insulation with the soft wires so twisted as to occupy radial positions between each two hard wires, the side walls of the soft wires having shallow seats formed therein by sidewise pressure on the hard wires and in which they are permanently located, the hard and soft wires being spirally wrapped and interlocked with the round wires making tight fits with the seats throughout their length.

2,106,061
ELECTRIC SWITCH GEAR
Robert Paxton, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York
Application March 12, 1936, Serial No. 68,430
7 Claims. (Cl. 175—228)

1. Electric switch gear of the metal enclosed unit type comprising a supporting frame, a circuit breaker and busbar structure mounted in said frame, a partition forming in said frame compartments for said circuit breaker and busbar structure, respectively, said partition having a substantially right angle flange overhanging said partition at one side thereof forming therewith a unit independent of the switchgear enclosure, and insulating structure mounted on said flange for supporting said busbar structure in spaced relation to said partition.

2,106,062
CIGARETTE OR CIGAR
Arthur Daniel Hawkings, Buxton, England
Application October 5, 1935, Serial No. 43,723
In Great Britain October 9, 1934
1 Claim. (Cl. 131—52)

As an article of manufacture, a smokable roll, a strip of material of uniform width wound into a roll having a bore and the outer end portion of the strip secured to one end of the smokable roll with one edge of the wound strip adjacent the smokable roll, a tubular mouthpiece having an exterior enlargement at one end engaged in the bore of the wound strip to extend substantially the length of the wound strip with the enlargement abutting the outer edge of the wound strip and the portion of the mouthpiece engaged in the bore of the wound strip secured to the inner end portion of the strip, the enlargement providing means for drawing out the wound strip to form a tapered tube and the portion of the mouthpiece engaged in the wound strip forming a supporting core for the outer end of said tapered tube to prevent the collapsing of said end of the tapered tube.

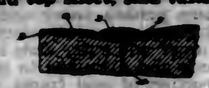


2,106,063
INDUSTRIAL TRUCK
Edward H. Rands, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a corporation of Ohio
Application August 16, 1935, Serial No. 36,522
6 Claims. (Cl. 280—35)

1. In an industrial truck, the combination of a frame having a low load supporting portion at one end, power driven wheels for supporting the other end of said frame, a sub-frame trunnioned on said low frame portion, inner and outer opposed pairs of knuckle mounted steerable wheels carried by the inner and outer ends respectively of said sub-frame and arranged to support the load carrying portion of said frame, and steering connections between said steerable wheels arranged to steer all thereof simultaneously about a common center, said connections including an

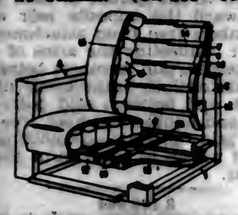
arm connected to the spindle of each wheel and extending toward the opposite pair of wheels, separate members free from attachment to said sub-frame for connecting the arms of each pair of wheels together, said members being disposed above and substantially transversely of said low frame portion and between said pairs of steerable wheels, and another member free from attachment to said sub-frame connecting one arm of one pair of wheels to one arm of the opposite pair of wheels.

2,106,064
LOAD INDICATOR FOR THREE-PHASE GENERATORS
Theodore A. Rich, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 12, 1935, Serial No. 54,675
6 Claims. (Cl. 172—245)



3. Safe current load measuring apparatus for a three-phase system, the phase currents of which may be designated I_1, I_2, and I_3, respectively, a ratio meter for measuring the ratio I_3/I_1, a second ratio meter for measuring the ratio I_2/I_1, indicating pointers for said ratio meters which swing in parallel planes and cross each other when the ratio measurements do not exceed unity, an ammeter for measuring the phase I_1 current, and a chart graduated in terms of the phase I_1 current as measured by said ammeter on which chart the crossing point of said pointers indicates the maximum safe phase I_1 current load that may be carried by the system.

2,106,065
MATTRESS
Edward Rose, Newton, Mass., assignor to Rose-Derry Company, Newton, Mass., a corporation of Massachusetts
Application October 24, 1936, Serial No. 107,429
1 Claim. (Cl. 5—356)



A mattress including a waterproof top sheet,

tufts located at suitable intervals on said sheet and secured in place by cords passing through holes in said top sheet, said tufts being secured

to said top sheet by waterproof cement cooperating with the tufts to form a seal against the passage of water through said holes.

2,106,966
CHAIR, SETTEE, OR LIKE FURNITURE
William Howard Sedgrove, Weybridge, England
Application September 23, 1936, Serial No. 101,991
In Great Britain January 30, 1936
10 Claims. (Cl. 155—56)

10. In a chair, settee or like article of furniture whereof the seat is upholstered or is constructed for use with loose cushions, the combination comprising a rigid frame for the article, a cross-member forming the front edge of the seat of the article, a foundation for supporting the upholstery or cushions of the seat, which foundation is elastically extensible in the direction of depth of the seat from back to front thereof and is anchored at one end to the cross-member and at the other end, along a line in the vicinity of the rear edge of the seat, to the rigid frame, the line of rear anchorage thus of the foundation being therefore, of fixed position relatively to the rigid frame, and at least one resilient cantilever supporting member for the seat, which supporting member extends in the said direction of depth of the seat with its free end towards the front thereof, is fastened at the fixed end to the rigid frame at a level therein below that of the plane occupied by the foundation and carries the cross-member in rigid connection with it upon the free end, the arrangement thereby being such that as the cross-member is displaced downwardly, under the weight of a person sitting upon the seat, it moves along a path of increasing distance from the said line of rear anchorage of the foundation, partly against the resultant pull of the foundation and partly against the upward thrust of the supporting member.

2,106,967
SHINGLE
Frank H. Schmidt, Hillsboro, Ohio
Application July 28, 1936, Serial No. 93,079
1 Claim. (Cl. 108—8)

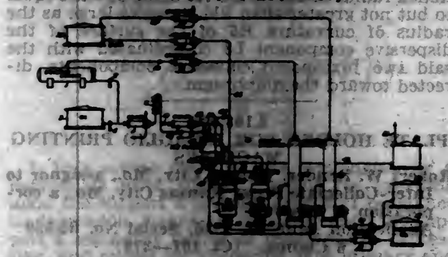
A shingle, comprising an elongated flat sheet of material having an unbroken edge contour throughout and an undersurface which is flat and unbroken throughout, said strip being tapered from a line extending longitudinally and inset a substantial distance from one longitudinal edge to the adjacent edge, a plurality of ribs formed upon the top surface of and integral with the strip and extending from the other longitudinal edge transversely of the strip and terminating short of said taper line, and said shingle being slightly bowed transversely, the concave side being the underside of the shingle whereby the shingle when

flattened out by elements securing it to a roof surface will have its tapered edge pressed firmly against the underlying surface.

2,106,968
DIVING BOARD APPARATUS
Charles W. Birch, Los Angeles, Calif.
Application January 2, 1936, Serial No. 57,192
12 Claims. (Cl. 272—66)

5. In a diving board apparatus, a frame structure, means for securing one end of said board to said frame, a horizontal track, a fulcrum member mounted on said track and adapted to support said board at a constant angle from the horizontal and at predetermined intermediate points, and means for moving said fulcrum member along said track while said board, including the weight of the diver, is resting upon said fulcrum.

2,106,969
HAT CLEANING TOOL
Lester C. Smith, West Hartford, Conn., assignor to The Spencer Turbine Company, Hartford, Conn., a corporation of Connecticut
Application July 19, 1935, Serial No. 32,216
5 Claims. (Cl. 223—23)

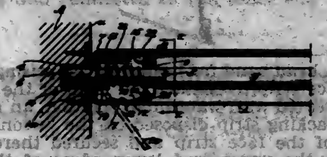


1. A hat blank cleaning tool comprising a crown of the general shape of a hat block and having a slot opening inwardly from the outer surface of said crown to a chamber therein, said slot permitting access to substantially the entire surface of said blank when slid on said crown, a valve to regulate the length of said slot, and means for attachment of a hose or similar device for creating a partial vacuum within said chamber.

2,106,970
DRAFTING OR LAY-OUT APPARATUS
Chester A. Speir, Laurel, Quebec, Canada, assignor to The Chester A. Speir Syndicate, Ottawa, Ontario, Canada
Application October 11, 1935, Serial No. 44,891.
Renewed December 16, 1937. In Canada April 30, 1935
16 Claims. (Cl. 33—110)

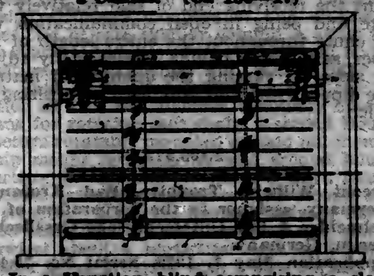
1. The combination with a measuring instrument, of a lay-out tool or instrument having at least one edge, an apparatus mounted thereon and embodying an indicating member movably mounted to be moved by said apparatus in a direction substantially parallel to said edge of said lay-out tool or instrument and relative to said measuring instrument for measurement indication.

2,106,971
DECOLORIZING PETROLEUM OILS
Robert E. Stanton, Denver, Colo., assignor to The Petroleum Processes Corporation, Wichita, Kans., a corporation of Kansas
Application March 7, 1934, Serial No. 714,494
1 Claim. (Cl. 196—147)



The herein disclosed process of refining viscous lubricating oils, which comprises dissolving and heating to from about 100° to about 125° F. viscous lubricating oil in liquefied normally gaseous hydrocarbon under pressure sufficient to maintain the solvent liquid and at elevated temperatures, removing suspended matter for which the solvent has an antagonistic effect at such temperature by passing the solution through a bed of inert filtering medium and then decolorizing by passing said solution directly and continuously from said inert filter bed through a bed of adsorbent decolorizing medium.

2,106,972
LINGERIE STRAP HOLDER
Julia A. St. Clair, San Francisco, Calif.
Application September 11, 1937, Serial No. 163,474
1 Claim. (Cl. 24—95)



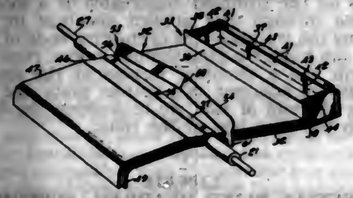
A lingerie holder made of a single piece of wire stock and comprising a bar member having a terminal point, said member being formed into a coil at a suitable distance from the point and extending thence in substantial parallelism with the bar member to provide a second bar member, then reversed upon itself in a single U-bend to provide a third bar member spaced and terminating in a closed loop which is resiliently held in contact with said coil, in combination with a sheet metal guard permanently and rigidly attached to the second bar member by having portions doubled over to enclose the wire of said member in proximity to said bend and provided with a receiving portion for the pin point when the pin is closed.

2,106,973
SHADE ROLLER PLUNGER TRUNNION
Walter J. Stuber, Philadelphia, Pa., assignor to Carey-McFall Co., Philadelphia, Pa., a corporation of Pennsylvania
Application October 27, 1934, Serial No. 750,360
12 Claims. (Cl. 156—36)

7. A hollow open ended shade roller comprising a substantially cylindrical wall having a rib extending longitudinally thereof, a preassembled bung unit comprising a cup-shaped element consisting of a substantially cylindrical body and an integral bottom plate at one end thereof, a second plate parallel to said bottom plate in spaced relation thereto, said bung unit being mounted in the hollow end of the roller with the axes of the two substantially coinciding, a trunnion operatively mounted in said plates with one end projecting beyond the end of the roller, said hollow end of the roller and the cylindrical body of the bung unit having aligned transversely extending openings affording communication between the interior of the bung unit and the exterior of the roller, and means on the trunnion engageable by a tool insertable through said aligned openings for retracting the trunnion, the cylindrical body of said bung cup having a longitudinal groove receiving said rib and a shoulder formed at the end of said groove adjacent said bottom plate and engaging the end of said rib to position the bung unit in the open end of the roller.

2,106,974
VENETIAN BLIND HEADRAIL SUPPORT
Walter J. Stuber, Philadelphia, Pa., assignor to Carey-McFall Co., Philadelphia, Pa., a corporation of Pennsylvania
Application June 12, 1936, Serial No. 85,174
2 Claims. (Cl. 156—17)

1. In a Venetian blind comprising a slotted head rail; a supporting bracket for the head rail, said head rail slot being located adjacent the bracket, and a latch slidably mounted in



the head rail slot and cofunctioning with the bracket to prevent accidental displacement of the head rail from the bracket.

2,106,675
HEAD BAND FOR HEADWEAR
George Lawrence Tabley, Paddington, near Sydney, New South Wales, Australia, assignor of one-fourth to Thomas Dyson Stock and one-fourth to George Seddon, both of Sydney, Australia
Application December 31, 1936, Serial No. 118,639
In Australia January 25, 1936
3 Claims. (Cl. 2—181)

1. A head band for headwear comprising a textile face strip to contact the head of the wearer and treated with waterproof solution, an absorption backing strip disposed on the "wrong" surface of the face strip and secured thereto adjacent the upper and lower edges of the face strip, and a waterproof sweat strip secured to the face strip adjacent the lower edge thereof, further characterised in that the face strip is folded to overlie and conceal the row or rows of stitching attaching the backing strip and sweat strip to the face strip.

2,106,676
VISCOUS LIQUID FILLING AND MEASURING APPARATUS
Norman M. Thomas, Brooklyn, N. Y., assignor to Joe Lowe Corporation, New York, N. Y., a corporation of Delaware
Application August 24, 1935, Serial No. 37,675
6 Claims. (Cl. 226—104)

1. An apparatus for delivering a measured quantity of material to a receptacle comprising a supply tank, a relatively wide chute mounted to tilt about an axis disposed transversely intermediate its ends, an open-top dipper mounted adjacent the receiving end of said relatively wide chute and being in open communication with said chute throughout the entire length of said dipper, said dipper having telescopically adjustable sides for varying the quantity of material to be dipped from said tank with each tilting operation.

2,106,677
CORRECTED OBJECTIVE
Albrecht Wilhelm Tronnier, Bad Kreuznach, Germany, assignor to the corporation of Jos. Schneider & Co., Optotechnische Gesellschaft, Berlin, Germany
Application May 7, 1936, Serial No. 78,451
In Germany November 22, 1935
1 Claim. (Cl. 88—57)

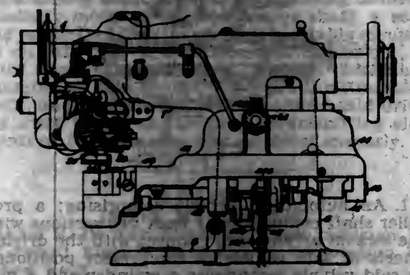
A light-intensive, spherical, chromatically and astigmatically corrected objective of the type comprising a diaphragm and five components in contact with the air, three of which have positive refractive power, while the remaining two are meniscus-shaped, have a dispersive effect, encompass the diaphragm, and have hollow outer surfaces toward the diaphragm, two of the three collecting components being juxtaposed and being arranged on the object side and have, together with the dispersive component co-ordinated therewith, a smaller positive refractive power than the two components of the objective arranged on the other side of the diaphragm, characterised in that each of the two collective

components on the object side of the diaphragm has a convex surface toward the object, the radius of curvature R3 of the said convex surface of the second component L2 from the object is smaller than the radius of curvature R1 of the corresponding convex surface of the component L1 first from the object, the first-mentioned radius of curvature R3 being at least equal to but not greater than 2¼ times as large as the radius of curvature R6 of the surface of the dispersive component L3 co-ordinated with the said two juxtaposed collective components, directed toward the diaphragm.

2,106,678
PLATE HOLDER FOR INTAGLIO PRINTING MACHINES
Robert W. Bender, Kansas City, Mo., assignor to Inter-Collegiate Press, Kansas City, Mo., a corporation of Missouri
Application June 15, 1936, Serial No. 85,239
6 Claims. (Cl. 101—378)

1. In an intaglio printing machine, a cylinder; a pair of arched plates each having a printing surface thereon; a fin mounting the plates in spaced-apart, end-to-end relation on the cylinder in spaced relation thereto; clamps on the said fin for each plate respectively for removably securing the same in operative position; and guide elements on the fin for said plates, said guide elements engaging the remote ends of said plates, said clamps engaging the plates along the arcuate longitudinal edges thereof.

2,106,679
ELECTRIC LAMP
Jan Bergmans, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application July 15, 1935, Serial No. 31,486
In the Netherlands July 26, 1934
7 Claims. (Cl. 176—34)



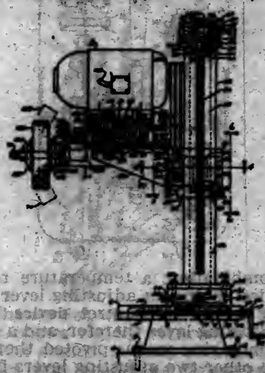
1. An electric lamp comprising a bulb having an elongated concave light-reflecting portion so

shaped that cross-sections thereof in planes passing through the longitudinal axis thereof are of increasing curvature as the sections are taken in

planes approaching the middle of said reflecting portion from its sides, and a light source located within said reflecting bulb portion.

2,106,680
SEWING MACHINE WORK SUPPORT
Louis G. Bowman, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a corporation of Maine
Original application September 27, 1935, Serial No. 42,547. Divided and this application May 5, 1936, Serial No. 78,695
16 Claims. (Cl. 112—260)

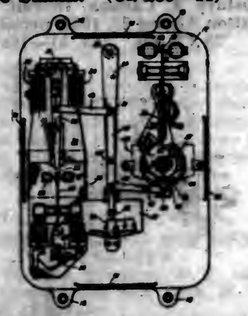
1. In a sewing machine, the combination of a depressible work support, means for imposing upon the support a primary degree of resistance to depression, means for imposing upon the support a secondary degree of resistance to depression, and means for rendering said primary and secondary resistance imposing means selectively dominant.



2,106,681
CASEMENT WINDOW OPERATING MEANS
Harry R. Campbell, Baltimore, Md., assignor to Campbell Metal Window Corporation, New York, N. Y., a corporation of Maryland
Application October 27, 1934, Serial No. 750,274
1 Claim. (Cl. 262—117)

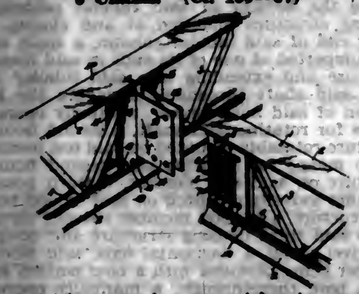
A casement window structure comprising a metallic window casing having a web portion extending parallel to the plane of and surrounding a window opening in said casing, and an inner flange portion at the inner edge of said web extending inwardly of the window opening and an outer flange portion at the outer edge of said web extending away from the window opening, a window hinged to said casing to swing outwardly from a position in which it closes said opening and comprising a metallic frame including a web portion which is parallel to and spaced away from the first mentioned web portion and inner and outer flange portions which overlap the said inner and outer flange portions of the casing in the closed position of the window, means subjecting the window to a yielding opening force, a bar extending movably through the outer flange of the window frame and having its inner end within the space between the casing and window frame webs in the closed position of the window and guided into said space by said webs as the window is moved into its closed position, a spring at the outer side of the window acting on said bar and tending to move the latter outwardly of the said flange through which it extends, said

inner window casing flange having an opening in register with said bar when the window is in its closed position, and a flexible window closing element extending through the last mentioned opening and connected to the inner end of the bar.



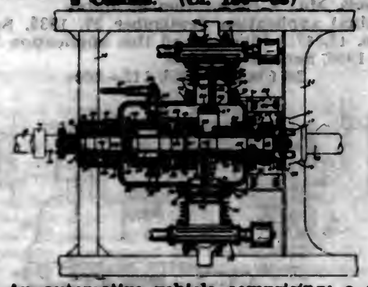
2,106,682
ADJUSTABLE FINISHING MACHINE
Gustave A. Carlson, Detroit, Mich.
Application August 23, 1935, Serial No. 37,524
20 Claims. (Cl. 51—168)

1. In an adjustable finishing machine, the combination of a slide member movably mounted, a second slide member movably mounted on said first mentioned slide member, a tubular column mounted on and extending upwardly from said second slide member and provided with a keyway extending through its side wall for the greater portion of the length of said tubular column, a nut member slidably mounted on said tubular column and provided with a boss portion extending within said tubular column, a key member secured to said nut member and engaging the keyway of said tubular column, a housing structure mounted at and closing the upper end of said tubular column, a shaft suitably supported at one of its ends in said housing structure and extending into said tubular column, said shaft threadably engaging the boss portion of said nut member, manually operated means for rotating said shaft, a second housing structure rotatably mounted on said nut member, clamp means for securing said second housing structure on said nut member, a third housing structure swivelly mounted on said second housing structure, a bracket member swivelly mounted on said third housing structure and adapted to swivel about a horizontal axis, said bracket member being provided with a boss portion having a bore therethrough, a manually operated means for swivelling said bracket member, a second shaft mounted in the bore of the boss portion



of said bracket member, a second bracket member pivotally mounted on said shaft, a housing supported on said second bracket member, a third shaft rotatably supported in the housing supported on said second bracket member, electrically operated means for driving said third shaft member, a third bracket member adjustably and pivotally supported by said second shaft and adapted to support said electrically operated means, and resilient means for actuating said second bracket member together with its supported mechanism about said second shaft.

2,106,663
MEANS FOR CONTROLLING CONDITIONS OR OPERATIONS
Ralph R. Chappell, Richmond, Va., and Denis McCormack, Lutherville, and Robert J. Sirob, Baltimore, Md., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 2, 1933, Serial No. 688,698
23 Claims. (Cl. 236—44)



17. In combination, a temperature responsive control device having an adjusting lever therefor, a humidity responsive control device having a separate adjusting lever therefor, and a third adjusting lever having means pivoted thereon connecting the other two adjusting levers for simultaneously adjusting said control devices according to a predetermined ratio whereby different effective temperatures may be obtained with any desired humidity or temperature.

2,106,664
JOIST SUSPENSION
Edwin D. Coddington, Douglaston, Long Island, N. Y., assignor to Reynolds Corporation, New York, N. Y., a corporation of Delaware
Application November 2, 1936, Serial No. 109,990
6 Claims. (Cl. 189—37)

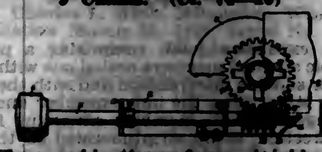
1. A joist suspension comprising in combination a transverse joist section and a supporting joist, a pair of spaced bearing plates detachably connected to the supporting joist and projecting laterally therefrom, a hollow plate strut carried upon the end of the transverse joist section and snugly received between the bearing plates, said bearing plates and hollow plate strut being provided with pairs of holes capable of being selectively brought into alignment but being differently spaced apart, and attaching means extending through the aligned holes of the bearing plates and hollow plate strut.

2,106,665
POWER TAKE-OFF AND ASSOCIATED MECHANISM
Paul H. Davey, Kent, Ohio
Original application December 12, 1932, Serial No. 702,962. Divided and this application March 28, 1936, Serial No. 71,017
6 Claims. (Cl. 180—53)

1. An automotive vehicle comprising; a propeller shaft comprising at least two sections with one section arranged to connect with the driving wheels of said vehicle; a compressor positioned on said vehicle comprising a cylinder and a piston therefor; a connecting rod and an eccentric strap connected to said piston; an eccentric associated with said strap and mounted on said propeller shaft; and means for optionally causing said propeller shaft to drive said eccentric or said driving wheels.

2,106,666
POWER TAKE-OFF AND ASSOCIATED MECHANISM
Paul H. Davey, Kent, Ohio
Application March 28, 1936, Serial No. 71,018
6 Claims. (Cl. 180—53)

1. A power take-off arranged to form a part of a drive shaft in an automotive vehicle comprising aligned driving and driven shaft sections, at least one of said sections being rotatably supported from said vehicle through a self-aligning bearing whereby the power take-off is maintained in self-aligned relation thereto; a power transmitting element rotatably supported on said driving section and spaced therefrom a substantial portion of its length to form an annular space adjacent the end of said driving section; double acting clutch means mounted on said driving



section in non-rotatable relation thereto and within said annular space; cooperating clutch elements on said clutch means and said power transmitting element arranged to engage in one position of said clutch means; and cooperating clutch elements on said clutch means and said driven section arranged to engage in another position of said clutch means.

2,106,667
POWER TRANSMITTING APPARATUS
Paul H. Davey, Kent, Ohio
Application July 28, 1933, Serial No. 92,214
11 Claims. (Cl. 74—11)

1. A power transmitting mechanism comprising a driving shaft, a power transmitting element rotatably mounted on said driving shaft, a second power transmitting element rotatably mounted on said first power transmitting element, a third power transmitting element rotatably mounted on said second power transmitting element, and means to selectively connect said driving shaft to any of said power transmitting elements or to a plurality thereof simultaneously.

2,106,668
DRIVE MECHANISM
Donald R. De Tar, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application May 8, 1936, Serial No. 78,616
9 Claims. (Cl. 74—10)

1. The combination of a rotatable driving member with a driven member, means connected with said driven member to utilize the motion thereof, a coupling member, means for moving said coupling member axially of said driving member during a predetermined rotational movement of said driving member, and means for causing said coupling member to rotate with said driving member upon further movement of said driving member in the same direction, said coupling member being arranged to transmit both its rotational motion and its motion axially of said driving member through said driven member to said means.

2,106,669
METHOD OF PREPARING STABLE CHOCOLATE MILK
Bernice Fick, Cincinnati, Ohio, assignor to Kroger Grocery & Baking Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application February 10, 1933, Serial No. 656,196
2 Claims. (Cl. 99—23)

1. The process of preparing a chocolate milk drink which comprises mixing together chocolate, water, and corn syrup, combining the gum, flour, salt, sugar and flavoring materials, blending the chocolate water mixture with the last named mixture and heating the mixture to approximately 185 degrees C.; heating whole or skimmed milk to a temperature of 70 degrees C. and cooling it approximately to 60 degrees C.; and adding one part of the mixture as prepared above to ten parts of the milk at 60 degrees C., heating the same slowly to a temperature of approximately 80 degrees C. and maintaining this temperature for approximately thirty minutes, then rapidly cooling to approximately 20 degrees C. and storing at this latter temperature for approximately ten hours.

2,106,699
WHEELED SUPPORTING MEANS FOR HEAVY MACHINES
Benjamin H. Flynn, Alexandria, La.
Original application November 5, 1935, Serial No. 48,426, now Patent No. 2,088,369, dated July 27, 1937. Divided and this application May 11, 1937, Serial No. 142,037
6 Claims. (Cl. 254—93)

1. In a heavy duty machine, a rigid frame, vertical jack bodies rigidly secured to said frame, vertical jack shanks slidably engaged with said jack bodies and projecting downwardly therefrom, wheeled supporting means to which the lower ends of said jack shanks are connected, means for vertically adjusting said jack bodies on said jack shanks to raise and lower said frame, rigid vertical brace bars connected with the lower ends of said jack shanks and lying slidably against portions of said frame, and means for rigidly securing said brace bars against said frame portions after vertical adjustment of the frame to the desired elevation.

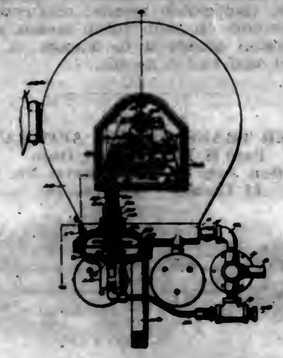
2,106,691
RADIATOR
Fred L. Foster, Jamestown, N. Y., assignor to Jamestown Metal Equipment Company, Inc., Jamestown, N. Y., a corporation of New York
Application October 26, 1935, Serial No. 46,920
2 Claims. (Cl. 257—130)

1. In a radiator core structure having water conduits and separator strips interposed between said conduits, a water conduit strip comprising a

body portion, the marginal edges of the strip being laterally offset from said portion and of generally zig zag conformation, marginally limited means in said body portion defining vertically aligned wall segments, the segments of two adjacent strips forming a straight water conduit, a ledge formed in each of said segments, said ledge projecting inwardly of said strip into the water conduit formed by a pair of strips, a flat face in said ledge, said ledge, when a pair of strips are assembled, abutting two adjacent ledges of the other strip and serving to bridge the space therebetween to provide a fluid passageway between front and rear portions of the conduit.

2,106,092
LOCKING STOP VALVE
John E. Glasscock, Oklahoma City, Okla.
Application April 13, 1937, Serial No. 136,542
1 Claim. (Cl. 292—307)

In a device of the class described in combination with a stop cock or valve, a two piece dart consisting of a dart proper and a follower adapted to be seated in registering openings in the spigot and barrel of said valve, heads formed on said dart members having shoulders for seating on top of said barrel, said heads having alining holes for inserting a seal therethrough, a catch on the lower end of said dart member for seating under said barrel and locking in position against removal when backed up by said follower and a chain for securing said dart members against separation when not in locked position.



2,106,093
DAMPER CONSTRUCTION
Arthur A. Geese, Milwaukee, Wis.
Application February 17, 1936, Serial No. 64,391
2 Claims. (Cl. 126—292)

1. In a damper arrangement for use within a sectional duct employing a partition, a set of plates of a size to fit said ducts, studs engaging said plates in opposite sides of their outer walls, the inner ends of said studs being longitudinally slotted through their center, rivets adapted to engage both sides of said studs and the plate, a flanged bushing fastened to said partition, two of said studs journaled in said bushing, the remaining two threaded and projecting through the outer walls of said duct equipped with flanges projecting outwardly to contact the inside of the outer walls, slots in the outer face of said threaded studs arranged in parallel relation to said plates, and nuts engaging said threaded studs for contacting the outside face of said outer walls causing the outer walls to be forced against said flange on the threaded stud.

2,106,094
TIME CONTROL MECHANISM
Leon J. Griffey and Chester C. Herndon, Tulsa, Okla., assignors to Hanlon-Waters, Inc., Tulsa, Okla.
Application January 13, 1936, Serial No. 58,943
15 Claims. (Cl. 161—7)

1. The combination with a fluid controlling valve, a valve control member, a train of gears for actuating said member, diaphragm actuated means for operating said train of gears, fluid means for actuating said diaphragm, a spring

clock mechanism, means associated therewith for timing the admission of fluid to said diaphragm, and means actuated by said diaphragm for winding said clock mechanism.

2,106,095
EXPANSION JOINT
Joseph William Holzel, Warren, Ohio
Application April 10, 1935, Serial No. 15,713
2 Claims. (Cl. 94—18)

1. An expansion joint, comprising a pair of telescopic channel members nested one within the other for slidable interrelation and with the outer member larger than the inner member and with the flanges of both members extending in the same direction, a cap strip mounted on the upper flange of the outer member, said outer member having a shear bar at its outer side for embedding in a road slab molded against the outer side of the outer member to hold the latter from vertical displacement relatively to the slab, a plurality of anchor pins fixed to the outer member and extending outwardly therefrom to hold the member to the road slab and extending inwardly therefrom for slidable engagement through the inner member and in the opposite slab thereof, said inner member having bearing openings therethrough for receiving the inner extensions of the anchor pins to maintain the members in alinement, a second plurality of anchor pins fixed to the inner channel member and extending outwardly therefrom to hold the inner member to an adjacent road slab molded against the outer side of the inner member and having inner ends extending slidably through the outer channel member and its slab, said outer channel member having bearing openings therethrough to receive the inner ends of the anchor pins of the inner member to maintain the members in alinement, said anchor pins extending irregular distances from the opposite sides of the channel members to prevent straight transverse lines of cracking in the molded road slabs.

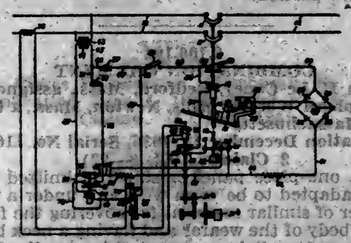
2,106,096
ART FOR THE TREATMENT OF TISSUE PAPER
Grover C. Hoffman, New York, N. Y., assignor of one-half to Helene de Bourgogne, New York, N. Y.
No Drawing. Application September 28, 1935, Serial No. 42,973
2 Claims. (Cl. 91—68)

2. The process of treating tissue paper which consists in saturating the paper with a solution comprising two parts of ethyl alcohol, one part of glycerine with three parts of water, and containing five and one-half ounces of talcum powder in suspension in six gallons of the solution, then passing the treated paper between wringer rolls, while saturated, and finally drying it.

2,106,097
CANDY NOVELTY
John G. Hogan, Steubenville, Ohio
Application February 23, 1935, Serial No. 7,891
10 Claims. (Cl. 46—175)

1. A candy novelty comprising a body formed of hard candy having a central chamber therein with confining walls, said candy having aligned small openings in opposite walls, the area of the openings being relatively small as compared with the area of the cavity and being so arranged that when the candy is placed in the mouth air may be blown through the openings to produce a whistling effect.

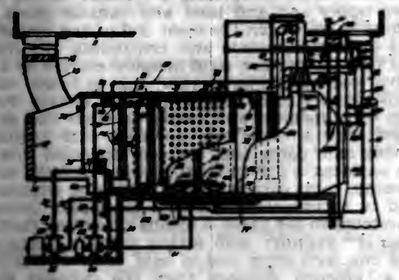
2,106,098
LAWN MOWER
Charles L. Huth, Milwaukee, Wis.
Application March 26, 1935, Serial No. 13,152
1 Claim. (Cl. 56—253)



In a lawn mower, a body comprising spaced vertical side plates, a driven shaft journalled in bearings at the inner sides of said side plates toward the said ends thereof, cutters carried by said driven shaft, a stationary cutter bar supported from said plates and extending beneath the cutter assembly, a ground roller carried by said plates directly in rear of said cutter bar, a drive shaft carried by said side plates toward the rear ends thereof, traction wheels mounted on said drive shaft at the inner sides of said plates, gears mounted on said traction wheels adjacent said side plates, gears mounted on said driven shaft adjacent said side plates, an intermediate shaft carried by said plates, gears on said intermediate shaft meshing with the gears on both the traction wheels and the driven shaft, and an operating handle pivotally connected to said side plates at the rear ends thereof and at points thereon lying in the horizontal plane of the traction wheel shaft, said side plates having their top and end edges inwardly flanged to form a housing overlying the peripheries of said gears.

2,106,099
PISTON VALVE ENGINE
John W. Jenkins, Indianapolis, Ind.
Application May 18, 1934, Serial No. 726,273
1 Claim. (Cl. 123—73)

A gas engine comprising a cylinder having an open upper end and inlet and exhaust ports, a sliding valve within the open end of the cylinder and closing the same and controlling the inlet and exhaust ports, a rigid member carried by the valve and extending beyond the cylinder, said rigid member being smaller in cross section than said valve member and having an outer end provided with a transverse opening, said opening having cam contacting surfaces and cam clearing surfaces, a driven shaft passing through said opening, cams carried by the shaft and engaging said cam contacting surfaces to impart proper movement to the valve, a means extending rigidly from the cylinder, said means slidably engaging said enlarged outer end of said central member at a sufficient distance from the cylinder and sliding valve to prevent overheating at such engagement and to facilitate the convenience of lubrication, repair and other attention of same independently of the cylinder and valve proper, said means preventing rotation of said valve by the friction of said cams against said cam contacting surfaces.



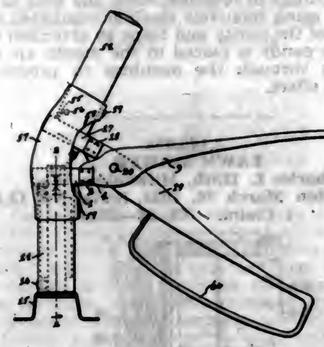
2,106,100
CIRCUIT CONTROLLING MEANS
Benjamin W. Jones, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 8, 1936, Serial No. 104,605
10 Claims. (Cl. 175—294)

1. Control means for a circuit controlling switch having an operating winding energizable to close

the switch, means for latching the switch in its closed circuit position upon operation thereto and means responsive to closure of the switch for deenergising the operating winding, said control means comprising normally energized means operable upon deenergization thereof to release said latch means, relay means for controlling said normally energized means, overload means for energizing said relay means to effect deenergization of said normally energized means and thereby release said latch means upon the occurrence of predetermined overload conditions, and connections controlled by said overload means for short-circuiting said normally energized means to effect release of said latch means upon the occurrence of said overload conditions even though said relay means fails to operate.

2,106,101
AIR CONDITIONING SYSTEM
Otto A. Labus, Wisconsin Rapids, Wis., and Robert B. P. Crawford, Chicago, Ill., assignors, by direct and mesne assignments, to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application November 16, 1928, Serial No. 319,764
Renewed December 11, 1933
13 Claims. (Cl. 236—44)

1. In combination, air conditioning apparatus for conditioning a mixture of fresh and return air, said apparatus comprising means for introducing a mixture of fresh and return air into a conditioning unit, means for varying the humidity and temperature of a portion of said mixture, means for mixing said portion with a second portion of said mixture of different temperature and humidity for producing the conditioned air, a control element responsive to the temperature of moisture condensed from the conditioned air, a control element responsive to the dry bulb temperature of the conditioned air, and means differentially responsive to both of said control elements for regulating the relative proportions of said two portions.

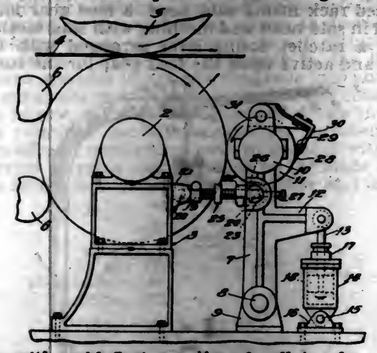


2,106,102
COMBINATION GARMENT
Joseph H. Le Cocq, Bedford, Mass., assignor to Shepherd Worsted Mills, Newton, Mass., a trust of Massachusetts
Application December 19, 1936, Serial No. 116,748
2 Claims. (Cl. 2—92)

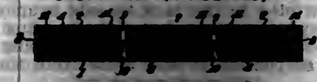
1. A one-piece panel or shield of knitted material adapted to be worn with and under a coat sweater of similar material for covering the front of the body of the wearer and having a neck band for supporting it in proper position on the body and having a non-stretchable tape band stitched to its inner face transversely thereof at approximately the waist line, said tape having extensible ends adapted to be tied together at the back of the

body for holding said panel in unstretched position on the front of the body.

2,106,103
CATTLE GUN
Eugene Locati, Sidney, N. Y.
Application March 23, 1937, Serial No. 132,607
8 Claims. (Cl. 17—1)



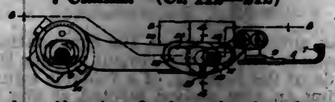
1. In a cattle gun two jaws with handles for moving them toward and from one another, a barrel carried by one jaw and a firing pin and pin timing and releasing mechanism carried by the other jaw and means operable upon the movement of the jaws together for first energizing the firing pin and then releasing it upon completion of the movement of the jaws together.



2,106,104
CLEANING ROLL
Peter J. Massey, River Forest, Ill., and William F. Thiele and Bert F. Raprager, Wisconsin Rapids, Wis., assignors, by mesne assignments, of nine-tenths to Consolidated Water Power & Paper Company, Wisconsin Rapids, Wis., a corporation of Wisconsin, and one-tenth to said Peter J. Massey
Application November 27, 1935, Serial No. 51,739
7 Claims. (Cl. 91—43)

1. In combination, a roll for applying coating material to a continuously passing flexible web,

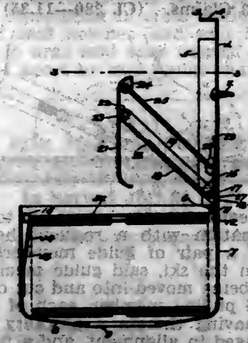
and a stone roll disposed in oscillating relationship with said first mentioned roll to clean the surface of the same.



2,106,105
COMPOSITE PLANK
Anthony P. Miller, Pleasantville, N. J.
Application May 14, 1935, Serial No. 21,238
6 Claims. (Cl. 94—15)

1. A composite plank, including a preformed base having a recess in its upper face extending throughout its length and transversely positioned preformed filler pieces keyed in the recess, said base having longitudinally extending grooves in its side edges adapted to receive the heads of securing devices driven into a support on which the plank is located.

2,106,106
TOP FEED MECHANISM FOR SEWING MACHINES
Charles W. Mueller, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a corporation of Maine
Application May 15, 1936, Serial No. 79,997
7 Claims. (Cl. 112—212)



1. A 4-motion top feed mechanism for sewing machines comprising the combination with a feed lever having a longitudinally extending fulcrum slot, of a feed dog connected to one end of said lever, a fulcrum pin located in the slot of the lever and swingable about a fixed axis, means connected to the other end of the lever for imparting up and down and back and forth movements to the feed dog, and means for securing said fulcrum pin in an adjusted position.

2,106,107
LOADED SMALL CALIBER RIFLE CARTRIDGE
John M. Olin, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a corporation of Delaware
No Drawing. Application November 7, 1930, Serial No. 494,189
6 Claims. (Cl. 102—42)

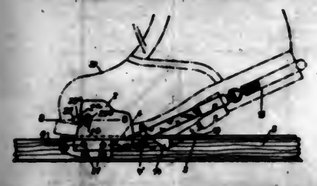
1. A loaded small caliber rifle cartridge comprising, a case or shell having a primer recess formed at its rim, a coordinative primer therein, a projectile, and a high density-loaded projectile-propelling charge of granular smokeless powder having a high available potential energy characteristic, the powder being granulated and surface modified in coordination with the primer to substantially retard the initial combustion rate and being also interiorly modified in coordination with the surface modification and granulation to maintain a fast subsequent burning rate, in a zone of high energy transfer at safe breech pressures.

2,106,108
TOWEL DISPENSING CABINET
Philip D. Parsons, Swarthmore, Pa., assignor to Scott Paper Company, Chester, Pa., a corporation of Pennsylvania
Application February 25, 1936, Serial No. 65,694
1 Claim. (Cl. 312—62)

In a towel-dispensing cabinet, a casing having a front wall provided with a delivery opening, and means for feeding the towels forwardly in the casing into position for withdrawal through said opening, said means comprising an arm mounted on a fixed pivot at the back of the casing, a pad element pivotally connected to said arm and flatly engaging the towels at the back, said pad being supported by said arm in spaced relation to and free from frictional engagement with the walls of the casing, a spring arranged to exert pressure tending to force the free end of said arm and the pad toward the said front wall, and a link having a fixed pivotal connection at the back of the casing and to said pad in position paralleling said arm, said link being effective to maintain the pad continuously in substantially parallel relation to said front wall, said arm, link and pad constituting a completely operative spring-actuated unit having engagement with the casing only through the pivotal connections between said casing and said arm and link.

2,106,109
FUSE PLUG
Pierce Prendergast, Pittsburgh, Pa.
Application June 4, 1936, Serial No. 83,462
9 Claims. (Cl. 200—125)

1. In a multiple-fuse plug, a body member, a cap member rotatably carried on the body mem-



ber, said cap member having an inverted well therein, the outer walls of which are provided with radially extending recesses, a fuse member having a hub portion located against the bottom of the well, radial arms with reduced area portions connected to said hub and located in the recesses and extending vertically to the top of the recesses and being turned over the edge of the well, and a hollow sleeve member fitted in the well having radial projections fitting into the said radial recesses, the radial extensions of the fuse member having a part of the vertical portion thereof of reduced area.

2,106,110

SKI ATTACHING DEVICE

Adolf Attenhofer, Zurich, Switzerland

Application October 26, 1935, Serial No. 46,700
In Switzerland October 31, 1934
13 Claims. (Cl. 280—11.35)

8. In a device for attaching a ski to footwear, the combination with a resilient heel pulling member of a pair of guide members pivotally mounted on the ski, said guide members being capable of being moved into and out of the path of the heel pulling member, each of said guide members having therein a plurality of spaced holes arranged in alignment, and a pair of pins on said ski, said pins being adapted to engage one with one of the holes of each of said guide members so as to form the pivotal point therefor, each of said guide members having an enlarged opening therein, and a second pair of pins on the ski, said latter pins being adapted to engage one with each of said openings for limiting the pivotal movement of said guide members to selectively vary the diagonal pull of the heel pulling member.

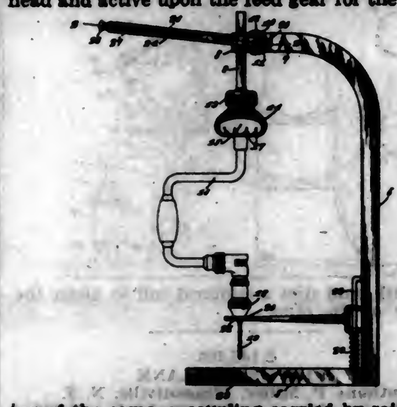
2,106,111

MANUFACTURE OF ALKALI CELLULOSE

Alfons Bayerl and Karl Kösslinger, Dessau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application February 5, 1935, Serial No. 5,152. In Germany February 9, 1934
6 Claims. (Cl. 260—10)

1. A process of manufacturing alkali cellulose which comprises spraying a cloud of caustic soda solution containing about 40 to about 50 per cent. of NaOH on wet wood pulp containing from about 40 to approximately 60 per cent. of dry pulp, the ratio of dry pulp to the caustic soda solution applied being less than 1:3.



2,106,112

BRACE HOLDER AND PRESS

Martin Benato, Santa Barbara, Calif.

Application July 30, 1936, Serial No. 93,509
Renewed December 15, 1937
1 Claim. (Cl. 144—104)

A brace holder and press comprising a base, a crane rising from the base and having a forwardly directed upper end, a guide head on the forwardly directed upper end, a vertically disposed toothed rack fitting said head, a feed gear journaled in said head and meshing with said toothed rack, a ratchet acting lever arranged with the head and active upon the feed gear for the turning of the same, a coupling carried by said rack at its lower end, and a bit brace knob receiving head swiveled to the rack by said coupling and having splits at intervals for the bending of the head about the brace knob for its clamping thereby and suspension of said brace from the rack.

2,106,113

VEHICULAR TRAFFIC SIGNAL

John W. Brougher, Bremen, Ind.

Application March 11, 1936, Serial No. 68,341
1 Claim. (Cl. 177—329)

In an automobile signal, the combination with a housing having a compartment opening through one side of the housing, of a foldable signal arm including an arm section pivoted at one end to an inner wall of said compartment, a hand section pivoted at one end to the free end of the arm section, and a link having one end pivotally connected to said hand section, and having its opposite end pivotally connected to an inner wall of said compartment whereby to cause said hand section to move to a folded or unfolded position relative to the arm section incidental to a swinging of the arm section into or out of position within said compartment and means connected to the arm section for actuating the same.

2,106,114

CIRCUIT BREAKER

Herbert J. Crabbs, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application November 2, 1934, Serial No. 751,290
13 Claims. (Cl. 200—146)

1. In an electrical switch, a pair of spaced insulator columns, conducting means mounted on each of the columns, a swingably supported blade for bridging the conducting means to provide an electrical circuit therebetween, an arc extinguishing device mounted in proximity to the blade, means operable to actuate the blade into and out of engagement with at least one of the conducting means, said arc extinguishing device including relatively movable conducting members for providing a conducting path in parallel with the current carrying path provided by the blade when the switch is in closed circuit position, and means

carried by said arc extinguishing device adapted to be engaged by said blade upon movement of the latter out of engagement with the said one contact for separating said relatively movable conducting members to establish an arc therebetween, said means carried by said arc extinguishing device being operative upon further movement of said blade toward the full open position to separate the arc extinguishing device a substantial distance from at least one of said conducting means to thereby provide an air gap sufficient to withstand high voltage.

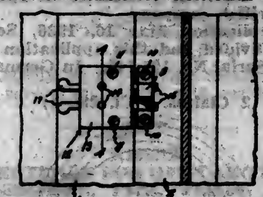
2,106,115

CINEMATOGRAPHIC INTERMITTENT FILM FEED AND SHUTTER

Andre Leon Victor Clement Debrie, Paris, France

Application March 15, 1937, Serial No. 131,054
In Great Britain June 27, 1936
2 Claims. (Cl. 88—18.4)

1. In a cinematographic apparatus a mechanism for the intermittent feed of the film past the film gate comprising a support, a pin carrier, two lever arms lying in a plane substantially parallel to the plane of the film gate, means for mounting said lever arms at one end on the support so as to allow their rocking both in their plane and in a direction perpendicular thereto, means whereby the pin carrier is pivotally secured between the free ends of both lever arms, a small sized cam arranged between intermediate parts of the lever arms and adapted to control their reciprocating motion in their plane a shaft controlling the rotation of the cam and a second cam carried by said shaft adapted to constrain periodically the pin carrier and cooperating lever arms to reciprocate in a direction perpendicular to the plane of the film gate.



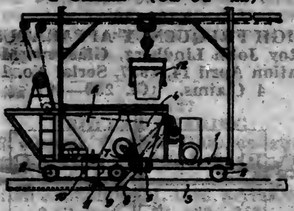
2,106,116

WINDOW LOCK

Leo Dusinske, Bedford, Mich.

Application February 27, 1936, Serial No. 66,117
1 Claim. (Cl. 292—54)

A lock for attachment to the meeting rails of window sashes and comprising a keeper plate on one rail having an upstanding keeper lug provided with a wedge shaped upper end and a pair of opposed notches in the side edges thereof, respectively, each of acute angled form, and a pair of opposed laterally spaced locking levers pivotally mounted intermediate their ends on the other



rail and having corresponding ends extending from said rail upon opposite sides of said lug, respectively, to receive the latter therebetween, said ends conforming in cross sectional contour to that of said notches, and said levers being tensioned to urge said ends thereof together to be cammed apart by said wedge shaped head.

2,106,117

METHOD FOR MAKING CONCRETE ROADS

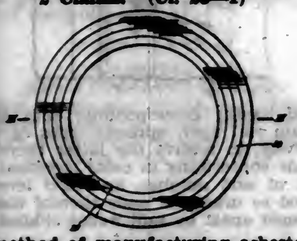
Alfred Holter, Abbedingen, near Oslo, Norway

Application July 13, 1934, Serial No. 735,044
In Norway July 21, 1933
1 Claim. (Cl. 94—22)

A method for making concrete road surfaces which comprises placing a layer of cement mortar on the road, placing a layer of stones of suitable size on top of said first named layer, mixing said layers by harrowing and exposing the mixture to the treatment of light rollers during a period extending beyond the initial setting time and over at least part of the period of final setting.

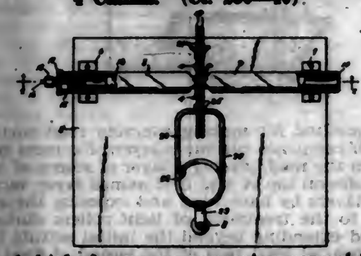
2,106,118

HOSE JOINT TIGHTENER



Walter Leslie Jackson and Kingsley John Jackson, Perth, Western Australia, Australia

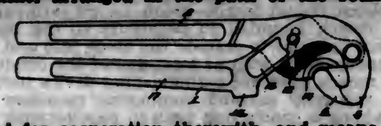
Application April 11, 1936, Serial No. 73,982
In Australia June 21, 1935
3 Claims. (Cl. 24—19)



1. In a device as and for the purposes herein set forth, a flexible band having a loop at one end, a cam-lever having an eccentric turned over lip freely anchoring and holding same, a bracket, a pin projecting beyond the bracket, pivot means securing said cam-lever to said bracket, said band adjacent its other end having a slot for anchoring same to said pin.

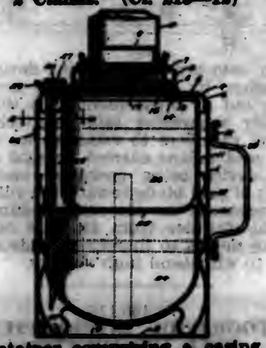
2,106,119
MANUFACTURE OF ASBESTOS RINGS
Theodor Kranzelt, Reuth v/Neumark, Germany, assignor of four-fifths to Maurice Prosberg, Paris, France, and one-fifth to George Angus & Company Limited, Newcastle-on-Tyne, England, a British company
Original application May 16, 1936, Serial No. 80,184. Divided and this application October 19, 1936, Serial No. 105,142. In Germany June 25, 1935
2 Claims. (Cl. 28—1)

1. A method of manufacturing asbestos rings for packing, clutches, brake linings and like purposes, which consists in bending into frusto-conical form a flat strip of the fabric formed by knitting asbestos on a machine, knitting the ends of the strip together and finally pressing the strip flat to give a circular ring.



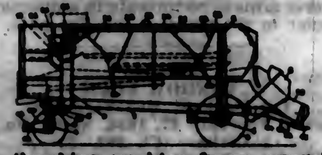
2,106,120
HIGH FREQUENCY APPARATUS
Le Roy John Lindberg, Glasgow, Mont.
Application April 14, 1927, Serial No. 186,930
4 Claims. (Cl. 250—40)

1. A high frequency apparatus comprising a base, a pair of supports on the base, a pair of tubes supported by the supports in alignment and having their adjacent ends in spaced relation, a third tube extending longitudinally in the tubes and having one end portion anchored to the outer end of one of the first mentioned tubes, adjusting means between the outer end of the other of the first mentioned tubes and the remaining end of the third mentioned tube, a pair of current conductive plates between the adjacent ends of the first mentioned tubes and circumscribing the third mentioned tube and spring means for holding the said plates under contractual relation.



2,106,121
FENDER TOOL
Frank Lorenze, Rochester, N. Y.
Application January 6, 1937, Serial No. 119,346
2 Claims. (Cl. 81—15)

1. A fender tool in the form of pliers, comprising a pair of companion members including handles, a jaw member for each handle and formed thereon, a hooked portion included in one of said jaw members, a rounded head formed on the hooked portion, means for pivotally securing the jaw members together, a channeled portion formed on the other jaw member and having its channel arranged in the path of the rounded



head for cooperation therewith, and means for slidably connecting the jaw members together inwardly of the pivot therefor.

2,106,122
CONTAINER
Frank D. McGowan, Worcester, Mass.
Application November 23, 1936, Serial No. 112,395
2 Claims. (Cl. 215—12)

1. A container comprising a casing, a vessel within the casing, a partition dividing the vessel into separate upper and lower compartments, a neck at the upper end of the vessel and opening into the upper compartment, a stopper received by the neck for closing the upper compartment, tubular means rising from and communicating with the lower compartment, a stopper for closing the tubular means, a ring member threadedly secured to the upper end of the casing, caps engageable with the stoppers and threaded to the ring member, a pouring spout for the tubular means and formed on and rising at an outward inclination from the ring member, a flat portion included in the ring member, a shoulder at the upper end of the vessel, cushion supporting means for the vessel and including corrugated upright spring arms between the vessel and casing and engageable therewith, a gasket between the shoulder and flat portion and said cushion supporting means cooperating with the gasket to provide a dead air space between the vessel and casing.

2,106,123
THRESHING MACHINE FRAME
Hermann Rommelfaert, Saxony, Germany
Application July 26, 1935, Serial No. 33,282
In Germany August 25, 1934
17 Claims. (Cl. 130—27)

1. A threshing machine frame comprising a central torque member, substantially integral U-shaped supporting means finally secured to said torque member and side walls secured to said U-shaped supporting means.

2,106,124
COMBUSTION CHAMBER OF INTERNAL COMBUSTION ENGINES OF THE COMPRESSION IGNITION TYPE
Harry Ralph Ricardo, London, England
Application December 27, 1934, Serial No. 759,392
In Great Britain January 4, 1934
3 Claims. (Cl. 123—32)

1. An internal combustion engine of the liquid fuel injection compression ignition type, comprising a cylinder; a combustion chamber, the contour of which is substantially a surface of revolution symmetrical about a plane at right angles to its axis, communicating with said cylinder; a piston adapted to reciprocate in said cylinder, and to approach the end of said cylinder at the end of its compression stroke so that the greater part of the clearance space is comprised within the combustion chamber; means constituting at least part of the wall of the combustion chamber arranged to be kept relatively hot during running, said means comprising a member in which a passageway between the cylinder and combustion chamber is formed, the axis of said passageway lying in the plane of symmetry of the combustion chamber and spaced from the axis of said chamber so as to cause the air entering the chamber to partake of a swirling motion about the axis of the chamber, the annular body of air moving with the greatest velocity being substantially in the plane of symmetry of the chamber and being separated from both the axis and the wall thereof; a fuel injecting nozzle disposed in the wall of the combustion chamber and adapted to deliver a jet of fuel, the axis of which lies in the plane of symmetry of the combustion chamber and is directed toward a point on the part of the wall of the combustion chamber which is kept hot during running, which point is spaced from said nozzle about the chamber axis in the direction in which the air circulates by an angular spacing which is between approximately 120° and approximately 150°, whereby said jet is concentrated in the path of that portion of the air circulating within the chamber at the highest velocity, the orifice of said passageway in the combustion chamber being disposed at a point which is outside of said angular spacing and spaced from said nozzle about the chamber axis in the direction of air circulation by an angular spacing in the neighborhood of from 190°–220°.

2,106,125
MECHANISM FOR GRINDING ARTIFICIAL DENTURES
Leslie Norman Redpath, Melbourne, Australia, and Samuel James Bryant, Thornton Heath, England; said Bryant assignor to said Redpath
Application November 21, 1935, Serial No. 111,226
In Great Britain November 5, 1935
3 Claims. (Cl. 32—33)

2. Denture-grinding mechanism comprising, in combination with a denture-carrier and driving means therefor, a support and a flexible ring arranged between the said carrier and support and adapted for permitting the carrier to be

rotated bodily by the driving means whilst preventing revolution of the said carrier about its axis.

2,106,126
ELECTRODE FOR OPEN ARC LAMPS
Isidor Silberstein, Paris, France, assignor to Prof. Dr. Max Volmer, Neubabelsberg-Steinstuecken, Germany
Application April 6, 1936, Serial No. 73,047
In Germany February 2, 1935
4 Claims. (Cl. 176—119)

1. The combination with an electrode for open arc-lamps, of a conductor pin attached at one end of the body of the electrode and in axial alinement with the same, and a resilient member provided with two substantially parallel legs connected with each other at one end, said resilient member being attached transversely to said pin and being provided to be connected with an electrode holder.

2,106,127
ROLLER BEARING
Harry E. Stamer, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application September 21, 1936, Serial No. 101,759
3 Claims. (Cl. 308—218)

1. A roller bearing comprising a cup having a conical raceway and a thrust rib at the larger end of said raceway, taper rollers on said raceway and a one piece cage for said rollers, said cage being of smaller diameter than the imaginary cone of the roll axes and comprising continuous end rings connected by bridges integral therewith and the large ends of the pockets between said bridges being wide enough to permit radial movement of the large ends of the rollers in the operation of assembling or disassembling the bearing, each of said bridges having a reentrant angle in its inner face defining a relatively long straight portion adjoining the small end ring and in pocket-forming relation to the rollers and a relatively short portion adjacent to the large ring.

2,106,128
GAME
Henry J. Stitt, New York, N. Y.
Application March 6, 1937, Serial No. 129,311
10 Claims. (Cl. 272—141)

1. A slide apparatus adapted to be used in a projecting machine, comprising a rotatable ring-

like wheel having a pointer carried thereby, an impeller independent of the ring-like wheel but formed with resilient protuberances adapted to strike the ring-like wheel so as to cause the ring-

like wheel to rotate, means for causing each of said protuberances to be bowed and then released to strike and spin said wheel upon each actuation of said impeller, and a hand-operated member for actuating said impeller.

2,106,129

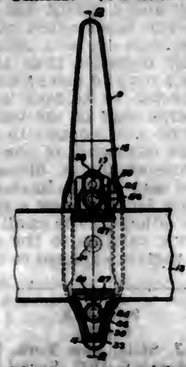
METHOD OF MAKING SEPARABLE FASTENERS

Gideon Sundback, Meadville, Pa., assignor to Talon, Inc., Meadville, Pa., a corporation of Pennsylvania

Application February 4, 1935, Serial No. 4,794

12 Claims. (Cl. 29—148)

1. The method of making fastener elements comprising forming attaching means on each fastener member for securing it to a tape, a portion of the member being adapted to project beyond the attaching means, punching out a recess in one side of such projecting portion of said member, and deforming material from an outer surface of said member to provide a projection opposite said recess.



2,106,130

VERTICAL BUMPER

Alphonso S. Campbell, Winchester, Mass., assignor to A. S. Campbell Co., Inc., East Boston, Mass., a corporation of Massachusetts

Application November 10, 1936, Serial No. 110,048

4 Claims. (Cl. 293—55)

1. A vertical bumper comprising a body having a seat at its rear side to be applied by a movement of superposition from the front to a horizontal bumper bar, a nut and a bolt at either side of the seat, one of which is secured to the body to dispose the shank of the bolt projecting rearwardly therefrom across the upper and lower vertical edges of the bar, clips through which the bolts pass having ends extending over the margin of the horizontal bar, including a clip having a hooked edge to engage said margin, a broad shank extending therefrom having a marginal flange and a rib struck up centrally therefrom through which the bolt-receiving opening is formed and which extends substantially from the throat of the hook.

2,106,131

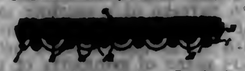
METHOD OF PRODUCING STRONTIUM CARBONATE

Harvey G. Elledge and Alfred Hirsch, Painesville, Ohio, assignors to Diamond Alkali Company, Painesville, Ohio, a corporation of Delaware

No Drawing. Application May 24, 1934, Serial No. 727,264

2 Claims. (Cl. 23—66)

1. A process of converting strontium sulphate to strontium carbonate which comprises treating said sulphate with agitation with Na_2CO_3 in the presence of NaOH and water from 10 to 20 times the weight of the sulphate at a temperature from approximately 90° C. to 100° C., said sulphate being in a state of subdivision to pass a 40 mesh sieve, the quantity of Na_2CO_3 ranging between 1.3%–9% excess Na_2CO_3 over the molecular equivalent of $SrSO_4$ and the corresponding quantity of NaOH ranging between 27%–100% of the weight of the sulphate.



2,106,132

METHOD FOR APPLYING FLOCK

William F. Feinbloom, Rochester, N. Y., assignor to Champion Knitwear Company, Inc., Rochester, N. Y.

Application August 27, 1937, Serial No. 161,240

3 Claims. (Cl. 91—68)

1. The method of applying flock to the finish face only of a knitted or woven fabric, which comprises, applying a relatively fine liquid adhesive coating to one face of the fabric such that it penetrates partially through the fabric, dispersing the flock on the coated surface, stretching the fabric to spread the fibres thereby increasing the exposed areas thereof and permitting the adhesive to form interstitial deposits and become impregnated in the fibres to the desired depth in the fabric, beating the fabric to work the flock into intimate anchored relation in the interstitial deposits and into cemented relation with the said adhesively impregnated fibres of the fabric at such a depth that the flock is clamped and compressed in rigid engagement between adjacent closed up fibres of the fabric, and relieving the fabric from its stretched condition whereby such anchored and cemented relation of the flock becomes pronounced and positive on drying of the adhesive.

2,106,133

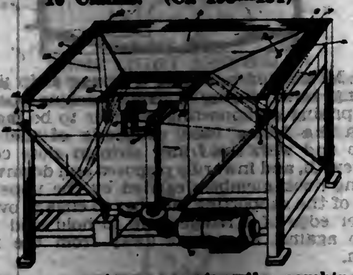
METAL BACKED PRESSURE-SENSITIVE ADHESIVE

Maurice A. Goldman, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey

No Drawing. Application November 7, 1935, Serial No. 49,788

6 Claims. (Cl. 91—68)

1. As a new article of manufacture, the combination of a flexible backing comprising one or more piles of metal foil having symmetrically formed selvage edges whereof the salvaging is manifested by hot trimmed sealed edges, and a pressure-sensitive adhesive applied as a tenacious coating to said backing and normally prevented from outflow therebeyond by the selvage edges of the backing, said coating having greater adhesion to the backing than to a surface to which it may be applied in service whereby the article is capable of repeated removal and use.



2,106,134

CONVEYING APPARATUS

Frederick Wade Greer, Belmont, Mass., assignor to J. W. Greer Company, Middlesex, Mass., a corporation of Massachusetts

Application July 2, 1935, Serial No. 29,482

10 Claims. (Cl. 198—184)

1. In a conveying apparatus, the combination of a conveyor belt, mechanism for driving said belt, means for guiding said belt to provide adjacent work supporting runs thereof, lying at an angle to each other, and connected by a downwardly extending loop, said means including a guiding member holding said loop taut and disposed angularly both with reference to the direction of travel of said runs and also with reference to the planes of said runs, the discharge end of the first run and the receiving end of the second run being located in approximately the same plane and separated from each other by a narrow crevice across which the articles conveyed will be carried by said runs.

2,106,135

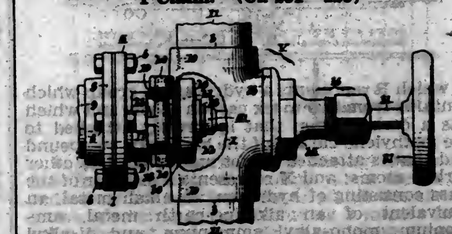
TRACTOR WHEEL

Alphonso Henry, Hamilton, Ohio, assignor to The Hamilton Caster and Manufacturing Company, Hamilton, Ohio, a corporation of Ohio

Application December 11, 1935, Serial No. 53,940

1 Claim. (Cl. 301—52)

A tractor wheel of skeleton structure, comprising, a pair of spaced conical rims in opposing relation with the sense converging toward each other, providing a centrally open recessed tread, and diagonally disposed cleats between the rims with the end of each cleat on one rim being directly axially opposite the end of the succeeding cleat on the other rim for contacting continuity, the cleats projecting radially beyond the periphery of the rims and curved so that their outer edges lie in a cylinder.



2,106,136

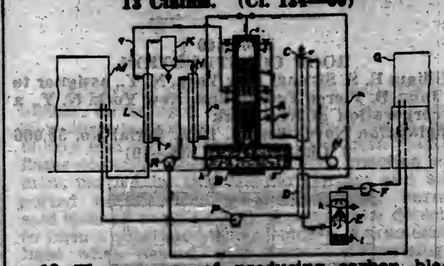
VALVE

James A. Jensen, Philadelphia, Pa., assignor to Quaker City Iron Works, Philadelphia, Pa., a corporation of Pennsylvania

Application August 21, 1935, Serial No. 37,134

1 Claim. (Cl. 251—125)

In a combined check and stop valve of the type described the combination of a body having aligned fluid outlets and a lateral fluid inlet in a common plane, a partition extending crosswise of the inlet, a closure member to cooperate with the flow orifice in the partition at the outlet side of the latter, a curved arm fulcrumed to the valve body by axially aligned socketed studs and a mutually engaging hinge pin, said arm being freely suspended on the inlet side of the partition and projecting at its other end through the flow orifice to the outlet side thereof, a pivot pin engaged in diametrically opposed holes of a sleeve-like clamp nut whereby the closure member is pivotally connected to the curved arm and can automatically swing away from the flow orifice and independently seek an open relatively-inclined position, and an actuating screw stem axially aligned with the inlet of the valve whereby the closure member may be moved against pressure to close the flow orifice.

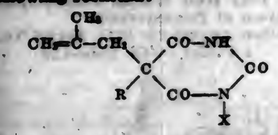


2,106,137

PROCESS OF PRODUCING CARBON BLACK

Forrest C. Reed, Kansas City, Mo.

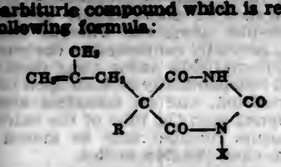
Application July 9, 1934, Serial No. 734,436



13 Claims. (Cl. 134—60)

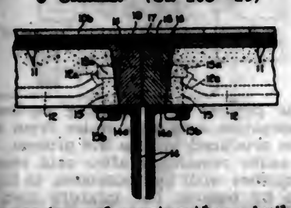
13. The process of producing carbon black which comprises, removing water from combustion gases produced within the process, subjecting the gases remaining after said removal of water, together with hydrocarbons, to high temperatures by passing the mixture over heated contacting surfaces so as to decompose said hydrocarbons, and then separating the carbon black from the gaseous mixture.

2,106,138
METHALLYL-SUBSTITUTED BARBITURIC COMPOUND
Horace A. Shonle, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application November 8, 1937, Serial No. 173,531
12 Claims. (Cl. 260—33)



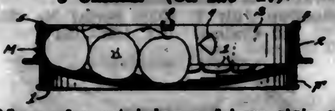
1. A barbituric compound which is represented by the following formula:

in which R represents a hydrocarbon group which contains from two to six carbon atoms and which has a carbon atom that is directly attached to the methylene carbon of the barbituric compound and that is attached to not more than two other carbon atoms; and X represents a member of the class consisting of hydrogen, an alkali metal, an equivalent of an alkaline-earth metal, ammonium, mono-alkyl ammonium, and di-alkyl ammonium.



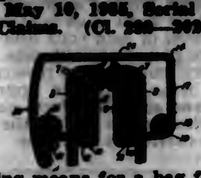
2,106,139
METHALLYL-SUBSTITUTED BARBITURIC COMPOUND
Horace A. Shonle, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application November 10, 1936, Serial No. 110,122
8 Claims. (Cl. 260—33)

1. A barbituric compound which is represented by the following formula:



in which R represents an amyl group having not to exceed one branching; and X represents a member of the class consisting of hydrogen, an alkali metal, an equivalent of an alkaline-earth metal, ammonium, mono-alkyl ammonium, and di-alkyl ammonium.

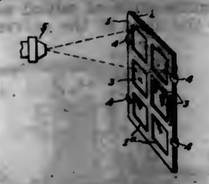
2,106,140
ROOF CONSTRUCTION
William E. S. Streng, New York, N. Y., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application November 16, 1935, Serial No. 50,066
3 Claims. (Cl. 108—10)



3. For use in roof construction a building unit comprising, a slab portion having one major face weather resistant, the margin of the said face being depressed to form a ledge running continuously peripherally of the unit; and a continuous peripheral groove formed substantially within the confines of the material of the said ledge along the inner margin thereof, opening into the surface of the ledge and having its bottom substantially opposite its opening.

2,106,141
FRINGE SUPPORT FOR USE IN PACKING FRUITS
James W. Trew, Gettysburg, Pa., assignor to Rice, Trew & Rice Co. Inc., Biglerville, Pa., a corporation of Pennsylvania
Application July 15, 1937, Serial No. 153,854
3 Claims. (Cl. 206—17)

1. Means for retaining a fringe strip upon a facing form during a fruit packing operation comprising a supporting member to be mounted upon the facing form exteriorly of the fringe strip and with the fringe strip in close contact therewith, and inwardly disposed and downwardly facing hook members carried by the upper portion of the supporting member to engage over the upper edge of a fringe strip to hold said fringe strip against movement away from the facing form.



2,106,142
HANDBAG FASTENER STRUCTURE
Preston Upham, Brookline, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application May 10, 1935, Serial No. 20,741
5 Claims. (Cl. 292—302)

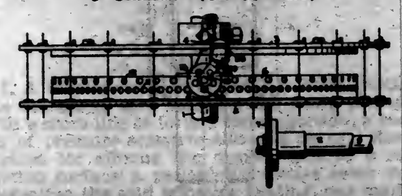
1. A fastening means for a bag frame having a pair of channel-shaped frame members hinged together at their ends, said fastening means securing the two frames together, and comprising an element fastened within one of said frame members and extending through the outer side wall thereof and a cooperating U-shaped fastening member pivotally attached to the other of said frame members and constructed for fastening engagement with said element.

2,106,143
PIEZOELECTRIC DEVICE AND METHOD OF MAKING THE SAME
Alfred L. W. Williams, Cleveland, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application April 1, 1936, Serial No. 72,149
In Great Britain April 5, 1935
17 Claims. (Cl. 171—327)

1. A method of making piezo-electric devices comprising bodies formed of homogeneous water-soluble crystalline material of high specific inductive capacity and having electrodes on one or more surfaces thereof, said method comprising applying directly to the body surface to be electroded a thin coating of conductive material in a wet state and in sufficiently limited amount to prevent significant solution of the said crystalline material and sufficiently finely divided to adhere, after drying, to the piezo-electric material in

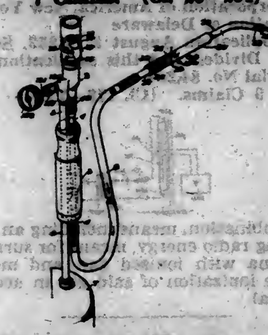
intimate contact therewith; causing the wet coated surface to dry; and thereafter applying additional conductive material to the coating to increase its conductivity.

2,106,144
DOME LIGHT ASSEMBLY
Burton S. Fleraday, Toledo, Ohio, assignor to Dura Company, Toledo, Ohio, a corporation of Ohio
Application August 8, 1935, Serial No. 35,854
2 Claims. (Cl. 240—7.35)



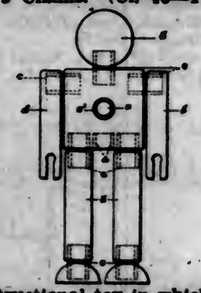
2. A light assembly comprising a housing element and a lens element, the housing element having a smooth forwardly extending flange, the lens element being of moulded plastic material and having an inwardly extending smooth resilient flange frictionally engaging the flange of the housing so as to form the sole means of connection between said elements, and one of said elements having an integral laterally extending rim forming a substantial continuation of the front face of the lens element.

2,106,145
VEHICLE LAMP
Burton S. Fleraday, Toledo, Ohio, assignor to Dura Company, Toledo, Ohio, a corporation of Ohio
Original application August 8, 1935, Serial No. 35,854. Divided and this application January 16, 1936, Serial No. 59,239
6 Claims. (Cl. 240—7.35)



6. A dome light assembly comprising a housing having a flanged end, a lens having an integral inwardly extending resilient flange frictionally engaging said flanged end, and a rim extending laterally from said second flange, said rim and lens being of the same material and integral with each other.

2,106,146
YARN SPEED INDICATING MEANS
Herbert E. Gosling, Providence, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application April 30, 1936, Serial No. 77,172
9 Claims. (Cl. 66—125)



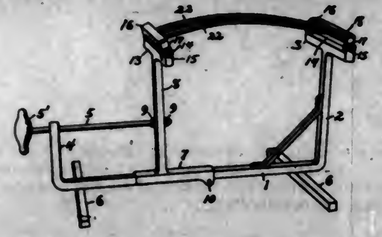
1. In a knitting machine having means for knitting a plurality of running yarns, means for indicating the relative rates at which the several yarns are being drawn including a master indicator element and a single, yarn driven element for cooperating therewith to effect an indication, said single element being movable from one yarn to another whereby indications are taken under uniform conditions.

2,106,147
APPARATUS FOR DETECTING GASES
William Keiffer Hull, Hagerstown, Md., assignor to The Hull Manufacturing Company, Hagerstown, Md., a corporation of Maryland
Application August 12, 1935, Serial No. 35,899
7 Claims. (Cl. 23—254)

1. Apparatus for detecting gases, comprising a burner, including a tubular flame-shielding portion surrounding the combustion zone of said burner and formed from iron free from reactive flame-coloring material, a copper reaction element carried by said tubular portion and supported in the heating zone of said burner, said element reacting with the gas to be detected to form a substance which emits a characteristic light when heated, said element comprising a slotted annular frusto-conical body, and means for bringing the gas into contact with said member including a flexible conduit, and a tubular member connected thereto and provided at one end with a restricted inlet opening for gas to be detected and provided with at least two relatively large longitudinally spaced air inlet openings and means for opening and closing said air inlet openings.

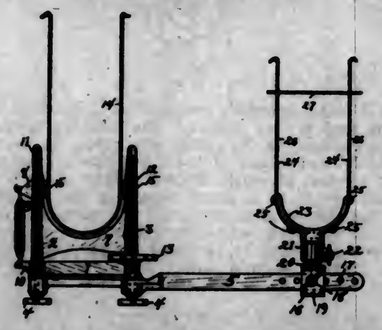
2,106,148
CONSTRUCTIONAL TOY
Georg Kellner, Tabarz, Thur-Wald, Germany, assignor to Walter Lines, London, England
Application August 3, 1936, Serial No. 93,959½
In Germany August 13, 1935
3 Claims. (Cl. 46—173)

1. A constructional toy in which the assembly of shaped blocks or units into figures, models, and the like is provided for by connections comprising a peg or pivot-like member which is formed integral with the one unit, and preferably does not project beyond the surface thereof, and a rubber sleeve-like member which is carried by in the other unit and is elastic in the longitudinal as well as in the radial direction; the said sleeve being adapted, on being pressed over its complementary peg member, to frictionally engage or grip the said peg.



2,106,149
RADIO APPARATUS
Ernest G. Linder, Philadelphia, Pa., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Original application August 31, 1933, Serial No. 687,544. Divided and this application June 9, 1936, Serial No. 84,264
9 Claims. (Cl. 179—171)

1. In combination, means including an antenna for radiating radio energy, means for surrounding said antenna with ionized gas, and means for varying the ionization of said gas in accordance with a signal.



2,106,150
SURGICAL HYPEREXTENSION FRAME
Earl E. Longfellow, Warsaw, Ind., assignor to Harry Herschel Leiter, Warsaw, Ind.
Application August 19, 1935, Serial No. 36,821
5 Claims. (Cl. 128—84)

1. A surgical hyperextension frame consisting of a base having feet to prevent lateral tilting thereof, and provided at one end with a vertical standard and at its opposite end with a post, said standard having a cross head at its top, a slide on said base between said standard and post provided with means to retain the slide in operating position on said base and having also an upright standard provided with a cross head at its top, link bars pivotally mounted respectively in said cross heads, said link bars having corresponding horizontal slots that are open through the opposing faces of said link bars and closed at the opposite sides thereof, means to limit tilting movement of said link bars in their respective cross heads toward each other, springs acting to move said link bars toward each other, flexible bridge bars the opposite ends of which are removably positioned in the slots of the corresponding link

bars and spaced apart from each other, and an adjusting rod threaded in said post operatively associated with the standard on said slide for moving same toward the standard on said base thereby to cause upward flexure of said bridge bars.

2,106,151
SURGICAL LEG SPLINT
Earl E. Longfellow, Warsaw, Ind., assignor to Harry Herschel Leiter, Warsaw, Ind.
Application November 16, 1935, Serial No. 50,169
4 Claims. (Cl. 128—84)

3. In a surgical splint having members applicable respectively to uninjured and injured legs of a patient, a frame provided with a stirrup and having longitudinal parallel guides, a cross-head having parallel rods that extend into said guides to permit longitudinal adjustment of said frame thereon, a beam connected with said cross-head so as to permit relative adjustment of said cross-head and beam transversely to said rods, means for securing said beam in its adjusted positions, means for moving and securing said frame adjustably on said rods relative to said cross-head, and a second stirrup having an adjustable connection with said beam.

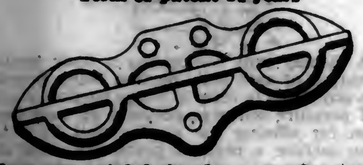
2,106,152
INDICATING AND CONTROL APPARATUS
Harold C. Matter, Chicago, Ill., assignor to Belmont Radio Corporation, a corporation of Illinois
Application July 19, 1937, Serial No. 154,371
14 Claims. (Cl. 116—124.4)

1. Indicating and control apparatus for a radio receiver including a one-piece combination tuner

and dial member connected with the tuning condenser for the radio receiver, said one-piece member having finger cavities therein for tuning movement thereof, a dial portion on said member lighting means to the rear of said member, with

said member translucent in portions and opaque in portions as to the passage of light therethrough from said lighting means whereby to provide selected illumination over the member to the eye of an observer in front of said radio receiver.

2,106,153
DISPLAY UNIT
Arthur B. Mull, Appleton, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application April 26, 1937, Serial No. 138,991
2 Claims. (Cl. 40—124.1)



1. A display unit comprising a body portion, one margin of said body portion being provided with a score line to form a flange portion, a coating of pressure sensitive adhesive on said flange portion for affixing the display unit to a supporting surface, a peelable protective cover strip protecting the said adhesive coating, one margin of said cover strip extending beyond said score line to afford a grasping portion therefor, one end of said score line terminating in two diverging slits to form a V-shaped notch to provide a free tab portion at the end of said flange portion disconnected from the body portion, a second tab portion positioned on the body portion of the display unit adapted to be folded over and adhered by the said adhesive to said first tab for retaining said flange at an angle to said body portion.

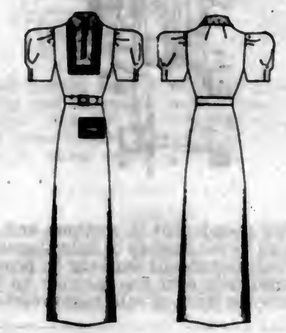
DESIGNS

JANUARY 18, 1938

107,937
DESIGN FOR A REAR FRAME MEMBER FOR A VELOCIPEDE
Bert J. Andersen, Hammond, Ind.
Application April 23, 1937, Serial No. 68,953
Term of patent 14 years

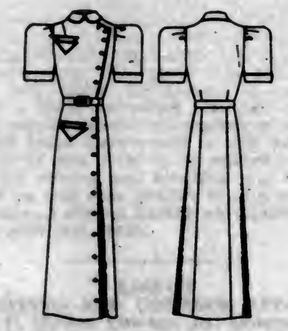
The ornamental design for a rear frame member for a velocipede, as shown.

107,938
DESIGN FOR A VELOCIPEDE FRAME MEMBER
Bert J. Andersen, Hammond, Ind.
Application April 23, 1937, Serial No. 68,954
Term of patent 14 years



The ornamental design for a velocipede frame member, as shown.

107,939
DESIGN FOR A TENNIS BALL
Samuel Graham Ball, Streetly, England, assignor to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application June 9, 1937, Serial No. 69,758
In Great Britain December 23, 1936
Term of patent 14 years



The ornamental design for a tennis ball, as shown.

107,940
DESIGN FOR A DRESS
Helen Berry, New York, N. Y.
Application December 14, 1937, Serial No. 73,607
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

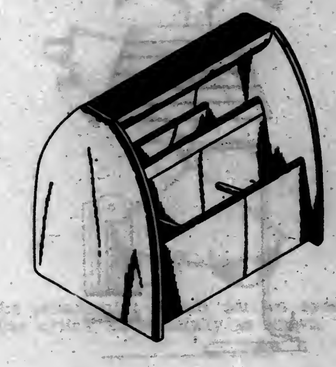
107,941
DESIGN FOR A DRESS
Helen Berry, New York, N. Y.
Application December 14, 1937, Serial No. 73,608
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

107,942
DESIGN FOR A DRESS
Helen Berry, New York, N. Y.
Application December 14, 1937, Serial No. 73,609
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

107,943
DESIGN FOR A WRIST WATCH
Israel L. Bloom, Denver, Colo.
Application September 5, 1936, Serial No. 64,738
Term of patent 14 years

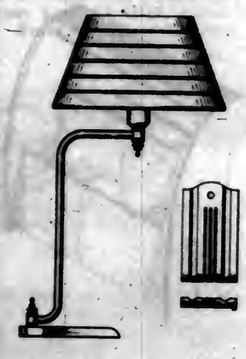


The ornamental design for a wrist watch, as shown and described.

107,944
DESIGN FOR A CLOTHESLINE TIGHTENER
Michael Becchine, Passaic, N. J.
Application May 19, 1937, Serial No. 69,429
Term of patent 14 years

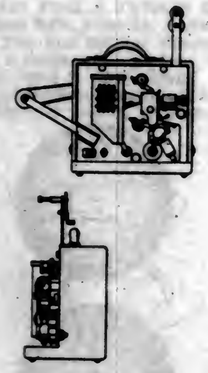
The ornamental design for a clothesline tightener, as shown and described.

107,945
DESIGN FOR A SHOESHINE BOX
Charles Harvey Churchill, Cortland, N. Y.
Application July 14, 1937, Serial No. 70,435
Term of patent 7 years



The ornamental design for a shoeshine box as shown and described.

107,946
DESIGN FOR A SHOE
Warren L. Delaney, Auburn, Maine
Application April 17, 1937, Serial No. 68,849
Term of patent 14 years



The ornamental design for a shoe, as shown and described.

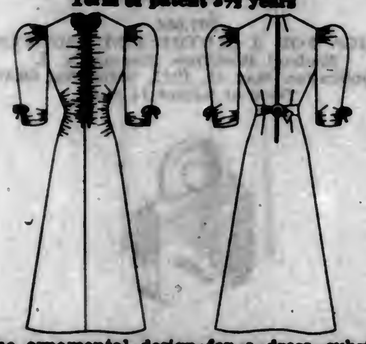
107,947
DESIGN FOR A SEMI-INDIRECT ELECTRIC LAMP
Bert A. Dickerson, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill.
Application February 17, 1937, Serial No. 67,709
Term of patent 3½ years

The ornamental design for a semi-indirect electric lamp, substantially as shown.

107,948
DESIGN FOR A PROJECTOR
Steve Edwards, New York, N. Y., assignor to Harry A. Kapit, New York, N. Y.
Application July 2, 1937, Serial No. 70,299
Term of patent 7 years

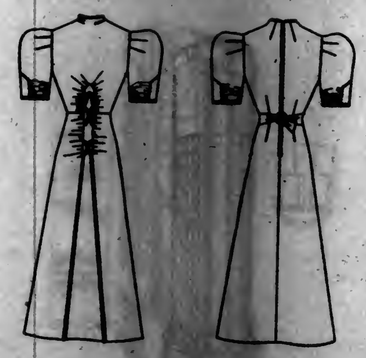
The ornamental design for a projector as shown.

107,949
DESIGN FOR A SHOE
Louis J. Epstein, Jersey City, N. J.
Application December 8, 1937, Serial No. 73,461
Term of patent 3½ years



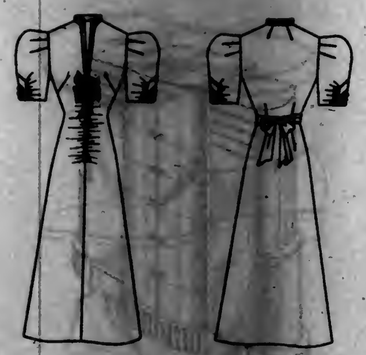
The ornamental design for a shoe substantially as shown.

107,950
DESIGN FOR A DRESS
Pauline Fraechia, New York, N. Y.
Application December 8, 1937, Serial No. 73,436
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

107,951
DESIGN FOR A DRESS
Pauline Fraechia, New York, N. Y.
Application December 8, 1937, Serial No. 73,438
Term of patent 3½ years

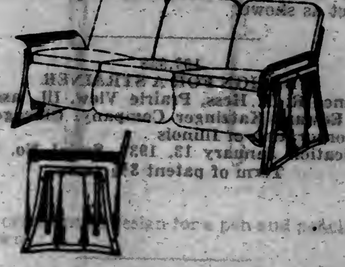


The ornamental design for a dress, substantially as shown, and described.

107,952
DESIGN FOR A DRESS
Pauline Fraechia, New York, N. Y.
Application December 8, 1937, Serial No. 73,439
Term of patent 3½ years

The ornamental design for a dress, substantially as shown, and described.

107,953
DESIGN FOR A DRESS
Pauline Fraechia, New York, N. Y.
Application December 8, 1937, Serial No. 73,440
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

107,954
DESIGN FOR AN EYESHADE OR SIMILAR ARTICLE
Arnold N. Gates, Cleveland Heights, Ohio
Application November 23, 1937, Serial No. 73,125
Term of patent 7 years

The ornamental design for an eyeshade or similar article substantially as shown.

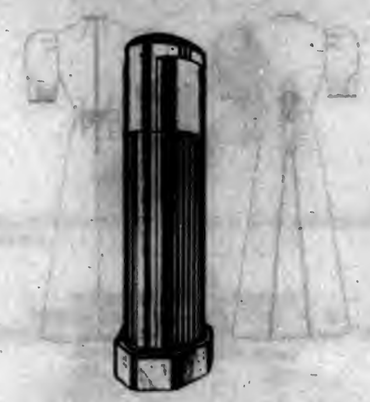
107,955
DESIGN FOR A GLIDER
Aaron S. Goldberg, Philadelphia, Pa., assignor to Bunting Glider Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 19, 1937, Serial No. 73,012
Term of patent 7 years

The ornamental design for a glider as shown.

107,956
DESIGN FOR A SLIPPER
Leo Goedkind, Williamsport, Pa.
Application December 2, 1937, Serial No. 73,326
Term of patent 3½ years

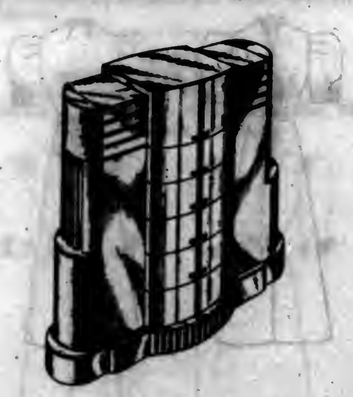
The ornamental design for a slipper substantially as shown.

107,957
DESIGN FOR A SPOOL DISPLAY CABINET
Barnett J. Graham, Okmulgee, Okla.
Application November 11, 1937, Serial No. 72,814
Term of patent 7 years



The ornamental design for a spool display cabinet as shown.

107,958
DESIGN FOR A STRAINER
Clarence R. T. Hess, Prairie View, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 13, 1937, Serial No. 67,027
Term of patent 3½ years

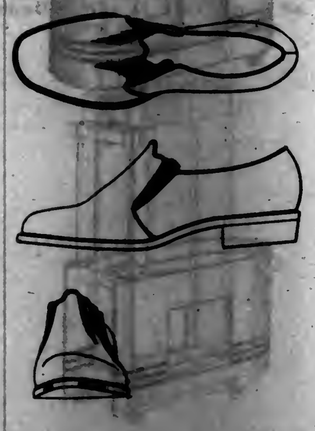


The ornamental design for a strainer, as shown and described.

107,959
DESIGN FOR A COMBINED HOSE TOWER AND CABINET FOR AUTOMOBILE SERVICE STATIONS OR THE LIKE
Willis A. Kropp, Oak Park, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 5, 1937, Serial No. 68,563
Term of patent 3½ years

The ornamental design for a combined hose tower and cabinet for automobile service stations or the like as shown and described.

107,960
DESIGN FOR A COMBINED HOSE TOWER AND CABINET FOR AUTOMOBILE SERVICE STATIONS OR THE LIKE
Willis A. Kropp, Oak Park, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 5, 1937, Serial No. 68,564
Term of patent 3½ years

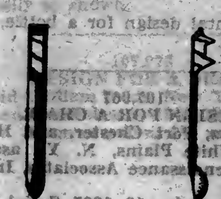


The ornamental design for a combined hose tower and cabinet for automobile service stations or the like as shown and described.

107,961
DESIGN FOR A COMBINED HOSE TOWER AND CABINET FOR AUTOMOBILE SERVICE STATIONS OR THE LIKE
Willis A. Kropp, Oak Park, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 5, 1937, Serial No. 68,565
Term of patent 3½ years

The ornamental design for a combined hose tower and cabinet for automobile service stations or the like as shown.

107,962
DESIGN FOR A SHOE
Josef Lanz, Salzburg, Austria, assignor to The Stetson Shoe Company, Inc., Weymouth, Mass., a corporation of Massachusetts
Application September 25, 1937, Serial No. 71,798
Term of patent 3½ years

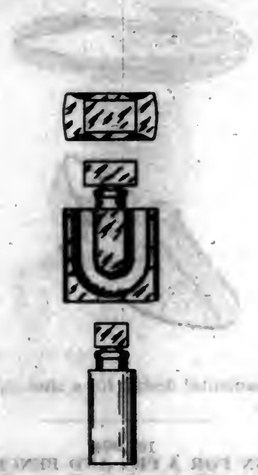


The ornamental design for a shoe, substantially as shown and described.

107,963
DESIGN FOR A SHOE
Arthur H. Lessing, New York, N. Y.
Application December 3, 1937, Serial No. 73,460
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

107,964
DESIGN FOR A PEN AND PENCIL CLIP
Clinton E. Marshall, Bronx, N. Y.
Application November 16, 1937, Serial No. 72,928
Term of patent 7 years



The ornamental design for a pen and pencil clip as shown.

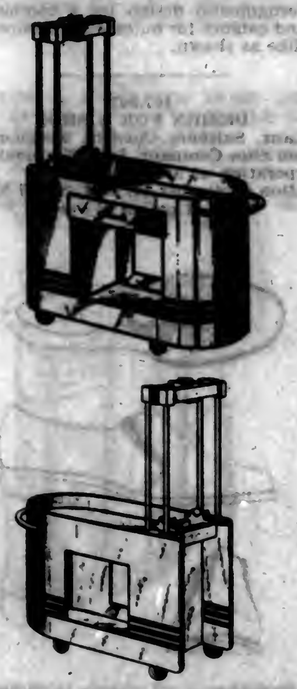
107,965
DESIGN FOR A PEN AND PENCIL CLIP
Clinton E. Marshall, Bronx, N. Y.
Application November 16, 1937, Serial No. 72,929
Term of patent 7 years

The ornamental design for a pen and pencil clip, as shown.

167,966
DESIGN FOR A BOTTLE
Frank McIntosh, New York, N. Y., assignor to Lentheric Incorporated, New York, N. Y., a corporation of New York
Application December 1, 1937, Serial No. 73,287
Term of patent 14 years

The ornamental design for a bottle, substantially as shown.

167,967
DESIGN FOR A CHAIR
Robert Mulwitz, Port Chester, and Herbert G. Jennings, White Plains, N. Y., assignors to American Renaissance Associates, Inc., White Plains, N. Y.
Application November 19, 1937, Serial No. 73,035
Term of patent 14 years



The ornamental design for a chair, as shown.

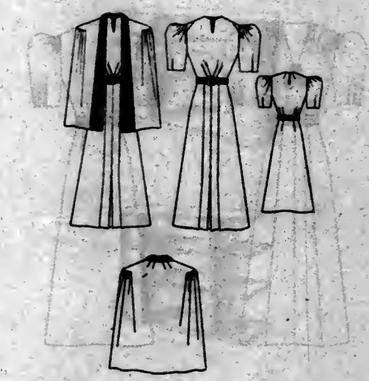
167,968
DESIGN FOR A LABEL
Edmund Opler, Hinsdale, Ill., assignor to Siren Mills Corporation, Chicago, Ill., a corporation of Illinois
Application April 8, 1937, Serial No. 68,628
Term of patent 14 years

The ornamental design for a label, as shown and described.

167,969
DESIGN FOR A WORKSTAND OR THE LIKE
Edward M. Pfanner, Elm Grove, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application May 10, 1937, Serial No. 69,284
Term of patent 7 years

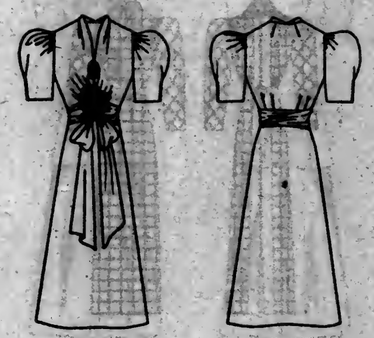
The ornamental design for a workstand or the like, as shown.

167,970
DESIGN FOR A WORKSTAND OR THE LIKE
Edward M. Pfanner, Elm Grove, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application May 10, 1937, Serial No. 69,285
Term of patent 7 years



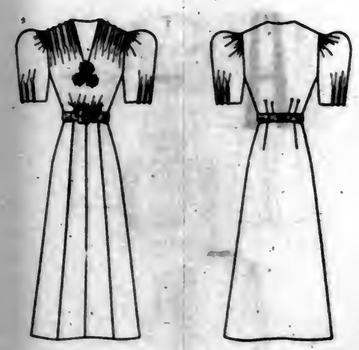
The ornamental design for a workstand or the like, as shown.

167,971
DESIGN FOR A PRESS OR THE LIKE
Edward M. Pfanner, Elm Grove, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application May 10, 1937, Serial No. 69,286
Term of patent 7 years



The ornamental design for a press or the like, as shown.

167,972
DESIGN FOR A DRESS ENSEMBLE
David William Price, New York, N. Y.
Application December 8, 1937, Serial No. 73,455
Term of patent 3½ years



The ornamental design for a dress ensemble, substantially as shown.

167,973
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application December 8, 1937, Serial No. 73,456
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

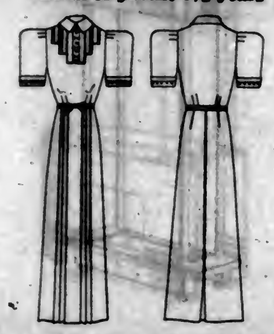
167,974
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application December 9, 1937, Serial No. 73,499
Term of patent 3½ years

The ornamental design for a dress, substantially as shown, and described.

167,975
DESIGN FOR A DRESS
Katheryn Rost, New York, N. Y.
Application December 11, 1937, Serial No. 73,525
Term of patent 3½ years

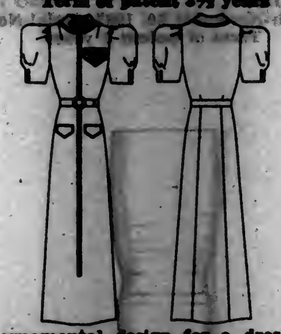
The ornamental design for a dress substantially as shown.

167,976
DESIGN FOR A CAMERA
Walter D. Teague, New York, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 23, 1937, Serial No. 73,132
Term of patent 7 years



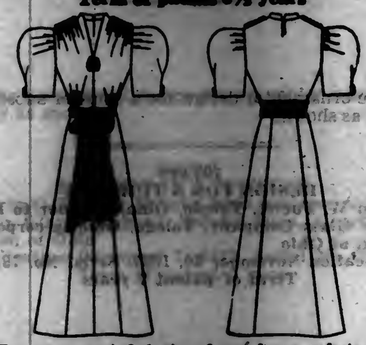
The ornamental design for a camera as shown.

167,977
DESIGN FOR A SHOE SOLE
Nelson E. Tousley, Waban, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application November 13, 1937, Serial No. 72,850
Term of patent 14 years



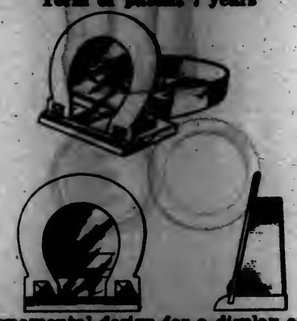
The ornamental design for a shoe sole as shown.

167,978
DESIGN FOR A DRESS
Mildred Wagner, New York, N. Y.
Application December 14, 1937, Serial No. 73,612
Term of patent 3½ years



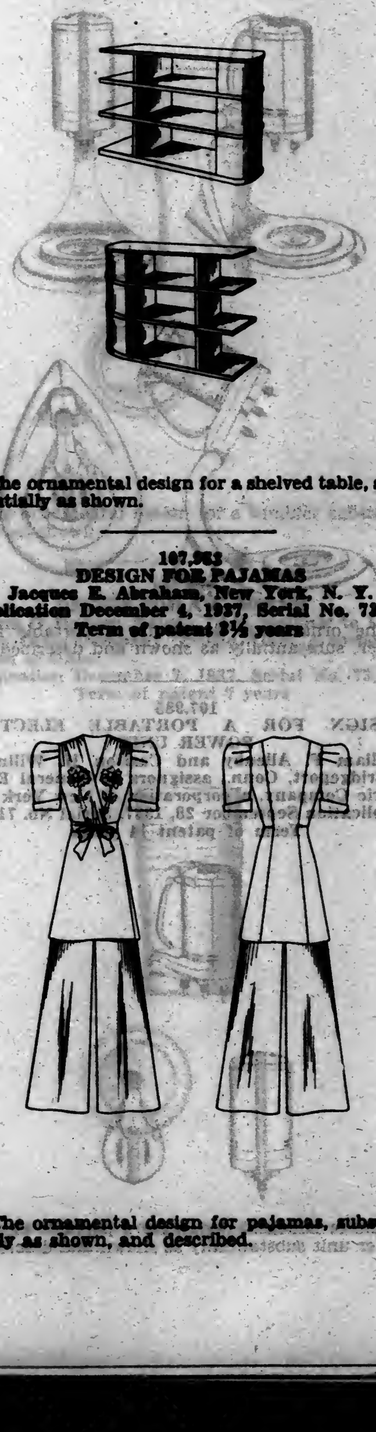
The ornamental design for a dress substantially as shown.

167,979
DESIGN FOR A DRESS
Mildred Wagner, New York, N. Y.
Application December 14, 1937, Serial No. 73,613
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

167,980
DESIGN FOR A DRESS
Samuel Warshaw, New York, N. Y.
Application December 8, 1937, Serial No. 73,453
Term of patent 3½ years

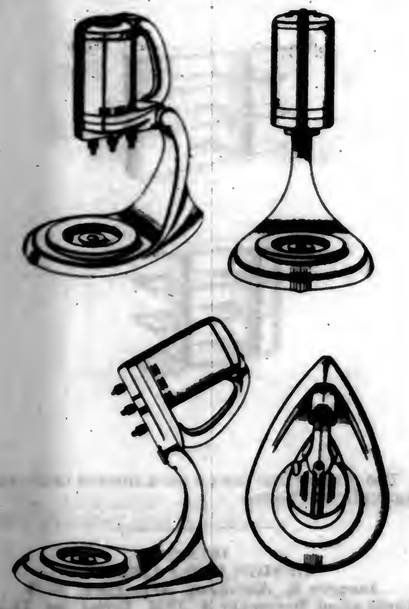


The ornamental design for a dress, substantially as shown.

167,981
DESIGN FOR A DISPLAY CONTAINER FOR WATCHES
Samuel Weissman, New York, N. Y.
Application May 4, 1937, Serial No. 69,146
Term of patent 7 years

The ornamental design for a display container for watches as shown.

167,982
DESIGN FOR A SHELVED TABLE
Lee L. Woodard, Owosso, Mich.
Application November 10, 1937, Serial No. 72,769
Term of patent 3½ years



The ornamental design for a shelved table, substantially as shown.

167,983
DESIGN FOR PAJAMAS
Jacques E. Abraham, New York, N. Y.
Application December 4, 1937, Serial No. 73,250
Term of patent 3½ years

The ornamental design for pajamas, substantially as shown, and described.

107,964
DESIGN FOR A PORTABLE FOOD MIXER
William F. Allenby and Carlton H. Willman, Bridgeport, Conn., assignors to General Electric Company, a corporation of New York
Application September 28, 1937, Serial No. 71,846
Term of patent 14 years

The ornamental design for a portable food mixer, substantially as shown and described.

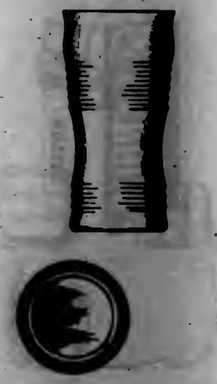
107,965
DESIGN FOR A PORTABLE ELECTRIC POWER UNIT
William F. Allenby and Carlton H. Willman, Bridgeport, Conn., assignors to General Electric Company, a corporation of New York
Application September 28, 1937, Serial No. 71,847
Term of patent 14 years

The ornamental design for a portable electric power unit substantially as shown and described.

107,966
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 30, 1937, Serial No. 73,253
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

107,967
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 30, 1937, Serial No. 73,254
Term of patent 7 years



The ornamental design for a tumbler substantially as shown.

107,968
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,422
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

107,969
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,423
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

107,990
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,424
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

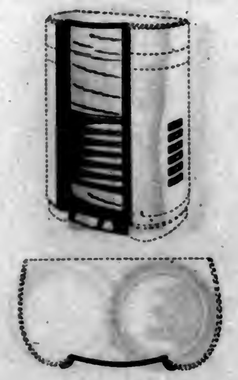
107,991
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,425
Term of patent 7 years

The ornamental design for a tumbler substantially as shown.

167,892
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,426
Term of patent 7 years

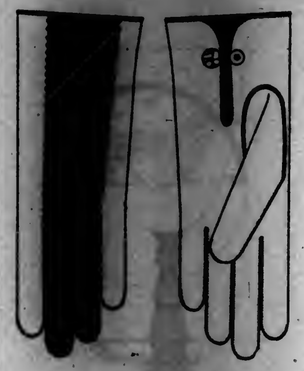
The ornamental design for a tumbler substantially as shown.

167,893
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,427
Term of patent 7 years



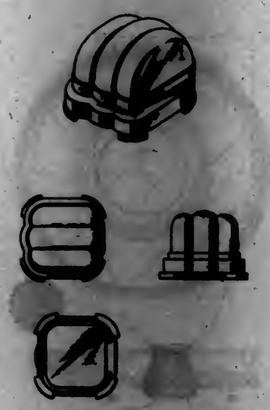
The ornamental design for a tumbler substantially as shown.

167,894
DESIGN FOR A TUMBLER
Melvin O. Hansen, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1937, Serial No. 73,428
Term of patent 7 years



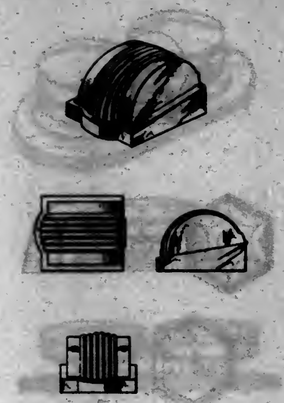
The ornamental design for a tumbler substantially as shown.

167,895
DESIGN FOR A RADIO CABINET
Archie L. Herron, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application February 15, 1937, Serial No. 67,745
Term of patent 7 years



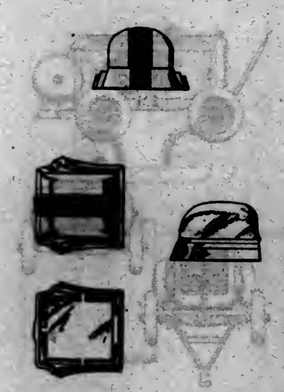
The ornamental design for a radio cabinet, substantially as shown and described.

167,896
DESIGN FOR A GLOVE
Julius A. Bieler, Gloversville, N. Y.
Application December 2, 1937, Serial No. 73,432
Term of patent 3½ years



The ornamental design for a glove, substantially as shown.

167,897
DESIGN FOR A JEWELRY DISPLAY CONTAINER OR SIMILAR ARTICLE
William J. Hiscock, Buffalo, N. Y., assignor to Wellsheim & Sachs, Inc., Buffalo, N. Y., a corporation of New York
Application December 2, 1937, Serial No. 73,314
Term of patent 3½ years

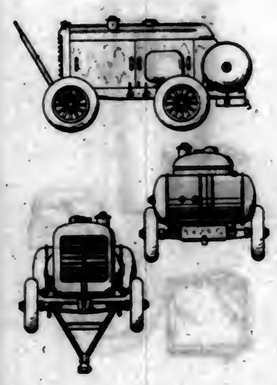


The ornamental design for a jewelry display container or similar article, as shown.

167,898
DESIGN FOR A JEWELRY DISPLAY CONTAINER OR SIMILAR ARTICLE
William J. Hiscock, Buffalo, N. Y., assignor to Wellsheim & Sachs, Inc., Buffalo, N. Y., a corporation of New York
Application December 2, 1937, Serial No. 73,315
Term of patent 3½ years

The ornamental design for a jewelry display container or similar article, as shown.

167,899
DESIGN FOR A JEWELRY DISPLAY CONTAINER OR SIMILAR ARTICLE
William J. Hiscock, Buffalo, N. Y., assignor to Wellsheim & Sachs, Inc., Buffalo, N. Y., a corporation of New York
Application December 2, 1937, Serial No. 73,316
Term of patent 3½ years



The ornamental design for a jewelry display container or similar article as shown.

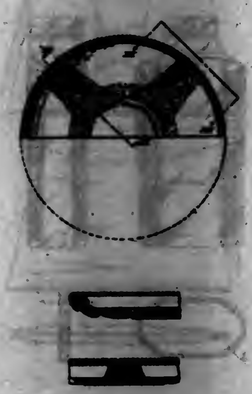
166,890
DESIGN FOR A JEWELRY DISPLAY CONTAINER OR SIMILAR ARTICLE
William J. Hiscock, Buffalo, N. Y., assignor to Wolfshein & Sachs, Inc., Buffalo, N. Y., a corporation of New York
Application December 2, 1937, Serial No. 73,217
Term of patent 3½ years

The ornamental design for a jewelry display container or similar article as shown.

166,891
DESIGN FOR A MOTOR DRIVEN PORTABLE COMPRESSOR
Joseph W. Jones, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application November 17, 1937, Serial No. 72,949
Term of patent 14 years

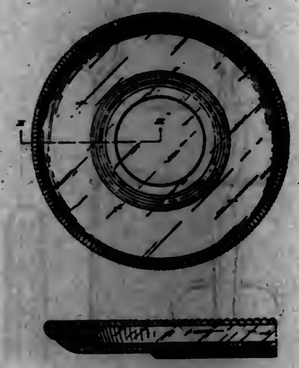
The ornamental design for a motor driven portable compressor, as shown.

166,892
DESIGN FOR A GOBLET OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 2, 1937, Serial No. 73,306
Term of patent 7 years



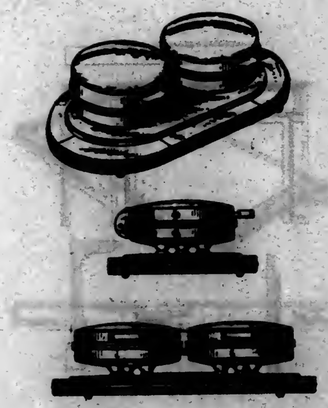
The ornamental design for a goblet or similar article, substantially as shown.

166,893
DESIGN FOR A GOBLET OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 2, 1937, Serial No. 73,307
Term of patent 7 years



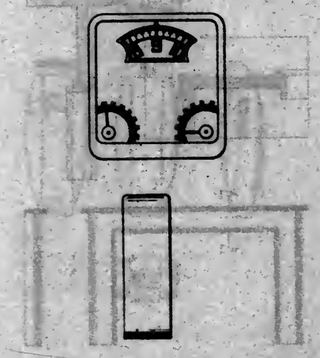
The ornamental design for a goblet or similar article, substantially as shown.

166,894
DESIGN FOR A SALAD PLATE OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 2, 1937, Serial No. 73,310
Term of patent 3½ years



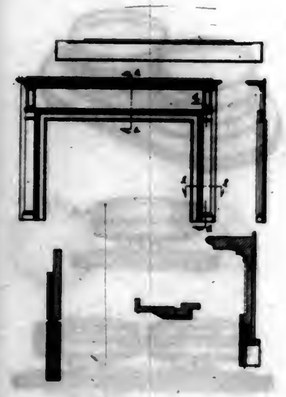
The ornamental design for a salad plate or similar article, substantially as shown and described.

166,895
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa.
Application December 10, 1937, Serial No. 73,516
Term of patent 3½ years



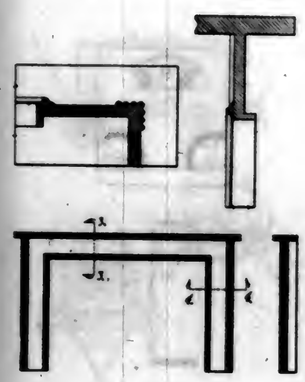
The ornamental design for a plate or similar article, substantially as shown.

166,896
DESIGN FOR A WAFFLE IRON OR THE LIKE
Howard A. Smith, St. Louis, Mo., assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Missouri
Application November 29, 1937, Serial No. 73,243
Term of patent 7 years



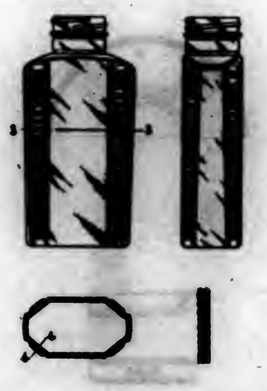
The ornamental design for a waffle iron or the like substantially as shown.

166,897
DESIGN FOR A COMBINATION CLOCK AND WEATHER AND TEMPERATURE INDICATOR
Othneil G. Williams, Winsted, Conn., assignor to William L. Gilbert Clock Corporation, Winsted, Conn., a corporation of Connecticut
Application November 26, 1936, Serial No. 66,944
Term of patent 3½ years



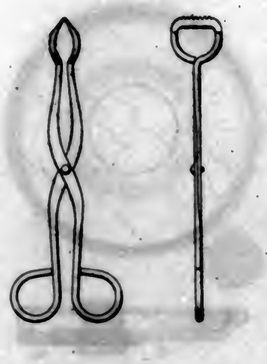
The ornamental design for a combination clock and weather and temperature indicator, as shown and described.

166,008
DESIGN FOR A MANTEL OR SIMILAR ARTICLE
Dwight J. Baum, New York, N. Y., assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application October 18, 1937, Serial No. 72,263
Term of patent 7 years



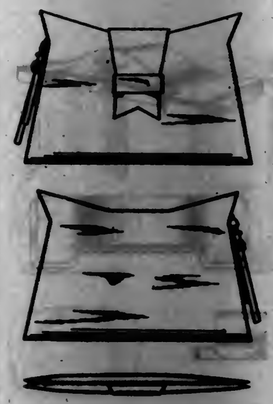
The ornamental design for a mantel or similar article substantially as shown.

166,009
DESIGN FOR A MANTEL OR SIMILAR ARTICLE
Dwight J. Baum, New York, N. Y., assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application October 18, 1937, Serial No. 72,265
Term of patent 7 years



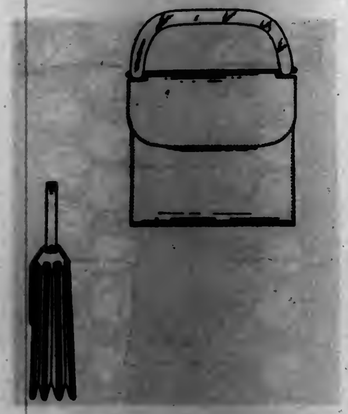
The ornamental design for a mantel or similar article, substantially as shown.

166,010
DESIGN FOR A BOTTLE
Sidney L. Brandeis, Chicago, Ill., assignor to Brockway Glass Company, Inc., Brockway, Pa.
Application November 18, 1937, Serial No. 72,995
Term of patent 7 years



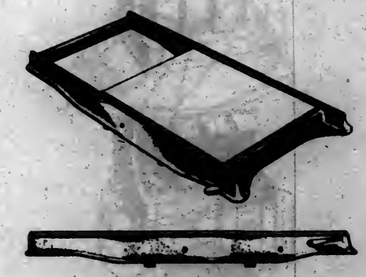
The ornamental design for a bottle, as shown.

166,011
DESIGN FOR A SERVING TONGS
John Clark Brown, New York, N. Y.
Application September 15, 1937, Serial No. 71,641
Term of patent 14 years



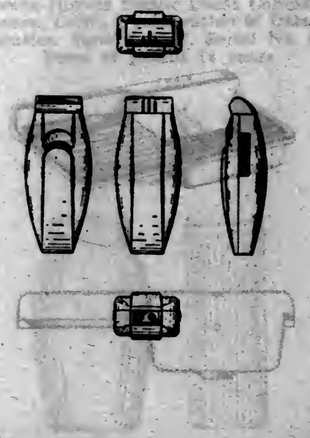
The ornamental design for a serving tongs, as shown.

166,012
DESIGN FOR A HANDBAG
Henri Fuhrmann, Chicago, Ill.
Application November 26, 1937, Serial No. 72,917
Term of patent 3½ years



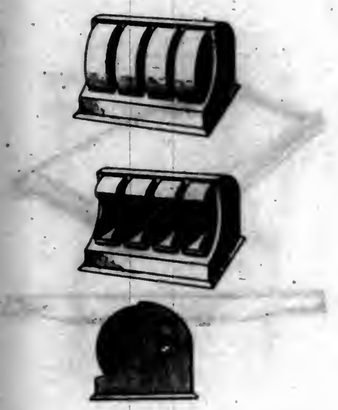
The ornamental design for a handbag, substantially as shown.

166,013
DESIGN FOR A HANDBAG
Henri Fuhrmann, Chicago, Ill.
Application December 8, 1937, Serial No. 73,470
Term of patent 3½ years



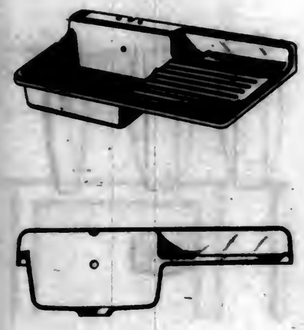
The ornamental design for a handbag, substantially as shown and described.

166,014
DESIGN FOR A PLATEN FRAME FOR TYPEWRITING MACHINES
Jacob N. Hoffman, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application June 18, 1937, Serial No. 69,896
Term of patent 7 years



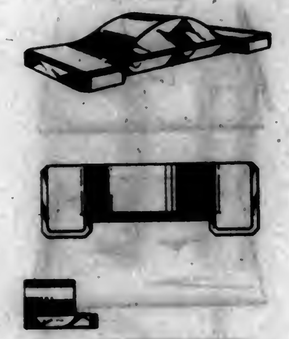
The ornamental design for a platen frame for typewriting machines, as shown.

166,015
DESIGN FOR A DRY SHAVER
Raymond Knapp, Long Island City, N. Y.
Application October 12, 1937, Serial No. 72,275
Term of patent 14 years



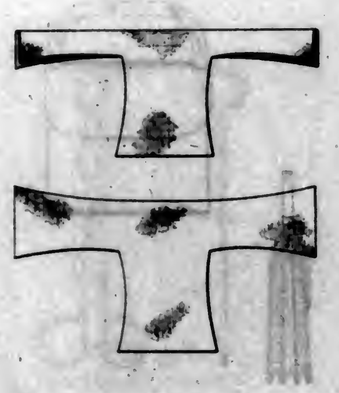
The ornamental design for a dry shaver substantially as shown.

166,016
DESIGN FOR A BOX FOR CIGARETTES, PLAYING CARDS, AND THE LIKE
Harvey Lathrop, Forest Hills, Long Island, N. Y.
Application November 18, 1937, Serial No. 72,966
Term of patent 7 years



The ornamental design for a box for cigarettes, playing cards, and the like, substantially as shown.

166,017
DESIGN FOR A SINK
John R. Morgan, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application November 12, 1937, Serial No. 72,820
Term of patent 7 years



The ornamental design for a sink, as shown.

166,018
DESIGN FOR A TOILET TANK TOP
Charles C. Norris, Riverside, Calif.
Application November 16, 1937, Serial No. 72,744
Term of patent 7 years

The ornamental design for a toilet tank top, as shown.

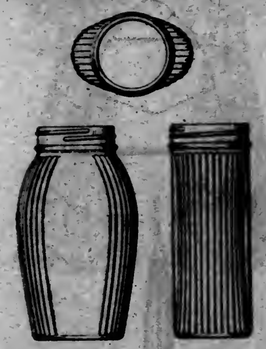
166,019
DESIGN FOR A SCARF
Patricia Quinn O'Hara, New York, N. Y.
Application May 26, 1937, Serial No. 69,585
Term of patent 7 years

The ornamental design for a scarf, as shown and described.

166,020
DESIGN FOR A PACKER JAR
Fred J. Peiler, Hammond, Ind., assignor to Ball Brothers Company, Muncie, Ind., a corporation of Indiana
Application November 20, 1937, Serial No. 72,277
Term of patent 7 years

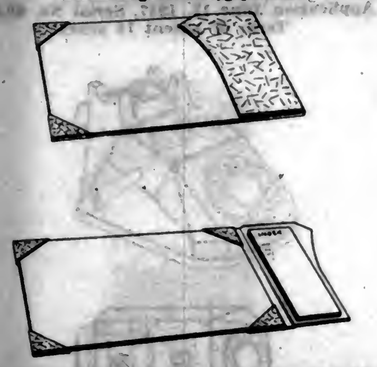
The ornamental design for a packer jar substantially as shown.

166,021
DESIGN FOR A TEXTILE FABRIC
Peter S. Salamanca, New York, N. Y.
Application December 16, 1937, Serial No. 73,648
Term of patent 2½ years



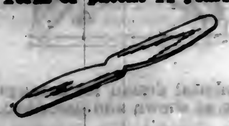
The ornamental design for a textile fabric substantially as shown.

166,022
DESIGN FOR A TELEPHONE HAND-SET-MOUNTING
Hans Sengebusch, Villa Park, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application June 12, 1937, Serial No. 69,515
Term of patent 14 years



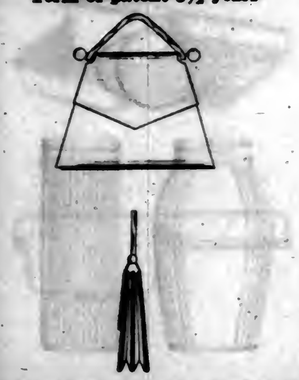
The ornamental design for a telephone hand-set-mounting as shown and described.

166,023
DESIGN FOR A JAR
Norman F. Stoner, San Francisco, Calif., assignor to Owens-Illinois Pacific Coast Company, San Francisco, Calif., a corporation of Delaware
Application June 2, 1937, Serial No. 69,652
Term of patent 14 years



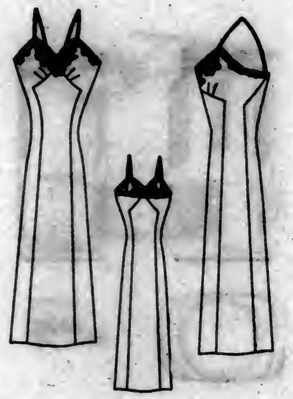
The ornamental design for a jar substantially as shown.

106,624
DESIGN FOR A COMBINATION BLOTTER AND PAD HOLDER FOR DESKS
Gloria Stone, Buffalo, N. Y.
Application June 22, 1936, Serial No. 63,440
Term of patent 3½ years



The ornamental design for a combination blotter and pad holder for desks as shown and described.

106,625
DESIGN FOR A HANDLE STICK
John W. West, Maplewood, N. J., assignor to Joe Lowe Corporation, New York, N. Y., a corporation of Delaware
Application June 10, 1936, Serial No. 63,185
Term of patent 14 years



The ornamental design for a handle stick substantially as shown and described.

106,626
DESIGN FOR A HANDBAG
Henri Feimann, Chicago, Ill.
Application December 3, 1937, Serial No. 73,468
Term of patent 3½ years

The ornamental design for a handbag, substantially as shown and described.

106,627
DESIGN FOR A SLIP
Sol B. Heckman, New York, N. Y.
Application November 27, 1937, Serial No. 73,211
Term of patent 3½ years

The ornamental design for a slip substantially as shown.

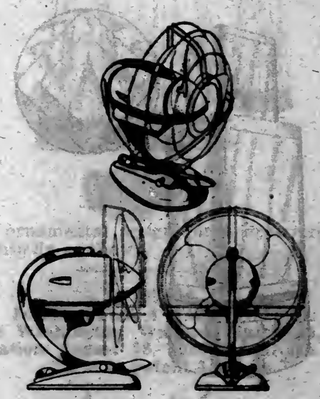
106,628
DESIGN FOR A VEGETABLE MASHER OR SIMILAR ARTICLE
Joseph G. Jacobsen, Oak Park, Ill., assignor to The Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 22, 1937, Serial No. 67,235
Term of patent 14 years

The ornamental design for a vegetable masher or similar article, as shown.

106,629
DESIGN FOR A DRESS
Margaret Michalsen, New York, N. Y.
Application December 9, 1937, Serial No. 73,456
Term of patent 3½ years

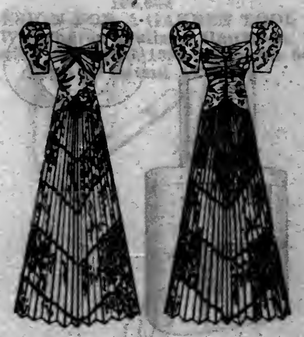
The ornamental design for a dress, substantially as shown, and described.

106,630
DESIGN FOR A DRESS ENSEMBLE
Margaret Michalsen, New York, N. Y.
Application December 17, 1937, Serial No. 73,669
Term of patent 3½ years



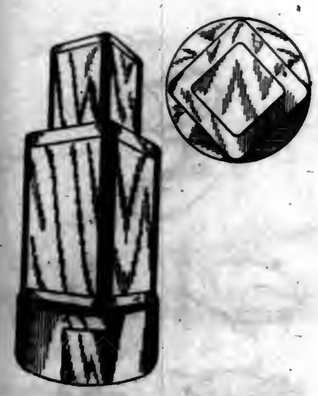
The ornamental design for a dress ensemble, substantially as shown and described.

106,631
DESIGN FOR A COAT
Henry Miller, New York, N. Y.
Application December 31, 1937, Serial No. 74,004
Term of patent 3½ years



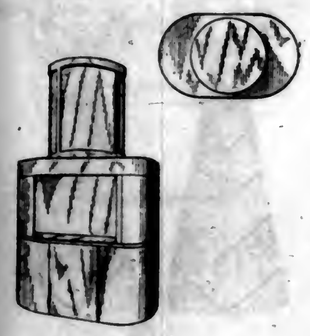
The ornamental design for a coat substantially as shown.

106,632
DESIGN FOR AN ELECTRIC FAN
Malcolm S. Park, Mount Kisco, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 27, 1937, Serial No. 72,497
Term of patent 3½ years



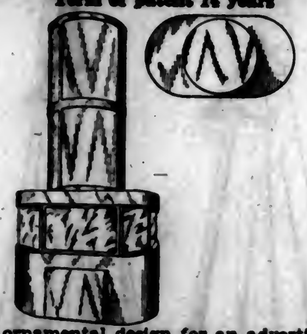
The ornamental design for an electric fan, as shown and described.

106,633
DESIGN FOR A DRESS
Edith Perlman, New York, N. Y.
Application December 27, 1937, Serial No. 73,668
Term of patent 3½ years



The ornamental design for a dress, substantially as shown, and described.

106,034
DESIGN FOR AN ADVERTISING DEVICE OR THE LIKE
Jean O. Reinecke, Chicago, Ill., assignor to Meta Dewes Burgweger, Wilmette, Ill.
Application October 7, 1937, Serial No. 72,040
Term of patent 14 years



The ornamental design for an advertising device or the like, as shown.

106,035
DESIGN FOR AN ADVERTISING DEVICE OR THE LIKE
Jean O. Reinecke, Chicago, Ill., assignor to Meta Dewes Burgweger, Wilmette, Ill.
Application October 7, 1937, Serial No. 72,041
Term of patent 14 years

The ornamental design for an advertising device or the like, as shown.

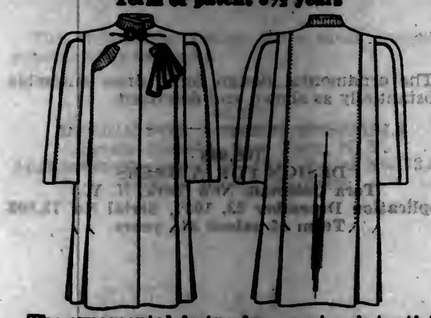
106,036
DESIGN FOR AN ADVERTISING DEVICE OR THE LIKE
Jean O. Reinecke, Chicago, Ill., assignor to Meta Dewes Burgweger, Wilmette, Ill.
Application October 7, 1937, Serial No. 72,042
Term of patent 14 years

The ornamental design for an advertising device or the like, as shown.

106,037
DESIGN FOR A TEXTILE FABRIC
Walter Ross, New York, N. Y.
Application December 22, 1937, Serial No. 73,793
Term of patent 3½ years

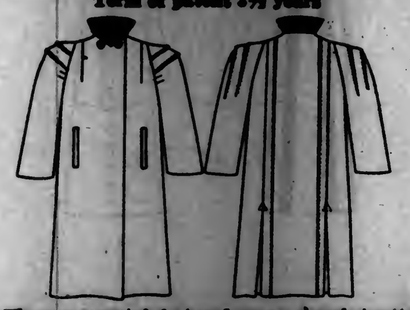
The ornamental design for a textile fabric, substantially as shown and described.

106,038
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 13, 1937, Serial No. 73,574
Term of patent 3½ years



The ornamental design for a coat, substantially as shown and described.

106,039
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 13, 1937, Serial No. 73,576
Term of patent 3½ years

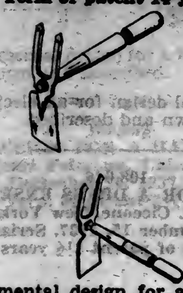


The ornamental design for a coat, substantially as shown and described.

106,040
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 20, 1937, Serial No. 73,734
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

106,041
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 20, 1937, Serial No. 73,735
Term of patent 3½ years



The ornamental design for a coat, substantially as shown.

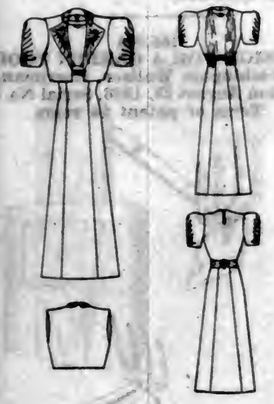
106,042
DESIGN FOR A DRESS ENSEMBLE
William G. Stekman, New York, N. Y.
Application December 13, 1937, Serial No. 73,583
Term of patent 3½ years

The ornamental design for a dress ensemble, substantially as shown.

106,043
DESIGN FOR A GARDEN TOOL
Wayne Washington Wallace, Harriman, Tenn.
Application August 28, 1936, Serial No. 64,624
Term of patent 14 years

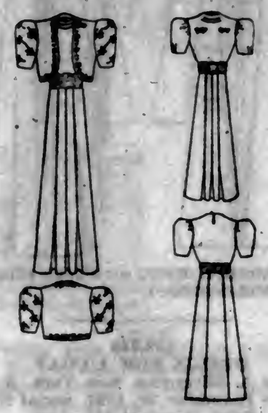
The ornamental design for a garden tool, as shown, and described.

106,044
DESIGN FOR A GARDEN TOOL
Wayne Washington Wallace, Harriman, Tenn.
Application August 28, 1936, Serial No. 64,625
Term of patent 14 years



The ornamental design for a garden tool, as shown, and described.

108,645
DESIGN FOR AN ELECTRIC WELDING APPARATUS
James W. Wilkinson, deceased, late of Kansas City, Kans., by Gladys M. Wilkinson, executrix, Johnson, Kans.
Application May 10, 1937, Serial No. 69,276
Term of patent 7 years

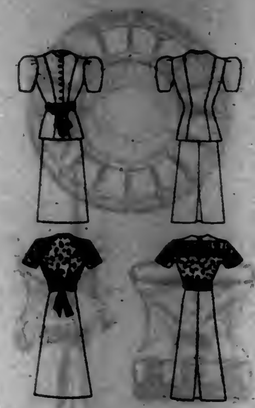


The ornamental design for an electric welding apparatus as shown and described.

108,646
DESIGN FOR A DRESS ENSEMBLE
Elizabeth M. Cisceno, New York, N. Y.
Application December 15, 1937, Serial No. 73,628
Term of patent 3½ years

The ornamental design for a dress ensemble substantially as shown.

108,647
DESIGN FOR A DRESS ENSEMBLE
Elizabeth M. Cisceno, New York, N. Y.
Application December 15, 1937, Serial No. 73,629
Term of patent 3½ years

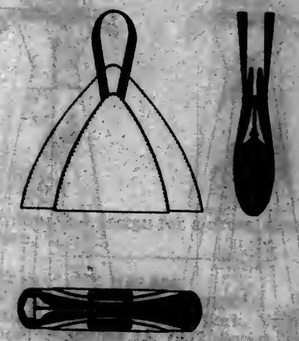


The ornamental design for a dress ensemble substantially as shown and described.

108,648
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application December 22, 1937, Serial No. 73,868
Term of patent 3½ years

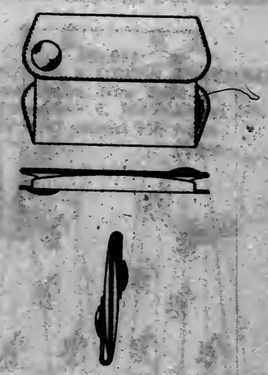
The ornamental design for a dress substantially as shown.

108,649
DESIGN FOR A DRESS ENSEMBLE
Tera Coleman, New York, N. Y.
Application December 22, 1937, Serial No. 73,869
Term of patent 3½ years



The ornamental design for a dress ensemble substantially as shown.

108,650
DESIGN FOR A DRESS ENSEMBLE
Sylvia Connell, New York, N. Y.
Application December 22, 1937, Serial No. 73,824
Term of patent 3½ years

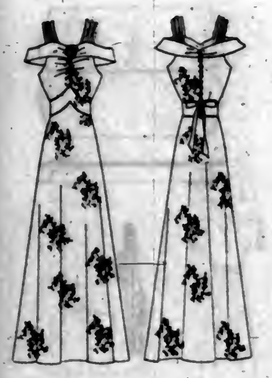


The ornamental design for a dress ensemble, substantially as shown, and described.

108,651
DESIGN FOR A HANDBAG
Henri Fuisseau, Chicago, Ill.
Application December 20, 1937, Serial No. 73,722
Term of patent 3½ years

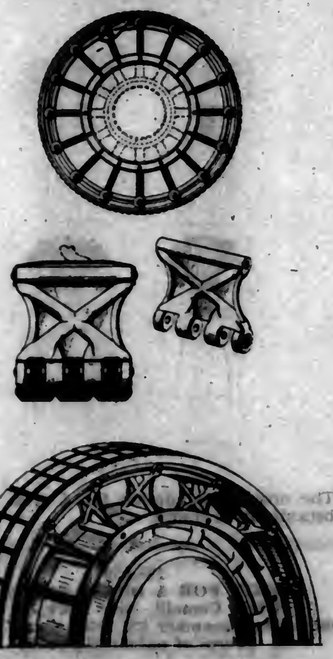
The ornamental design for a handbag, substantially as shown and described.

108,652
DESIGN FOR A HANDBAG
Henri Fuisseau, Chicago, Ill.
Application December 20, 1937, Serial No. 73,723
Term of patent 3½ years



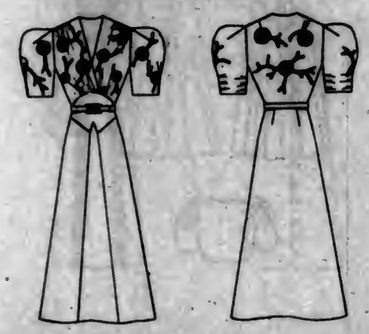
The ornamental design for a handbag, substantially as shown and described.

102,953
DESIGN FOR A DRESS
Ida Lampel, New York, N. Y.
Application December 20, 1937, Serial No. 73,730
Term of patent 3½ years



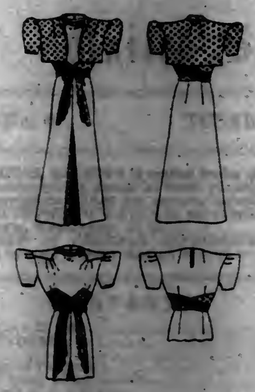
The ornamental design for a dress, substantially as shown and described.

102,954
DESIGN FOR A DRESS
Abraham Magenis, New York, N. Y.
Application December 23, 1937, Serial No. 73,813
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

102,955
DESIGN FOR A COMBINED WHEEL AND TIRE
James V. Martin, Hempstead, N. Y.
Application April 12, 1936, Serial No. 62,193
In Canada January 22, 1936
Term of patent 14 years

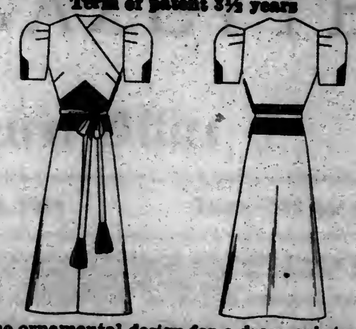


The ornamental design for a combined wheel and tire, as shown and described.

102,956
DESIGN FOR A DRESS
Sidney J. Foster, New York, N. Y.
Application December 4, 1937, Serial No. 73,454
Term of patent 3½ years

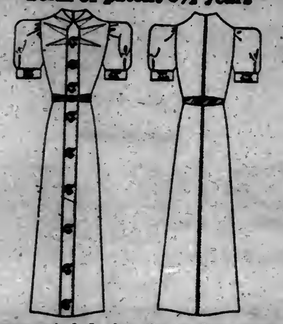
The ornamental design for a dress, substantially as shown, and described.

102,957
DESIGN FOR AN ENSEMBLE DRESS
Nathan Rolfe, New York, N. Y.
Application December 23, 1937, Serial No. 73,830
Term of patent 3½ years



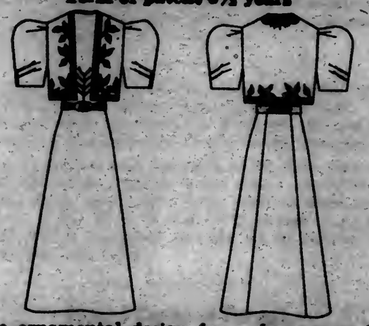
The ornamental design for an ensemble dress, substantially as shown.

102,958
DESIGN FOR A DRESS
Benjamin Shapiro, Brooklyn, N. Y.
Application December 15, 1937, Serial No. 73,624
Term of patent 3½ years



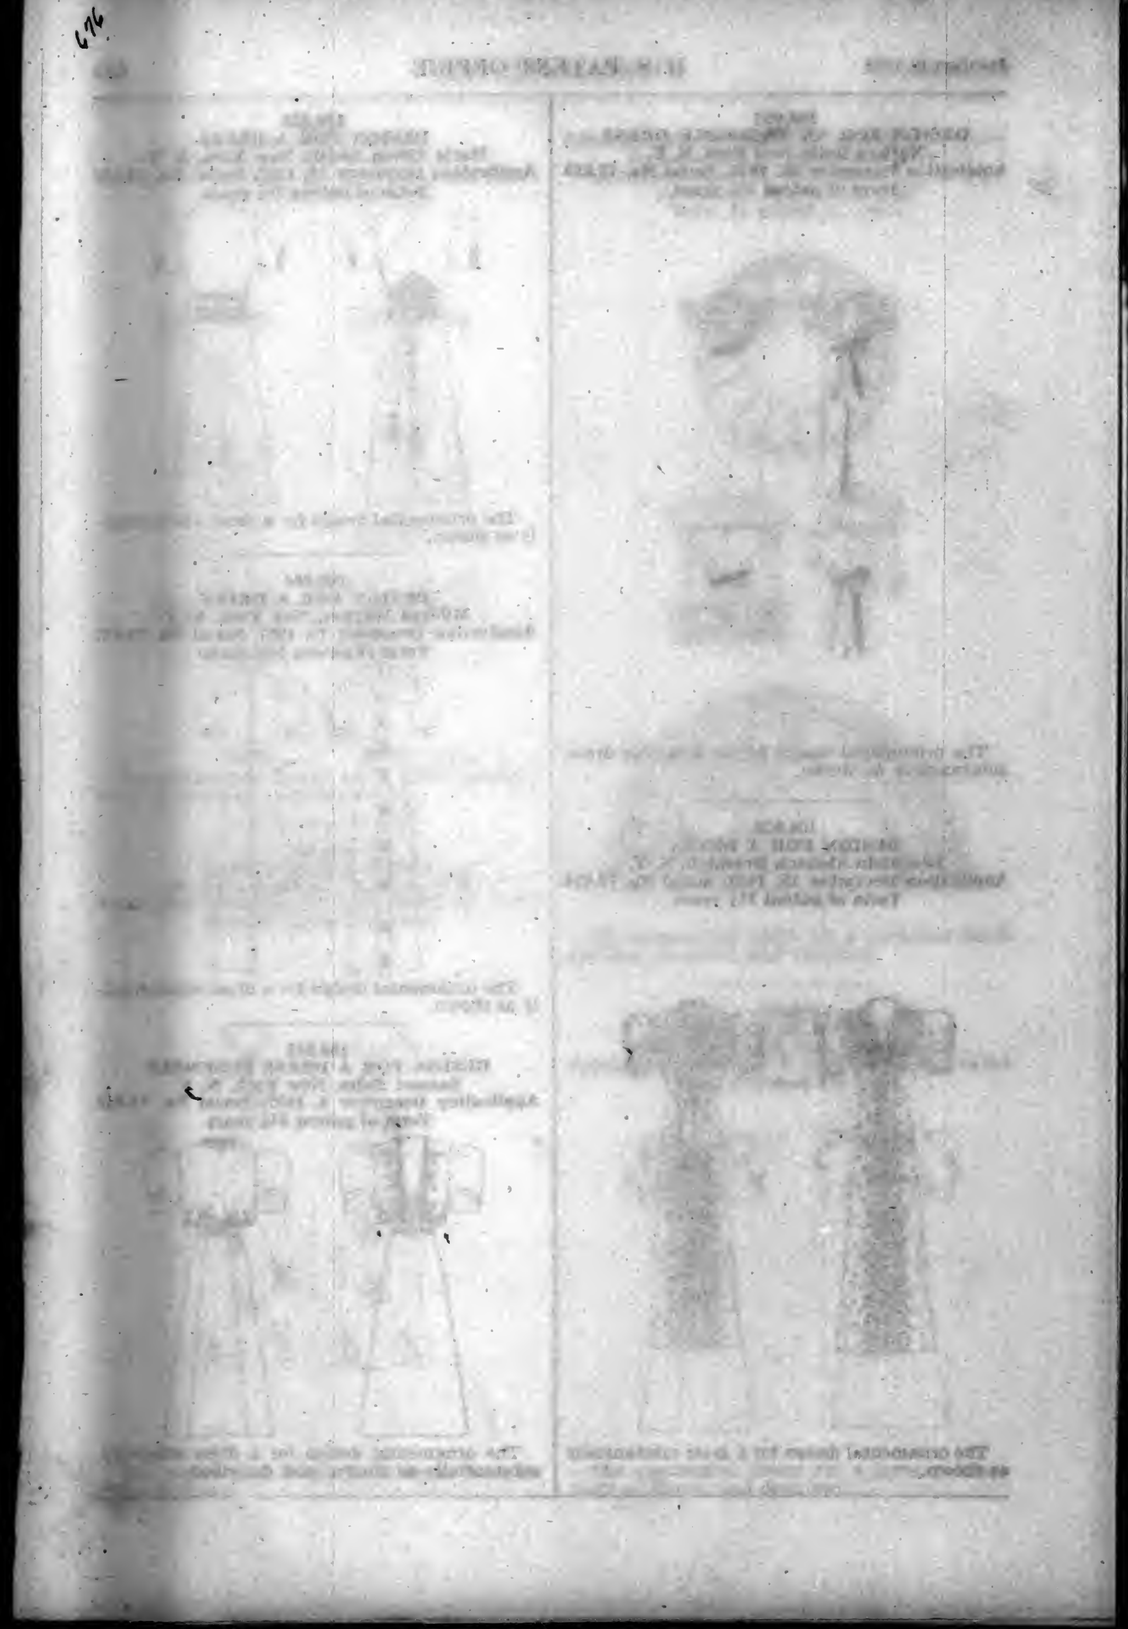
The ornamental design for a dress substantially as shown.

102,959
DESIGN FOR A DRESS
Marie Eileen Smith, New York, N. Y.
Application December 20, 1937, Serial No. 73,728
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

102,960
DESIGN FOR A DRESS
Mildred Wagner, New York, N. Y.
Application December 15, 1937, Serial No. 73,627
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

102,961
DESIGN FOR A DRESS ENSEMBLE
Samuel Zahn, New York, N. Y.
Application December 4, 1937, Serial No. 73,245
Term of patent 3½ years

The ornamental design for a dress ensemble, substantially as shown, and described.

Patents Nos. 2,106,154 to 2,106,697

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 486—No. 4 TUESDAY, JANUARY 25, 1938 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $54.40 per annum, including annual index, $16.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(D. C. N. J.) Hayduck patent, No. 1,449,103, for process for the manufacture of compressed yeast, *Held* valid and infringed. *Standard Brands* v. *National Grain Yeast Corporation*, 21 F. Supp. 46.

(D. C. N. J.) Hayduck patent, No. 1,449,105, for low-alcohol yeast process, *Held* invalid. *Id.*

(D. C. N. J.) Hayduck patent, No. 1,449,106, for low-alcohol yeast process, *Held* invalid. *Id.*

(D. C. N. J.) Hayduck patent, No. 1,449,109, for low-alcohol yeast process, *Held* invalid. *Id.*

(D. C. Pa.) Cappon patent, No. 1,475,932, for ink eradicator, claims 1, 2, 4, 5, and 9 *Held* valid and infringed. Claim 8 *Held* invalid. *Cardinell Corporation* v. *Scriptos Ink & Paste Co.*, 21 F. Supp. 60.

(C. C. A. Ind.) Gillian patent, No. 1,620,643, for glove, *Held* not infringed. *Gillian* v. *Glove Corporation*, 92 F.(2d) 656.

(D. C. N. J.) Corby and Bührig patent, No. 1,673,735, for process for the manufacture of yeast, *Held* invalid. *Standard Brands* v. *National Grain Yeast Corporation*, 21 F. Supp. 46.

(C. C. A. Ill.) Lewin patent, No. 1,777,120, for conduit coupling, claim 6 *Held* valid and infringed. *Pyle Nat. Co.* v. *Lewin*, 92 F.(2d) 628.

(C. C. A. Ill.) Lewin patent, No. 1,800,539, for conduit coupling, claims 2, 3, 8, 9, 10, and 11 *Held* valid and infringed. *Id.*

(C. C. A. Ind.) Gillian patent, No. 1,807,402, for glove, claims 1 and 2 *Held* invalid. *Gillian* v. *Glove Corporation*, 92 F.(2d) 655.

Disclaimers

1,907,328.—*Alexander A. MacOubbin*, Montclair, and *Joseph Zavertnik, Jr.*, Harrington Park, N. J. DISTILLATION OF PETROLEUM OILS. Patent dated May 2, 1933. Disclaimer filed December 29, 1937, by the assignee, *Warren W. Grimes*.

Hereby enters his disclaimer to claim 5 of said Letters Patent.

1,919,292.—*John Field*, Fairfield, Conn. ELASTIC GARMENT. Patent dated July 25, 1933. Disclaimer filed December 27, 1937, by the assignee, *United States Rubber Products, Inc.*; *The Warner Brothers Company*, former assignee, consenting.

Hereby disclaims claim 9 of said patent, and also disclaims from the scope of claims 1, 3, 6, 7, and 8, a garment wherein the material positioned at the rear of the wearer and extending over the posterior portions is formed of a knitted elastic fabric employing knitted elastic yarn in its construction and having laid-in elastic yarn extending along some of the knitted courses.

2,097,173.—*Arthur J. Beasley*, Shaker Heights, Ohio. Closure means. Patent dated October 26, 1937. Disclaimer filed December 31, 1937, by the assignee, *National Malleable and Steel Castings Company*.

Hereby disclaims from the claim of the above identified Letters Patent any closure means except one which is bendable along intersecting axes, such as those designated A—A and B—B in line 36 of column 2, page 1, of said patent, extending through spaces between the "projections" and "ribs".

Printed Copies of Patents

A printed copy of the complete specification and drawings of any patent published herein can be obtained for ten cents.

Condition of Applications Under Examination at Close of Business January 8, 1938

(Total number of applications awaiting action, excluding Trade-Mark Division, 43,827; Trade-Mark Division, 1,805. Oldest new case, July 6, 1937; oldest amended, June 21, 1937.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE TAYLOR AND LOUNSBURY

No. 3,859. Decided December 28, 1937

(88 F.(2d) 705)

PATENTABILITY—PROCESS OF REFINING PETROLEUM.

Claims for a process of refining petroleum *held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Cornelius M. Stillmore for Taylor and Lounsbury.

Mr. E. F. Whitehead and *Mr. Howard E. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming a decision of the Examiner denying the patentability of 11 claims, numbered 36 to 46, inclusive, of an application for patent for a process of oil refining. Claims 36 to 38, inclusive, are generic claims. The Examiner classes claims 40 to 42, inclusive, as being

"sub-generic to claims 36 to 39 and generic to species of converting the sulphur compounds into sulphur compounds having higher boiling point."

Claims 43 to 46, inclusive, are drawn to the species of treating with sulphuric acid. Five claims, numbered 47 to 51, inclusive, are not directly involved in this appeal, they being held by the tribunals of the Patent Office to be

"directed to other species which it is believed would become patentably allowable, if generic claims 36-39 are decided to be allowable."

We quote claims 36, 40, and 45:

36. A process for refining a sulfur-containing petroleum distillate of gasoline boiling range, comprising: sharply fractionating said distillate into a plurality of not substantially overlapping gasoline fractions, at least one of which fractions contains sulfur compounds, separately chemically treating said fraction containing sulfur compounds to convert sulfur compounds into sulfur compounds boiling within the boiling temperature range of one other of said gasoline fractions, separately redistilling said treated fraction to recover the major portion of said treated fraction and eliminate converted sulfur compounds, and blending the redistilled desulfurized portion with another of said gasoline fractions of the distillate having a boiling temperature range including the boiling temperatures of some of the eliminated sulfur compounds.

40. A process for refining a sulfur-containing petroleum distillate of gasoline boiling range, comprising: sharply fractionating said distillate into a plurality of not substantially overlapping gasoline fractions at least one low boiling fraction of which contains sulfur compounds, separately chemically treating said low boiling gasoline fraction to convert sulfur compounds into compounds having boiling temperatures which fall within the boiling temperature range of a higher boiling gasoline fraction of said distillate, separately redistilling the treated fraction in a manner to recover the major portion of said treated fraction and eliminate converted sulfur compounds, and blending the recovered desulfurized portion with at least one other of said gasoline fractions of the distillate having a boiling temperature range including the boiling temperatures of some of the eliminated sulfur compounds.

45. A process for refining a sulfur-containing petroleum distillate of gasoline boiling range, comprising: sharply fractionating said distillate into a plurality not substantially overlapping gasoline fractions, more than one of which contains sulfur compounds, separately treating at least two of said sulfur-containing gasoline fractions with sulfuric acid so as to cause a change in the constitution of the sulfur compounds accompanied by a rise in the boiling temperature of said sulfur compounds, the boiling temperatures of said converted sulfur compounds being beyond the original boiling temperature ranges of the major portions of the respective treated fractions and within the boiling temperature range of another of said gasoline fractions, separately redistilling said treated fractions to recover the major portions thereof having substantially the same boiling temperature ranges as those of the original fractions and to eliminate converted sulfur compounds, and blending the redistilled portions.

The Examiner rejected the claims at issue upon prior art and also "as being drawn to an old and exhausted combination." The latter ground was not referred to in the decision of the Board. The prior art references cited are: Robinson, 910,534, January 26, 1909; Coast, 1,400,860, December 20, 1921; Howard et al., 1,797,145, March 17, 1931; Merrell, 1,827,537, October 13, 1931; Wagner, 1,873,738, August 23, 1932.

All the claims are method claims and no drawing accompanies the application. The steps comprehended in the process, in the combination of which steps the invention is claimed to reside, are four in number. These we give (supplying the numerals) in the language of the concluding portion of the specification:

[1] producing a number of fractions by distillation, [2] treating some or all fractions to change the volatility of sulfur-bearing components by any of known methods, [3] separating said components from the low-sulfur-containing portions by distillation and [4] thereafter combining the remaining desulfurized portions to produce finished material of low sulfur content.

The brief on behalf of appellants, after a general statement relative to process of distilling petroleum to obtain gasoline, says:

Appellants' invention is particularly concerned with a method for eliminating sulfur-bearing substances which could not be removed by these old methods of treatment. [Italics quoted.]

There was no oral argument before us on behalf of appellants, but an elaborate brief was filed originally, and, by permission of the court, a brief in reply to that of the Solicitor for the Patent Office also was filed.

These briefs we have examined with care, and it must be stated that in neither of them does there appear to be specific and definite answers to the adverse findings of the Examiner; approved in all respects, although without detailed discussion as to all of them, by the Board.

It is well settled, of course, that this court will not reverse concurring decisions of the tribunals of the Patent Office unless we are convinced that such decisions are manifestly erroneous, and the burden rests upon the party appealing to point out and convince us of the error, or errors, alleged.

The Examiner gives detailed statements of the features of the prior art deemed by him to be pertinent to the issue, saying, inter alia:

* * * Merrell teaches the process of separating a distillate of the gasoline range into two or more fractions, treating each fraction separately, and then blending the treated fractions. Attention is particularly directed to lines 17 to 64 and lines 95 to 97, page 2 of Merrell. It is to be noted that Merrell mentions the advisability of redistillation of the chemically treated fractions where thought necessary before blending said fractions. The applicability of Merrell to the instant case is apparent. It is conceded that Merrell does not specifically describe the chemical treatment of each fraction in order to convert the sulphur compounds into such compounds which would fall within the boiling range of another

fraction. Nevertheless, Morrell does teach the desirability of redistillation, and since the main object of the Morrell process is desulphurisation it would be obvious that the distillation would be carried out in such a way as to obtain the greatest possible removal of the objectionable sulphur compounds. Distillation for the purpose of more efficient separation of desirable from undesirable components of a fraction simply falls within the domain of any oil refining engineer.

Wagner separates a distillate into three fractions within the motor fuel range and treats at least two of the fractions separately. Wagner teaches the redistillation of the separated fractions as noted on page 2, lines 53 to 56, and the blending feature on page 2, lines 90 to 103.

Robinson 910,584 discloses treating oil from cracked products in separate fractions followed by rerunning before blending to obtain a kerosene product of a very low sulphur content. See page 6, lines 23 to 47 and lines 118 to 122 of Robinson.

Coast discloses the separation of a distillate into two fractions wherein the heavier fraction is treated with sulphuric acid, redistilled and then blended with the untreated lighter fraction.

The Board did not, in its first decision, enter into details of the prior art but devoted its discussion largely to a diagram containing two figures which appellants seem to have presented to that tribunal in a brief to illustrate their views of the distinction between their procedure and that of the prior art. This diagram is repeated in the brief before us, it is stated,

"For the purpose of aiding the Honorable Court in understanding the decision of the Board of Appeals * * *."

The brief further states that "this figure will not be relied upon in the present appeal * * *."

Since appellants do not here rely upon that diagram, it is our assumption that they accepted as correct the Board's analysis thereof and answer thereto. Appellants, however, include in their brief before us another diagram consisting of three figures intended to illustrate their argument relative to distillate boiling between certain temperatures, distillation curves, fractionating into a plurality of narrower not substantially overlapping fractions, treating one or more of the fractions chemically, separately redistilling the treated fractions, and, finally, the blending process.

As to claim 45, supra, appellants petitioned the Board for rehearing, pointing out certain limitations which it was claimed clearly distinguished it from the prior art. In denying this petition the Board wrote a second opinion in which appear a number of quotations from the Morrell specification, some of which seem to us to be pertinent not only to the limitations in claim 45, but generally to all the claims.

It is conceded in the brief on behalf of appellants that the specific steps of their process are "individually old," but the insistence is that the claims "are drawn to novel combination steps which mutually co-act to achieve improved results," that is, as we deduce from the statement of the brief, quoted, supra, the result of "eliminating sulfur-bearing substances which could not be removed by * * * old methods of treatment."

The difficulty which we have in respect to this contention is that of finding just where or how the appellants have combined the admittedly old steps in any novel manner which required the exercise of invention. The brief for appellants emphasizes the fact that it was conceded by the Examiner that

"Morrell does not specifically describe the chemical treatment of each fraction in order to convert the sulphur compounds into such compounds which would fall within the boiling range of another fraction."

Also, the brief asserts:

* * * *Appellants' process is a further improvement on Morrell's* in so far as the drastic treatment of the heavier fraction *A* of Morrell can be improved by applying appellants' method, that is by subdividing this fraction by distillation into two or more cuts, acid treating each cut separately to convert sulfur compounds, separately redistilling each treated cut, and combining desulfurized distillates with the alkali treated fraction *B* of Morrell. The sulfur reduction by this method would be still greater than by Morrell's method. [Italics quoted.]

While it is true that the Examiner made the concession, recited supra, it is also true that the chemical treatment of fractions derived from distillation and their redistillation after treatment is admittedly old.

Morrell teaches the treatment of a "condensed fraction" by sulphuric acid, caustic soda, and plumbite, and "if necessary, a redistillation." The Morrell specification further states:

* * * I have found that these objectionable amounts of sulphur compounds can be more readily removed from the distillate if the distillate is divided into fractions. The reason for this is that the *separated fractions* permit of more intimate contact between the oil and the *desulphurizing agent*. While the reactive types of sulphur compounds may be of the same general series in the several fractions, the *separation* of these fractions permits more *selective* action between the *desulphurizing agent* and the *reactive sulphur compounds*. [Italics ours.]

The foregoing certainly seems to us to justify the holding that Morrell teaches the chemical treatment of all fractions when necessary to desulphurize. Also, he teaches the following:

After the various fractions have been independently subjected to the necessary refining and desulphurizing treatment, they are recombined and the recombined product is ready for use as a motor fuel.

So, it seems to us clear that Morrell teaches the four general steps of (*a*) fractionating by distillation, (*b*) chemical treatment of all fractions which require treatment, (*c*) redistillation after treatment, if necessary, and (*d*) blending the refined fractions.

It is urged on behalf of appellants that the only redistillation taught by Morrell is that of redistilling the highest boiling fraction, but it is conceded that in his specification Morrell states that some of another fraction may be subjected to a "*light* refining or a *light* desulfurizing action and redistillation" (italics quoted), and it is then argued that such light treatments do not mean the "drastic" treatments of the separate fractions which appellants require.

We find nothing in appellants' claims which specifically names "drastic" treatment. It is supposed that we are asked to infer that "drastic" treatment is necessary in order to convert sulfur compounds into compounds boiling within the boiling range of "one other of the fractions." We do not feel at liberty to draw such an inference but, even if drawn, we are not convinced that Morrell's process fails to comprehend such treatment. Morrell's objective was the same as that of appellants—desulphurization, and we regard as quite pertinent the observation of the Examiner to the effect that it would be obvious to carry out the Morrell process in such a way as to obtain, as nearly as possible, the desired result.

It is noted that in appellants' specification, after describing the treatments declared to be requisite for desulphurizing the fractions, it is said:

It is not always necessary, however, to treat all fractions of the distillate by one of these methods, as some of them, especially those occurring at the lower boiling range, sometimes do not contain a sufficiently high percentage of sulfur to require any other treatment, than a soda or water-wash. In some cases certain fractions may be sweetened by doctor treatment and may not require redistillation. The most effective and/or economical combination of the various treatments can be best ascertained by preliminary tests on a small scale; the method and conditions selected are then reproduced in the plant operation.

No reason is suggested why tests "on a small scale" may not be made in applying the Morrell process, as well as in applying the process of appellants.

It is pointed out in the second decision of the Board that Morrell's specification states:

* * * It is obvious of course, that any number of cuts or fractions may be made in the fractionating tower, and that the fractions or cuts may be taken off separately at varying heights in the fractionating tower, and subjected to only that amount of refining action which will produce the most efficient results. * * *.

In view of all the foregoing, we are unable to agree to the correctness of the contention of counsel for appellants that "Actually, Morrell has stopped where appellants have only begun," but, it may be remarked that, even were this conceded, the question would still remain whether the combination of steps on the part of appellants alleged to be different involves invention, or is merely a matter of mechanical skill.

We have found some difficulty in determining the precise limitations embraced in claim 45, supra, upon which appellants rely to differentiate it in principle, or in any patentable sense, from the other rejected claims.

The brief says:

Claim 45 calls for (*a*) distilling a gasoline distillate into a plurality of sulfur bearing fractions, (*b*) separately treating at least two sulfur bearing fractions to produce sulfur compounds boiling beyond the ranges of the original fractions but within gasoline range (*c*) separately redistilling the treated fractions and (*d*) blending the redistilled fractions.

Taking the argument in the brief and considering also the statements in the petition for rehearing filed with the Board, it is our conclusion that limitation (*b*), supra

"separately treating at least two sulfur bearing fractions to produce sulfur compounds boiling beyond the ranges of the original fractions but within gasoline range"

comprises the subject matter upon which the contention is principally based.

We are of the opinion that the teachings of the Morrell patent, already quoted supra, while not specifically stating a treatment of two separate fractions, are comprehensive enough to include the treatment of two, or even more. That the use of sulfuric acid is taught by the prior art already has been pointed out, and we are unable to discern wherein appellants teach its use in any new way.

We do not feel under the necessity of analyzing or discussing any other of the references cited, since it seems clear to us that whatever appellants do which differs from Morrell's teachings does not constitute invention. For the same reason, we do not regard it necessary to give especial attention to appellants' claimed result. They claim to have accomplished a higher degree of desulphurisation than was accomplished by the prior art. This may be true, although we have no particular evidence of it in the record, but that would not of itself render their process patentable.

We find no error in the holdings below and the decision of the Board of Appeals is affirmed.

Affirmed.

GRAHAM, *P. J.*, sat during the argument of this case, but died before the opinion was prepared.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,031,864, H. Pauling, Method of concentrating aqueous solutions of nitric acid; 1,292,948, F. C. Zelsberg, Process of concentrating nitric acid and apparatus for use in connection therewith, D. C. N. J., Doc. E 2562, *Southern Electro-Chemical Co. v. E. I. du Pont de Nemours Co.* Dismissed Sept. 27, 1937.

Des. 102,487, E. E. Mendelsohn, Hosiery, filed Sept. 3, 1937, D. C. N. J., Doc. E 5813, *Rocello Hosiery Mills v. Saks & Co., Inc.*

Des. 105,454, G. Spitzer, Textile fabric, D. C., S. D. N. Y., Doc. E 86/256, *Maison France, Inc., v. Schaefer & Tiger, Inc.* Consent decree for plaintiff (notice Dec. 9, 1937).

Des. 106,491, F. M. Neufeld, Dress, filed Dec. 14, 1937, D. C., S. D. N. Y., Doc. E 86/142, *Neufeld Furst & Co., Inc., v. Arher Dresses, Inc.*

Des. 106,640, S. T. Shore, Dress, filed Dec. 16, 1937, D. C., S. D. N. Y., Doc. E 86/163, *Kellman & Morris, Inc., v. Bon Kay Dance Frocks, Inc.*

Des. 107,050, P. Fracchia, Dress, filed Nov. 24, 1937, D. C., S. D. N. Y., Doc. E 86/84, *Rosenthal & Kalmon Co., Inc., v. Trousel Dress Co., Inc.*

Des. 107,159, E. Fried, Dress, filed Dec. 13, 1937, D. C., S. D. N. Y., Doc. E 86/141, *Columbia Dance Frocks, Inc., v. Cafe Dance Frocks, Inc.*

Des. 107,161, M. R. Berger, Dress, filed Dec. 15, 1937, D. C., S. D. N. Y., Doc. E 86/160, *Les Claire Costumes, Inc., v. Paris Dance Frocks, Inc.*

Des. 107,299, E. Fiat, Dress, filed Dec. 16, 1937, D. C., S. D. N. Y., Doc. E 86/167, *Camel Dress Mfg. Co., Inc., v. Victor Dress Co., Inc.*

Des. 107,306, J. Schmer, Dress, filed Dec. 14, 1937, D. C., S. D. N. Y., Doc. E 86/146, *Simon & Schmer, Inc., v. Semas Dress Co.*

Des. 107,393, M. Stone, Dress, filed Dec. 15, 1937, D. C., S. D. N. Y., Doc. E 86/161, *Will Steinman, Inc., v. Columbia Dance Frocks, Inc.*

Des. 107,492, R. Schultze, Dress, filed Dec. 16, 1937, D. C., S. D. N. Y., Doc. E 86/166, *Schultze-Esch Co., Inc., v. Columbia Dance Frocks, Inc.*

Trade-Mark Registrations Canceled

143,194. Trunks. C. A. Taylor Trunk Works, Inc., Chicago, Ill. Registered May 24, 1921. Canceled November 29, 1937.

155,404. Medicinal preparation. Patrick J. Dervin, New York, N. Y. Registered May 30, 1922. Canceled January 7, 1938.

254,813. Women's and misses' clothing. Stern-Imbrey Co., New York, N. Y. Registered April 2, 1929. Canceled January 7, 1938.

275,710. Portfolios. Michigan Book Binding Company, Detroit, Mich. Registered September 30, 1930. Canceled November 29, 1937.

293,415. Concentrated vegetable nerve food. Anabolic Food Products, Inc., Los Angeles, Calif. Registered April 19, 1932. Canceled January 11, 1938.

293,416. Concentrated vegetable stomach food. Anabolic Food Products, Inc., Los Angeles, Calif. Registered April 19, 1932. Canceled January 11, 1938.

293,417. Concentrated vegetable tonic food. Anabolic Food Products, Inc., Los Angeles, Calif. Registered April 19, 1932. Canceled January 11, 1938.

297,955. Ladies' handbags. Saks & Company, New York, N. Y. Registered October 4, 1932. Canceled November 29, 1937.

299,741. Cleansing preparation. Keystone Lubricating Company, Philadelphia, Pa. Registered December 20, 1932. Canceled January 7, 1938.

326,279. Whiskey. Arrow Distilleries, Inc., Peoria, Ill. Registered September 26, 1935. Canceled January 7, 1938.

335,220. High calcium food. Milk Minerals Co. Inc., New York, N. Y. Registered May 28, 1936. Canceled December 16, 1937.

340,357. Tea. Montgomery Mills, Jersey City, N. J. Registered November 3, 1936. Canceled January 7, 1938.

345,804. Certain named medicinal preparations. The Warren-Teed Products Company, Columbus, Ohio. Registered May 4, 1937. Canceled January 7, 1938.

347,637. Aspirin tablets. Elijay Corporation, Chicago, Ill. Registered June 29, 1937. Canceled January 7, 1938.

349,348. Hair preparation. Paul Gaise, Jr., New York, N. Y. Registered August 24, 1937. Canceled January 7, 1938.

349,690. Refrigerators. Fordson Export Corporation, Detroit, Mich. Registered August 31, 1937. Canceled January 7, 1938.

351,887. Children's, misses', and women's outer garments. Morris Sobelman, doing business as Perfect Garment Company, Baltimore, Md. Registered November 9, 1937. Canceled January 7, 1938.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,027,007, Otto Wittal, Feelable footage indicator for motion picture apparatus, decided December 31, 1937, claims 1, 2, 3, 4, 5, 6, and 7.

Pat. 2,056,896, J. K. Douglas, Hydraulic transmission, decided December 16, 1937, claims 5 and 6.

Pat. 2,065,269, G. W. Fyler, Radio transmitting system, decided December 14, 1937, claims 1 and 11.

Changes in Classification

Order No. 3,417, December 31, 1937, directs:

In *class 38, Textiles, Ironing or Smoothing* (Division 27), abolish the following subclasses with their definitions:

Fluid treatment
Machines
151 Steaming
152 On cylinder.
153 Static devices
154 With fabric carrying cylinder,
155 Moistening
156 Strippers,
157 Fountain,
158 Immersion,
159 Roller,
160 Web,
161 Aqueous vapor,
162 Implements
163 Steamers.

The patents formerly contained in these subclasses have been placed for the most part in class 68, Textiles, Fluid Treating Apparatus, subclasses 5, and indented subclasses, 200, and indented subclasses, 221 and 222, established in this order.

In *class 141, Washing Apparatus* (Division 27), abolish the following subclasses:

2 Lubricating waste cleaning and reclamation.
5 Wool-washing machines.
12 Miscellaneous fiber and pulp washers.

The patents for apparatus formerly contained in these subclasses have been placed for the most part in class 68, Textiles, Fluid Treating Apparatus, established in this order, in appropriate subclasses thereof, and the process patents have been placed for the most part in class 8, Bleaching and Dyeing.

In *class 150, Cloth, Leather, and Rubber Receptacles* (Division 29), establish the following subclass and definition:

Bags
1.8 Clothespin-bag type.

1.8. Bags falling within the class definition and commonly known as clothespin bags.

The patents contained in this subclass have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 206, Special Receptacles and Packages* (Division 40), establish the following subclass and definition:

0.5 Infusion containing.

0.5. Receptacles and packages not otherwise classified containing an infusing substance which may be infused directly from or through the walls of the receptacle or package.

Search Classes—
6—BATHS, CLOSETS, SINKS AND SPITTOONS, subclasses 226 and 229–231.
8—BLEACHING AND DYEING, subclass 6.
21—PRESERVING, DISINFECTING AND STERILIZING, subclass 74.
23—CHEMISTRY, subclasses 5 and 240.
45—FURNITURE, subclass 28.
99—DOMESTIC COOKING VESSELS, subclass 3.5.
87—OILS, FATS, AND GLUE, subclass 23.
99—FOODS AND BEVERAGES, subclass 77.1.
128—SURGERY, subclass 272.
131—TOBACCO, subclasses 30 and 55.
167—MEDICINES, POISONS, AND COSMETICS, subclass 84.
239—FLUID SPRINKLING, SPRAYING AND DIFFUSING, subclass 24.

The patents contained in this subclass have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 242, Winding and Reeling* (Division 61), establish the following subclass and definition:

Cordage
47.5 Storage on sheaves.

47.5. Devices for storing rope, cord, thread, yarn or other strand material on sheaves, the sheaves being shiftable toward each other but normally urged apart and the strand material being wound around the several sheaves.

The patents contained in this subclass have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 248, Supports* (Division 52), establish the following subclass and definition:

27.5 Washboard type.

27.5. Supports for washboards. These supports may or may not be permanently attached to the washboard.
Note.—For washboard structure, see class 68, TEXTILES, FLUID TREATING APPARATUS, subclass 223 and indented subclasses.

The patents contained in this subclass have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 294, Handling, Hand and Hoist-Line Implements* (Division 4), establish the following subclasses and definitions:

8.5 Clothes tongs.
Poles
23.5 Laundry sticks.

8.5. Devices of the plier or tong type peculiarly adapted to lift clothes.
(1) Search this class, subclass 3.
(2) Search Class—
81—TOOLS, subclass 44 and indented subclasses.

23.5. Poles peculiarly adapted for use in handling laundry.

The patents contained in these subclasses have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 211, Supports, Racks* (Division 8), establish the following subclasses and definitions:

119.01 Clothesline, isolated supports
119.02 Looped lines
119.03 Horizontal plane,
119.04 Pulley support inside of building,
119.05 Pulley support movable through building opening
119.06 Swingable support
119.07 On vertical axis only,
119.08 On horizontal axis only,
119.09 With loop tighteners,
119.10 Single run line
119.11 With pin or gripper actuator,
119.12 With suspended article support,
119.13 With article gripper
119.14 Linked lines,
119.15 Line tighteners,
119.16 Bodily displaceable line
119.17 Vertically translatable,
119.18 Line covers.

119.01. Isolated supports with a flexible article supporting strand or strands joining the supports.
(1) Note.—For clotheslines supported by a single support see appropriate subclasses in this class.
(2) Note.—For means for gripping and holding a clothesline or for coupling the ends of a looped line see class 24, BUCKLES, BUTTONS, CLASPS, ETC., subclass 115 and indented subclasses, and class 188, BRAKES, subclass 64 and subclass 65.1 and indented subclasses.
(3) Note.—For clothespins see class 24, BUCKLES, BUTTONS, CLASPS, ETC., subclass 137 and indented subclasses.
(4) Note.—For tools for pulling clotheslines see class 81, TOOLS, subclass 3.
(5) Note.—For clothesline reels see class 242, WINDING AND REELING, subclass 100 and indented subclasses.
(6) Note.—For devices for supporting rods or tubes from a messenger cable see class 248, SUPPORTS, subclass 61. For similar devices see class 191, ELECTRICITY, TRANSMISSION TO VEHICLES, subclass 40 and indented subclasses.
(7) Note.—For props for supporting intermediate portions of a clothesline which is strung between isolated supports see class 248, SUPPORTS, subclass 353.
(8) Note.—For pulleys of general utility see class 254, PUSHING AND PULLING IMPLEMENTS, subclass 190 and indented subclasses.

(9) Note.—For means engaging a run of a looped line suspended from another run of the line or from a support above the line to prevent the line from sagging see class 254, PUSHING AND PULLING IMPLEMENTS, subclass 198.

119.02. Devices of the type set forth in subclass 119.01 wherein the strand is in the form of an endless loop trained about pulleys.

119.03. Devices of the type set forth in subclass 119.02 in which the looped strand has its runs arranged so that a plane passing through the runs is out of the vertical.

119.04. Looped strands which pass through a building opening and about a pulley within the building to enable the loading of the strand within the building.

119.05. Looped strands under subclass 119.02 which pass through a building opening and about a pulley in the building and in which the pulley is shiftable to a position outside of the opening to enable the closing of the building opening with the strands wholly outside of the building.
(1) Note.—For window attached racks see this class, subclass 67 and indented subclasses.
(2) Note.—For window brackets see class 248, SUPPORTS, subclass 306.

119.06. Structures as set forth in subclass 119.05 in which the support for the pulley is swingable through the opening.
Note.—For brackets with vertical and horizontal pivots, see class 248, SUPPORTS, subclass 278 and indented subclasses.

119.07. Structures under subclass 119.06 in which the support for the pulley is mounted on a vertical axis and is swingable through the opening.
Note.—For brackets mounted on a vertical pivot see class 248, SUPPORTS, subclass 288.

119.08. Structures under subclass 119.06 in which the support for the pulley is mounted on a horizontal axis and is swingable through the opening.
Note.—For brackets mounted on a horizontal pivot see class 248, SUPPORTS, subclass 291.

119.09. Means under subclass 119.02 for tightening and preventing sagging of a looped strand, usually by shifting one of the pulleys about which the strand is trained.
(1) Note.—For looped line tighteners due to the motion of a pulley support through a building opening see this class, subclass 119.05 and indented subclasses.
(2) Note.—For transmission belt tighteners see class 74, MACHINE ELEMENTS AND MECHANISMS, subclass 242.3 and indented subclasses.
(3) Note.—For conveyer belt tighteners see class 198, CONVEYORS, POWER DRIVEN, subclass 208.
(4) Note.—For means to prevent sagging of looped lines by devices intermingling the runs of the lines see class 254, PUSHING AND PULLING IMPLEMENTS, subclass 198.

119.10. Isolated supports with a flexible strand or strands joining the support, the strands not being looped endlessly about pulleys.

119.11. Devices under subclass 119.10 with strands not looped endlessly about pulleys in which the strands are provided with article gripping means and in which means are provided for moving the gripping means along the supporting strand or for separating the jaws of the gripping means.

119.12. Devices under subclass 119.10 in which there is provided means suspended from a strand and which functions to support articles.
Note.—For clothespins per se see class 24, BUCKLES, BUTTONS, CLASPS, ETC., subclass 137 and indented subclasses.

119.13. Devices of the type set forth in subclass 119.10 in which the strand is provided with means to grip an article.
Note.—For article supports associated with looped lines see this class, subclass 119.02.

119.14. Racks of the type set forth in subclass 119.13 in which the flexible strands are made up of linked members.
Note.—For linked chains see class 59, CHAIN, STAPLE, AND HORSESHOE MAKING, subclass 84 and indented subclasses.

119.15. Tighteners for strands, the strands not being looped endlessly about pulleys.
(1) Note.—For line tighteners and stretchers, in general, see class 242, WINDING AND REELING, and class 254, PUSHING AND PULLING IMPLEMENTS.
(2) Note.—See also class 256, FENCING, subclass 87 and indented subclasses, for fence wire stretchers.

119.16. Single run lines mounted so that they may be bodily displaced for convenience in loading or for subsequent positioning for ready drying of clothes suspended from the line.

119.17. Devices as set forth in subclass 119.16 in which the line is capable of being translated bodily in a vertical plane.

119.18. Means for covering strands to prevent transfer of soil accumulated during non-use of the strands to the object supported thereby.

The patents contained in these subclasses have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order.

In *class 254, Pushing and Pulling Implements* (Division 61), establish the following subclass and definition:

Cable
Guides
198 Sag preventers.

198. Devices for preventing the sagging of a loop strand by engagement of a coupling device supporting one strand from the other strand or from a separate supporting line.
Note.—See class 248, SUPPORTS, subclass 61, for similar devices. See also class 173, ELECTRICITY, CONDUCTORS, for conductors supported from a parallel line, and class 191, ELECTRICITY, TRANSMISSION TO VEHICLES, subclass 40 and indented subclasses, for trolley line supports.

The patents contained in this subclass have been taken for the most part from various subclasses in class 68, Laundry, abolished in this order, and from class 254, subclass 190.

In *class 68, Laundry* (Division 27), change the title of the class to read class 68, Textiles, Fluid Treating Apparatus, abolish the existing subclass titles and establish in lieu thereof the subclasses contained in the new loose leaves now being printed for insertion in the Manual of Classification, and definitions which will appear in Bulletin No. 73.

(Note.—Lists of subclass titles, and the definitions, may be seen in the Search Room, and in the Classification Division, Room 3624, pending publication.)

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS, LABELS, AND PRINTS

RENDERED DURING DECEMBER, 1937

EX PARTE THE PEPSODENT CO., Serial No. 384,267.

In a decision rendered December 23, 1937 (159 Ms. Dec. 1,046), *Assistant Commissioner Frazer* held that The Pepsodent Co., of Chicago, Ill., is not entitled to register, under the act of 1905, the word "Irium" as a trade-mark for dentifrices.

The ground of the decision is that the specimens filed with the application do not show a trade-mark use of that word.

In his decision, after stating that on each of the cartons filed as specimens are found the words "Pepsodent tooth paste alone contains Irium. Safely steps-up polish on teeth," and noting that on the hearing on appeal additional cartons were offered showing the words "Pepsodent alone contains Irium. New discovery that safely steps-up luster on teeth", the Assistant Commissioner said:

"I am clearly of the opinion that this record conclusively shows the word 'Irium' to perform no trade-mark function with respect to dentifrices. All applicant has done is to inform purchasers of the fact that its tooth paste contains a new ingredient known as 'Irium'. The word identifies the ingredient rather than the tooth paste, and the notation in which it appears on the cartons is merely a 'statement of the quality of the product.' *General Baking Co. v. Commander-Larabee Corporation*, 23 C. C. P. A. 973, 82 Fed.(2d) 427."

He further noted that originally applicant's goods were described as "a pharmaceutical preparation used as an ingredient in dentifrices", and that in responding to the rejection on the ground that no specimens on file showed such use, the applicant said "the labels very definitely identify a pharmaceutical, the right to use which belongs to the applicant, and it does not identify the tooth paste",

and then said:

"I am in complete agreement with that statement, and I think it is as true now as when made."

CALIFORNIA PRUNE & APRICOT GROWERS ASSOCIATION v. DOBRY FLOUR MILLS, INC., Application for Cancellation No. 3,029.

In a decision rendered December 23, 1937 (159 Ms. Dec. 1,047), *Assistant Commissioner Frazer* held that Dobry Flour Mills, Inc., of Yukon, Okla., was entitled to register, under the act of 1905, as a trade-mark for wheat flour, a mark including the name "Dobry's" beneath which is the word "Sunsweet" and a purported representation of the sun, all inclosed within an elaborate border, notwithstanding the prior adoption and use by the California Prune & Apricot Growers Association, of San Jose, Calif., of the term "Sunsweet" and a sun design as a trade-mark for dried fruits, canned fruits, etc.

The ground of the decision is that there is sufficient difference in the goods and such difference in the marks taken as a whole that confusion in trade would not be likely.

In his decision the Assistant Commissioner said:

"Broadly speaking it may be that wheat flour is of the same descriptive properties as fruit and fruit products, but specifically there is a wide difference. The ruling of the California Packing Corporation case (158 Ms. D 397, 25 U. S. P. Q. 118), was restricted to 'dried fruits and small packages of flour.' Moreover, the marks there considered were identical. In the instant case, even if the design features of respondent's mark be disregarded, there remains the notation 'Dobry's Sunsweet' to be compared with petitioner's mark 'Sunsweet'. Apparently the Examiner refused to consider the first word of respondent's mark, observing in his decision that, being an ordinary surname, 'it is incapable of statutory ownership and can add nothing to the right of registration claimed to be possessed by the respondent.' In this I think the Examiner erred. Respondent's mark is to be considered as a whole, and the name 'Dobry's' is a constituent part thereof."

He then, after referring to the opposition of *Joseph Tetley & Co. v. Buy State Fishing Co.*, 23 C. C. P. A. 969, 82 Fed.(2d) 299, in which the Court of Customs and Patent Appeals held there was no likelihood of confusion between the mark "Budget Special" used on fish and "Tetley Budget Tea" for tea, and noting that the court expressed the opinion that fish and tea are merchandise of the same descriptive property, but held in view of the difference in the character of the goods there was no likelihood of confusion said:

"I think the difference in character of the goods here involved is as considerable as that found to exist with respect to those of the cited case. Also the dissimilarity of the marks appears to be substantially equal, particularly in view of the stipulation in the instant proceeding that respondent's mark as used is 'Dobry's Sunsweet Flour.'"

GREEN CROSS PHARMACEUTICAL PRODUCTS, INC., *v.* THEODOR H. TEMMLER AND TUCKER PHARMACAL COMPANY (THEODOR H. TEMMLER, ASSIGNEE, SUBSTITUTED), Application for Cancellation No. 3,036.

In a decision rendered December 28, 1937 (159 Ms. Dec. 1,051), *First Assistant Commissioner Macklin* held that a cancellation proceeding brought by the Green Cross Pharmaceutical Products, Inc., of New York, N. Y., to cancel the registrations of Theodor H. Temmler, of Berlin, Germany, and Tucker Pharmacal Company, of New York, N. Y., of the terms "Bro-seda" and "Brosedan" as applied to a bromide and a sedative, respectively, was properly dismissed.

In his decision, after pointing out that the registrants had opposed the application for registration of the Green Cross Pharmaceutical Products, Inc., of the term "Prosedal" for nerve quieting medicine and that the cancellation proceeding was brought thereafter, petitioner for cancellation alleging that the words are descriptive of the goods, and noting the position of the Examiner of Interferences that the words were not descriptive and that the petitioner for cancellation did not have the right to use a word so modified from these terms, whether descriptive or not, which would be likely to cause confusion with the registered mark, the First Assistant Commissioner said:

"'Bro-seda' and 'Brosedan' were properly cited by the Examiner of Trade-Marks against 'Prosedal', which is admitted by the appellant to be similar to the registered words, although appellant states that his word is arbitrary."

And then, pointing out the argument as to the manner in which the registered words would be pronounced, he said:

"Neither of these words as registered appears in the dictionary, nor are they mere misspellings of the words of which they are alleged to be suggestive. The decisions cited by the appellant have been carefully considered. * * * The appellant adopted its word 'Prosedal' long after these registrations. It was faced with an opposition proceeding and has filed this cancellation proceeding admitting, or claiming as it were that 'Prosedal' is similar to both the registered marks.

"It seems to me there is much to support registrant's contention that this cancellation proceeding is in the nature of frivolous and vexatious litigation; that it is without substance; that it was interposed for purposes of delaying an adjudication in the opposition proceeding."

EX PARTE PINAUD INCORPORATED, Serial No. 365,477.

In a decision rendered December 28, 1937 (159 Ms. Dec. 1,054), *First Assistant Commissioner Macklin* held that Pinaud Incorporated, of New York, N. Y., is entitled to register, under the 10-year proviso of the Trade-Mark Act of 1905, the word "Vegetal" as a trade-mark for perfumery extracts.

In his decision the First Assistant Commissioner noted that the registration had been refused because the Examiner was of the opinion that the "alleged mark is merely the name of the goods" and that in the opinion of the Examiner the allegation of ten years exclusive use was negatived by the fact that the term appears in the Century Dictionary of 1903, the definition given being, among others, "* * * having the characteristics or nature of a vegetable", and then, after noting applicant's argument as to the applicability of the 10-year proviso, he said:

"First, it may be noted that the application seems to be filed in proper form, and under oath it is stated that the applicant and its predecessors, naming them, have continuously used the trade-mark 'Vegetal' since the year 1857, and that such use of said trade-mark was in commerce among several states of the United States and between the United States and foreign nations . . . etc."

"The fact that the word 'Vegetal' was defined as above quoted in the Century Dictionary of 1903 and is now similarly defined in later dictionaries is not in my opinion tantamount to finding that the applicant's use for more than ten years prior to 1905 was not exclusive use, when such dictionary definition does not refer to toilet water and where, as seems to be the case here, the trade-mark use of the applicant is specifically for toilet water having the characteristics or nature of a vegetable extract."

He also said:

"Further, that 'vegetal' has since been used by others, if this should be true, may indicate that at present there is not an entirely exclusive trade-mark use by the applicant, but I think that this is a matter with which the Patent Office cannot be concerned to the extent of refusing the registration sought."

DERMALAB, INC., *v.* HERMAN GUMBIN, Opposition No. 15,441.

In a decision rendered December 29, 1937 (159 Ms. Dec. 1,058), *First Assistant Commissioner Macklin* held that Herman Gumbin, of Chicago, Ill., is entitled to register the notation "NaCene" as a trade-mark for ointment for eczema, etc., notwithstanding the prior registration by Dermalab, Inc., of Winnetka, Ill., of the terms "Nac" and the term "Nac-pac" for similar goods.

In his decision the First Assistant Commissioner noted opposer's argument that the applicant had merely added to the mark "Nac" the suffix "ene" and that through carelessness or ignorance "Nac" might be pronounced so as to be confused with "NaCene" and the further argument that a prospective purchaser would suppose that "NaCene" was a companion of the original and primary "Nac" product, and said:

"Considering the argument of both parties and the cases cited, I think that the appearance and natural pronunciation of the applicant's word sufficiently differentiates it as to be not reasonably likely to cause confusion.

"It would seem natural that almost anyone able to read would pronounce 'Nac' as 'nack' and applicant's mark 'NaCene', whether the long mark over the 'a' were understood or not, as 'naycen'."

EX PARTE CONTINENTAL OIL COMPANY, Serial No. 367,233.

In a decision rendered December 29, 1937 (159 Ms. Dec. 1,049), *First Assistant Commissioner Macklin* held that Continental Oil Company, of Ponca City, Okla., is entitled to register, under the act of 1920, the term "Germ Processed".

In his decision he noted the Examiner's holding that the mark would not "perform the function of indicating origin or ownership of the goods", and could have no meaning except as referring to the process by which the goods had been treated and, after referring to the evidence to show that the term "Germ Processed" means to the purchasing public and those who retail the oil a motor oil made by the Continental Oil Company, said:

"The Examiner's position might be tenable if 'germ processed' were a term properly and naturally applied to a product of other manufacturers, and by reason of which there could be no exclusive use and thus no trade-mark use by the applicant. Clearly in the present case there is no reason to believe that other oil companies have used 'Germ Processed'. Therefore, it seems to me to be of no consequence for the purpose of this decision that 'Germ Processed' is a correct statement relating to the applicant's patented process. The patent does not use the term. On the contrary, it refers to the steps of the process by a number of other terms. It follows, therefore, that if 'Germ Processed' has been selected as an apt term and has been used as a trade-mark and has become known to designate a product manufactured by appellant, it is registrable under the 1920 act."

EX PARTE THE PENNZOIL COMPANY, Serial No. 337,543.

In a decision rendered December 29, 1937 (159 Ms. Dec. 1,056), *First Assistant Commissioner Macklin* held that the notation "Tough-Film" is not registrable, under the act of 1905, as a trade-mark for lubricating oils since it is merely descriptive of the characteristics of the goods.

In his decision he referred to publications as showing that it is important that a lubricating film be maintained, and noting the definition of tough and referring to the argument based on the decision of the Court of Appeals for the District of Columbia

In re The Irving Drew Company, 54 App. D. C. 310, 297 Fed. 889, said:

"I cannot agree that this case nor the reasoning of the applicant is sufficient to overcome the impression I have that the words 'Tough-Film' applied to motor oil are clearly descriptive within the meaning of the statute and must be refused registration. In my opinion, descriptiveness may apply to use or results, as well as to the particular nature of the goods themselves."

He then referred to the decision of the Court of Appeals for the District of Columbia in *The Kay & Ess Company* v. *Coe, Commissioner of Patents*, 21 U. S. P. Q. 174, 483 O. G. 229, in which the Court, in holding the term "Morocco" descriptive of a finish, had said that a paint is as much the goods of the manufacturer

"in the trade-mark sense of the term, when applied to a wood or metallic surface as when in the can,"

and said:

"In that case the word 'Morocco' was held descriptive of the finish and it seems to me that oil in the can has no more utility than paint in the can. Both are useful only when applied to a surface. In the present case the oil could does form a film when used and the toughness of this film as understood by the purchaser is a desirable quality and is a natural and apt term to apply to such a film."

R. B. DAVIS COMPANY *v.* TOWNS & JAMES, INC., Opposition No. 16,447.

In a decision rendered December 31, 1937 (159 Ms. Dec. 1,050), *Assistant Commissioner Fraser* held that error had been committed by the Examiner of Interferences in treating a paper filed by the applicant Towns & James, Inc., of Brooklyn, N. Y., as a motion to dismiss and in suggesting that the respondent might waive his right to file an answer and then raise the question sought to be raised by the motion.

It appears that in the paper filed the respondent had denied the allegations of the answer as to the similarity of the marks and the goods being of the same descriptive properties but it asked that "the interference be dissolved" and in view of that and the later waiver of the right to file an answer the Examiner of Interferences had refused to consider the "paper" and to enter a decree pro confesso.

In his decision the Assistant Commissioner said:

"Opposer insists that as a motion to dismiss admits the truth of all facts properly pleaded in a notice of opposition, applicant's failure to answer after the denial of such motion entitles opposer to judgment. Ordinarily I think that would be true, but the difficulty here is that the supposed motion to dismiss expressly denied most of the material allegations of the notice. It should have been, and should now be, treated as an answer. The mere fact that a prayer was included 'that the interference be dissolved' did not convert it into a motion to dismiss, nor did applicant's acquiescence in its treatment as such. Applicant is not represented by counsel, and apparently knows nothing about the technicalities of pleading. Having answered the notice of opposition, sufficiently though somewhat informally, applicant is entitled to a hearing upon the issues made."

He then dismissed the appeal and remanded the case with directions to set time for the taking of testimony.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 25, 1938

[VOL. 486. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 384,794. GOODRICH GRINDING WHEEL CO., Chicago, Ill. Filed Oct. 26, 1936.

CARBO-OXILITE

For Grinding Wheels, Sharpening Stones and Hones, and Similar Sharpening Devices.
Claims use since June 1, 1933.

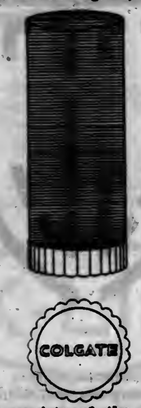
Ser. No. 395,064. COMMERCIAL SOAP AND CHEMICAL CO., San Francisco, Calif. Filed July 10, 1937.

KLENLEE

For Scouring Soap Powder and Toilet Liquid Soap.
Claims use since Apr. 1, 1937.

Ser. No. 396,023. BOURJOIS, INC., New York, N. Y. Filed Aug. 5, 1937.

SHAV PAK



For Shaving Soap.
Claims use since July 9, 1937.

Ser. No. 397,013. THE J. B. WILLIAMS COMPANY, Glastonbury, Conn. Filed Sept. 1, 1937.

No claim is made to the representation of the carton or any wording except "Williams", "Luxury", and "The J. B. Williams Company."
For Shaving Cream.
Claims use since May 27, 1937.

Ser. No. 397,014. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Aug. 26, 1937.

The trade-mark consists of the combination and arrangement of the colors employed and of the word "Col-

gate." The horizontal lining on the drawing denotes the color blue. The applicant without waiver of its common law rights makes no claim herein to the exclusive use of the representation of a shaving stick holder or of a cap, per se.

The applicant is the owner of United States trade-mark certificate No. 230,252 dated July 19, 1927, registered under the 10-year proviso of the act of Feb. 20, 1905.

For Shaving Soap and Shaving Stick.

Claims use since 1856 for the word "Colgate"; and since Dec. 28, 1935, for the entire mark.

Ser. No. 397,439. GENERAL CHEMICAL COMPANY, New York, N. Y. Filed Sept. 15, 1937.

For Sodium Phosphate Detergents, Particularly Tri-Sodium Phosphate Detergents, and Sodium Silicate Detergents, Particularly Sodium Meta-Silicate Detergents.

Claims use since August, 1934.

Ser. No. 397,440. GENERAL CHEMICAL COMPANY, New York, N. Y. Filed Sept. 15, 1937.

For Sodium Phosphate Detergents, Particularly Tri-Sodium Phosphate Detergents, and Sodium Silicate Detergents, Particularly Sodium Meta-Silicate Detergents.

Claims use since August, 1934.

Ser. No. 397,517. FRANK POSTMA, Paterson, N. J. Filed Sept. 17, 1937.

TRUE THE SHAFT FIRST

JOURNALIZE

The words "True the Shaft First" are disclaimed apart from the mark.

For Abrading Material Used in the Lapping of Engine Crankshafts.

Claims use since Aug. 8, 1937.

Ser. No. 399,035. MAYBEE SOURCE, INC., New York, N. Y. Filed Oct. 19, 1937.

Irresistible

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Outfit Packages Containing Soap and Towel, Soap Powder for Bathing, Washing, and Cleaning Purposes, Laundry Soaps, Soap Flakes, Hand Soaps, and Toilet Soaps.

Claims use since Oct. 5, 1937.

Ser. No. 399,107. PRODUCTSON MACHINE COMPANY, Greenfield, Mass. Filed Oct. 20, 1937.

Proma

For Polishing Wheels and Belts.

Claims use since Mar. 24, 1937.

Ser. No. 399,266. BELTRACTION CO., Chicago, Ill. Filed Nov. 3, 1937.

BELTRACTION

For Material for Treating Mechanical Belting for the Purpose of Cleaning, Preserving, Etc.

Claims use since Jan. 25, 1937.

CLASS 5

Adhesives

Ser. No. 400,171. REMINGTON RAND INC., Buffalo, N. Y. Filed Nov. 26, 1937.

LB

For Paste.

Claims use since July 12, 1937.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 380,452. WINFRED IRVING FROST, doing business as B. F. W. Products, Los Angeles, Calif. Filed June 30, 1936.

The word "Products" is disclaimed apart from the mark.

For Medicinal Preparations for the Treatment of Irritation of the Skin; Ointments for the Muscles.

Claims use since May 9, 1936.

Ser. No. 383,660. MILES TEKULIA, Rochester, Pa. Filed Sept. 25, 1936.

The word "Mast" is disclaimed apart from the mark.

For Ointment for Running Sores, Cuts, Burns, Bruises, External Cancers, and Skin Irritations Generally.

Claims use since July 1, 1936.

Ser. No. 383,665. ROBERT S. R. WITTMER, doing business as Pittsburgh Scientific Laboratories, Pittsburgh, Pa. Filed Sept. 25, 1936.

Yan-s

For Laxative Regulator, Cold Tablets, and Foot Salves.

Claims use since August, 1936.

Ser. No. 384,818. CRESTS DOW CHEMICAL COMPANY, Marquette, Mich. Filed Oct. 14, 1936.

The words "Trade Mark" are disclaimed.

For Acetic Acid, Acetone, Activated Carbon, Creosote Oil, Iron Acetate Liquor, Methanol, Propionic Acid, Pyroligneous Acid, and Charcoal for General Use in the Chemical Arts.

Claims use since Oct. 4, 1935, for methanol; since Jan. 8, 1936, for acetic acid, acetone, creosote oil, iron acetate liquor, propionic acid, and pyroligneous acid; and since Apr. 20, 1936, for activated carbon and charcoal.

Ser. No. 389,546. CRESTEX LABORATORIES, INC., Chariton, Iowa. Filed Mar. 2, 1937.

NIF

Hair and Scalp Dressing

No claim is made to "Hair and Scalp Dressing."

For Preparation for Use in Dressing the Hair.

Claims use since Jan. 7, 1937.

Ser. No. 393,196. ROMRO PARENT, doing business as Familex Products Company, Montreal, Quebec, Canada. Filed May 24, 1937.

Jacquello

For Perfumes, Make-Up Rouges, Lipsticks, Talcum Powders, Skin Lotions and Toilet Water, Face Powders, Bath Salts, Body Powders.

Claims use since July 1, 1928.

Ser. No. 393,384. ANDREW F. LUZZI, doing business as The X-Lin Company, Wichita Falls, Tex. Filed May 28, 1937.

X-LIN

For Dental and Surgical Dressing in the Nature of Ointments and Salves.

Claims use since Jan. 1, 1937.

Ser. No. 393,546. GENE PALMER, INCORPORATED, Los Angeles, Calif. Filed June 2, 1937.

The colors of the mark are blue, buff, and gold. The word "Hollywood" is disclaimed apart from the mark.

For Tissue Cream.

Claims use since March, 1937.

Ser. No. 394,239. LOVELY LADY, INC., Chicago, Ill. Filed June 18, 1937.

Lovely Lady

For Face Powder, Cold Cream, Vanishing Cream, All Purpose Face Cream, Astringent, Lipstick, Lip Rouge, Rouge, Eye Shadow, Eyebrow Pencil, Foundation Cream, Skin Freshener, Tissue Cream, Bleaching Cream, Brilliantine, Skin Lotions, Dusting Powder, and Nail Polish.

Claims use since Sept. 15, 1923.

Ser. No. 394,893. EUGENE H. EISING, JR., doing business as Kyrene Laboratories, New York, N. Y. Filed July 6, 1937.

KOOLORA

60 ASTRINGENT MOUTH WASH TABLETS

The words "60 Astringent Mouth Wash Tablets, 1966 Broadway, New York, N. Y.," and the representation of the label are disclaimed. The drawing is lined for green.

For Pharmaceutical Preparation to be Dissolved in Water to Make a Dentifrice and Mouth Wash.

Claims use since Apr. 15, 1936.

Ser. No. 395,065. COMMERCIAL SOAP AND CHEMICAL CO., San Francisco, Calif. Filed July 10, 1937.

KWIKILL

No claim is made to the word "Kwikill" apart from the mark.

For Fly Sprays, Roach Sprays, Moth Sprays, and Insecticides.

Claims use since Apr. 1, 1937.

Ser. No. 396,260. SHUBEL S. COOKE, Cobleskill, N. Y. Filed Aug. 11, 1937.

The portrait of the child is the infant portrait of applicant and the portrait of the elderly person that of his deceased grandmother. No claim is made to the word "Salve" apart from the mark.

For Medicinal Salve for the Relief of Hemorrhoids or Piles, Sunburn, Burns, Ulcers, Chafing, and Similar Irritations and Diseases of the Skin.

Claims use since June 23, 1937.

Ser. No. 396,682. HOLDER MEDICINE CO., INC., Cincinnati and Norwood Station, Cincinnati, Ohio. Filed Aug. 23, 1937.

VITAL-EX

For General Tonic Containing Vitamins.

Claims use since Aug. 14, 1937.

Ser. No. 396,695. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Aug. 23, 1937.

DYSPEL

For Medicinal Tablets for Relief of Pain, Deodorant Powder, and Deodorant Cream.

Claims use since January, 1933 on tablets; since Apr. 5, 1937 on powder, and since Jan. 25, 1937 on cream.

Ser. No. 396,836. LOMBO D. MILLARD, Grainton, Nebr. Filed Aug. 27, 1937.

The portrait is that of a deceased person. No claim is made to the words "Green Salve" apart from the mark.

For Green Salve Having Healing and Curative Properties and Employed for Treatment of Skin Irritations, Burns, Abrasions, and Minor Ailments in the Same General Category.

Claims use since June 1, 1937.

Ser. No. 397,033. MAIN LABORATORIES, INC., Olympia, Wash. Filed Sept. 2, 1937.

For Livestock Salve, Livestock Antiseptic, Germicides, and Sterilizing Preparations, Mouth Wash, Gargle, and for Oral Use for Treating Ulcers, Etc., Antiseptics, Bactericides, Fungicides, Skin Salve for Medicinal Use, for Treating Skin Diseases, Sunburn, Rash, Acne, Scabies and Hemorrhoids, Antiseptic and Fungicidal Oil, Particularly for Treating Fungus Infections, Staphylococcic Infections and the Exudative Diathesis of Infancy and Childhood, Shampoo and Dandruff Remover, Preparation for Removing Ink, Intravenous Injection Solution Administered to Human Beings for Treatment of Infections of the Skin and Skin Diseases, Intravenous Injection Solution Administered to Livestock and Animals for Treatment of Mastitis, Coccidiosis, Hemorrhagic Septicemia, Foot-Rot, Forage Poisoning, Suppurative Wounds, Infectious Enteritis, Canine Distemper, and Other Contagious and Infectious Diseases, and for a Chlorine Solution Used as a Disinfectant for Swimming Pools.

Claims use since Feb. 1, 1937.

Ser. No. 397,361. EDWIN M. FREEMAN, Denver, Colo. Filed Sept. 13, 1937.

PORCELAINIZE

For Jelly-Like Material for Use in Application to Coated Surfaces to Change the Absorptive and Reflective Co-Efficients of Such Coatings and the Perviousness and Resistant Qualities Thereof.

Claims use since May 17, 1935.

Ser. No. 397,533. JOHN L. DENNEY, doing business as Kamba Laboratories, Fresno, Calif. Filed Sept. 18, 1937.

KAMBA

For Medical Preparation for Treatment of Stomach Ulcers, Indigestion, Gas, Kidney, Liver, and Gall Bladder Trouble.

Claims use since Jan. 1, 1934.

Ser. No. 398,365. THE WM. S. MERRELL COMPANY, Reading, Ohio. Filed Oct. 11, 1937.

BASSORAN

For Laxative Preparation in Dry Form.

Claims use since Sept. 28, 1937.

Ser. No. 399,235. WILLIAM E. HUNGER, doing business as Sutton-Hunger Products Company, Los Angeles, Calif. Filed Nov. 2, 1937.

NATO-BARRO

The word "Barro" is disclaimed except as shown.

For Natural Mineral Clay-Pack of a Medicinal Nature for Animals.

Claims use since Jan. 3, 1935.

Ser. No. 399,251. SHARK INDUSTRIES, INC., Hollywood, Fla. Filed Nov. 2, 1937.

ELBROL

For Processed Shark Liver Oil.

Claims use since Dec. 15, 1936.

Ser. No. 399,252. SHARK INDUSTRIES, INC., Hollywood, Fla. Filed Nov. 2, 1937.

SHARKOL

For Processed Shark Liver Oil.

Claims use since July 15, 1937.

Ser. No. 399,378. SYLVANIA INDUSTRIAL CORPORATION, New York, N. Y. Filed Nov. 5, 1937.

CEGLIN

For Chemical Compounds for Impregnating and Coating Yarns, Fabrics, and Papers for Improving the Feel, Appearance, and Durability Thereof.

Claims use since Nov. 3, 1937.

Ser. No. 400,284. THE ANACIN COMPANY, Jersey City, N. J. Filed Nov. 30, 1937.

ANACIN

For Medicinal Preparation for Internal Use Acting as an Analgesic to Relieve Pain.
Claims use since Jan. 22, 1919.

Ser. No. 400,481. ZENITH PRODUCTS CO., Wellsville, Ohio. Filed Dec. 4, 1937.

SULPHASOL

For Medicated Shampoo for Dogs.
Claims use since Nov. 1, 1936.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 398,534. JACQUES L. GALEF, New York, N. Y. Filed Oct. 15, 1937.

GERMANY

The word "Germany" is disclaimed.
For Alarm Pistols, Alarm Revolvers, Automatic Pistols, Air Pistols, Air Rifles, Revolvers, Shot Guns, Rifles, Ammunition, More Specifically, Blank Cartridges, Cartridges, Shells.
Claims use since Aug. 2, 1937.

CLASS 10

Fertilizers

Ser. No. 400,064. L. M. McLAREN PRODUCE, INC., Yuma, Ariz. Filed Nov. 23, 1937.

"PHOTOSENSIN"

For Fertilizer.
Claims use since Nov. 8, 1937.

CLASS 11

Inks and Inking Materials

Ser. No. 399,914. TYRON CORPORATION, Philadelphia, Pa. Filed Nov. 18, 1937.

CADUX

For Inked Ribbons and Carbon Paper.
Claims use since Apr. 7, 1937.

CLASS 12

Construction Materials

Ser. No. 399,965. MARGUERITE HANSEN, doing business as San Francisco Stove Works, San Francisco, Calif. Filed Nov. 20, 1937.

FINLENITE

For Cast Iron and Cast Bronze Plates Having a Non-Slip Tread and Adaptable for Use as Thresholds, Stair Landings, Step Plates, or Elevator Approaches and the like, as Well as In or Out of Buildings, or in Ships, etc., to Prevent Slipping Especially Under Damp or Wet Conditions.
Claims use since Nov. 5, 1937.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 388,765. THE BREWER-TITCHENER CORPORATION, Cortland, N. Y. Filed Feb. 11, 1937.

BTC

For Drop Forgings—Namely, Chain Hooks, Grab Hooks, Slip Hooks, Shackles, Yoke Rod Ends, Cold Shuts, U-Bolts; Also Forged High Tension Suspension Line Hardware—Namely, Insulator Caps, Eye Hooks, Ball Hooks, Ball Eyes, Shackles, Clevises, Clevis Eyes, Adapters, Socket Eyes, Links, Straps, Suspension Clamps, Trunnion Clamps, Ground Wire Clamps, Strain Clamps and Double Strain Yoke Sets; Also Metal Stampings—Namely, Yoke Ends for Pull Rods, Wire Suspension Clamps, Expansion Plugs, Heel Washers for Shoes, Upholstery Nails, Wiring Clips, Chair Glides, Drawer Slides and Hose Clamps.
Claims use since Feb. 1, 1918.

Ser. No. 396,655. ALUMINUM GOODS MFG. CO., Jersey City, N. J., and Manitowoc, Wis. Filed Aug. 23, 1937.

THRIFTY — MAID

For Base Metal Cookers.
Claims use since Apr. 19, 1937.

Ser. No. 399,896. GUSTIN-BACON MANUFACTURING CO., Kansas City, Mo. Filed Nov. 18, 1937.

ROLAGRIP

For Pipe Couplings.
Claims use since December, 1931.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 399,900. ROSS-MEEHAN FOUNDRIES, Chattanooga, Tenn. Filed Nov. 18, 1937.

ROSS-MEEHAN

For Iron and Steel Castings.
Claims use since Oct. 28, 1937.

Ser. No. 399,943. TAY-HOLBROOK INC., San Francisco, Calif. Filed Nov. 19, 1937.

TAY HO

For Sheet Metal Rods from Galvanized Iron.
Claims use since July 1, 1929.

CLASS 16

Paints and Painters' Materials

Ser. No. 395,982. DEUTSCHES HYDRIERWERKE, A.-G., Berlin-Charlottenburg, Germany. Filed Aug. 4, 1937.

Hydrowax

For Polishing Waxes.
Claims use since Dec. 20, 1935.

Ser. No. 399,451. LACQUER PRODUCTS, INC., Cleveland, Ohio. Filed Nov. 8, 1937.

LP

For Ready Mixed Paints, Paint Enamels, Lacquers, Varnishes, Coloring and Tinting Products, Thinners, Reducers, Retarders, Removers, Primers, Sealers, Polychromatic Bases, and Masking Compounds.
Claims use since Feb. 2, 1932.

Ser. No. 400,255. TARR & WONSON, LIMITED, Gloucester, Mass. Filed Nov. 29, 1937. Under 10-year proviso.

TARR & WONSON, LIMITED
METALLIC COPPER PAINT
For the Bottoms of Vessels & Wooden & Boats

For Paints—Namely, Preservative Paints for the Bottoms of Vessels.
Claims use since July 1, 1933.

Ser. No. 400,256. TARR & WONSON, LIMITED, Gloucester, Mass. Filed Nov. 29, 1937. Under 10-year proviso.

TARR & WONSON, LIMITED
RACING COMPOUND

For Paints—Namely, Preservative Paints for the Bottoms of Vessels.
Claims use since Dec. 15, 1936.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 399,302. BERNARD G. JOHNSON, Brookfield, Ill. Filed Nov. 4, 1937.

Multiduty

For Hand Die Trucks.
Claims use since Oct. 21, 1937.

Ser. No. 399,950. JOHN V. BUCHER, Albany, N. Y. Filed Nov. 20, 1937.

SAFTISIG

For Warning Signal Consisting of a Flag on Which the Words "Learner" and "Caution" Appear and Which is Fastened to Automobiles.
Claims use since Oct. 15, 1937.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 389,368. MODERN ELECTRIC DOOR CHIME CO., New York, N. Y. Filed Feb. 25, 1937.

NuTone CHIME

No claim is made to the various words apart from the mark.
For Electric Chimes, Door Signals, and Inter-Office Signaling Devices.
Claims use since Feb. 23, 1937.

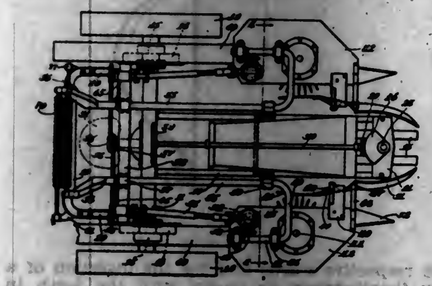
REISSUES

JANUARY 25, 1938



20,623

COTTON HARVESTER

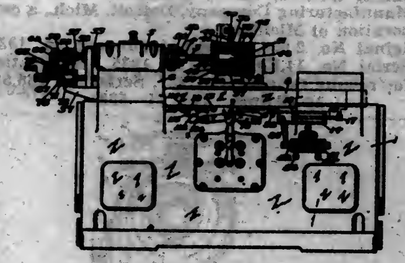
Bert R. Benjamin, Oak Park, Ill., assignor to International Harvester Company, a corporation of New Jersey

Original No. 2,011,264, dated August 20, 1935, Serial No. 211,734, October 11, 1938. Application for reissue July 17, 1937, Serial No. 154,203

26 Claims. (Cl. 56—14)

21. In a cotton picker, a tractor, picking units detachably in connection with said tractor and individually outstanding therefrom at its opposite sides, supporting means carried by and outstanding from the tractor, hinged connections between said supporting means and said units whereby said units are permitted to swing toward and away from the tractor and at the same time prevented from swaying lengthwise of the tractor, and driving connections between the tractor and each of said picking units.

20,624



SIZE CONTROLLING MECHANISM FOR BORING MACHINES AND THE LIKE

Harold L. Blood, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts

Original No. 2,041,806, dated May 26, 1936, Serial No. 598,635, March 10, 1932. Application for reissue June 14, 1937, Serial No. 148,203

20 Claims. (Cl. 77—3)

1. In a machine for the machining of one surface of each of a succession of workpieces to a predetermined dimension, a cutting tool and a workholder, means for producing relative rotation between said tool and a workpiece in said workholder, means for effecting the traverse of one of said parts by the other to procure a cutting operation on each successive workpiece, said operation involving a single longitudinal movement of the tool along the surface of the workpiece and subsequent withdrawal of the cutting tool from said workpiece, work-calipering means operative upon the withdrawal of the tool from the workpiece, and means under the control of said work-calipering means and operative only when a workpiece is not machined to the desired dimension as indicated by the calipering means

for procuring a compensatory movement of the cutting tool relative to the workholder.

20,625

PROCESS FOR TREATMENT OF YEAST AND THE PRODUCT PRODUCED THEREBY

Curtis P. Freshel, New York, N. Y., assignor to Rakeo Yeast, Inc., New York, N. Y., a corporation of New York

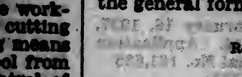
7 Claims. (Cl. 99—96)

1. The process of treating dry powdered yeast, which comprises exposing a relatively large surface area of dry powdered yeast to smoke whereby flavor-giving substances are absorbed by said yeast from said smoke, said flavor-giving substances being dominant over the natural flavor-giving substances of said yeast.

7. As a new article of manufacture, an edible dry granulated or powdered yeast containing flavoring matter having the characteristics of smoke, said flavoring matter being effective to dominate the natural flavoring matter of the yeast.

20,626



WETTING AGENTS

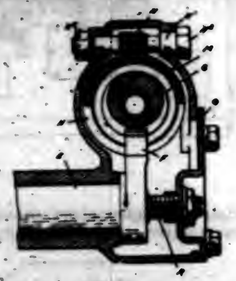
Benjamin R. Harris, Chicago, Ill., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware

No Drawing. Original No. 2,023,287, dated December 3, 1935, Serial No. 640,501, October 31, 1932. Application for reissue July 27, 1937, Serial No. 155,969

27 Claims. (Cl. 252—1)

1. A stable chemical substance represented by the general formula

wherein R is an acyl radical with at least four



carbon atoms, X represents the residue of an aliphatic polyhydroxy substance of a class consisting of glycerol, polyglycerols, glycols, polyglycols, hydroxycarboxylic acids, sugars, sugar alcohols, and acid derivatives of sugars which links together the acyl radical with the sulphate group, Y is a cation, and w and v are small whole numbers, at least one.

20,637

WORM GEAR ADJUSTMENT FOR STEERING GEARS

Charles F. Hammond, Jr., and Harper E. Pulleyblank, Detroit, Mich., assignors to Gemmer Manufacturing Company, Detroit, Mich., a corporation of Michigan

Original No. 2,069,143, dated January 26, 1937, Serial No. 14,176, April 1, 1935. Application for reissue October 11, 1937, Serial No. 168,524
10 Claims. (Cl. 74—500)

1. In a steering gear, the combination of a gear housing, a steering post mounted thereon, a steering stem within said post, a bearing for said stem at the upper end of said post, a rock shaft extending transversely of said housing and having its axis in fixed relation thereto, a worm gear on said rock shaft, a worm on said steering stem intermeshing with said worm gear, radial and end thrust journal bearings for said worm at opposite ends thereof, eccentric mountings for said journal bearings and means for simultaneously rotating said eccentric mountings independently of any rotation of said bearings to adjust said worm towards or from said worm gear.

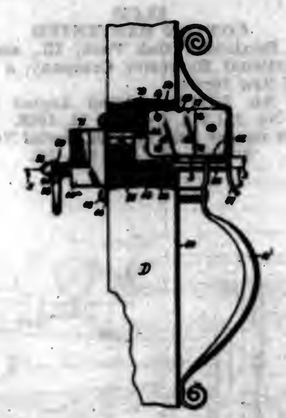
20,638

ALLOY

Robert H. Leach, Fairfield, Conn., assignor to Handy & Harman, New York, N. Y., a corporation of New York

No Drawing. Original No. 2,019,984, dated November 5, 1935, Serial No. 746,273, September 29, 1934. Application for reissue December 2, 1937, Serial No. 178,007
6 Claims. (Cl. 75—175)

2. An alloy for soldering and similar purposes which consists of silver ranging from about 30% to about 50%, copper ranging from about 19% to about 35%, zinc ranging from about 10% to about 40%, and phosphorus ranging from about 0.5% to about 5%.



20,639

COMBINED LOCK AND LATCH

James E. Price, Manhattan Beach, Calif., assignor, by direct and mesne assignments, to Burdette Lock Company, a corporation of Nevada

Original No. 2,070,619, dated February 16, 1937, Serial No. 729,494, June 7, 1934. Application for reissue August 30, 1937, Serial No. 161,635
15 Claims. (Cl. 70—353)

1. Mechanism of the class described comprising a plurality of identical wards having circumferentially spaced teeth; means for mounting the wards in two groups for rotary movement about axes arranged side by side with the wards of one group spaced from those of the other group sufficiently to provide for the passage of the teeth of

the respective wards and for the insertion of a key therebetween to co-act with the teeth in rotating the wards; means for operatively connecting the groups of wards to synchronize rotation of the groups in opposite directions; and means for urging the two groups of wards to rotate to a pre-determined starting position.

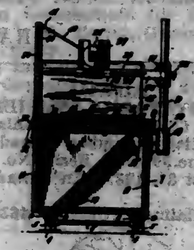
20,640

LUMINOUS DISPLAY OR REFLECTOR SIGN

Jonathan C. Stimson, Chicago, Ill.

Original No. 1,900,761, dated June 9, 1931, Serial No. 650,462, July 9, 1923. Reissue No. 18,166, dated August 25, 1931, Serial No. 544,649, June 15, 1931. This application for reissue December 2, 1937, Serial No. 177,837
21 Claims. (Cl. 40—130)

12. A reflecting sign having a sign character provided with reflecting units arranged to form an outline of the character, each of said units comprising an optical system having a reflecting area and adapted to reflect light incident thereon from a distant source back in the general direction of the light source, irrespective, within limits, of the angle of incidence of the light, each of said units having means adapted to slightly spread the reflected light but concentrate the light within an included angle of twenty degrees.



20,641

FLUOROSCOPIC DEVICE

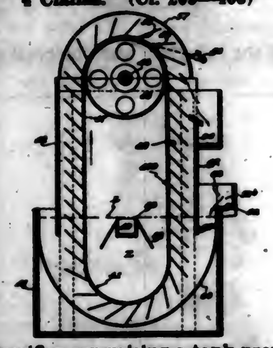
Francis E. Tally, Arlington, Mass., assignor to Daylight Fluoroscope Corporation, Cambridge, Mass., a corporation of Massachusetts

Original No. 1,967,980, dated July 24, 1934, Serial No. 575,606, November 17, 1931. Application for reissue September 21, 1934, Serial No. 744,962
7 Claims. (Cl. 250—94)

1. A fluoroscopical device comprising a dark chamber, means to produce X-rays spaced from said dark chamber, a panel extending from said dark chamber, means associated with said panel to regulate the area covered by said rays, means affected by the X-rays to produce an image, and

means for the reflection and observation of such image.

PATENTS



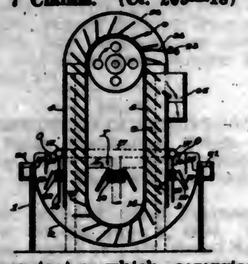
GRANTED JANUARY 25, 1938

2,106,154
ELEVATOR CLASSIFIER

Alexander C. Munro, Britannia Beach, British Columbia, Canada

Application June 30, 1936, Serial No. 88,155. Renewed August 31, 1937. In Canada March 31, 1936

4 Claims. (Cl. 209—463)



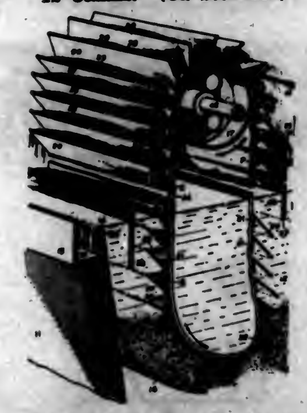
1. A classifier comprising a tank provided with means for supplying divided material together with liquid thereto, movable elevator means extending into said tank and having its upper end mounted above the level of liquid in said tank, said elevator means comprising a flexible endless carrier means having ascending and descending run portions looped downwardly within said tank and provided with open-ended agitating and elevating members mounted thereon and adapted to agitate material in said tank and to scoop up coarse material from the tank and lift the same from the body of material in the tank while permitting liquid to drain through the open ends of said agitating and elevating members and to discharge the coarse material so lifted at a point above said liquid level, slimes overflow means located in said tank within said downwardly looped portion of said endless carrier means, and means for supporting and driving said carrier means.

2,106,155
CONCENTRATOR

Alexander C. Munro, Britannia Beach, British Columbia, Canada

Application July 1, 1936, Serial No. 88,396

7 Claims. (Cl. 209—18)



1. A concentrator which comprises: a tank provided with means for supplying thereto a pulp containing divided material together with liquid and with froth flotation agent; movable elevator means extending into said tank and comprising an endless flexible carrier having its upper end mounted above said tank on a rotatable supporting means to provide a downwardly looped portion extending within said tank, said looped portion having ascending and descending run portions, and a plurality of open-ended bucket means secured to said flexible carrier, said bucket means being directed upwardly and downwardly respectively on said ascending and descending run portions and adapted to agitate the material in said tank and to scoop up coarse material and lift the same from said tank while allowing liquid to drain therefrom through the open ends thereof and to discharge such coarse material outside of said tank, said downwardly looped portion of said carrier defining with said tank an inner zone and an outer zone extending parallel to the axis of rotation of said supporting means; driving means for said rotatable supporting means; slimes overflow means in one of said zones for maintaining a liquid level in said tank; froth producing means in the other of said zones for producing a froth concentration in said zone; and concentrate overflow means in said other zone for withdrawing the froth so produced.

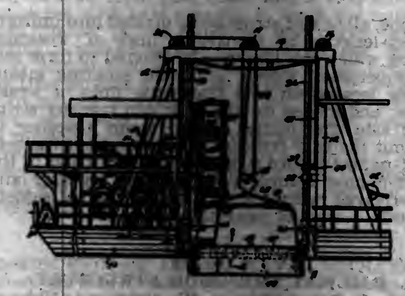
2,106,156
CLASSIFICATION

Alexander C. Munro, Britannia Beach, British Columbia, Canada

Application April 19, 1937, Serial No. 137,883

12 Claims. (Cl. 209—461)

1. A classifier having a tank, adapted to contain a bath of a solids-liquid mixture to be treated provided with a feed therefor and an outflow for the discharge of classified finer solids in suspension, an endless flexible belt extending from above to below the normal liquid level of said bath, a head pulley for supporting and impelling said belt, a plurality of blades on the outside of said belt extending therefrom at an angle of the order of 45° adapted to be carried by travel of said belt into submergence in said bath and then to emergence, said bath being divided into a zone



wherein agitation is caused by travel of said blades and a zone of relative quiescence adjacent said outflow wherein there can be realized concurrently sedimentation and a relatively quiet outflow, each of said blades adapted to carry to emergence without harmful disturbance of said outflow a load of settled solids picked up from the bottom zone of said tank from which loads liquid entrained thereby escapes freely, and means for diverting from the classifier the emerged loads discharged by the blades upon their being upset after taking around said head pulley.

2,106,157
GOLD MINING MACHINERY

Robert G. Neider, Boise, Idaho, assignor to The Submarine Gold Mining Company, Boise, Idaho, a corporation of Idaho

Application May 15, 1937, Serial No. 142,892

11 Claims. (Cl. 262—3)

1. A mining apparatus of the character described, including a barge, a diving bell, means supporting the diving bell on the barge, power operated means for raising or lowering the bell, means maintaining a predetermined air pressure within the bell, a man-way tower extending upward from the bell and having locks, means whereby the pressure of air between the locks of the tower may be equalized, a sluice box disposed within the diving bell and discharging into a tailings compartment, a pump on the barge, a flexible pipe extending from the pump into the bell and discharging into the sluice box, and a suction line extending from the tailings compartment to the barge and a sand pump connected to the suction line.

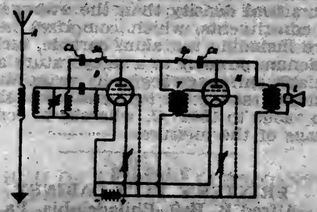
2,106,158
PURIFYING CHLORINATED HYDROCARBONS

Friedrich Pevese, Rheinfelden/Baden, and Alfred Riechs, Wolfen, Kreis Bitterfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application June 12, 1936, Serial No. 85,916. In Germany July 4, 1935

2 Claims. (Cl. 260—163)

2. The process for purifying halogenated hydrocarbons of the group consisting of halogenated methane, ethane, ethylene and acetylene which are contaminated with metal chlorides, which comprises adding ethylene oxide to the chlorinated hydrocarbon and distilling the latter in the presence of water.



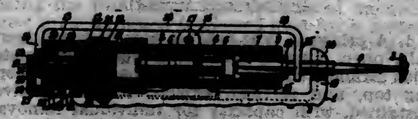
2,106,159
AUTOMOBILE RADIO APPARATUS

Wilhelm Runge, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application January 31, 1936, Serial No. 61,644

In Germany February 25, 1935

6 Claims. (Cl. 250—13)



1. In a receiving and sending system comprising in combination an input and output circuit, a detector stage connected to said input circuit, an audio frequency amplifier stage connected to said detector stage, means for establishing a feedback in both the detector and audio stages, switching means to interrupt said feedback in the detector stage, a second switching means to interrupt the feedback in said audio frequency stage, said first and second switching means being closed in the sending position and open in the receiving position.

2,106,160
PUNCHING MECHANISM

Job D. Baker, Gilbertville, Mass., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application November 22, 1933, Serial No. 699,211

28 Claims. (Cl. 76—5)

1. In a punching mechanism, a fluid actuated hammer motor, a valve for controlling the supply of motive fluid to said motor, a pinning out tool actuated by said motor, and means actuated by movement of the pinning out tool relative to the motor and operatively connected to said valve independently of said motor for controlling said valve.

2,106,161
HARD ALLOYS

Clarence W. Balke, Highland Park, Ill., assignor to Ramet Corporation of America, North Chicago, Ill., a corporation of Illinois

No Drawing. Application March 7, 1932, Serial No. 597,416

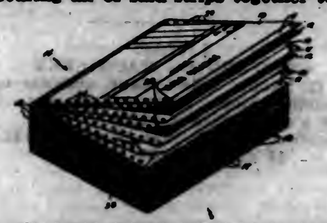
5 Claims. (Cl. 75—126)

1. A method of making a tool alloy having a greater actual density than the average density of its constituents, which comprises heating a mixture including tantalum carbide, nickel, and tungsten powders to a temperature at which appreciable shrinkage begins in vacuo, and thereafter slowly raising the temperature of said mixture in vacuo to 1380° C., whereby to control the shrinkage of the mixture.

2,106,163
HARD ALLOYS
Clarence W. Balke, Highland Park, Ill., assignor to Ramet Corporation of America, North Chicago, Ill., a corporation of Illinois
No Drawing. Application March 14, 1932, Serial No. 598,896
5 Claims. (Cl. 75—126)

1. A method of making a tool alloy having a greater actual density than the average density of its constituents, which comprises heating a mixture including tantalum carbide, nickel, and molybdenum powders to a temperature at which appreciable shrinkage begins in vacuo, and thereafter slowly raising the temperature of said mixture in vacuo to 1380° C., whereby to control the shrinkage of the mixture.

2,106,164
PRINTER'S TYPE CABINET
Alfred B. Bell, Philadelphia, Pa.
Application June 17, 1936, Serial No. 85,671
24 Claims. (Cl. 276—45)



1. A printer's type cabinet comprising a frontally-open housing fabricated from sheet metal with straight side walls, a solid back and a sloping top, and vertically-spaced inclined shelves sustained, with capacity for individual removal, within the housing, each of said shelves supporting a number of gravity-feed type chutes side by side in close contiguity with their delivery ends accessible at the front of the housing.

2,106,164
COATED FLEXIBLE SHEET
Walter Durgin Bowlby, Jersey City, N. J., assignor to Egyptian Lacquer Manufacturing Company, a corporation of New Jersey
No Drawing. Application April 7, 1936, Serial No. 73,184
20 Claims. (Cl. 91—68)

1. A flexible sheet having an adherent flexible lacquer film in which the principal base is nitrostarch and containing an amount of plasticizer equal at least to 20% by weight of the nitrostarch in the film.

2,106,165
MANIFOLDING
Carl W. Brenn, Montclair, N. J., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Application August 22, 1936, Serial No. 97,307
17 Claims. (Cl. 282—12)

1. A manifolding pile comprising a plurality of continuous record strips in superposed relation; a plurality of continuous transfer strips interleaved with said record strips; other continuous record strips each overlying one of said first-named record strips to receive type impressions direct and transferred from said transfer strips and simultaneously block out the transfer of type impressions on certain parts of the first-named record strips, said second-named record strips having on their back surfaces transfer material covering areas in which type impressions are to be made simultaneously on all of the strips; means for securing all of said strips together to travel

as one, all of said strips being divided into uniform sheet-lengths by transverse lines of weakness along which the pile may be severed to form sets of superposed sheets, and said securing means being located on said transverse lines of weakness; and means for securing said transfer strips and said first-named record strips together to permit the easy removal of the sheets of the second-named record strips leaving the sheets of the first-named record strips secured together and interleaved with transfer sheets for subsequent manifold writing operations.

2,106,166
RAILWAY CAR DOOR STRUCTURE
Edwin G. Busse, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application May 2, 1934, Serial No. 723,438
4 Claims. (Cl. 292—184)

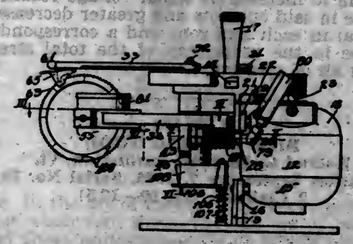
1. In combination, a stop member for attachment to a wall with a door opening, said member having a vertically disposed element and an element inclined to the vertical, both of said elements facing in the same general direction, latch bolt structure arranged for vertical sliding movement on the door, said latch bolt structure having a vertical face on its lower portion and also having an inclined face on said lower portion and said latch structure being positioned when said door is closed so that said vertical face opposes the vertical element of said stop member and said inclined face opposes the inclined element of said stop member.

2,106,167
SELF-ADJUSTING BRAKE
Howard D. Coleman, Rockford, Ill.
Application March 15, 1935, Serial No. 11,352
40 Claims. (Cl. 188—79.5)

1. A wear compensating device for maintaining a predetermined operating slack comprising, in combination, a self-adjusting unit having two relatively rotatable screw members with non-locking coacting threads and being adjustable in axial length through relative rotation in one direction when subjected to an axial force in one direction, and a housing enclosing said unit and being hermetically sealed to prevent the loss or deterioration of lubricant and the entry of foreign matter.

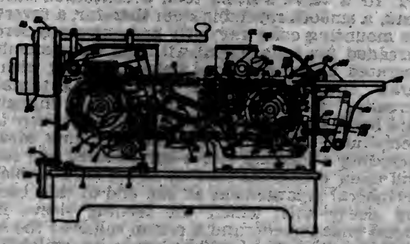
28. A vehicle brake comprising, in combination, a rotatable drum, a brake element engageable with said drum, spring means for retracting said element from said drum and a stop device associated with said element to limit the movement thereof in one direction, said device comprising a self-adjustable unit having two relatively rotatable screw members with non-locking coacting threads and being adjustable in length when subject to axial tension, and spring means other than said first mentioned spring means for placing said unit under compression and of a strength sufficient to counteract a downward acceleration of said brake bearing a ratio to gravity up to five to prevent adjustment in response to momentum.

2,106,168
PRODUCTION OF ALKALI METAL NITRATES
Alfred Stevens Denny, Hopewell, Va., assignor, by mesne assignments, to The Solvay Process Company, New York, N. Y., a corporation of New York
No Drawing. Application October 2, 1931, Serial No. 566,262
10 Claims. (Cl. 23—102)



1. In a process for the production of an alkali metal nitrate from an aqueous solution of the same containing a small proportion of an alkaline material from the group consisting of the alkali metal carbonates and hydroxides, that improvement which comprises treating said solution with an inorganic ammonium salt and heating the thus treated solution to concentrate it until said alkaline material is substantially completely removed therefrom.

2,106,169
AUTOMOBILE STEERING WHEEL
Prentis Enright Erickson, Minneapolis, Minn., assignor to James B. Bradshaw, Minneapolis, Minn.
Application November 17, 1936, Serial No. 111,311
3 Claims. (Cl. 74—555)



1. In a steering wheel construction, a pair of cooperating split metal castings interposed between a spoke and the adjacent rim sections, a second pair of cooperating split metal castings interposed between an adjacent spoke and the adjacent rim sections, alined hinge pins connecting each pair of split castings and completely housed within the same, means for detachably connecting the remaining spoke with the wheel hub, means for latching and unlatching the remaining spoke for respectively placing the wheel in driving position or in inoperative position when the major portion of the wheel is raised upwardly and forwardly to permit unobstructed getting into or out of the driver's seat, and a locking means carried by one of the split metal castings for retaining the wheel in its inoperative position.

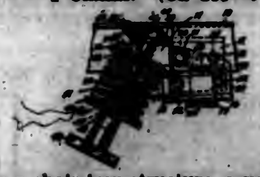
2,106,170
METHOD OF TESTING LUBRICANTS
Frederick A. Faville, Chicago, Ill.
Application April 20, 1936, Serial No. 75,323
4 Claims. (Cl. 73—51)

1. The method of testing lubricants, which comprises rotating a cylindrical member between plane bearing surfaces under increasing bearing load, measuring the load and torque up to the point where the torque suddenly increases, continuing the rotation of said cylindrical member under predetermined increased load for a period of time and measuring the amount of wear produced on the bearing surfaces.

2,106,171
FLEXING MACHINE
Emil Fegelson, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application August 1, 1936, Serial No. 93,828
58 Claims. (Cl. 12—17)

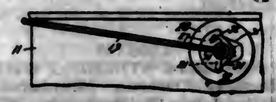
1. In a flexing machine, means for advancing a workpiece along a path having two rectilinear portions outgoing and incoming with respect to a work-receiving point, flexing mechanism acting upon the work over the outgoing rectilinear portion, and flexing mechanism acting upon the work over the incoming rectilinear portion.

2,106,172
VACUUM TUBE
Philip M. Hafleke, Washington, D. C.
Application July 30, 1936, Serial No. 93,464
27 Claims. (Cl. 250—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A method of operating a vacuum tube, comprising applying a signal voltage to control an electron stream in said tube, intercepting from said stream at each of a plurality of spaced zones a portion of the electrons to set up a current through each zone separate from the current in the output signal channel, and utilizing the said currents to effect a decrease of potential in the respective zones, whereby increase of electron flow due to increase of signal voltage results in increase in said currents and greater decrease of potential in each said zone and a corresponding decrease in the proportion of the total stream passing all of said zones.

2,106,173
BIBB SEATING TOOL
Roland G. Hawker, Burlington, Vt.
Application September 7, 1935, Serial No. 39,589
2 Claims. (Cl. 90—12.5)

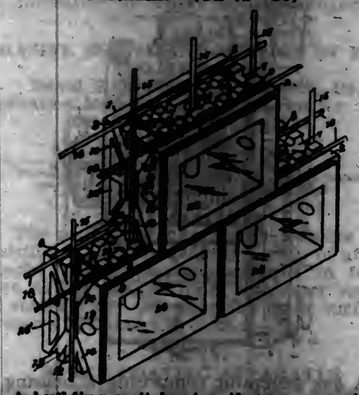


1. In a valve seating tool, a contoured cutter head, a smooth revoluble stem therefor, a reversible mounting cone interiorly and exteriorly screw threaded for engagement with the valve member operated upon, said cone being provided with a screw threaded central bore, an externally threaded feeding sleeve threadedly engaging said bore, and interengaging means between the sleeve and the stem, said interengaging means including a bushing sleeve surrounding the stem and upon which the feeding sleeve is revoluble, a peripheral enlargement at one end of said bushing sleeve with which the feeding sleeve has thrust engagement, and a clamp collar at the opposite end of the bushing sleeve by which the bushing sleeve is immovably engageable with the stem in different positions of axial adjustment, said mounting member having a tube-like sleeve centrally located and shorter than the maximum depth of the screw-threaded portion to provide clearance for retracting at least a portion of the contoured cutter within the mounting member.

2,106,174
CHAIR IRON
Walter F. Herold, Bridgeport, Conn., assignor to The Rassiek Company, Bridgeport, Conn., a corporation of Connecticut
Application June 12, 1936, Serial No. 84,837
4 Claims. (Cl. 155—77)

4. In a chair iron structure, a supporting post, a frame rigidly mounted on said post, a pair of spider arms, a spanner member rigidly connecting said spider arms in spaced relation, joint means connecting said spider arms and spanner member to said frame for tilting movement about a horizontal axis, said frame comprising a U-shaped frame member having an aperture in its transverse portion engaged by said post, a second frame member secured between the sides of said first frame member and having an aperture in its transverse portion also engaged by said post, said post being secured with respect to said apertures against vertical displacement, forwardly projecting arms on the sides of said U-shaped frame member adapted to engage said spanner member in the non-tilted position of said spider arms, stop means on said arms adapted to engage said spanner member to limit the tilted position of said spider arms, a forwardly projecting integrally formed apertured resilient element supporting head on the transverse portion of said second frame member engaging the under sides of said arms, a rod rockingly connected to said spanner member and extending through said apertured head, a resilient element supporting base adjustably mounted on said rod in spaced relation to said head, and resilient means disposed about said rod between said head and said base.

2,106,175
BAIL CONTAINER
John M. Hethersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application September 3, 1933, Serial No. 688,675
1 Claim. (Cl. 220—91)



A container comprising a body, cup-shaped hollow bail ears formed of bendable sheet metal, each including a peripheral wall permanently secured to said body, and a one-piece bail having hooked ends adapted for insertion within and pivotal engagement with said ears, the peripheral wall of the bail ear including an arcuate portion of substantial length, the portions of the peripheral wall at the opposite ends of said arcuate portion being bent inwardly to form stop shoulders for engaging said bail ends to hold the bail spaced away from the wall of the container body, the hooked shoulder engaging portions of said bail normally extending transversely of the bail within the hollow bail ears, whereby said bail ends may be inserted within said hollow bail ears by a twisting movement of the bail.

2,106,176
QUICK RELEASE VALVE
William E. Hoffman and George W. Replogle, Dayton, Ohio
Application March 2, 1935, Serial No. 9,636
6 Claims. (Cl. 251—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A valve assembly comprising a valve body having an external shoulder and provided internally with a fluid passage having a discharge orifice and a valve seat, a valve plug carrier slidably mounted in said body for movement up and down relative to said valve seat, a valve plug positioned in and secured to said carrier and having a sealing means to engage the valve seat in the down position of the carrier and to be raised from said seat in the elevated position of the carrier, tensioned carrier-elevating means adapted to hold the said carrier, valve plug and sealing means elevated above the seat and a releasable lever-and-latch element pivoted at one end to the valve body for swinging movement downwardly against the carrier to press the sealing means to the valve seat and at its free end having a latch lug engageable with the external shoulder of the valve body for retaining the said carrier down against the tension of the carrier-elevating means.

2,106,177
BUILDING UNIT
Victor J. Hultquist, Alcoa, Tenn.
Application December 15, 1936, Serial No. 116,022
8 Claims. (Cl. 72—36)

1. A building unit having the upper and lower faces formed with a longitudinally ranging channel and side channels on opposite sides of the longitudinally ranging channel, the ends of the unit being formed with a vertical channel communicating with the ends of the longitudinally ranging channel, and inclined channels leading from the ends of the side channels and leading into the vertical channel, the inclined channels providing air vent paths from the side channels to the vertical channels.

2,106,178
ELECTROLYTIC CONDENSER
Fred Keller and Charles M. Hastings, New Kensington, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 23, 1927, Serial No. 182,527
11 Claims. (Cl. 148—31.1)

6. In the art of making electrolytic condensers from aluminum sheet, the method of rendering said sheet uniformly etchable which contains a total of not more than 0.6 per cent of the impurities iron, silicon and copper, said method comprising heating the sheet at 650 to 950° F. for 5 minutes to 12 hours and thereafter subjecting said sheet to a thermal treatment between 250 and 400° F., followed by cooling to room temperature.

2,106,179
COMPOSITE CONSTRUCTION MEMBERS
Guy F. Kotrisaty, New York, N. Y., assignor to Fer-O-Cem Corporation, Bryn Mawr, Pa., a corporation of Delaware
Original application November 17, 1933, Serial No. 698,432. Divided and this application July 5, 1935, Serial No. 29,626
7 Claims. (Cl. 72—115)

1. In composite structural stud members, including end sections of self-supporting building units having tongued post sections formed therein and serving as structural supporting and keying members, H-shaped sheet metal keying members between and in locking engagement with aligned and spaced post sections of adjacent building units, the said keying members comprising panel sections generally lying in the same plane as the walls of the building units and intermediate web sections having flange portions, the flange portions of the said members being adapted to mate with and engage the post sections on the building unit end sections whereby the composite is held as a structural unit.

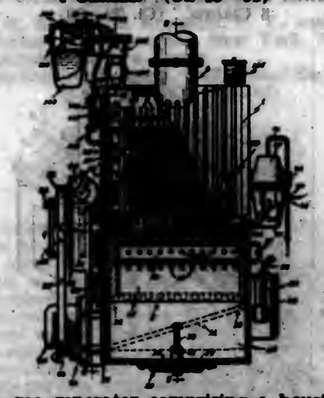
2,106,180
PROCESS OF PREPARING TERTIARY ETHYNYL CARBINOLS AND PRODUCT THEREBY PRODUCED
Oscar Robert Kreimeier, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 20, 1936, Serial No. 91,622
7 Claims. (Cl. 260—156)

1. Process of preparing dimethylethynylcarbinol which comprises reacting 46 parts of sodium with an excess of liquid ammonia in the presence of 1.3 parts of sodium oxide and in the presence of 0.3 part of ferric nitrate enneahydrate, passing acetylene gas into the ammonia solution of sodamide thus prepared at —50° C. to —40° C. until the gray color thereof changes to black, adding 116 parts of dry acetone to the sodium acetylide solution thus obtained, and isolating the dimethylethynylcarbinol by evaporating the ammonia, dissolving the residue in water, acidifying and steam distilling the aqueous acid solution, and salting out the product from the steam distillate.

2,106,181
ETHYNYL CARBINOLS AND PROCESS OF PREPARING THE SAME
Oscar Robert Kreimeier, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 20, 1936, Serial No. 91,623
10 Claims. (Cl. 260—156)

1. Process of preparing methylethynylcarbinol which comprises reacting 46 parts of sodium with an excess of liquid ammonia in the presence of 1.3 parts of sodium oxide and in the presence of 0.3 part of ferric nitrate enneahydrate, passing acetylene gas into the ammonia solution of sodamide thus prepared at —50° C. to —40° C. until the gray color thereof changes to black, adding 88 parts of dry acetaldehyde to the sodium acetylide thus obtained, and isolating the methylethynylcarbinol by evaporating the ammonia, dissolving the residue in water, acidifying and steam distilling the aqueous acid solution, and salting out the product from the steam distillate.

2,106,182
PROCESS OF REACTING ALKALI METAL ACETYLIDES WITH ALKYLENE OXIDES AND PRODUCTS THEREBY PRODUCED
Oscar Robert Kreimeier, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 20, 1936, Serial No. 91,624
12 Claims. (Cl. 260—156)



1. Process for the preparation of beta-ethynylethanol which comprises reacting 46 parts of sodium with an excess of liquid ammonia in the presence of 1.3 parts of sodium oxide and in the presence of 0.3 part of ferric nitrate enneahydrate, passing acetylene gas into the ammonia solution of sodamide thus prepared at —50° to —40° C., until the gray color thereof changes to black, adding 88 parts of dry ethylene oxide to the sodium acetylide solution thus obtained, maintaining the temperature at —50° to —30° C. for four to fifteen hours, and isolating the beta-ethynylethanol by evaporating the ammonia, dissolving the residue in water, acidifying and steam distilling the aqueous acid solution, and salting out the product from the steam distillate.

2,106,183
SUCTION ELEVATOR
Arthur Lowy, Newark, N. J., assignor to New York Engineering Company, New York, N. Y., a corporation of New York
Application May 5, 1936, Serial No. 77,911
4 Claims. (Cl. 302—15)

1. In a suction elevator, a chamber having inlet and discharge openings arranged with their axes at an angle so that the material changes its direction of travel in passing therethrough, a one-piece lining for said chamber having a substantially continuous and unbroken surface adapted to permit passage of material without turbulence, and a water supply nozzle terminating substantially flush with said lining so that the nozzle is out of the path of the flow of material in said chamber and does not interfere with the smooth flow of material therethrough.

2,106,184
GAS GENERATOR
Vincent D. McDonnell, Chicago, Ill.
Application May 21, 1934, Serial No. 726,691
7 Claims. (Cl. 48—61)

1. A gas generator comprising a housing arranged to provide a fuel bowl in its lower portion and a combustion space above said fuel bowl, a horizontally disposed rotatable drum positioned within said combustion space and arranged to extend into fuel held in said fuel bowl, means to rotate said drum, means to ignite fuel

carried on said drum, a catalyzing chamber within said housing communicating with said combustion space, catalyzing means in said catalyzing chamber, a tortuous passageway within a wall of said housing adjacent said catalyzing chamber and said combustion space, means to introduce water into said passageway for vaporization therein, means communicating with said passageway and arranged to distribute the water vapors therefrom along one side of said drum, and means to introduce air into said combustion chamber in predetermined quantities and at said one side of said drum.

2,106,185
VENDING MACHINE
Louis H. Morin, New York, N. Y., assignor to The Coca-Cola Company, Wilmington, Del., a corporation of Delaware
Application September 8, 1934, Serial No. 743,255
10 Claims. (Cl. 312—36)

1. A device of the class described having a tank provided with a discharge opening in the top wall thereof, horizontally disposed endless conveyor means in the tank operable to advance bottles or the like in an up-standing position below and in alignment with said opening, manually operable means for the first mentioned means, a device for partially ejecting a bottle aligned with said opening and supporting such bottle in partially ejected position, said device being normally interfitted with said conveyor means, and mechanism operable through each operating movement of said manually operable means to disengage said device from the conveyor means and thereafter to restore said interengagement.

2,106,186
ABRASIVE SLEEVE AND METHOD OF FORMING THE SAME
David R. Mallinckrodt, Swarthmore, Pa.
Application November 2, 1936, Serial No. 108,845
12 Claims. (Cl. 51—378)

2. The method of forming an abrasive sleeve consisting of spirally winding a strip of abrasive material about a tapered mandrel to form a sleeve having tapered inner and outer surfaces, and subsequently trimming the outer surface of the sleeve to cylindrical form.

2,106,187
SPRAY COATING APPARATUS
Walter R. Meagher, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application September 9, 1936, Serial No. 99,901
14 Claims. (Cl. 91—39)

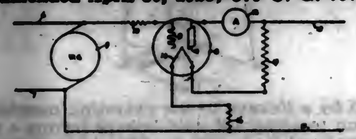
1. In combination, a stand, a spray gun on the stand having an operating member, a gun support having pivotally joined sections constructed and arranged to permit adjustment in a plurality of planes, said support extending between the stand and the spray gun to hold the latter in the desired position on the stand, and an operator-controlled member remote from the spray gun

joined by a linkage to the operating member at the gun to actuate it, said linkage having a connecting portion associated with said support, said connecting portion being jointed in such relation to a joint of the support that adjustment of the position of the gun does not affect the operativeness of the connection.

2,106,188
METHOD OF ACCELERATION OF GELATINIZATION OF CELLULOSE NITRATE AND LIQUID NITRIC ESTERS AND THE PRODUCT THEREOF
James T. Power, Wilmington, Del., and Kenneth R. Brown, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 6, 1934, Serial No. 705,622
7 Claims. (Cl. 52—22)

3. A composition comprising a cellulose nitric ester gelatinized with a liquid nitric ester in the presence of a minor proportion of an accelerator comprising an alkyl ether of a hexahydric alcohol, said ether having at least five ether groups.

5. The process of gelatinizing cellulose nitric esters with liquid nitric esters, which comprises bringing about said gelatinization in the presence of an accelerator comprising an alkyl ether of a hexahydric alcohol, said ether having at least five ether groups.



2,106,189
APPARATUS FOR CONSTRUCTING LEVEES AND THE LIKE
Frederic Carl Rabbiff, South Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware
Application June 27, 1936, Serial No. 87,675
16 Claims. (Cl. 214—160)

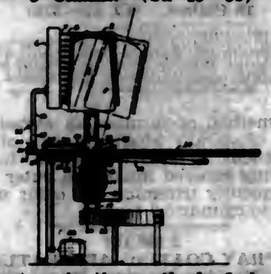
1. In apparatus for constructing levees and the like, the combination of: a central supporting

propelling base; a loading wing pivoted adjacent one side of said base; a dumping wing, pivoted adjacent the opposite side of said base; adjustable means suspending each wing; a load-carrying car adapted to travel the length of the two wings and the base; a loading hopper, to direct material into the car; and a ground engaging support for the hopper, adapted to be engaged by the loading wing, whereby the hopper support is carried by the loading wing when the latter is raised, and whereby the hopper is free from connection with the loading wing when the latter is lowered.

2,106,190
ARCHONOGRAPH
Bela Rozsay, Annapolis, Md.
Application September 12, 1933, Serial No. 689,119
13 Claims. (Cl. 219—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. The combination with a welding circuit wherein the voltage passes alternately through values corresponding substantially to open circuit and short circuit during the fusion of a particle of the welding electrode and the transfer of such particle to the welding, respectively, of a vacuum tube having a grid, a filament, and a plate, means connecting the said grid to one side of said circuit and said filament to the other side of said circuit, whereby said tube passes a saturation current during the time of fusing said particle and is blocked during the transfer of said particle to the weld and a high inertia indicating instrument connected to the said plate, the said instrument being thus actuated to indicate the relative durations of the fusing stage and the transfer stage.

2,106,191
MAIL TREATING MACHINE
Commodore D. Ryan, Los Angeles, Calif., assignor to National Postal Meter Company, Los Angeles, Calif., a corporation of California
Application April 26, 1935, Serial No. 18,245
7 Claims. (Cl. 164—61)

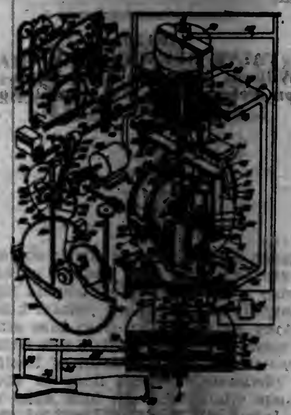


7. In a mail treating machine, a powerplant including a guide wall, an envelope magazine having one side in alignment with the said guide wall, and an envelope feed conveyor arranged parallel to said wall and operable for serially feeding envelopes from the magazine; a letter opening device mounted in the powerplant and having cutting means positioned a predetermined distance outwardly from the envelope engaging face of the guide wall for trimming a strip of predetermined width from the body of each of the envelopes conveyed therepast, said opening device having a guide wall in substantial alignment with the powerplant guide wall, and a conveyor means mounted in the opening device and diagonally related to the powerplant guide wall for moving the envelopes under treatment into guiding relation with said guide walls.

2,106,192
METHOD AND APPARATUS FOR MAKING AND DECANTING CHAMPAGNE
Willard C. Seville, Belvedere, Calif.
Application October 15, 1934, Serial No. 748,351
21 Claims. (Cl. 226—26)

1. In an apparatus for transferring champagne from a bottle in which it was fermented into another bottle, the combination with means for holding each bottle stationary, and a closure member for each bottle adapted to engage the mouths of said bottles of a syphon, means to simultaneously insert the ends of the syphon through said closure members into the respective bottles so as to cause the flow of champagne from the full to the empty bottle, and means for the gradual escapement of air from the second bottle as it is being filled.

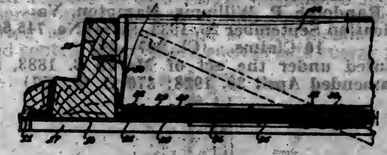
2,106,193
METHOD OF MAKING HOLLOW GLASSWARE
Theodore H. Sloan, Charleroi, Pa., assignor to G. M. S. Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 52,363
6 Claims. (Cl. 49—68)



1. The steps in the method of shaping glass articles which comprise providing a shaping support having a portion of its supporting surface of the desired surface contour of the finished article and having its axis adapted for adjustment to different angles, the cross-section of the support at any point along its axis being smaller than the

corresponding cross-section of the glass blank placing a preformed glass article of substantially straight-sides on said shaping support, subjecting the outer surface of the article to uniform heating temperature to render it plastic, tilting said support and subjecting the supporting article to rotary movement whereby the article, when plastic, adapts itself to the contour of the support.

3. Apparatus for shaping glass articles comprising a rotary table, a plurality of shaping supports mounted in angularly spaced relation thereon, each of said supports comprising a matrix portion of substantially the surface contour desired in the finished article, a shaft pivotally mounted to the table for carrying said shaping supports, means for rotating the shafts, a series of burners adjacent the rotary table adapted to project the burner flame in the path of travel of the rotary supports, and means responsive to rotary movement of the table to vary the inclination of the shaping supports relative to a vertical axis.



2,106,194
GYROSCOPIC FLUID METER
Emery Frank Stover, Wynnewood, Pa.
Application December 20, 1935, Serial No. 55,219
44 Claims. (Cl. 73—206)

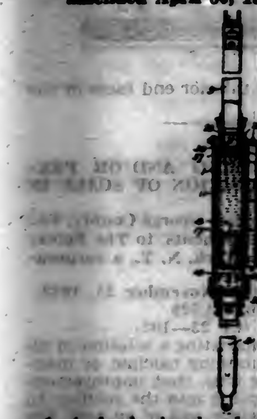
1. A meter comprising a rotatable frame, means for rotating said frame, a gyroscope operatively mounted upon said frame and arranged for producing a gyroscopic force, means operatively associated with the gyroscope for rotating the latter at a speed proportional to the speed of the frame, a member subjected to a variable force and opposed by force produced by the gyroscope, and means associated with said first named means and actuated by said member for controlling the speed of rotation of said frame and arranged for maintaining said forces in balance.

2,106,195
MOTOR VEHICLE
Milton Tibbetts, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application May 1, 1931, Serial No. 535,785
9 Claims. (Cl. 296—44)

1. In a motor vehicle body, a side panel having a flange defining an opening therein, and a window structure having the outer portion formed to fit in and close the panel opening with the exterior face flush in a longitudinal direction with the outer surface of the panel and the inner

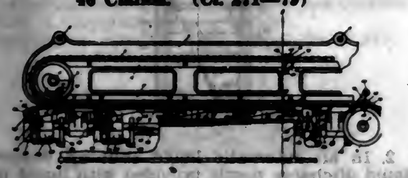
portion overlapping the interior end faces of the panel flange.

2,106,196
PROCESS FOR REMOVING AND/OR PREVENTING THE DEPOSITION OF SCALE IN EVAPORATORS
Charles Fitch Weston, Prince George County, Va., assignor, by mesne assignments, to The Solvay Process Company, New York, N. Y., a corporation of New York
No Drawing. Application November 25, 1932, Serial No. 644,329
14 Claims. (Cl. 23—102)



1. In a process for evaporating a solution of an alkali metal nitrate containing calcium or magnesium and bicarbonate ions, that improvement which comprises introducing into the solution to be evaporated an ammonium salt of an acid, the calcium and magnesium salts of which are more soluble than calcium and magnesium carbonate, said salt being in amount in excess of that equivalent to the carbonate present in the solution and heating the liquor to evaporate it in contact with heat transfer surfaces.

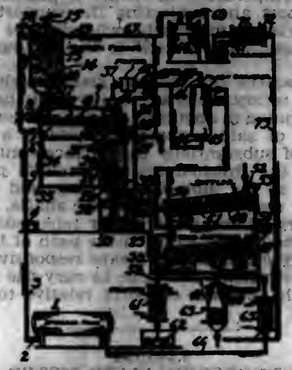
2,106,197
AUTOMATIC LIQUID SHUT-OFF DEVICE
Charles W. Wildebour, Olympia, Wash.
Application March 20, 1926, Serial No. 95,651
6 Claims. (Cl. 226—127)



2. In an automatic liquid shut off device, a liquid discharge nozzle provided with liquid passageway means defining a path of flow of liquid therethrough, and having a chamber positioned at one side of the path of flow of the liquid; a liquid shut off device positioned to extend substantially across the open side of the chamber, said liquid shut off device providing a restricted communication between the chamber and the interior of the nozzle when it is in open position, said shut off device being movable into obstructing position as respects said liquid passageway when closed; and means yieldingly holding said liquid shut off device in open position, said liquid shut off device being adapted to be moved by the liquid flowing therethrough into a closed position in response to the entrance of liquid behind said liquid shut off device when the end of the nozzle is submerged in liquid.

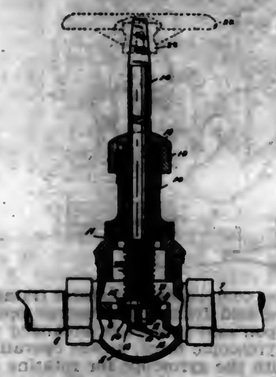
2,106,198
AIR METERED SHOCK ABSORBER FOR AIRPLANE LANDING GEARS
Randolph P. Williams, Hampton, Va.
Application September 26, 1934, Serial No. 745,009
10 Claims. (Cl. 267—64)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A shock absorber having, in combination, a cylinder, an elastic medium in the cylinder, a piston movable inwardly of the cylinder for compressing the elastic medium, a mobile non-compressible liquid normally confined between the piston and the elastic medium, and means operating at a predetermined compression of the elastic medium to by-pass the liquid to the outer side of the piston during continued inward travel of the latter.



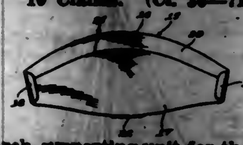
2,106,199
SHEET DELIVERY DEVICE AND METHOD
Arthur Wernaer, Offenbach-on-the-Main, Germany, assignor to Faber & Schleicher, A. G., Offenbach-on-the-Main, Germany, a corporation of Germany
Application August 18, 1933, Serial No. 685,695
In Germany August 31, 1932
46 Claims. (Cl. 271—79)

1. In a sheet delivery device, holding means adapted to seize the sheet at opposite edges thereof, and operating means for depressing said edges at different times.



2,106,200
METHOD OF EXTRACTING PERFUME MATERIALS UNSTABLE TO HEAT
Philip L. Young, Westfield, and Peter J. Wiezevich, Elizabeth, N. J., now by judicial change of name Peter J. Gayler, assignors to Standard Oil Development Company, a corporation of Delaware
Application October 3, 1935, Serial No. 43,324
4 Claims. (Cl. 87—28)

1. Method of extracting perfume materials unstable to heat, comprising subjecting matter containing same under pressure to the action of a hydrocarbon solvent having 2-4 carbon atoms, separating the solution from the unextracted matter, subjecting the solution to refrigeration



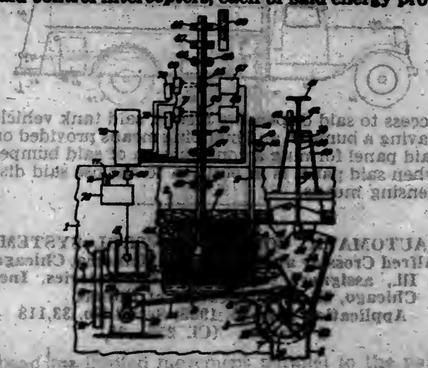
until a separation of phases occurs, separating the phase rich in the hydrocarbon solvent and removing the hydrocarbon solvent therefrom by distillation.

2,106,201
VALVE REFACING TOOL
William Aab, New Ulm, Minn.
Application February 6, 1936, Serial No. 62,622
1 Claim. (Cl. 90—13.5)

In a valve refacing tool, a shaft having a cutter head rigidly secured thereon inwardly of one end thereof, a centering head portion journaled on the end of the shaft beyond said cutter head and comprising, a sleeve having a disk-like portion secured to its outer end, means on the shaft engaging the disk-like portion to hold said sleeve in abutting relation with the active face of the center head, said disk-like portion being of materially less diameter than the passageway through the valve to be refaced and having a circumferential series of radially diverging spring wings, the free ends of which extend toward the active face of the cutter head for angular resilient engagement with the sides of the passageway through the valve, whereby said centering head portion functions to laterally support the cutter head irrespective of any irregularities or roughness in the passageway through the valve as the tool is progressively fed to its work.

2,106,202
ARCH SUPPORT
Charles Abramshaw, Highland Park, Ill., assignor of one-half to Eugene P. Lichtenthal, Chicago, Ill.
Application November 14, 1936, Serial No. 110,902
10 Claims. (Cl. 36—71)

1. An arch-supporting unit for the human foot comprising a resilient upper member and a resilient lower member, the said resilient lower member being arranged below the said resilient upper member and extending throughout substantially less than the entire area or bottom surface of the said upper member but when in position of use making contact throughout substantially its entire upper surface with the bottom surface of said upper member so as to brace the said upper member under and throughout the entire area of the central and outer marginal edge portions of the latter but leaving the same unsupported along the inner marginal edge portion of the same.



2,106,203
FRAME FOR ADVERTISING CARDS
Marcellus T. Aabe, Garden City, N. Y.
Application June 5, 1937, Serial No. 146,538
3 Claims. (Cl. 40—156)

1. A device of the class described comprising a frame having a closed back and inwardly-extending flanges spaced from the back; a card insertable in said frame; a plurality of elongated clips for holding said card in the frame, each of said clips formed of a strip of metal bent longitudinally upon itself to form a V-shape, the outer edge of one side of each clip bent inwardly towards the other edge, said edges normally spaced from each other by the tension of the metal; and the clips insertable under the flanges of the frame with the bent sides engaging under the flanges.

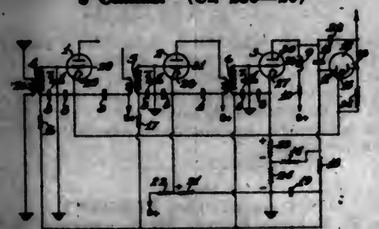
2,106,204
WASH BOX DISCHARGE CONTROL
Edward J. Burnell and Ward J. Hancock, Chicago, Ill., assignors to Link-Belt Company, Chicago, Ill., a corporation of Illinois
Application January 23, 1935, Serial No. 2,840
11 Claims. (Cl. 209—41.5)

1. In combination in a mechanism, a movable control member, a plurality of energy responsive means adjacent said member, energy projecting means positioned adjacent said member opposite each of said energy responsive means, a plurality of intercepters carried by said member, the number of intercepters being the same as the number of energy responsive means, said control member being adapted to be moved to position said intercepters into and out of the paths of energy from said energy projecting means, and electric control means for said mechanism operatively associated with said energy responsive means arranged to be energized and deenergized in response to energy from said projectors when the intercepters are in non-shielding position with respect to said energy responsive means, whereby the operation of said control means is varied by the movement of said member and said control intercepters, each of said energy projecting means associated with the respective energy responsive means comprising plural sources of energy spaced along the path of movement of said control member and defining the range of movement through which each interceptor is effective to control its associated energy responsive means.

2,106,205
UNIT ABRADING ELEMENT
Kirke W. Conner, Detroit, Mich., assignor to Micromatic Hone Corporation, a corporation of Michigan
Application April 19, 1934, Serial No. 721,264
2 Claims. (Cl. 51—134.5)

1. In a honing tool having a head for carrying an abrading element and means on said head for engaging said abrading element to adjust the same, an abrading element comprising an abrasive stick, a holder for said stick of heat hardenable resin non-injurious to the surface upon which the tool is operating, said holder having one face formed to cooperate with said tool adjusting means and having an end thereof extended beyond the abrasive element for retaining the holder on said tool, said holder being so formed and bonded to the abrasive element during the molding operation.

2,106,206
TANK VEHICLE
Robert W. Crossen, Jr., Plainfield, and Howard Somervell, Evanston, Ill., assignors to Farrell Manufacturing Company, Joliet, Ill., a corporation of Illinois
Application February 11, 1935, Serial No. 6,029
17 Claims. (Cl. 280—5)



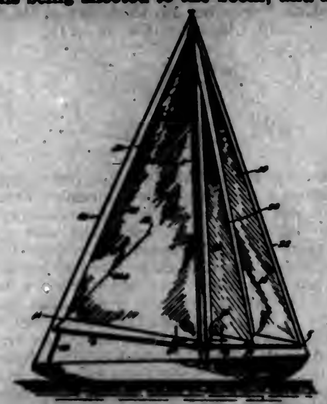
4. In a tank vehicle, the combination of a chassis, a tank body supported on said chassis, dis-

pensing means for said tank body, a skirt disposed adjacent said dispensing means for enclosing said means, said skirt being provided with a movable panel adapted to be moved to permit

access to said dispensing means, said tank vehicle having a bumper, and bumping means provided on said panel forming a continuation of said bumper when said panel is in position to enclose said dispensing means.

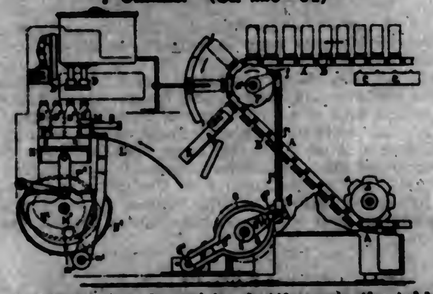
2,106,207
AUTOMATIC VOLUME CONTROL SYSTEM
Alfred Crossley and Herbert E. Meinema, Chicago, Ill., assignors to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application July 25, 1935, Serial No. 33,118
8 Claims. (Cl. 250—20)

7. In a radio receiver, plural high-frequency amplifying tubes and a detector-rectifier, means for automatic control of the amplification of at least some of said vacuum tubes, and means whereby one of said controlled tubes acts additionally as a direct-current amplifier to increase the degree of control exerted upon at least one other of said vacuum tubes by said automatic control means.



2,106,208
ELECTROLYTIC DEVICE
Paul McKnight Deeley, New York, N. Y., assignor to Cornell-Dubilier Corporation, New York, N. Y., a corporation of New York
Application December 30, 1935, Serial No. 56,595
11 Claims. (Cl. 175—315)

1. The method of preparing electrolytes for use in electrolytic condensers or the like which consists in reacting together a weak acid and polyhydroxyl alcohol and controlling the water content of the reaction product by removing excess reaction water by subjecting the electrolyte mixture to a dry air stream.

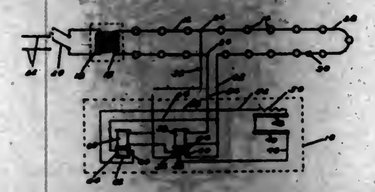


2,106,209
SAILBOAT
Charles Neal Edge, Parsonage Point, Rye, N. Y.
Application September 7, 1935, Serial No. 39,514
4 Claims. (Cl. 114—39)

1. A sailing vessel having a mast and also having a boom which is turnable relative to said mast, sails turnably and directly connected to said mast and also connected to the boom fore and aft of the mast, said sails being turnable in unison with the boom around the axis of the mast, said sails being sheeted to the boom, and a main

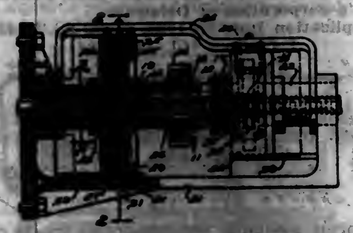
sheet connecting the boom to the hull of the vessel, said sails having arched configurations, said sails having their adjacent edges permanently spaced from each other along a line which is parallel to the longitudinal axis of the boom, in all positions of said boom.

2,106,210
MECHANISM FOR RAISING BOTTLES ONTO THE TABLE OF A BOTTLE FILLING AND CAPPING MACHINE
Arthur Guy Enock, Wembley Park, England
Application October 12, 1935, Serial No. 44,650
In Great Britain October 20, 1934
7 Claims. (Cl. 226—94)



1. Mechanism for raising bottles onto the table of a bottle filling and capping machine comprising a receiving plate, a push bar adapted to reciprocate over the receiving plate, a bell crank lever to impart movement to the push bar, a shock absorbing buffer mounted on the bell crank lever and a stop on the table against which the buffer comes in contact to take up any play in the push bar as it approaches the end of its forward stroke.

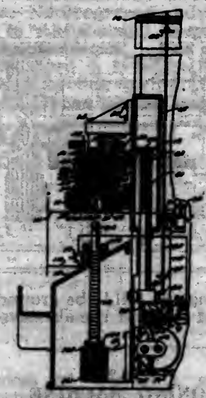
2,106,211
ELECTRICAL APPARATUS
Lester W. Geis, Mishawaka, Ind., assignor to South Bend Current Controller Company, South Bend, Ind., a corporation of Indiana
Application October 17, 1935, Serial No. 45,415
17 Claims. (Cl. 176—124)



1. A lighting system comprising a source of substantially constant current, a set of vapor

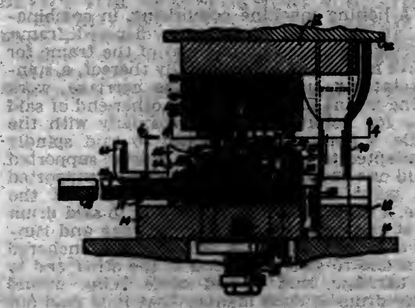
lamps connected in series in a circuit forming a loop connected at its ends to said source, means for short-circuiting a portion of said loop to permit the starting of the remainder of the lamps independently of the short-circuited portion,

means for automatically breaking the short-circuit formed by the first means after a time interval, and means for automatically reestablishing said short circuit if a break occurs in said portion of the loop.



2,106,212
APPARATUS FOR BROACHING AN APERTURE IN AN ARTICLE RELATIVE TO ITS OUTER DIMENSION
Carl J. Halberg, Detroit, Mich., assignor to Colonial Broach Company, a corporation of Michigan
Application April 14, 1932, Serial No. 605,272
5 Claims. (Cl. 90—33)

1. A broaching fixture including, in combination, a bracket for supporting centrally aligned spline bushings, a splined broach slidable through said bushings with lands of bushings disposed in the grooves of the broach for engaging the body portion thereof, means disposed between said bushings for supporting and accurately locating the outer peripheral edge of the work element relative to the broach, and means for drawing the broach through the work element.



2,106,213
BROACHING MACHINE
Carl J. Halberg, Detroit, Mich., assignor to Colonial Broach Company, a corporation of Michigan
Application April 19, 1935, Serial No. 17,196
9 Claims. (Cl. 90—33)
